The Nation.

NEW YORK, THURSDAY, JULY 2, 1908.

The Week.

One hears many Republican sneers at Bryan's reported intention to have the Denver Convention adopt the planks urged by La Follette at Chicago, but there refused. What infantile strategy, it is said. But there is at least one of those planks which may plague the Republicans more than they imagine. We mean the demand for publishing all campaign contributions and expenses. It was voted down at Chicago by 880 to 94. Previously, the McCall bill to compel publicity of campaign accounts had been mysteriously done to death in Congress. It was one matter of pending legislation in which the President took no interest. If now the Democrats at Denver take the stone which the Chicago builders rejected and make it the head of the corner, the Republicans will be put on the defensive in a matter where their record is peculiarly vulnerable. Bryan will certainly make great play with the Standard Oil and Beef Trust and Harriman contributions to Mr. Roosevelt's fund in 1904. The only way to meet him will be to volunteer complete publicity. To that, the Republican Committee may as well make up its mind from the start. And if Bryan is both sincere and shrewd in this business, he will call also for an account of the preliminary expenses of the nomination. Should he give out a full statement of what he himself had spent, the Taft family would be forced to do the same.

Secretary Metcalf has announced in San Francisco the "ultimate" policy of keeping a battleship fleet in the Pacific as well as in the Atlantic. Admiral Wainwright further explained the idea in a speech to the Rainier Club in Seattle. According to him, the "two-ocean standard" means the maintaining of two adequate fleets, "too wise for conquest, too strong for fear." This being the intention, the question recurs why the suggestion of able naval officers to retain a part of the ships already in the Pacific, should not be adopted. If eight or ten battleships were kept, a force sufficient for defence, though not for aggression, would be at hand to calm excitement on the Coast, while the others, returning, would soon be joined by ships now building, so as to give all needed strength in the Atlantic. It is not too late to change the plan to bring all the battleships home via Suez, and we hope it will be done.

There are two men in New York who must now wish that they had never heard of the Mayoralty recount—William R. Hearst and George B. McClellan. The former's rout is complete; he has failed to show any wholesale frauds in the counting. Some corruption there apparently was; but in the main the errors made have been due to blunders or to stupid decisions as to the validity of the markings. We very much fear, therefore, that Mr. Hearst's newspaper will have to forego the pleasure of calling Mr. McClellan the fraud Mayor, and printing his title in quotation marks. Mr. Hearst will now have to fall back upon registration frauds, colonizers, and repeaters as the reason why he is not sitting in the City Hall. As for the Mayor, who has fought so hard for more than two and a half years to prevent a recount, he must be regretting that he did not promptly come forward after the election and demand the opening of the boxes. His failure to do that has cost him dear, not only in pocket, but in prestige, and has created the unhappy impression that he was willing to hold office even if not entitled to it. The Mayor must have had an exceeding distrust of the methods of his own beloved Tammany henchmen!

We should like very much to know how it is that the National Rifle Association of America, with offices in New York and Washington, is able to use War Department "official business" envelopes for its mail matter. We understand that the association is hard up, for a letter, lying before us in one of these franked envelopes, confesses that it "is badly handicapped for lack of funds." Obviously, it is convenient to use envelopes that make postage unnecessary. But is there a provision in the laws which permits this, and does the real head of the War Department, Assistant Secretary Oliver, know that this thing is going on? We do not believe so, even though Mr. Roosevelt, Mr. Root, and Mr. Taft have written letters commendatory to the association, facsimiles of which are enclosed in this begging circular. But we have not yet got to the point where the mere enclosing of a copy of the letter of the ruler of this country entitles the whole communication to free carriage. This organization is needless and mischievous in its aim to put a rifle into every boy's hands, expressed as follows:

> We are trying to build up a sentiment in this country for better conditions of defence, and encourage a spirit of patriotism among our citizens, most especially the schoolboys.

This whole business of putting firearms into children's hands is bound to fail. Lord Roberts, with all his prestige, has not been able to frighten England into making instruction in shooting a part of each school's curriculum. Much less will the effort to do the same for our schoolboys succeed. Our school children, for one reason, are worked hard enough now, and when they are free they have better uses for their time in the way of sports and gymnastic exercises than wasting afternoons in the effort to learn how to kill on sight. Indeed, if there is one kind of national society we need, it is an association to restrict the carrying of arms—not one to familiarize more people with them.

Two articles in the July magazines emphasize the responsibility of the public for railway accidents. Mr. Julius Kruttschnitt, director of maintenance and operation of the Union Pacific system and the Southern Pacific Company, offers in *Appleton's* a somewhat feeble apology for the railways. He makes the surprising assertion that conditions are really improving. Unfortunately, the evidence brought forward is very slight. In 1906, he says, there were 114 persons killed and 1,983 injured in accidents on the Union Pacific; but in 1907 there were only 105 killed and 1,104 injured, though in the same time there was an increase of 12.87 per cent. in the passenger traffic. The difference is not very reassuring; with such limited data, one suspects that the decrease itself was a railway accident. Another cheerful aspect of the situation, according to Mr. Kruttschnitt, is that a very great number of all those killed and injured are foolhardy persons who take unnecessary risks, and trespassers who take the hazards open-eyed. Mr. Kruttschnitt agrees, on the whole, with Mr. Fagan (writing in the *Atlantic*) that lack of discipline among employees is the cause of most preventable accidents. But Mr. Fagan comes out roundly with the charge that this lack of discipline is largely owing to the "harmony" that exists between managers and employees. The "Brown system" of secretly recording demerits against a man who has broken a rule saves much "irritation" and is very agreeable to all parties concerned—except the public. Mr. Fagan asserts, furthermore, that the "investigation of a railroad accident by the management of an American railroad is neither more nor less than a hushing-up process," and that all those who are in a position to speak with authority are "tongue-tied and pen-paralyzed." On the altar of "harmony" the interests of the public are continually being sacrificed. The labor unions, moreover, make it practically impossible for the management properly to discipline men, even when it so desires.

It is to the South that students of prohibition are looking now for light. There the experiment is being tried on a greater and greater scale. Lately, the chief of police of Atlanta, Henry Jennings, has published statistics showing the results of the first three months of prohibition as compared with the same three months of the year previous—January, February, and March, 1907. There was, he reports, no decrease in the burglaries and thefts, but the total number of arrests fell from 5,277 to 2,010, a decrease of 3,267. Arrests for disorderly conduct were cut in half, and those for drunkenness were but 323, as contrasted with 1,293. Mr. Jennings avers that this correctly indicates the great falling off in drunkenness; and the result has been fewer complaints of severe distress among the poor and more cash for household expenses. Altogether, his report is as favorable as could be expected under the circumstances.

The complete collapse of the Yale 'varsity crew and of the successful Harvard freshman crew calls fresh attention to the danger of these contests to men improperly trained. Something was radically wrong with the Yale crew; the explanation that they were "rowed to pieces" by the Harvard crew in the first two miles is not adequate. There have been gruelling races at New London before, but never, we believe, a 'varsity crew which was in such evident distress before the three-mile flags were reached. Yale crews have rowed down Harvard eights in the first two miles without such consequences. Nor is it sufficient to say, as does the Yale coach, that the Yale stroke was of a highly nervous temperament. That does not explain why No. 4 collapsed at one time and No. 3 also showed signs of distress. There ought to be a very careful inquiry by the Yale authorities, for the sending of a crew to the post when unfit physically is but little short of a crime. The whole matter will renew the discussion as to whether four miles is not too long for a contest between boys. On the other hand, the complete exhaustion of the victorious Harvard freshman crew shows that even two miles may be too much. Defeated eights often collapse, but the picture of the conditions in the Harvard freshman boat after their triumphant breaking of the record and defeat of their rivals must raise the question whether the strain is not too great for young men of from seventeen to nineteen years. Certain it is that many an oarsman pays the penalty in after-life for over-exertion, either by some organic trouble or by inability to resist disease.

Col. Higginson discusses in the July *Harper's* the change of American aristocracy. In his own undergraduate days the only persons whom he recognized as aristocrats were the president and the professors. Many can remember when it was *lèse majesté* not to remove one's hat ten feet before meeting a professor and to keep it off ten feet after. But the former things have passd away. It is no longer true, as Sir Thomas Browne affirmed, that "there is in this universe a stair, or manifest scale of creatures, rising not disorderly or in confusion, but with a comely method and proportion." The modern professor is gratified at the recognition of his eminence if the student's hat is removed in the classroom. Doubtless, the collegian means no disrespect when he salutes a gray-haired teacher with "Hello!"—it is only his genial way of asserting the brotherhood of man. Still, there is no more condescension of students toward the intelligence of the faculty than toward intellectual distinction among themselves. Debaters, writers, and scholars are not the aristocrats. Young Americans will not off-cap to wealth, though it somewhat gildeth the infirmities of them that have it. The college aristocrat without fear or reproach is none of these: they may all be patronized—blue blood by red gold brains by both. The successful athlete, though his fortune be made in a day, bears the palm from them all. To him everything bows down—family, wealth, learning, freshman, and—*exceptis excipiendis*—college presidents. Muscle will be served.

Dispatches from Chicago, though not of the boastful summer-resort order, report numerous suicides in that city in consequence of the great heat. It is a fact, however, that the month of June is everywhere the one in which self-destruction is most common. In all parts of the world, the smallest number of suicides occurs in December, the largest in June. And the difference is considerable—the average for the United States being 336 in June, as against 217 in December. In this country, last year, there was a record of 10,782 suicides, and, as George Kennan remarks in an article on the problems of suicide in *McClure's Magazine*, if the present rate of increase be maintained, we shall in the next five years lose in this way nearly as many lives as were lost in battle by the Union armies in the five years of the Civil War. Many attempts have been made to explain why the first month of summer should convince more persons than any other month that life is not worth living. Why, when nature is most smiling and happy, should these men and women be more inclined to part with life than at a season when the air is full of chill and discomfort? Mr. Kennan's explanation is the most ingenious and plausible that has yet been suggested. The sunshine, the blue skies, the leafy trees, and the singing birds of June increase the happiness of the man who is happy already, but they intensify, by contrast, the misery of the man who is already miserable. "Everybody is happy," he says to himself; "everybody is rejoicing, I am the solitary exception. I am the only living thing that is out of place," and so he makes away with himself. Accepting this view, one can understand why, as statistics show, it is not only in the pleasantest month of the pleasantest season that the tendency to suicide is greatest, but also, as has been demonstrated in New York city, greatest on the clearest and sunniest days of that month. It is too true; Lowell's "perfect day," the rare day in June, is suicide weather!

Rapid progress is being made in European countries, notably Italy and Scandinavia, in the utilization of water-power for generating electricity. In Germany, the elation in industrial circles over this advance has been dampened by hints that the government is meditating a monopoly, or at any rate a policy which will turn over most of the profits to the state. The first intimations were made last December, and more recently the Bavarian Minister of Traffic, Herr von Frauendorfer, made some remarks which indicated that the question was under serious consideration, and that a national tax on electric power was to be expected in any case. He admitted that a complete state monopoly would have serious disadvantages, because it would discourage inventors and thus delay the development of the electric industry. The government would need an unlimited supply of electric power in case it should be substituted for steam on the state railways. Such a change is not, however, imminent, the military authorities being strongly opposed to it.

Insurrection in Mexico is such a comparatively obsolete trade as to offer the very slightest chance of success to the enterprising promoter. President Diaz's iron hand is gripping tight about the raiding bands in Coahuila, and if the United States does its duty in keeping its territory from being used as a recruiting ground and centre of refuge, the well-trained regular army of Mexico should make the work of pacification easy. Order was what Diaz made the main end of his policy, so that the country might turn to work and self-improvement; and order he has succeeded in enforcing for thirty-two years now, with the interval of the four years' Gonzalez administration in the early eighties. To that end the railways have been built with an eye to strategic as well as economic factors; the telegraph

brings news of sedition in an hour, where it once took days, and the transportation of troops is a matter of half-days instead of weeks. Revolution, therefore, has little time to gather impetus before it is attacked, and a standing army of 27,000 men should be sufficient to deal with anything outside of a national upheaval. But if there is nothing to fear from the present uprising, the question still comes up, whether the rule of the strong hand has not been too unrelaxed for the country's ultimate good. Order has brought prosperity; so we hear every day of Mexico, yet the actual figures are surprising. The census of 1879 showed a population of 9,908,000. This had increased to 12,490,000 in 1895, and to 13,605,000 in 1900. It must now be over fifteen millions. When Diaz became President in 1877, the revenue and expenditure of the government were each a little under thirty million dollars. For the fiscal year just ended, the revenue is estimated at $98,835,000 and the expenditure at $92,966,000. But the wealth of the country has increased in more than sufficient proportion. When Diaz became President in 1877, the value of the year's exports was $29,285,000, and the imports two years earlier had reached a total of $23,282,000. In the fiscal year 1905-06, the imports were worth $220,650,000 and the exports $271,138,000. Our own trade with Mexico in 1877-78 was worth $19,735,000, of which we bought about two-thirds and sold one-third. In 1905-06 our trade with Mexico was worth $325,600,000, of which we were buyers to the extent of $180,000,000. In 1896, Mexico had 7,388 miles of railways. In 1906, there were 13,515 miles, or almost double. Diaz, therefore, means prosperity; but how if Diaz dies? A political dynasty cannot go on under Constitutional forms. Would not Diaz have done better if he had relinquished power a dozen years ago, in order to give the Mexican people a chance to show what they can do for themselves?

Havana's rejoicing over the first Spanish naval vessel to enter the harbor since 1898, probably blends sentiment with purpose. There must, of course, be thousands in the Cuban capital who were loyal to Spain during the last war of independence, and whose pride chafes at the thought of Cuba reduced to a dependent on Yankee protection, even when that protection is recognized as conducive to her material welfare. In all our discussions of Cuba's incapacity for self-government, the sensitive Spanish temper can easily discern the note of contempt, as though the descendants of the conquistadores were on a plane with those we call the inferior races. So it may be a consolation to emphasize the point that, though political bonds may break, blood still binds Cuba's leading citizens to a European nation with a glorious past. The Nautilus may fly the flag of former oppression, but it is now a clear title to good descent, fit for flaunting in the face of upstart Anglo-Saxons who glory in mere success. It is as much as saying that, though our exports to Spain have fallen from $8,000,000 in 1894 to $700,000 in 1906, we are still the people of the Cid and Cervantes.

Being a very practical race, the British will often lash themselves into a fury over nothing in particular. At the present moment many people are anxious to find out whether Mr. Smuts, who is a member of the Boer Ministry in the Transvaal, really did say that one hundred years from now the British flag would not be flying in South Africa. In the heat of direct charge, circumstantial argument, and mere inference, no one seems to have stopped to consider what the harm would be if Mr. Smuts had really uttered so startling a sentiment. Even the Germans, who foresee everything, would not greatly worry themselves over what is going to happen to Alsace-Lorraine, for instance, one hundred years from now. So much the less the English nation, whose pride it has been that it has managed to keep up a happy-go-lucky scramble through history for the last thousand years or so without looking much further ahead than its nose. In one hundred years South Africa may very well be an independent commonwealth, English-speaking, and governed by English ideals, but with a flag of its own. That is a condition which many statesmen are predicting for Canada in far less than a hundred years. It is a condition which may easily be realized in Australia. In both cases, Englishmen have been inclined to regard the outcome with equanamity; and undoubtedly to South Africa, too, the mother country would be willing to allow any drafts on the future payable a century hence, provided South Africa promised to behave during the next ten years. But prophets of empire have been so busily dinning the dangers of empire into English ears, that the Anglo-Saxon has become, as he says, "jumpy." Now his island is being washed away by the waves; now his coal is giving out; now his racial stock is degenerating. And every warning to Britain is driven fast home with the scare that the Germans will get her, if, as Eugene Field used to say, she—don't—watch—out.

The new German Finance Minister has at last allowed some of his schemes for making both ends meet to leak out. For one thing, he is going to execute his predecessor's plan of an increased tax on tobacco and beer. This is certain to arouse violent opposition on the part of the Left, which cannot be expected to approve of anything that makes the workingman pay more for these two luxuries. To make up for this, Herr Sydow has abandoned the idea of a government brandy monopoly—doubtless in view of the severe criticism of the scheme in all quarters. The existing tax on brandy, if equalized, can readily be made to produce from $12,500,000 to $17,500,000 more annually, particularly if the favors now shown to a small circle of rural manufacturers be done away with. There will be an increased inheritance tax, and it is hinted that the individual States may be inspired to try a direct income tax. The most encouraging thing in Herr Sydow's annoucement is the reiteration of his desire to make the overhauling of the financial system thoroughgoing. Somehow or other he is bound to get out of his new taxes the sum of $200,000,000 annually. Unless this is to weigh heavily on those least able to bear it, there must be a radical reorganization of the entire financial system. Meanwhile, it is interesting to note, the situation is grave enough to compel the army authorities to give up for the moment their plea for several new regiments.

The German university world has been stirred to its depths by the sudden creation of a fourth professorship of economics at the University of Berlin, and the immediate appointment to it of a young teacher at the University of Kiel. For years past the three chairs of economics at Berlin have been held by Professors Wagner, Schmoller, and Sering—men of world-wide reputation, who have been assisted by four or five "extraordinary" professors and a swarm of docents. There was, therefore, not the slightest necessity, from the teaching point of view, of creating a new professorship. But early in this month the university authorities were astounded to receive from the Ministry of Education the notice that a new chair had been founded, and that Prof. Ludwig Bernhard, thirty-two years of age, had been appointed to it. The Ministry explained that, owing to certain circumstances requiring haste, there had been no time to sound the university authorities, as was the invariable custom; nor had it either consulted the Prussian Diet, but had used for this purpose certain emergency funds given to it for an entirely different purpose. The real reason, it appears, is that Professor Bernhard has published a study of the Poles in Prussia which supported the government in its anti-Polish crusade. Having received a call from a South German university, he was about to accept it and give up his Polish studies, when the government intervened.

MR. CLEVELAND.

Grover Cleveland had the good fortune to be identified with a great political enthusiasm. The lift and hope and zeal of the Presidential campaign of 1884 now seem far away, but at the time the hearts of thousands of our bravest and best burned within them as they saw the great opportunity and fought the great battle. They had a cause and they had a man. Long denied reforms sprang to new promise; and a leader who simply could not be made afraid was there to embody those governmental virtues for lack of which the country was sick unto death. The result was that even cynics were stirred out of their indifference, while generous youth were banded together and inspired as they had been by no man since Lincoln. It was a wonderful re-birth in American politics; and to have quickened all that aspiration, to have called out that devotion, and to have held it, through good report and through ill, for twelve years, would make the fame of any public man secure.

The personal qualities of the man fell happily with the needs of the time. Mr. Cleveland was called by James Russell Lowell a typical American. The unaffected simplicity, the clear honesty, the direct thinking, the plainness of speech, the homely but solid virtues of the President to whom Lowell offered his resignation as Minister to England, appeared to that shrewd and cosmopolitan scholar and observer to be racy of the soil. It was a great thing that such a four-square man could be found to stand against the brilliant but tricky and untrustworthy candidate who threatened to degrade at once the Presidency and our public life. The issue was never more sharply one of character, and character won. Without eloquence or personal magnetism or social graces, the blunt, rugged, tenacious, calm, and unshakable man won a hold upon the American people which he never lost.

Behind the man, stood great political causes, which he partly found and partly made. The people were suspicious of corruption, and appalled at schemes of public plunder. Thrift and economy were officially despised; extravagance which meant waste was everywhere the watchword of politicians. But Mr. Cleveland, from the time of his service as Mayor of Buffalo till the hour when he vetoed the dependent-pension bill, was the resolute enemy of every job or plan to squander the public money. "This is a time for plain speech," he wrote, in vetoing a legislative measure which he told its backers was "a most barefaced, impudent, and shameless scheme to betray the interests of the people." It was such forthright moral indignation, with courage in taking corrupt politicians by the throat, which drew the attention and admiration of the country and made Mr. Cleveland President.

There was then a feeling abroad that party machines were getting the better of the people. Representative government seemed to be failing to represent. Men had an uneasy perception that public affairs were managed by little cliques of politicians for their own advantage. Looking about for a leader to fight the battle against the manipulators and the plunderers, they discovered Grover Cleveland. They saw him, as Executive at Albany, attacking tyrannous politicians, and they longed to see him clothed with the powers of the Executive at Washington in order to wage the same war on a larger scale. That was the great reform aspiration which Mr. Cleveland exemplified and satisfied. Not ambitious new policies, not dazzling programmes of national aggrandizement, were what the country wanted, but a purified public service and a heightened vigor of administration. To that work Mr. Cleveland was called, and in it he wrought with quiet heroism. Himself a man of iron industry, the infection of his spirit spread. To do the necessary work of the government honestly, intelligently, and economically was ever his motto, and it became that of his entire Administration. He did not know the formidable nature of the task he had undertaken. Looking back in 1888, he said: "I knew that abuses and extravagances had crept into the management of public affairs; but I did not know their enormous power, nor the tenacity of their grasp." But that meant, for him, only the greater energy and resolution in attacking them. For what he did in rescuing the civil service from the spoilsmen, and in toning up everywhere the idea of the faithful public servant, he will long be remembered as a great administrator.

Mr. Cleveland took the Presidency amid the gibes of the opposing party, which thought then, as it thinks now, that it alone is fit to rule; but he soon showed the country that it had a true statesman. He was as steady as a rock. When new questions arose, he calmly confronted them with independent judgment and massive common sense. In the wild storm of financial upheaval, he kept his head. That the silver madness had swept away a majority of his own party did not make it in his mind less a madness. His course in that matter alone was sufficient to keep his memory green among American statesmen. His letter to Mr. Lamar, shortly after his second election, showed with what rare sagacity he foresaw the coming of that free-silver tempest which was to make his last term in office one long agony, but he went on simply to do his duty without complaint or thought of flinching. In view of what he did to avert the financial dishonor of the nation, Senator Allison might well exclaim, in a burst of frankness, "It was God's mercy to this country that Grover Cleveland, and not Harrison, was elected President."

Disputes about the measure of Mr. Cleveland's greatness are futile. It is said that he was a commonplace man. This is not the view of disinterested observers like Mr. Bryce, who have been struck by the grasp of Mr. Cleveland's mind, and his large way of looking at all questions. If his characteristic virtues were commonplace, then may Heaven send us more commonplace men! He did a work which would have broken a genius, and driven a creature of public flattery to despair. His monument is not only the impress of his integrity and a long record of useful legislation, but a vaster mass of foolish and wicked laws which he kept from enactment. He was the arch-enemy of jobbers; he maintained the public credit; he flung himself upon the entrenched and insolent beneficiaries of the protective tariff; he conquered the hearts of a democracy that has not lost its instinct for a real man. If that be not greatness, no man need desire to be great.

TAFT PROLOGIZES.

Mr. Taft has been writing freely of his conceptions of the Presidency and of the policy which his party ought to pursue. We will not suggest an imitation: Mr. Roosevelt wrote of the Presidency before he attained it, but it is doubtless only a coincidence that his Secretary of War should have done the same thing. In any event, Mr. Taft's article in *Collier's Weekly* on the duties of the President contains much good sense. One likes especially his emphatic protest against the folly of a would-be President tying himself up in political bargains which will fatally hamper him in case of his election. "He must," says candidate Taft, "draw the line at any compact which will not leave him free of promises and of the control of any faction." Those words should be underscored and sent to the United States Senators from Ohio. And they ought to be framed and hung up before Mr. Hitchcock, or whoever the Chairman of the National Committee may be. It would do no harm if a copy were left at Oyster Bay.

The long experience of Secretary Taft in administrative work, and his nearby observation, speak in what he has to say of "the strain of countless interviews" which a President has to undergo. This is a necessary evil, eating up time and exhausting nervous energy, but it is a question if it might not be greatly cut down. Probably at least half of the callers at the White House go there on the business of office-hunting. Office-beggars and office-mongers have been the great devastators of the President's day. They worried Lincoln almost more

than the war. But it should surely be possible for a resolute and reforming President to disperse a part of this noisome swarm about his ears. By extending in every possible way the merit system; by placing the responsibility of routine appointments upon his heads of departments, and summarily referring his importunate visitors to them; by refusing to make needless changes in the offices, the Chief Executive could get rid of a good part of his pesterers, and save time and thought for the really important affairs of state.

Mr. Taft displays a sure sense of proportion in remarking that it is essential for a President to keep in touch with disinterested public opinion. He has to be on his guard against "the fair words of the special pleader." Now, of course, it is the special pleaders who throng and press about a President. Hence the vital importance of seeking information and advice from those out of office, to enable him to arrive at the truth. It is proverbial that no one in the President's immediate entourage tells him the truth. That he must search for and welcome elsewhere. Presidents have been known to resent the intrusion of a friend, dealing faithful wounds. We have heard a story of one such going to Mr. Roosevelt, and prefacing the unpleasant thing he had to say by remarking: "I am a man who doesn't want anything." "Then why do you come here," retorted the President, "to waste my time?" This was doubtless jocose. Presidential time cannot better be utilized than in listening to plain speech from those who desire only the public good. Secretary Taft seems to be strongly of that mind, since he dwells upon the great advantage which comes to the President by consulting freely with those who "view public affairs unselfishly."

We cannot take as much satisfaction in Mr. Taft's other article—that on "The Republican Party," in the *Yale Courant*. His discussion of protection and of tariff revision is peculiarly disappointing. True, he declares that it is high time the Dingley tariff were overhauled, some of the rates in it being "too high." He also pronounces against customs duties of a sort to "furnish a temptation to the formation of monopolies to appropriate the undue profit of excessive rates." This is further than the Chicago platform dared go. Yet when Mr. Taft comes to explain his ideas about revising the tariff, he betrays no mind to go to the root of the matter. He would have a tariff that would "properly protect against foreign competition," and would "afford a reasonable profit to all manufacturers, farmers, and business men." A pretty large order! Why not call upon the miraculous tariff to afford reasonable profit also to lawyers and editors, bricklayers and seamstresses? Possibly, the Secretary intends them under his broad term, "*all* business men." At any rate, if there are any failures in the United States after Mr. Taft becomes President and gets the wonder-working tariff law he desires, we shall all want to know the reason why.

In all this talk about a tariff to "equalize the cost of production" and to insure a "reasonable profit," one sees only confusion of ideas and a readiness to play, consciously or otherwise, into the hands of the high-tariff leeches. When they say, "cost of production," they do not mean the cost scientifically determined, but merely the nominal rate of wages. Yet, as Mr. Schwab testified before the Industrial Commission, giving much higher wages than foreigners pay, Americans can produce steel cheaper than they. Yet there stand the Dingley steel schedules to "properly protect" us against foreign competition—a protection which results in our having to pay more for manufactures of iron and steel than the same articles are sold for by the same people to the dreaded foreigner! And when it comes to a question of "reasonable profit" to the Steel Corporation, no doubt Mr. Taft's fellow-LL.D. at Yale, Mr. Morgan, would explain to him that it was only "reasonable" to have a tariff that would pay dividends on $400,000,000 of water! That way lies small hope of real tariff revision.

BRYAN'S FLATTERING UNCTION.

All the news from Lincoln is that Mr. Bryan feels not only sure of nomination, but confident of election. That, however, is an old sensation with him. All candidates, in fact, have it. To any man conscious of his fitness for the highest office in the nation, it is inconceivable that the majority of the voters should not be of the same mind with himself. Even Greeley expected to win at the polls: the *Tribune* proved mathematically that he would. Bryan is not the first, and will not be the last, to see rose-color. Yet his stoutest opponent may as well frankly admit that he has a chance. In a year of such confused politics and disrupted business, no one can tell what answer the oracle of the popular vote will give in November. Talk about campaigns from the rear car! The 300,000 idle freight cars may prove to be more effective spellbinders than any orators that the Republicans can send out.

While it is only common prudence to look the facts full in the face, it does not in the least follow that Mr. Bryan is the strongest candidate whom the Democrats could name, or that his plan of campaign is the shrewdest. The plea is put forth that Bryan could poll more votes than any other Democrat. That may be true, yet it might also be true that he would be defeated while another candidate might be elected. This is not a paradox. The trouble with Bryan's great vote, conceding that he gets it, is that it does not fall in the strategic States. He has undeniably a large and devoted personal following. If he were hostile to a rival who might be put in nomination, that proprietary vote of his could not or would not be cast for the party ticket. That was pretty clearly shown in 1904. In that sense, it may be correct to say that Bryan can get more votes than he will permit any other Democrat to secure. But his ballots are not placed right. Gov. Johnson, for example, might have a total poll smaller than Bryan's, yet by carrying Minnesota, the Dakotas, Wisconsin, New York, and New Jersey, would get a majority in the electoral college where Bryan could not.

Elmer Dover, Secretary of the Republican National Committee, declares in Washington that the real fighting of the campaign will be in the Middle West. There, he says, is where Bryan has his greatest strength, and there, he implies, is where the Republicans have their most acute anxieties. According to him, Bryan will practically concede New York and New Jersey, and put up only a sham fight in those States. If Mr. Dover believes that, he will believe anything. A mere glance at the table showing the representation in the electoral college, and a little figuring with pencil and paper, will show that a Democratic plan of campaign which leaves New York and New Jersey to the enemy is doomed to failure. Mr. Bryan knows this as well as the next man. Whatever his exertions in the Middle West, we may be certain that he will spare no effort, and omit no bargain, to carry New York. One of his chief fuglemen at Denver is saying that he will get this State by 50,000. That is the only way of making his campaign look at all promising.

Our amateur political cipherers overlook the great change made by the last apportionment act of Congress which fixes, too, the representation in the electoral college. Most of their calculations are based upon the old combination of the Solid South with two or three selected States in the North. The Solid South, with New York, New Jersey, and either Connecticut or Indiana, used to suffice. It does so no longer. Under the new apportionment, the Solid South gained ten votes, but the Northern States, including Oklahoma, gained twenty-six. This destroys the old equation. To-day, Bryan might get the Solid South with 169 votes, New York, New Jersey, and Connecticut, with 58 more, and still be short of an election. Throw in Oklahoma with 7 votes, and he would still lack 8 of a majority. Along those lines, he could be barely saved by carrying his own State with 8 votes, or have a slight margin with Indiana's 15.

Look at it how you will, New York is practically indispensable to the success of any Democrat this year. If it be true that Mr. Bryan is prepared to surrender this State, with New Jersey, in advance, he is surrendering the whole campaign in advance. There is hopeful talk of his carrying Ohio this year; he might do that, with Iowa thrown in, and still be beaten for lack of New York's 39 electoral votes. He might carry Ohio, Illinois, and Nebraska, yet lose if New York, New Jersey, and Connecticut went against him. It is, indeed, barely possible that a political revolution might sweep the Middle West, and make Mr. Bryan President without a single Eastern State; but sober people planning campaigns do not reckon upon the aid of miracles. And lacking a miracle in politics, the Empire State remains the key to the coming electoral battle.

No delegate at Denver who will coolly examine the figures and the probabilities, can deny that the nomination of Mr. Bryan will simply throw away thousands of votes in the critical States. They would go enthusiastically for Judge Gray, or Gov. Johnson, or Judson Harmon; they will never be cast for Mr. Bryan. The New York *Sun* publishes a letter written by Mr. Bryan in 1900, in which he said: "I cannot conscientiously ask the party to consider me again for the Presidency. I led them to defeat eight years, and that ought to be enough for any man." If he really put the success of his party to-day above personal vanity, he would withdraw in favor of a candidate before whom defeat did not visibly yawn.

ASPECTS OF INDIVIDUALISM.

Gentlemen of the graduating class: Whatever you may have learned in this place will be of little value unless it teaches you some consistent attitude toward the great problems of life, with which every man must concern himself, whether he will or no. If you go forth without some such philosophy of life, you go into the world rudderless and chartless.

These words from President Hadley's baccalaureate address set one wondering how many college men are entering upon the world with philosophical chart and rudder? If the test of the university is ability to provide a vital philosophy of conduct, which one shall stand? There was a time, perhaps, when the denominational colleges sent out good Presbyterians, Baptists, Episcopalians, with consistent Episcopal, Baptist, and Presbyterian attitudes toward life. We have changed all that. Denominational lines have broken up, and philosophical lines are dissolving. When comparative religion is taught, the hearers become comparatively religious. When philosophy is taught, not by philosophers, but by students of the history of philosophy, the learner may easily come to despise all systems. Only he who insists upon nothing can pass for a fair-minded man. In dispassionately presenting for choice four different ideals of conduct, the Epicurean, the Ascetic, the Stoic, and the Christian, each having its own peculiar virtue, President Hadley indicates the universal indecisiveness and, in matters intellectual, the individualism, of the hour.

A solution of the difficulty is offered by Arthur Owen Simmons in the June *Westminster Review*, speaking from an ultra-liberal point of view. The forms of religion are manifold, he says, "yet all have the same task to fulfil. Each has to discover, to quicken, to develop the spiritual force or faculty, which, within every one, lies hidden and dormant till found and awakened." It matters very little, he contends, which form does the wakening. The son may not rise to the alarm which roused the father. The weakness is "in the system which imparts only one creed to one person." Mr. Simmons proposes a comprehensive religious elective system by which each one in the public schools shall receive for forty-five minutes a day whatever instruction he desires. The plan is called by its author "the 'individual' solution." Its justification seems to rest upon a belief that the youthful mind, uncoerced by outer authority, will, if a sufficiently extensive banquet is set out, instinctively bite into its own appropriate religious viand. When the doctor can't decide, let the patient prescribe for himself. The weakest spot in the theory is the total neglect of human nature's fundamental craving for authority in religion.

French practice, outrunning English radical theory, has carried individualism to its logical extrême. M. Compayré, writing in *La Revue*, thinks it is high time to sound a retreat. Moral dilettanteism, he declares, is uncontestably in fashion. On every side some one is saying: There are morals and morals; the immorality of to-day may be the moral ideal of to-morrow. The subtle venom of Nietzsche's troubling dreams has penetrated into the French spirit. It is not confined to æsthetic circles. It may be detected even in such an eminent educator as M. Payot. "Duty," says he, "consists in living an intense life." "Doubtless," replies M. Compayré, "we can no longer hold up as an ideal, effacement of personality and restriction of one's being; but is there not, nevertheless, some danger in proclaiming that the supreme goal is 'intensity of life'?" Walter Pater thought so when he suppressed his famous dictum: "To burn always with a hard, gem-like flame, to sustain this ecstasy, is success in life."

That all attempts to impart moral ideas to the child are humbug and nonsense is a conclusion not attained at a single leap, continues M. Compayré. First came the suppression of strictly religious instruction; it would not do to scandalize the atheists! Then the inculcation of patriotic notions was ended under the pretext that such things are questions of personal conscience, of individual taste, which the free will of the pupil may answer in its own fashion. One schoolmaster thought he ought to suppress in a new edition of a copy-book such phrases as these: "In order to be a good Frenchman, one must prepare to be a soldier; no country is so deserving of love as France." This is not the worst—as M. Faguet says: "The basis of Nietzsche's teaching is this: There is no education."

In a recent educational review, we learn that "to declare that education is the art of making gentlemen is to affirm that we know what constitutes a gentleman. We know what that pretension comes to." Yet to take that point of view is to deny civilization. It is to wash one's hands of the whole matter. But what, then, will become of society and morality? Oh, for the heroic age, exclaims M. Compayré, the age of gold, when instructors applied themselves to giving information about moral truths, founded upon reason and good sense, consecrated by the experience of the ages, by the universal conscience of gentlemen! Even that would not seem to get us much further ahead with the problem of religious teaching, in a day when Professor James can say that, whatever the Creator may be, it is certain that He is "no gentleman."

PARIS BOOK NOTES.

PARIS, June 19.

In the favorite line of modern reading "about" literature a few books have appeared. "Dante," by Pierre Gauthiez, is a book of essays on the poet's life, so far as it may be known from his works and documents at first hand, of which a bibliography is given. The author is an artist, as might be gathered from the dozen plates he reproduces from original sources. He has taken thirty years to prepare this book—ever since the time when he won his first fame by studies of Aretino and Giordano Bruno. In the publications of the Institut Catholique de Lille (a sort of unauthorized university) Prof. Albert Delplanque has two volumes of historical interest in language and literature: "Saint François de Sales" considered as a humanist and writer of Latin; and the much-vexed, very human, and philosopher-like correspondence of Fénelon on "pure love" and Quietism, which was evidently more philosophically important than Modernism and Pragmatism are now. The latter is a contribution to the unpublished correspondence of the great archbishop.

In the late A. de Boislisle's definitive edition of the "Mémoires de Saint-Simon" the twentieth volume (1700-1711) has appeared, with Saint-Simon's additions to the Journal of Dangeau, and various additions, corrections, and tables of the editor. Georges Pellissier, whose well-classified ideas on nineteenth-century literature have made his

books as well known abroad as in France, displays his usual merits and limits in "Voltaire philosophe." He treats in succession of Voltaire in the fields of metaphysics and physics, religion, morals, and politics. He praises the intelligence and criticises the lack of imagination, which perhaps explains the restricted field of the philosopher's common sense. In "Voltaire mourant" Frédéric Lachèvre reproduces the necessary but uncomfortable account of the philosopher's death. The manuscript was hitherto unpublished, although the legends which grew from it based many a sermon in Puritan America on the death of the infidel. In reality an old man, whose life had been made sweet to him, was unwilling to die, and "revolted against God and nature." The little volume contains other unpublished Voltairean documents of less gruesome and less general interest. Dr. E. T. Hamy edits the unpublished Correspondence of Alexander von Humboldt with François Arago during their long personal and scientific friendship (1809 to 1853). This, too, belongs to literature, with the human interest enduring after the science has ceased to be timely. In "Alfred de Vigny et son temps (1797-1863)," Léon Séché gives another of his curiously gossipy books, from unpublished documents, on the poet's family, origin, loves, religion, and the rest. Alfred de Vigny's drama holds the stage, but his poems are studied rather than read in France; he embodied the futile leaning of middle classes and nobility toward English ideals during the half-century succeeding the Revolution.

Alfred Mézières, eighty-two years old, fifty-four years a university professor of foreign literatures, of which forty-five have been at the Sorbonne, thirty-four years an Immortal of the French Academy, and twenty-seven years a member of Parliament, with the army commission as his specialty, publishes the discursive thought of kindly age on various things, "Hors de France," in Italy, Spain, England, and modern Greece.

Ernest Daudet, whose very great literary merit should not be overshadowed by the fame of his brilliant younger brother, Alphonse, comes out with a novel, "Au Galop de la vie," after a long interval devoted to the history of the Emigration and Bourbon Restoration. It is a novel of our own times by a liberally conservative observer. The statesman who crosses its pages will easily be recognized as the late Waldeck-Rousseau, letting loose political campaigns whose social and emotional consequences he could neither foresee nor forestall, still less confine within the limits he had set to their working.

"Nietzschéenne," by the favorite woman novelist, Daniel Lesueur (Madame Henry Lapauze), shows by its name that the heroine is not without literature; and she is regarded from the "intellectual" point of view. That Nietzsche should enter into current French life, even by the backdoor of a novel, is a striking comment on the sweep of his philosophy. The lady who writes under the name of Ossit publishes "Cyrène," a love romance like "Ilse," which won first fame for her. "Antoinette," by Romain Rolland, gives in a separate story the fifth episode of his musical hero, Jean-Christophe; he is this time in Paris, where his author is professor of the history of music at the Sorbonne. The women's academy gave its prize to this unending romance in 1906. S. D.

NEWS FOR BIBLIOPHILES.

The manuscript of the continuation of Sabin's "Dictionary of Books Relating to America," which has been prepared under Mr. Eames's direction by the help of a grant from the Carnegie Institution, is nearly completed and it is expected that the printing will begin during the summer. The first part of the work was issued in January, 1867, and up to the time of Mr. Sabin's death in 1881 thirteen volumes had been published, bringing the work down to the letter O. Mr. Eames then took Mr. Sabin's manuscript and parts were published at intervals until 1872, when the first part of Vol. XIX., ending with Henry Hollingsworth Smith, was published. Although Mr. Eames's name nowhere appears in these later volumes, it is well known that the work is largely his and, as constant users of the work, we may say that his portion is much more accurate and fuller than the earlier volumes. The motto quoted from Ant à Wood, which appears upon the title of each volume, is peculiarly appropriate to the undertaking: "A painfull work it is I'll assure you, and more than difficult, wherein what toyle hath been taken no man thinketh so no man believeth, but he has made the triall." Copies to the number of 525 were printed on small paper, and 110 copies on large paper. A considerable portion of several of the later parts were destroyed in a fire and complete sets are very rare. A large-paper set of the nineteen volumes brought $393.75 at Libbie's in 1901 and small paper sets have several times brought $200 or more, at auction.

Proposals for the publication by subscription of a Canadian bibliography have been issued by A. H. O'Brien, barrister at law, and L. J. Burpee, librarian of the Carnegie Library at Ottawa. The plan is to include books and pamphlets relating to Canada and Newfoundland from the earliest date to the present and it is estimated that the total number of titles will be about sixteen thousand.

The five volumes of Milton, "Lycidas," 1638, "Poems," 1645, "Paradise Lost," both issues of 1667, and "Paradise Regained," 1670, were sold as one lot at Sotheby's on June 4 for £515. Other important items at the same sale brought the following prices; Drayton's "England's Heroical Epistles," 1600, in the original vellum binding, £50; Drayton's "Poems Lyrick and Pastorall," n. d., but 1605, probably Heber's copy, £30; Quarles's "Emblems," 1635, earliest form without the Latin verses by Benlowes, original black morocco, £34; Vaughan's "Silex Scintillans or Sacred Poems and Private Ejaculations," 1650, £30; Vaughan's "Olor Iscanus," 1651, £17; Herbert's "The Temple," 1633, £41; Sir William Barclay's "The Lost Lady," 1838 (it is said that only two other copies are known), £40; George Scot's "Model of the Government of the Province of East-New-Jersey in America," 1685, the first issue, a fine copy in the original calf, £120; Edward Williams's "Virginia, more especially the South Part thereof richly and truly valued," second edition, 1650, £12 15s.

Six quarto volumes, being the manuscript diary of Mrs. Piozzi, friend of Dr. Johnson, brought the astonishing price of £2,050, and were bought under the name of "Barclay." The first entry which explains the origin and purpose of the record is as follows:

It is many years since Dr. Samuel Johnson advised me to get a little Book and write in it all the little Anecdotes which might come to my knowledge, all the Observations I migbt make or hear, all the Verses never likely to be publisbed, and in fine everything which struck me at the Time. Mr. Thrale has now treated me with a Repository—and provided it with the pompous Title of Thraliana.

The last entry, dated March 30, 1809, reads:

Everything most dreaded has ensued . . . all is over, and my second Husband's Death is the last thing recorded in my first husband's Present! Cruel Death!

When Mr. Hayward wrote his "Autobiography, Letters and Literary Remains of Mrs. Piozzi," he said:

"Thraliana," which at one time she tbought of burning, is now in the possession of Mr. Salusbury, who deemed it of too delicate and private a character to be sumbitted to strangers, but has kindly supplied me with some curious passages and much valuable information extracted from it.

Mrs. Thrale (afterwards Mrs. Piozzi) was a Miss Salusbury. Other manuscripts by her, books from her library including her Bible, and some of her correspondence including forty-one letters of Dr. Johnson to her, were also disposed of.

Correspondence.

CULTURE AND SCHOLARSHIP.

To the Editor of The Nation:

Sir: I read with interest Prof. George B. Adams's letter to the *Nation* (May 28) on the "Proper Work of a Graduate School." This work, according to Professor Adams, should be purely technical and professional—the training of the investigator and, as he somewhat vaguely adds, of "the teacher of the higher grades." The college, he continues, may properly encourage culture. Now, inasmuch as college teachers are mainly recruited from the graduate school, where, one inevitably inquires, are these teachers to acquire the culture they are to impart to undergraduates? One might suppose that Professor Adams looked on culture as a by-product of research; but he goes on to say that the "object of a graduate school is not culture; it is scholarship"—in other words, "culture" and "scholarship" are, even in the literary and historical fields, things entirely distinct and separate. We need not be surprised that men who are thus trained purely as investigators in the graduate school should, when they try to stand for culture in the college, run the risk, as Professor Adams puts it, of giving "soft" or "snap" courses. It does not need a deep psychologist, but merely an observer of existing conditions, to know that the "scientific" student of linguistics or literary history does not, in his actual handling of literature as something apart from philology, differ essentially from the dilettante.

Inasmuch as so many of our graduate students are to go forth to teach the humanities, why not try to give them a train-

ing that shall itself be broad, liberalizing, and humane? I venture to repeat the suggestion I have made on various occasions during the past five years, that our universities establish graduate honors in literature to be administered in connection with the A.M., and to be somewhat on the same order as the French *agrégation;* in short, that they offer a degree that shall stand primarily for reflection and assimilation as well as a degree like the doctorate that stands primarily for research. The humanistic tradition is at present weakening in France along with other traditions, and some of the younger French scholars are showing an almost German inability to distinguish between literary and scientific standards. However, the day is still distant, we may surmise, when a Frenchman can become a teacher of literature in either lycée or university without a severe preliminary discipline extending over years in reflective and assimilative work. We do not hear complaints that the *agrégés* give "snap" courses. On the contrary, the danger with both teachers and taught in France is a sort of intellectual over-training joined to an undue neglect of that physical training on which we ourselves put an even exaggerated estimate.

The signs are multiplying of late of dissatisfaction with our higher education, of a feeling that it is failing to meet certain needs and aspirations of American life. There is a growing impatience at the present domination of the German Ph.D.; impatience at the infliction of philologists upon our colleges as teachers of the humanities; impatience at the men who do not see any necessary connection between scholarship and culture. Prof. Brander Matthews, in his letter to the *Nation* of the same date, would apparently wave aslde the expression that Dr. Sherman has given to the existing discontent as "grotesque" and "fantastic." But would it not be wiser for our Eastern universities to recognize frankly this discontent, inquire into its causes, and make a more serious effort than they seem to be making at present, to find a remedy? IRVING BABBITT.

Paris, France, June 11.

THE TWILIGHT OF THE GODS.

TO THE EDITOR OF THE NATION:

SIR: In 1820, when Hawthorne was sixteen years old, he wrote to his sister a letter in which he told her among other things, what he had been reading:

> I have bought the "Lord of the Isles," and intend either to send or to bring it to you. I like it as well as any of Scott's other poems. I have read Hogg's "Tales," "Caleb Williams," "St. Leon," and "Mandeville." I admire Godwin's novels, and intend to read them all. I shall read "The Abbot," by the author of "Waverley," as soon as I can hire it. I have read all Scott's novels except that. I wish I had not, that I might have the pleasure of reading them again. Next to these I like "Caleb Williams." I have almost given up writing poetry.

It is a good list for the casual reading of a boy of sixteen; not startling, to be sure; very likely it would be easy to find a longer one among the records of Hawthorne's contemporaries. It is probable, too, that one could find boys of sixteen today, and not necessarily our future Hawthornes—if any such there be—who read as widely. Still, we have reason to believe that such cases are more exceptional today than they were a generation or so ago. Even within ten years we think we have seen a change come over the spirit of our young people. Now they seem to take their literature in the shape of admission requirements, with a wry face and hope for the future, instead of sipping it "like a glass of port, that it may do them good at the time." The case may be typified by the expression of a schoolboy, speaking in rare frankness of his English course to a former teacher. "I could have stood it all right," he said, "if it hadn't been for those damned gods." He seems to have been referring directly to "sage Hippotades" and "Camus, reverend sire," but the expression opens up a wider vista in one's mind. If we reflect on the anathema it becomes almost symbolic. Milton and Shakespeare, Scott and Dickens, are the condemned divinities about whom the twilight is gathering.

"No, for we'll save them!" is the cry of the teachers of English, and they rush from school and college to organize a solid front against the insidious enemy. Almost at once they find themselves at cross purposes. "We must strike from the college admission requirements the list of books for study," says one, "otherwise the pupil will never learn to appreciate what he reads." Another is equally sure that the list of books for careful study must be maintained, for without them, he declares, there will be no accurate reading. If at this stage you ask for a definition of the object that the entrance requirements are to attain, you are directed to the college catalogues that call for "accurate, intelligent, and appreciative reading" on the part of the pupils. That this is the ideal no one will deny, but under the discussion there lies always the assumption that reading on the part of secondary school pupils cannot be both accurate and appreciative.

How, then, shall we meet the dilemma? We might grant the assumption that, with things as they are, we are not likely to get both accurate and appreciative reading, and arrange our admission requirements on that basis. We might do well to give up altogether our requirement of appreciative reading, and save the gods if we can by keeping them within the walls of the colleges where they seem safer on the whole than they are in the schools. This would mean treating English in the schools very much as other subjects are treated, mathematics for example, for which there seems to be little or no attempt to arouse enthusiasm. In the case of mathematics a boy is required to learn before entering college only so much as it is necessary he should know in order to pursue higher courses or to count his change in the street car. No one since Gilbert and Sullivan has tried to give any news interest to binomials, or to make cheerful the necessary "facts about the square of the hypothenuse." A similar requirement in English would mean two things. In preparation for college courses in literature the boy would be required to know the elements, the stories of which literature is made, the myths and legends of the nations. In order to go on with composition, and to count his change in the conversational market place, he should know the English language.

For the first he should know "Æsop's Fables," and the standard stories from the "Arabian Nights." He should know Greek myths and heroes as he might learn them from Hawthorne, or from Church's "Stories from Homer" and "Stories from the Greek Tragedians," and the Roman stories and heroes from Livy and Plutarch. He should learn the mythology of the North, and the heroes of the nations, the Cid, Roland, Arthur and his knights. Above all, he should know the Bible, or at least the Old Testament stories. Perhaps this would be enough. If you begin on the "Tales from Shakespeare," "Pilgrim's Progress," "Robinson Crusoe," and "Gulliver's Travels," the gods would be in danger again. These might be left to teachers who wished to use them, or for college courses. In composition the requirement would be spelling, grammar, punctuation, sentence and paragraph structure, and some rudimentary ideas of unity and coherence; more, if possible, but these at least.

This should be a course in heroes, but not in hero worship. Teach the boy the facts as it were in history or geography, and let them be tested in the same way. Teach him to write on anything you like so long as he writes correctly. Leave the great books unspoiled for him; teach him the stories in whatever form you choose, tell them to him if you like without the intervention of any books. When he comes to college he will have a background for his teachers to fill in—at least, he will not say, as a student did recently, that Christ was the shepherd of King Admetus! Then let him learn to read appreciatively after he gets to college, if he has not picked it up for himself before.

This requirement is based on the assumption that, things being as they are, we are not likely to get both accuracy and appreciation in school classes, and what is more, that of the two we had better give up the appreciation. The other assumption, that we might better give up accuracy, is the basis of another plan which has been proposed. It acknowledges our responsibility to pupils who do not go to college, declaring that since the admission requirements shape the English courses in the schools, they should be so framed as to make a course that would be valuable to a pupil who goes no farther. The suggestion is that the admission examinations be based on a four year school course in English literature, consisting of appreciative reading of the main authors, with an adequate background of literary history and biography. Certainly, the theory of our responsibility to pupils who do not go to college demands grave consideration. The question is, whether or not, even with the list of books "for careful study" abolished, we can get appreciative reading in secondary school classes. Without appreciative reading such a course would tend to hasten rather than avert the threatened twilight of our literary gods. Might it not be better, even in the case of pupils who are not going to college, to lay a foundation for future appreciation, or, if the right teacher is at hand, to give them a glimpse of the gods in their glory in the last year of the course? Indeed, if the right teacher is at hand, there is no reason why appreciation of literature should not go with such a course as this paper has outlined. Most of the stories suggested can be had in good literary form, as in the case of Hawthorne's

"Wonder Book," or Plutarch's "Lives," and the book-loving teacher could make many excursions into the adjacent fields. The course is suggested as one which, in the hands of the hest teacher, would do all that we could desire, and in the hands of a less gifted teacher would do all that the colleges need require.

It is a plan, of course, to which many objections can he made, but to most such the answer is, that it is not supposed to be ideal—that has already been explained—hut a system that might work to the end we wish with the teachers and pupils we have. It would seem also to hring ahout the separation now called for between composition and literature. The call in itself seems a sign of the times, a sign that some of the teachers do not look to literature, but to some unknown source for models of excellence in composition. The proposal here set forth is meant, then, to be a working plan, possibly practical, certainly far from ideal, a desperate measure to postpone or avert the threatened darkness.

ROBERT P. UTTER.

Amherst, Mass., June 18.

CLEVELAND.

Yes, quietly; drumbeat, nor trumpet's peal,
Nor martial trampling, should the end proclaim
Of this great civic life; the grief we feel
No blazon asks; nor asketh aught his fame.

For his was that best courage peace tries best,—
Sedate defiance of all clamors shrill;
Scorn of mere shows; stern putting to the test
Of men and causes; and unconquered will.

His, therefore, is this solemn pause of all,
This deep remembrance of old ardors true—
Dear as our youth—in us who, at his call,
Bared stripling arms plain patriot work to do.

Silence, keep silence, o'er this wasted frame,—
Wreck of that burly strength which once he gave.
Better than drums, or outcry of his name,
Is silence—and the woman by his grave.

W. G. BROWN.

Washington.

Notes.

Naturally the announcement that John D. Rockefeller will hegin in Octoher to contrihute to the *World's Work* his "Random Reminiscenees of Men and Events," has caused some talk. There are people foolish enough to suppose that Mr. Rockefeller will divulge any of the things they would really like to hear from him.

The Frank Allahen Genealogical Company of this city announces a series of hiographies of distinguished Americans. Thc first to appear will he that of Gen. John Watts de Peyster, who died in 1907.

The forthcoming number of the *Dublin Review* contains an article on Shelley hy the late Francis Thompson, found among his papers. The essay is said to reveal unknown powers in Thompson as a writer of prose.

Not many authors whose achievement, after all, is so slight are honored hy so ample and handsome an edition as that in which David Nutt of London is hringing out the Complete Works of William Ernest Henley. Of the seven volumes which will make the set, four have already appeared, two of poetry and two of essays. The clear type and generous margins invite perusal, and, apart from any enticement so sensuous, there are many warm friends of Henley still living who have never been shocked by his so-called treachery to Stevenson, and who will prize this monument to his boisterous genius. Boisterous, we call it, although his verse, when needs he, can sink to a pretty, pathetic whisper. But the general effect on our ears, as we have gone through these four volumes, re-reading here and there his sufficiently familiar prose and verse, has heen something like that of a rebellious, hrawling brook, not deep and still or clear and melodious, hut noisy and fretful of its hanks. One likes a manly, fresh-air style; but through all Henley's writings runs a savage pursuit of the molly-coddle that grows monotonous after a while. One likes, too, a savage thrust at cant, British cant, now and then; hut Henley's unceasing praise of unredeemed human nature makes us prudish Puritans once more. He overdoes it. On the whole, these faults are less conspicuous in his verse than his prose, less insolent where he expresses his own emotions than in his critical essays, where his chief desire is to slash at the emotions of other. An admirer of Byron or of Burns, as we profess to be, would, for instance, almost lose his taste for those poets—or for Henley—after reading Henley's juhilation over their ways and his contempt for any one who may think they were a trifle more irregular than is necessary for the training of genius. However, these are the excesses of a free lance among letters, of a knight who slew his hundreds in a day, and gloried in the slaughter. We welcome this admirahle reprinting of his works—particularly of those essay-introductions which have heen almost inaccessihle heretofore.

Comparative statistics are not always pleasant reading, and those who have heen revelling in the figures of American foreign trade during the recent years of prosperity, will have their spirits dampened if they glance at the supplementary tahle of "Finance and Commerce of Various Countries" in the "Statesman's Year-Book" for 1908, just puhlished hy the Macmillan Co. They will not only read that the per capita exports of the United Kingdom are more than douhle those of the United States, which is hardly surprising, hut will prohahly rub their eyes to find that in proportion to its population the kingdom of the Netherlands exports ahout six times as much as our country and Belgium three times as much, while Switzerland is barely helow Belgium, with Denmark closely following. France, Germany, Norway, and Sweden are all ahead of us. Turning to the section on the Argentine Repuhlic, the most flourishing of our South American "neighhors," we discover hy a simple computation that its per capita exports are ahout three times as great as ours, which is a pretty good showing even when allowance has heen made for the agricultural character of that country.

Volumes XI. and XII. of Worthington C. Ford's monumental edition of the "Journals of the Continental Congress" (Washington: Government Printing Office), following close upon Volume X., complete the record for 1778. Until the end of June Congress was at Yorktown; then, on the second of July it once more met at Philadelphia. The year was one of unhroken occupation, with sessions twice a day during the later months. The French treaties arrived in May and were promptly ratified, except Articles 11 and 12 of the treaty of commerce; and a congratulatory address to the puhlic was presently issued. Gérard, the French minister, arrived July 10, and on August 6 was formally received hy Congress; not, however, without anxious discussion regarding the ceremony proper for the occasion. In Septemher, Franklin was chosen sole minister to France. The organization of the army made progress, so far as appearances went, with the appointment, May 5, of Steuben as inspector-general, while ten days later the complaints of the officers were met hy a vote of half pay for seven years after the conclusion of the war. The detention of Burgoyne's army continued to he a source of irritation, hut Congress refused to yield, and in Octoher the troops, who had heen detained for a year in Massachusetts, were ordered to Virginia, where they remained throughout the war. The persistent efforts of the British peace commissioners to negotiate first with Washington, then with Congress, and finally with individuals, ending in the failure of the mission and the puhlication hy Congress of parts of the correspondence, fill a considerahle space in the journal for several months. On the other hand, the pressure of the war is shown in the emhargo on the exportation of provisions; in the ominous depreciation of the paper money, which, notwithstanding the solemn exhortation of Congress to the people of the States, circulated at the end of the year at ahout one-eighth of its face value in specie; and in the sale of tohacco and other commodities in government hands for the payment of dehts. By the end of the year eleven States had ratified the Articles of Confederation. The Silas Deane controversy hegan with the arrival of Deane from France in July, although the formal inquiry did not open until August 15. On the ninth of December Henry Laurens, disgusted at the course of Congress in the matter, resigned the office of president, and John Jay was chosen in his place. Vol. XII. contains the usual index for the year, a list of committees, and a hihliography.

The second edition of Bliss's "Encyclopedia of Social Reform" (Funk & Wagnalls) has heen thoroughly revised, and in its way

will prove as serviceable as its predecessor. The editor is nothing if not zealous in his faith that almost any proposed change in the social order must be a "reform," and his work comes perilously near meriting the designation of a "Dictionary of Cranks." Yet just this catholicity of taste makes the volume a convenient work of reference on social movements of the day. Thus, too, it comes about that in its pages such "undesirable" reformers as W. R. Hearst, Eugene V. Debs, John P. Altgeld, and W. D. Haywood brush elbows with the very elect such as Jacob Riis, Lyman Abbott, and J. B. Reynolds. The prohibitionists, woman suffragists, anarchists, parlor socialists, trade unionists, single taxers, social settlers, and all the others are fully represented; and if there be any alleged reform that has been omitted, it has not come to the reviewer's notice. Particularly interesting are the statements of the creed of some of the reformers. Professor ———, we learn, "holds neither to individualism nor to collectivism, but avows as his creed social energism, of which the cardinal points are: minimization of wasteful conflict, maximization of coöperation, unleashing of human energy, diffusion of security, socialization of the higher goods of civilization, and conscious acceleration of progress." Mrs. ——— believes that "social life is organic, that industries are the organic functions of society, and that human work is not proportioned according to individual desire, but to the social energy previously supplied to the individual"; hence "she maintains that property rights inhere in the consumer's needs." Mr. ——— "believes that political economy should be enriched by dealing with ethical questions; and that all social reform grows out of new conditions, and must be treated from an evolutionary standpoint, ethics prevailing in the treatment." Somewhat more definite, if less inspiring, is the following:

> He belongs to no one school, except as holding to the ethical view of political economy. He favors the referendum and initiative, proportional representation, arbitration and conciliation, trade unionism, the nationalization or municipalization of natural monopolies, and the complete governmental control of currency.

From these samples the reader may infer what he is in for when social reform gets fairly under way.

"Homerica," by Mr. Thomas Leyden Agar (New York: Henry Frowde), is a portly volume of emendations and elucidations of the Odyssey—most of them ingenious, many plausible, not a few convincing. Mr. Agar believes that the language of the Homeric poems is not a medley, but fairly represents the speech of the Achæan people. The forms and phrasing were gradually and sometimes unconsciously modernized in the mouths of the rhapsodists, and it is the office of the critic in such cases to restore the true reading without athetizing entire lines or rejecting whole passages as interpolations. His emendations are especially directed to the restoration of the digamma, the elimination of the late article, and the banishing of the *hiatus licitus*, against which he wages a war of epigrams. He also replaces obscure by lucid expressions, smooths out anacolutha, softens hard constructions, abolishes anomalies and exceptions, and does away with ἅπαξ λεγόμενα of usage or meaning. Mr. Agar is no respecter of formulas. We thought that τὸν δ' ἀπαμειβόμενος at least was secure. But it seems that the original reading was more than possibly τὸν Γόπ' ἀμειβόμενος. Again, ἔρρε κακὴ γλήνη, "away slight puppet," is properly ἔρρε κακῇ γλήνῃ, "begone with the evil eye upon you." These specimens will suffice for the general reader. The Homeric student will find entertainment or edification on nearly every page of the book, which will doubtless receive from the philological journals the detailed consideration which we cannot give to it here.

"Ceylon, the Paradise of Adam: A Record of Seven Years' Residence in the Island," by Caroline Corner (John Lane Co.), makes no pretence of being more than an impressionist's journal. It is a sort of "my garden" book on a large scale. The reader incidentally learns a good deal about native life and something of Anglo-Ceylonese society, and is bored only by the authoress's insistence on her own gentility. But she is bright and can tell a good story well, and her book is "not half bad" even to those jaded by the too many sketchy volumes devoted to the record of unimportant happenings east of Suez.

Defenders of the faith have often indulged in searching criticism of the Church, and they may appeal to the example of Paul, as is done by the Rev. Washington Gladden in "The Church and Modern Life" (Houghton, Mifflin & Co.). Dr. Gladden's enumeration of the failings and weaknesses of organized Christianity is frank and thorough-going, yet he bears throughout a cheerful temper and appeals with confidence to young men to enlist in what he believes will be the most inspiring and successful campaign Christianity has ever waged. He sees immediately ahead a great struggle for the redemption of the social order and the Christianization of society, and he is persuaded that in this contest the Church will find more vigorous life and more glorious success than it has known hitherto. He does not advocate an alliance with Socialism, as did Dr. Walter Rauschenbusch not long since. As between Socialism and the reformation of the present "competitive régime," he says:

> The Church cannot commit herself to either of these methods. The best work she can do at the present time is to inspire men with a love of justice and a spirit of service. She must rear up a generation of men who hate robbery in all its disguises; who are determined never to prosper at the expense of their neighbors, and who know how to find their highest pleasure in helping their fellow-men.

Dr. Gladden's essay will make for sanity as well as earnestness in the current debate on the relation of religion and the Church to social reform.

Prof. Ferruccio Quintavalle's "La Conciliazione fra l'Italia ed il Papato" (Milan: L. F. Cogliati) has several claims to attention. It contains the correspondence of Father Luigi Tosti, of the Monastery of Monte Cassino, and Senator Gabrio Casati, one of the makers of United Italy and an intelligent Catholic, on the possible conciliation between Italy and the Vatican. Father Tosti, who was perhaps the most eminent Benedictine monk of the nineteenth century, was also an ardent patriot, and he hoped that first Pius IX. and then Leo XIII. might be moved to give up the political and worldly position which the Papacy inherited from the Renaissance. It is particularly interesting now, when another Pius has fulminated against modernism, to read the Liberal views of a great churchman whose orthodoxy was unchallenged. The value of the book is enhanced by Professor Quintavalle's study of the Roman Question from 1859 to 1870. In a monograph of 175 pages, which serves as a preface, he describes the conflict with unusual dispassionateness. He concludes that, although the popes are well aware that their Temporal Power has gone forever, they will long continue to withhold from the King in Rome their blessing, which Tosti prayed for, but which Quintavalle regards as undesirable until it shall be the prelude to a complete separation between Church and state.

The standard dictionary of modern German writers and literature, Kürschners Deutscher Literatur-Kalender, has appeared for the current year—the thirtieth issue. This volume brings excellent portraits of four prominent Berlin writers, Clara Cohn-Viebig, Adolf Harnack, Paul Hinneberg, and Ernest Vollert (Leipzig: Göschen).

The "Geographisch-statistischer Welt-Lexikon," by Gottlieb Webersik (Vienna: A. Harlebens Verlag), which has been appearing in parts during the last two years, is now completed, in a volume of 960 pages. It is a comprehensive work of reference, the data in terse form and easily found.

"Geschichte des Reiches Gottes bis auf Jesus Christus" is the title of a recent work by the indefatigable Prof. Eduard Koenig of Bonn (Braunschweig: Wollerman). It is the first volume of the second part of the Grundrisse der Theologie, a handy set of text-books, particularly for students. In this series, in contrast to the current critical views, the Old Testament books are regarded, not as an accidental collection of interesting literary remains of Jewish religious thought, but, as in the days of a Hengstenberg and Von Hofmann, the exposition of a divine plan of redemption.

Dr. Julius Moses has sent to a large number of prominent men and women of Germany four questions with reference to the Anti-Semitic or Jewish problem. He publishes ninety-nine of the replies, many of them practically brochures, and representing all phases of the subject, in "Die Lösung der Judenfrage" (Berlin: Verlagsbureau Curt Wigand).

Sir Edward Baldwin Malet, whose death is reported from London, was born in the inner circles of the diplomacy in which he was to pass his whole life. He was the son of Sir Alexander Malet, formerly British minister at Frankfort, and was born at The Hague in October, 1837. After studying at Eton and Oxford, he himself entered the diplomatic ranks in 1854 as an attaché on his father's staff. Presently he was transferred to Brussels, then to Rio de Janeiro, and again, in 1862, to Washington, where he held the post of second secretary. Other appointments followed in rapid succession, until 1895, when he retired on a pension. In 1900 he was made a member of the Court of Arbitration at The Hague. He was a frequent contributor to the periodical and daily press on subjects of political or general interest, and was recognized as an authority of wide infor-

mation and varied experience. In 1901 he published a volume of recollection, "Shifting Scenes," which had a large circulation.

From Milan comes the report of the death, in his sixty-first year, of Wilhelm von Locella, Italian consul at Dresden, and author of "Dante in der deutschen Kunst," "Friedensstift," and various books of reference.

Donald Wedekind, a dramatist and novel writer of Vienna, has just committed suicide, at the age of thirty-seven. His story called "Ultra Montes," a plea for Roman Catholicism, was at one time much talked of.

THE AGE OF LOUIS XIV.

The Cambridge Modern History. Volume V.: The Age of Lewis the Fourteenth, Planned by the late Lord Acton; edited by A. W. Ward, George W. Prothero and Stanley Leathes. New York: The Macmillan Co. $4 net.

As we have already discussed at length the general plan and characteristic features of this encyclopædic history, in notices of previous volumes of the series, the criticism of the present volume may be restricted to comments on the execution of this part of the design. The volume contains twenty-four chapters by just twenty-four writers. This does not, however, mean that every chapter is from a different pen. Four writers have each produced two chapters; but, on the other hand, several chapters have been divided into sections, which are the work of different writers. Most of the writers have not contributed to earlier volumes; and two of them, Prof. Émile Faguet and Mr. Kaufmann, belong to Continental Europe. The rest are Englishmen. The best known contributors are Dr. A. W. Ward (one of the editors of the work); J. B. Bury, professor of modern history at Cambridge (England); C. N. Firth, professor of modern history at Oxford; Prof. H. M. Gwatkin of Cambridge, England; Prof. Hume Brown of Edinburgh; and the late Sir Michael Foster, formerly professor of physiology at Cambridge, whose article treats of the history of science. Two chapters deal with literary history—one of the literature of France and its European influence (by M. Faguet), and one of the literature of the English Restoration. Three are devoted to ecclesiastical affairs, and one to physical science, while the rest are occupied with general political history. The plan of bestowing special treatment on intellectual and religious tendencies has thus been adhered to, and with good results; for these six chapters are among the best, and are certainly the most interesting to those readers who are not professional historians. The necessarily condensed narrative of political doings, of wars, treaties, intrigues, and so forth, must become somewhat dry and perplexing when the writer has not space in which to paint those details which make history picturesque, or to expatiate on those reflections by which it may seek to become philosophical.

Regarded as literature, this volume seems to us less effectively written than the first two were, and there are fewer contributors of first-rate eminence. Dr. Ward, however, succeeds by his skilful treatment in making the early history of Brandenburg and Prussia lucid and attractive, compressed though it is. Like praise may be given to the outline of the early growth of that principality of Moscow, which became the Russian Empire between 1462 and 1682. Mr. Bury handles his large and obscure subject in a broad illuminative way, explaining how the Muscovite Czardom came to develop into a despotism, not (as is commonly supposed) natural to the Slavic races, but due to special causes. Incidentally, he tells us something which the reader of to-day will find interesting about the Duma, or Council of Nobles, in the Russia of the sixteenth century. So, too, Mr. Gwatkin's short chapter on Religious Toleration is excellent.

We must again express our regret (generally felt in this country) that the copious bibliography has not been rendered more valuable by indications, however brief, of the relative value of the treatises enumerated.

From Moscow it was in the seventeenth century a far cry to Paris. In the period covered by this volume France dominated European politics, and Louis XIV. was the central figure on the stage of the world. His ambitions affected the whole of southern and central as well as western Europe. His domestic policy was decisive for the character of the administration of the country and the ideals of the French nation for some generations. The study of his personality presented by Mr. Grant seems hardly adequate, when one considers what a difference the personality of that one man made. It is not always the great men who are the most important. Louis was not a great man, but only a grandiose one. He seems all the less great because he strove to be great. Yet he would not have been nearer greatness had he been more modest. His pride and conceit helped him in one way, if they injured him in another. They made him more laborious and attentive to business, if they encouraged him to attempt things beyond the power even of France in the day of her strength.

Who were the great men of that age? Peter of Russia had some striking qualities, but he was a savage and sometimes came near to being a madman. Charles XII. of Sweden displayed extraordinary gifts, but now and then actually was a madman; perhaps not mad enough to require confinement in an asylum, but quite mad enough to deserve deposition from his throne. Oliver Cromwell was gone. William of Orange (William III. of England) was able, shrewd, tenacious, but does not rise to the sort of greatness which impresses our imagination. Neither does any one else among the statesmen of the eighty years between Cromwell's death and the accession of Frederick II. of Prussia. There are great men in other fields—Milton, Newton, and Leibnitz perhaps the most remarkable. But in the field of politics the most interesting figure is on the whole that of the elector Frederick William of Brandenburg, whom the Prussians call the "Great Elector"; and he is interesting not so much in respect of his personal gifts, though he was an able and vigorous ruler, as because he was the man who more than any one else (except his great-grandson, Frederick the Great) laid the foundation of the now mighty Prussian dominion. We have already referred to Dr. Ward's sketch, concise but complete in its way, of his character and career in pages which are among the most instructive in this volume, because they explain so much that becomes afterwards of significance in Prussian and therewith in general European history.

It is not a mere coincidence that the latter half of the seventeenth, and earlier half of the eighteenth century, were lacking in great men, as well as in great popular movements. One may describe it as the dynastic period of modern European history. The religious passions which had induced the internal convulsions of Germany, France, and England since the days of Charles the Fifth, and had given rise to so many wars between the leading states, were slowly dying out. They were strong enough in France to lead to the revocation of the edict of Nantes, an act whose hideous and gratuitous folly (for the Huguenots had ceased to be a political danger to Louis XIV.) is well traced in more than one chapter of this volume. They were strong enough in England to accentuate the resistance to the efforts of King James the Second to subvert the English Constitution, for it was fear of Romanism that forced even the clergy of the Church of England, who had been preaching the divine right of kings, to turn against the monarch who was putting their theory into practice. They were strong enough in Ireland to cause a civil war, and, indeed, in that unlucky island they are not yet extinct; for the Orangemen still celebrate with martial processions the anniversary of the battle of Aughrim, and the Roman Catholics are still with difficulty prevented by the police from attacking the processions. If, however, we except Ireland, one may say that before the middle of the eighteenth century religious differences had ceased to stir the minds of European peoples or induce wars between European Powers. The hundred years that lie between 1689 and 1789 were years in which no strong feelings, either ecclesiastical or political, swayed any nation. Except in England and her North American colonies, free political life had died out over the civilized world, and there were hardly any signs that it would revive. Accordingly, the monarchs had it all their own way. The wars which they carried on were waged primarily for personal or dynastic reasons, that a king might gratify his vanity by conquest; that a younger son or a daughter's husband might be provided with a principality; that some old-standing dispute about a frontier might be settled by the sword of the strongest. Sometimes considerations of commerce, and the acquisition of territories outside Europe, with which commerce might be carried on, had weight with sovereigns or their ministers. But Professor Seely, as sometimes happens with lecturers anxious to make their points, overstated the case when he argued that the wars between France and England in the first half of the eighteenth century were undertaken for the sake of colonial dominion. The results of the struggles which decided the fate of North America and India were more important as they affected those regions than as they affected Europe, but it was out of dynastic rivalries and am-

bitions, more than from views of a distant future, when the world should be parcelled out among the European races, that these conflicts arose.

The age of Louis XIV. and the age that followed down to 1776 were a time in which the mind of mankind was resting from conflicts of thought or sentiment. It was the epoch which saw the birth and the first quiet, steady advances of modern science. It was an epoch in which there was little first-rate poetry in any country, little enthusiasm, little ardor for any cause. But there was a good deal of forgetting and a good deal of acute thinking. Old things were passing away. The interest in theological doctrine, the vehemence with which questions of ecclesiastical organization had been debated, were silently declining. Feudal institutions survived in Continental Europe, but the spirit had vanished and left them an empty shell. Reverence for the crown had waned along with the reverence for the altar. The first revelation of the change that was passing in men's minds came with the outbreak of the American Revolution; and as soon as the success of the revolted colonies was proclaimed, every European thinker perceived that the same tendencies were at work in Europe, and must soon make themselves felt there. With 1789 there opened a new era in which first the principle of liberty, then the principle of nationality, finally the demand for social and economic equality, became the moving forces. The dynastic epoch was ended; popular feeling again asserted itself as it had done in the time of the wars of religion; but now the groupings of nations and the action of forces within each nation were different, because men were striving at first for the establishment of certain new ideas, then not only for new ideas, but for the material interests of classes. That France took the lead, becoming the exponent of the principles successfully asserted in America, was due not only to the predominant influence her writers had secured in the age of Louis XIV. and the sort of primacy in Europe she had then won, but also to the fact that the policy of that sovereign had, by shewing the faults of monarchy on a grand scale, discredited the institution of monarchy and made the Revolution begin in the country where opinion had been best prepared for it and where it was most wanted.

CURRENT FICTION.

The Bishop's Scapegoat. By Thomas Bailey Clegg. New York: John Lane Co.

An English vicar, in a creditable fit of rage, chokes a scoundrelly French adventurer in Paris, and hastens to England, leaving him for dead. Dr. Thibauld, whose wife has been seduced by the adventurer, comes in upon the dying man. He could save the blackguard, but, strengthened by righteous hatred, lets him die. Who is responsible? The English clergyman in his blossomy vicarage scans the Paris papers, but the murdered man had many aliases, and he finds no notice of the crime. The French doctor is tried, convicted, and transported for life to a convict colony in the South Pacific. From this point, the doctor's daughter, Cecile, becomes the significant character. Beautifully devoted, she follows her father into exile. In the vicissitudes of that life, she meets the son of the vicar—now bishop of the See of Capricornia—and they fall in love whole heartedly. The daughter of a murderer and the son of a murderer—there is a situation for you—and the bishop objects to the girl on the ground of her antecedents! Ultimately, the bishop and his scapegoat confront each other at the latter's death-bed. The story ends with explanation, forgiveness, and the union of lovers.

The plot scheme strongly suggests the "Winter's Tale"; a delightful scene of youthful romantic love framed in heavy tragedy. That is an exceedingly difficult thing to manipulate; the construction in this case is not perfectly satisfactory. One is irritated by a succession of rather inartistic surprises; at first, one is led to expect a story of the bishop's conscience; then, one decides that the misery of the convict is the theme; but the interest shifts again to Cecile and her lover. The author does not seem quite certain whether romance springs from passion or from adventure. He seems needlessly afraid that he will bore us if he keeps the story long in one place—rushes it, therefore, breathlessly from England to France, New Caledonia, and Queensland, Australia. There are bloodhounds, a tribal war, all manner of moving accidents by flood and field. There is tropical color, there are isles of unexpected plenty to delight a Swiss Family Robinson, there is the brave new spirit of the frontier. There are two capital characters—really memorable characters—Mary Ann Dubois, a motherly magnificent frontierswoman, and Cacalouch, a convict of indomitable Gascon valor and gayety. The book is worth reading; it is fresh, wholesome, and entertaining.

The Voice of the City: Further stories of the Four Million. By O. Henry. New York: The McClure Co.

Among the best of the twenty-five stories in this volume are: "The Harbinger"—a park bench loafer attempts to wheedle from his wife a dollar, which she earned by washing overalls, and, failing, regrets that he did not choke her in the first place; "The Memento"—an actress hopes to leave her profession and marry a minister, but, discovering that the holy man has preserved in a casket a disgraceful relic of her own life in the music hall, returns to the stage; "The Plutonian Fire"—a young man comes up from Alabama to New York to write fiction, and, learning that for fame he must exchange his character, returns home to sell ploughs for his father:

> I see the game now. You can't write with ink, and you can't write with your own heart's blood, but you can write with the heart's blood of some one else. You have to be a cad before you can be an artist. Well, I am for old Alabam and the Major's store. Have you got a light, Old Hoss?

It is interesting to watch "O. Henry" capering to the hurdy-gurdy of the mortal hour while with one eye he winks significantly at immortality. No man of his talents ever took more deliberate aim at the eyes of his contemporaries; his acknowledgment to the New York *World* and *Ainslee's Magazine* for permission to reprint frankly declares the shaping exigencies. These new stories of the four million are marked by the brutal materialism and the mordant cynicism which insured success to the "Trimmed Lamp." They begin with the same precision and end with the same whip-like snap. They are, if possible, even more pungent, acrid, and curt. To borrow an expression applied by the author to the rectangularity of the city streets, they "coldly exhibit a sneering defiance of the curved line of Nature." Yet, after hearing from so many quarters of soubrettes with the heart of St. Agnes and of bejewelled sinners sighing for home and mother, it is wholesomely corrective and refreshing to learn from one of the fraternity that "there ain't a sorrow in the chorus that a lobster cannot heal."

On the whole, it must be said that the voice of the city, as reproduced by "O. Henry," has a singularly phonographic and metallic quality. Blue in spirit, with the ugly din, one glances at the sphinx on the cover and hopes she has not spoken yet. Smart to the verge of genius, the style sacrifices too much to the hour. Admirers may call "O. Henry" the American Maupassant, but so long as he continues to hang so far over the abyss of slang they should put the accent on American.

My Lost Duchess. By Jesse Lynch Williams. New York: The Century Co.

"An Idyl of the Town" is the just subtitle of this pleasant and foolish tale. The hero is a young gentleman of the ex-college athlete type, who falls in love with a girl out of a club window. Some of his colleagues admire her, though not to his degree of ecstasy; and among them they dub her the duchess. Her progress up the avenue is "a triumphal tour." She walks a goddess, or would if the metaphor were good enough for her: "Imagine a rather heavy goddess trying to wear one of her bats." Of course she is a thoroughbred, and to be stared at as such. Presently it falls to our ex-athlete to rescue her somewhat emphatically from an impudent beggar, which is the beginning of their amatory engagement. She turns out to be (though of excellent family) acting as a governess and training for the stage. Diana is the heavy goddess whom she slightly resembles, and she by no means jumps at the rather cavalier advances of the young clubman. She disappears, and is discovered at the eleventh hour, on the eve of her début in a musical comedy. This will never do; our hero now asserts the man that is in him, and all is well. If Mr. Williams is a trifle too lively of fancy and broad of touch to produce a town eclogue of classical grace, he is by that same token more fit for the moment, more, as it is called, up-to-date.

Vayenne. By Percy Brebner. New York: The John McBride Co.

Again a Duchy is in turmoil. Again a Duchess is harassed. Again an Englishman comes to the rescue. But there are variants enough to provide the unexpected for even the reader well-nigh immune to surprises. Such for instance is the discovery that the Englisbman is the real duke, a revelation highly dishonorable to make here, if it were the final solution. For after all, he was the duke on his mother's side only, and Montvilliers was one of those duchies where, as the schoolboy put it, no woman

or son of a woman could reign. So that Roger Herrick's claim held good only if there were no son of a man to preëmpt it. Could anything be more fortunate for the weaving of a tangled web? What with a far-off bar sinister to invalidate other pretensions, what with a lovely Christine involved, and what with the will of the people being the final court of award, there is great stir in the duchy and in the residence city, Vayenne. Over and over when the climax seems inevitable, fresh intricacies arise, prolonging suspense.

As each new tangle in the game of cat's cradle is said to mark a new degree of civilization, so the game of untwisting principalities goes on and on, making records for our writers. The step beyond "Vayenne," who may foretell? Of its class it is a member in good standing.

Handicapped. By Emery Pottle. New York: John Lane.

Donovan O'Hara, who came of a well-bred mother,was handicapped by having a horse-trainer for a father. He had the bringing-up, the associates, and, on the whole, the tastes and morals of a horse-trainer. A foolish Southern woman, a friend of his mother, took him up, allowed him to drive her horses, sit at her fireside, and associate with her daughter. The author seems to think it a sign of good blood in Donovan that he saw the difference between this girl and the other women he had companioned, and promptly fell in love with her. Further evidence is furnished by the fact that the girl fell at least halfway in love with him. Of course, he was "impossible." A breezy Western girl, friend of girl number one, really would have liked to have him; but his mother's blue blood, we must suppose, kept him cold to her advances. Both girls trifled with him outrageously. In the end, the boy broke his neck, or some such matter, at a horse show in Madison Square Garden. The group of people who appear in these pages is united by a common love of horse flesh. When the book is not horsy it is "sexy." It is also rather dull.

American Philosophy: The Early Schools. By I. Woodbridge Riley. New York: Dodd, Mead & Co. $3.50 net.

Our gradual escape from the bondage of older theology has often been followed by historians; but we have not regarded our earlier philosophers as playing any very important part either in the emancipation from dogma, or in the formation of the national consciousness. And even Dr. Riley's elaborate and scholarly study leaves us still with a very modest estimate of the influence that philosophy exerted in the moulding of our American character. The old theology possessed its Jonathan Edwards—probably our greatest philosophical genius, if such genius be measured by the native power of the man to see what he had not been taught by anybody else to see, and to think without the guidance of the schools. But Edwards, at his best, was no reformer of speculation, and no creator of any great movement of thought. Our Revolution, moreover, had its Jefferson and its Franklin; but they helped us far less by means of their philosophical tendencies than by virtue of their other powers. Our Revolutionary movement had no Kant or Fichte to formulate the national ideal of freedom; and even our later transcendentalism, though it possessed its Emerson, was without a Schelling, or a Hegel, or even a Schleiermacher. For decades of the nineteenth century the blighting effect of the older text-books of Scottish philosophy helped to sterilize our college teaching. The influence of transcendentalism meanwhile remained too largely ethical and literary; and it was not until after Mill's empiricism and Spencer's Synthetic Philosophy, as well as German thought, had together influenced our youth for a generation, that we began to take our more serious part in the modern philosophical movement.

Yet early American philosophy is well worth knowing; and Dr. Riley has shown us that its processes were not so embryonic as we had so far supposed, and that, in a genuine sense, the principal tendencies of contemporary European speculation during the late seventeenth, and most of the eighteenth century, found their representatives on our own soil, in the work of men who have heretofore been far too much neglected. Dr. Riley says of his volume:

> Written almost wholly from first-hand sources, a large part of which exist only in manuscript, it attempts to reconstruct a period of philosophy but little studied and imperfectly understood.

This general characterization of the author's work is correct. He has already received, from many sources, hearty and deserved thanks for his book.

If one may, nevertheless, mention some of the limitations of the work, it seems fair to point out, first, that, like most studies made directly from sources, this volume is often somewhat burdened by weight of detail. Dr. Riley has made a serious effort to combine a judicial attitude towards whatever is doubtful in the interpretation with a clear portraiture of individuals and tendencies. Judicial his attitude always is. But as to finished and impressive portrayal he has succeeded unequally. For instance, in the chapter on Jonathan Edwards, Dr. Riley is very fair and considerate in his estimate of the problems that this wonderful man presents to the historian; but in drawing conclusions he is hesitant; and as a portrayal, the chapter leaves us dissatisfied. Dr. Riley's citation (p. 157) from James's "Varieties of Religious Experience" regarding the nature of mystical experiences, does indeed help us to a modern psychologist's views as to how Edwards may have come, unaided, to his early idealism. But, after some pages of judicious yet somewhat baffling analysis of the unquestionably problematic utterances of Edwards, Dr. Riley concludes:

> With this note of ineffability, denoting a certain metaphysical impotence, one may leave the writings of Jonathan Edwards. His unpublished manuscripts may afford some corrective to the grave deficiencies of his phllosophical system, but, until they are given to the public, one is forced to the abrupt conclusion that while the Saint of New England was a precocious idealist, and a profound mystic, he was not a consistent philosopher.

All this is disappointing. For while, as the whole history of thought shows, we may hardly expect an original philosopher to be wholly "consistent," especially if he is either "precocious" or "profound," we naturally look to our philosophical historians to help us to a new understanding of the personal unity that may lie beneath the inconsistencies of a notable man; and Dr. Riley, having labored so hard over Edwards, and having learned in a scholarly way to take account of the modern psychological studies of the "varieties" of individuals, might be expected to reach some less "abrupt"—and less commonplace—conclusion regarding the greatest man who is discussed in his book.

Another limitation of the work is its somewhat hazy historical perspective. Dr. Riley, to be sure, rightly regards our "early schools" as provincial representatives of the general movement of European thought. But he sometimes seems at a loss in linking this modern movement and its American representatives with the history of still earlier thought. The place assigned to deism (p. 23, and in later discussion) is an example. Here, to be sure, Dr. Riley is not alone. Other modern historians have similar views of deism. But why should one not remember that deism is only a modern form of that much older and always somewhat rationalistic interest in natural theology which played a most important part in the genesis of scholasticism? This interest took shape in what has been called the *Aufklärung im Mittelalter*—a tendency which classic scholasticism of the thirteenth century presupposed, and undertook to assimilate in the interests of orthodoxy, but in the end somewhat unwillingly transmitted as a heritage to the modern world. If one grants the really unquestionable pre-existence of this philosophical tendency, then deism appears simply as the form into which it was readily transformed as soon as the physical science of the seventeenth century had popularized a large number of new ideas about the natural world. Surely it is one thing to recognize that the originality of a few great men in Europe does indeed entitle us to date a genuinely modern philosophy from the seventeenth century. It is quite another thing to forget the continuity of European thought so far as to suppose that deism in theology was itself any essentially new tendency. The second chapter of Dr. Riley's book, on "Philosophy and Politics," despite many valuable observations, is much weakened by such imperfect historical perspective, well-founded as many of his observations are.

But a book must be judged by what it brings to us, and not by what it fails to bring. Fairly estimated, then, Dr. Riley's work does offer a large amount of new material, carefully collected; reported (so far as one can possibly judge) with great faithfulness and accuracy; judiciously estimated; portrayed without any of the familiar exaggerations which a collector's enthusiasm so often entails, and classified in a comprehensive and instructive way. The book covers substantially the whole pre-transcendental period. Several of the writers discussed are, in a measure, discovered, or rediscovered. Manuscript materials are frequently cited at length. Especially notable is the place accorded to the early philosophical movement in the South—a movement heretofore almost wholly neglected. In this connection, the materialistic tendencies in our early thinking receive a description which is almost entirely new. The extent to which theological liberalism and scientific studies affected both our colonial and our post-Revolution-

ary philosophical thought becomes for the first time manifest. Philosophy as it took part in the life of the older universities also receives a notable treatment. We shall not learn, through Mr. Riley's book, to form any extreme opinions regarding the originality or the power of early American philosophy. But we shall come to see how we took a wholesome part, so far as our social conditions permitted, in the intellectual movement of the period. We shall come to an increased respect for the civilization of the colonial days. And we shall await with interest the coming volumes in which Dr. Riley promises some account of later American philosophy.

Les Sources et l'évolution des Essais de Montaigne. Par Pierre Villey. 2 vols. Paris: Hachette et Cie.

Les Livres d'histoire moderne utilisés par Montaigne. Par Pierre Villey. Paris: Hachette et Cie.

It is of no small importance that the results of many recent studies of Montaigne's "Essais" should pass into the current of general literature and common knowledge, for it is becoming more and more evident that in many respects the great essayist has not been rightly appreciated. Of these researches the most intelligent and the most scholarly are to be found in the work before us. It opens entirely new, extremely interesting, and wholly trustworthy views; it is not a mere step but a leap toward the comprehension of the famous works and of their author. The special value of these three large octavo volumes lies in their elaborate record of the books read by Montaigne, a field hitherto only imperfectly known. The subject is treated by M. Villey with an appropriate width of learning and accuracy of erudition, rare in these days, and extraordinary in one blind from childhood. We are shown not only what books Montaigne read, but how and when he read them, what use he made of them, what was his judgment of them; and all this information is admirably arranged. Those books which, with very few exceptions, it is certain Montaigne read, are first set down in an alphabetical list of two hundred and seventy-one authors, accompanied by statements, sometimes in much detail, regarding each work and Montaigne's relation to it. Another arrangement of these works is then given, dividing them into classes according to their subjects.

An examination of these lists shows that if we leave out of consideration for a moment the influence on Montaigne's mind of his life-long admiration for the great poets, it may be said that he found his chief nourishment in works on social conditions, and the moral questions arising from them. His avowed desire was that the organization of his life should profit by what he read; all that did not aid him in this direction, all that did not touch him directly, was unimportant to him. M. Villey well says:

> Quand il s'assied devant son bureau, quand il tend les mains pour prendre ses livres, son but est d'abord d'étudier l'homme et les conceptions morales qui ont été émises sur l'homme; ensuite, de critiquer la raison humaine pour mieux connaître le fait moral et fonder solidement ses propres opinions.

The second part of "Les Sources" is concerned with the chronology of the "Essais"—a most important matter in considering them as an expression of Montaigne's differing tone of thought and his changing opinions at various periods of his life. Along this line, M. Villey is the first thorough investigator; and it may almost be said he is the last, for it is difficult to conceive of any future student surpassing him in his sleuth-hound keenness of scent, his eagle-eyed vision of the whole field, and his remarkable power of putting two and two together. These gifts are combined with extraordinary patience, and, better still, with the utmost care in asserting nothing that he cannot prove. The hypotheses which he is, of course, obliged occasionally to suggest are set forth with delightful open-mindedness; while, in combating the views of others, his unfailing courtesy is as marked as it is in complimenting his fellow-students on work very inferior to his own.

The second volume of that book is concerned with the evolution of the "Essais," and is solidly based on the previously built-up foundations. It treats first of the "impersonal" earlier essays, those written probably about 1572-3-4. These "impersonal" essays have never been carefully distinguished from the others. It has never before been shown, as is clearly done here, that when Montaigne first began to write, his intentions were wholly different from what later (but before he published anything) they became. M. Villey then takes up the personal essays, those written probably between 1579 and 1588. The volume closes with fifty pages on the deductions to be drawn from the passages added by Montaigne to the edition of 1588, which were incorporated in the posthumous edition of 1595. Here we learn the same sort of facts that we gathered from the first volume, but they are offered in narrative form, and are confined only to the years between 1588 and 1592, which gives them greater vividness and vitality.

The second book, "Les Livres d'histoire moderne," is a volume of 250 pages, forming, as it were, an appendix to the larger work, with cross references from one to the other. It is again the question of the sources that is treated of, and we have the examination of twenty-nine modern historians, whom it is evident Montaigne had read. The notices here of these authors, who are all mentioned in the larger volumes, are fuller than there; and these pages, together with an appendix on the ancient Greek historians read in translations by Montaigne, and a table that indicates for each of these authors the period at which Montaigne read them and the amount of his borrowings, give the reader the clearest possible impression of the general scope of Montaigne's historical interests.

It will be seen from this very inadequate résumé of these three volumes that while the field they reap seems at first glance to be somewhat limited, the harvest is abundant and rich. The intellectual life of a great moralist whose influence has been and continues to be world-wide, is here recorded by an accumulation of disconnected facts which change their nature from their very number and become an organic whole.

The work, lately presented at the Sorbonne and received with high praise by the most competent judges, has obtained for its young author the diploma of *docteur ès lettres.*

Our First Ambassador to China: The Life and Correspondence of George, Earl of Macartney. By Helen H. Robbins. New York. E. P. Dutton & Co. $5 net.

The story of British trade with the Chinese is a varied one. So far from being a march in steady progress, it has seen many vicissitudes and setbacks. Now that Britain's supremacy in trade is threatened by the rivalry of nations hardly known on the seas in Macartney's time, the story of his experiences in China are of singular interest. Before his advent the "carrot-pated race" had hardly respectable standing with the Chinese; but his visit enlightened Peking as to British power. Now, in this book, thanks to a woman's research, patient and full, through family papers, state documents, and personal writings of Earl Macartney's companions, we have a pleasing picture of an eighteenth-century English nobleman's active official life. Added to this is his own journal kept in China, richly annotated by Miss Robbins.

The China seen by Macartney in 1792-1794 was little more than midway in point of time between the Manchu conquest and the present year. Hence the effect is that of a book dealing with new territory, even though the reader runs across many a famous saying or statement hitherto read as quotation: for example, (p. 386) we meet this familiar acquaintance:

> The empire of China is an old, crazy, first-rate man-of-war, which a fortunate succession of able and vigilant officers have contrived to keep afloat for these one hundred and fifty years past and to overawe their neighbors merely by her bulk and appearance. But, whenever an insufficient man happens to have the command on deck, adieu to the discipline and safety of the ship. She may, perhaps not sink outright; she may drift some time as a wreck, and will then be dashed to pieces on a shore; but she can never be rebuilt on the old bottom.

Here is a high compliment to the abilities of the first Tartar emperors; and the next sentence contains the cue to that rather stagy British talk (even to book-titles by admirals), continued ever since, on "The Break-up of China." But to cripple the power emanating from Peking and to destroy the Chinese social system are two vastly different things. Tartar and Chinese were not then, as now, virtually fused into one people, with the ancestral and racial, social and official lines of demarcation nearly obliterated. Indeed, these were almost as distinct as those between white and red men in our country. Many of the mandarins who impressed the earl most profoundly were pure blooded Tartars. This old China, as we see it pictured by Macartney, seems almost as different from the body social, economic, and politic of to-day, as was the old Japan, official and popular, seen and described by Townsend Harris, our first envoy to Nippon.

Even apart from Macartney's work as pioneer of British diplomacy in China, we have in this book a delightfully accurate and readable picture of the official life of a statesman rich in many gifts. Born May 14, 1737, of ancient lineage, Macartney early enjoyed what comes to the student, lover,

husband, and inheritor of rank and fortune. Then he "broke the bonds of effeminate love," and planting new passions in his breast resolved in future to be "a British person with a Roman soul." How he carried out his ambitious plan is admirably detailed in these pages; as a member of Parliament, as Chief Secretary for Ireland, or as a representative abroad he served king and country. He was Governor of Grenada, President of Madras, and Governor of the Cape in South Africa; he was also employed in missions to Russia, China, and Italy. Through all these chapters the mastery of details lends the narrative continual charm.

The American interest is notable, for Macartney's era was that of George III. Macartney regarded the war with America as most disastrous to true British interests. Especially did Lord North's methods with America seem to him "a constant see-saw of menaces and flattery," and when hostilities broke out he denounced "this Tartar kind of war."

Astonishingly free from lapses of pen or errors of types as this book is, we note (p. 462) the misspelling van Breams, for van Braam, who, besides belonging to the Dutch family that furnished George Washington's military instructor, made an embassy to China in 1795. With finest English paper, print, binding, and illustrations, especially the portraits, this book is both readable and valuable.

A Star of the Salons: Julie de Lespinasse. By Camilla Jebb. New York: G. P. Putnam's Sons.

A great deal of matter has been lately printed in English relating to Mlle. de Lespinasse, in the wake of "Lady Rose's Daughter," and this latest addition is in substance an informal "doing into English" of the biography, already officially translated, of M. de Ségur. It makes, however, with its twenty illustrations, a fresh and delightful contribution to the subject. These pictures, chiefly from paintings or engravings of the period, help to put Julie de Lespinasse back into her Regency and *philosophe* setting, where she may be understood, and, no doubt, excused. Greuze's portrait of the little Mademoiselle de Courcelles, who married the Comte de Guibert, Julie's lover, and who herself published Julie's letters to the Comte, is a clearer explanation of the enigmatic parts of the story than pages of special pleading. She looks both charming and good.

After the illustrations, the chief merit of the book is in the author's gusto and narrative skill. She is elated with her subject, and her subject, in turn, which has both complication and action, carries her along. Thus she focuses on her heroine what she has to say of town and country life, convents as genteel boarding-houses, dress, education, and manners under the Regency. Julie's father provided for her narrowly and treated her harshly. She yielded, however, to infatuation for his sister, her aunt, Madame du Deffand, went with her as a social assistant to Paris, where, after some years of decreasing confidence on both sides, occurred their picturesque quarrel. After this Julie set up a personal salon, kept house with d'Alembert, loved first the dying Marquis de Mora, then the Comte de Guibert, who was thoroughly alive, wrote her letters to both, suffered greatly, and died at the age of two and forty, probably of consumption, opium, and remorse.

It is possible that her chief interest for us still, as for her contemporaries, is not in her letters and the dingy romance they reveal, but precisely in her salon, in the men and women whose friendship she won and enjoyed. One is always gratified by an occasion for meeting Mme. Geoffrin, Mme. du Deffand; and Turgot, Malesherbes, and d'Alembert increase our respect for Julie, and raise the tone of her history. To d'Alembert, indeed, Mademoiselle de Lespinasse owed most of her reputation. To his guidance may be traced the progress she made towards redeeming her bad moral inheritance and education. That, under the influence of Rousseau and "Clarissa Harlowe," she betrayed him and the deist principles of personal conduct, is the tragedy of her career. D'Alembert, a sincere man and, naturally, not an emphatic writer, says poignantly, in his portrait of himself:

> L'amour a presque fait le malheur de d'Alembert; et les chagrins qu'il lui a causé l'ont dégoûté longtemps des hommes, de la vie et même de l'étude.

There was surely in Julie's lapse a special shock for a doctrinaire. The affair with the Marquis de Mora—as Sainte-Beuve says, the man of real delicacy and distinction—seems, from Julie's side, twanging on the double strings of sensualism and cupidity. She went on to play Clarissa to Guibert's Lovelace, consciously, if not deliberately. No doubt she was better, *valait mieux*, than her actual conduct; the phenomenon may be observed among those sentimentalists of to-day who attempt to deal with life in the spirit of art.

Memories of Eight Parliaments. By Henry W. Lucy. New York: G. P. Putnam's Sons. $2.50 net.

Mr. Lucy divides his memories into two classes, which he labels respectively "Men" and "Manners." The men include five prime ministers—Gladstone, Disraeli, Salisbury, Rosebery, and Balfour—and Chamberlain, John Morley, the two Cecils, Lord Courtney, and Lord Randolph Churchill. His method is rather rambling, his material miscellaneous. Both vary greatly with the different personages whom he treats of. Thus Gladstone and Disraeli are already figures of the past, about whom he can and does speak with candor; but we feel that in the case of the living men Mr. Lucy is consciously or unconsciously reticent. He makes them out too indiscriminately "fine fellows." A stranger would hardly suppose that Mr. Chamberlain, for instance, earned a reputation for unscrupulousness which his apologists have never succeeded in explaining away. The only elaborate portrait which Mr. Lucy attempts is that of Disraeli, which is, however, a discursive narrative of episodes in that extraordinary career, with quotations from his speeches and some of his witty flings, rather than an orderly biography or an analysis of character.

But after all, the value of Mr. Lucy's book lies precisely in its informal miscellaneousness. It represents what an acute observer has seen and heard during the forty years he has frequented Parliament. He is no ordinary reporter. He can, on occasion, write descriptive passages of great vividness. He hits off in a phrase which you do not forget the way of speaking, or the gestures, or the deportment of the celebrities we have mentioned, and of dozens of other M.P.s besides. The historian will have to go to him over and over again to get the snap-shot picture of some exciting scene in the House. "Tobey, M.P." is not only a keen observer, but a wit withal, as readers of *Punch* are aware: and his wit serves to enliven his account of even obstruction and routine proceedings. Although Mr. Lucy draws no new portraits of the political leaders of the past forty years, he does throw upon them many side-lights, and helps us to fill out, or refresh our estimate of them. Above all, he gives us the atmosphere of the House, its various moods, its hobbies and prejudices, which account for its action much more than the superficial suppose. Such information is always hard for the historian to recover after the generation has gone to which it was an every-day matter. The election of 1906 marked the end of an era in the British Parliament. With the influx of members of classes hitherto unrepresented at Westminster, a new atmosphere is already discernible, and in time new practices will replace the old. It is fortunate that Mr. Lucy, saturated with the old traditions, should chronicle them.

His chapters on "Manners" deal with the humor of the House of Commons; its dramatic possibilities—as in the Bradlaugh and Irish episodes; and in the average decorum—or lack of it. An American reader, who has had to blush for the blackguardism that occasionally breaks out in Congress, may take a sort of *tu-quoque* satisfaction in reading Mr. Lucy's account of some of the rowdy scenes which have disgraced the House of Commons. Until quite recently British M.P.s were assumed to be technically "gentlemen," a fact which makes their performances all the more discreditable. It was Tory "gentlemen," and not Radicals or Laborites, who grossly insulted Mr. Gladstone, despite his four-score years, in a scene to which Mr. Lucy refers several times.

The description of the routine proceedure in Parliament and in Congress should be equally interesting on both sides of the water. In general, Mr. Lucy finds Congress much more businesslike and expeditious—*mirabile dictu!*—than Parliament. The presence of the Leader of the House and of Ministers on the Treasury Bench, and of the Leader of the Opposition and his chief colleagues on the front bench opposite, gives a dramatic, personal interest to the sittings of Parliament; but Mr. Lucy regards the custom which requires ministers to sit on the floor of the House and to hold the fort against every assailant, as a great waste of time and energy. Mr. Lucy concludes—*pace* the Hon. Gamaliel Bradford—that it would be better for the country and for the dispatch of business if British ministers attended to their departmental duties in their respective offices.

We have touched upon only a few of the many points of interest in the book; but these should show what a variety of entertainment Mr. Lucy has to offer to cul-

tivated American readers not less than to his own country people. His collection of bulls uttered in Parliament contains some marvellously amusing specimens.

The Court of Philip IV. By Martin Hume. New York: G. P. Putnam's Sons. $4 net.

The question of the relation of the great political and diplomatic epochs of a nation to those of its supreme achievements in literature and art, is one of the most interesting that confronts historians. If the England of Elizabeth is an example of the coincidence of the highest national and intellectual accomplishment, the Spain of Philip IV. is an equally significant illustration of the way in which literature and art sometimes attain their greatest glory in an age of national decadence. There is no more dreary chapter in modern European history than that of Spain under its last three Hapsburg Kings: an absolute, though decentralized despotism, but with monarchs unwilling and unable to exercise the sovereign powers with which they were clothed, a fond clinging to antiquated ideals in politics, economics, and religion, from which all the rest of Western Europe had long since parted, and an unexampled moral and social corruption—these are the salient features of the national life. But in the midst of all this we find the most corruscating intellectual and artistic brilliancy. Cervantes, indeed, had passed to his grave before the fourth Philip had come into his vast inheritance, but Lope, Calderon, and Quevedo reached the height of their fame during his rule, the name of Velasquez associates itself with those of Olivarez and Philip IV., well nigh to the exclusion of all others, and that of Murillo scarcely less.

It is with this brilliant period of national decline that Major Hume's most recent book deals. It is a picture of the characters and conditions of the time rather than a history, and on the whole he has succeeded well. The errors and inaccuracies which have so seriously marred much of his historical writing and also his editing of the Spanish Calendars are by no means absent here; they reach their climax, as usual, when Major Hume attempts to treat of non-Spanish affairs, and are significantly illustrated by his making the Elector John Frederick of Saxony, who died in 1554, a participant in the Thirty Years' War (p. 248); still, in a work intended for the general public rather than the specialist such blemishes are not of capital importance. A more serious fault of the book is its redundancy; the court festivities, the amours of the King, the ruinous foreign policy, and the dearth of resources are all described over and over again. On the other hand a good deal more might have been made of the dominant figure of Olivarez, especially his attempt at constitutional and administrative union of the different nations which composed the Iberian peninsula, and which were held together, up to the accession of the Bourbon dynasty, solely by the fact that they had the same sovereign. The account of the visit of Charles I. and Buckingham to Madrid naturally occupies a prominent position in the book, and is very well done, and the story of the relations of England and France to Spain in the last fifteen years of Philip's life contains some new and interesting material, though we fancy that Major Hume has not quite grasped the full significance of the results for Spain of the policy of Louis XIV. in getting Charles II. of England into the last struggle for Portuguese independence by arranging his marriage with Catherine of Braganza. On the personal side, the description of the relations of Philip with the Nun of Agreda forms perhaps the most valuable part of the book.

Students of the history of the France of Louis XIV. will be interested to note the number of customs of the court of the Grand Monarque which had their counterpart and precedent in Spain. Major Hume's description of the daily appearance of Olivarez in the bed chamber of his master before the latter got up, of his standing by while the King dressed and handing him every separate article of clothing, reminds one irresistibly of Versailles and of the elaborate exposition of "l'ordre du lever et du coucher" of Louis XIV., which occupies no less than fifty pages of "L'État de la France," the official publication of the household of the Roi Soleil. It could scarcely have been otherwise. Louis himself was more than half Spaniard, his wife was the daughter of Philip IV., and Spanish influence had at times been very powerful in France since the death of Henry of Navarre, though the two nations were often at war. That a large majority of the court customs and ceremonies which are usually associated with the reign of Louis XIV. are of Spanish origin there is hardly room to doubt, and the student of comparative literature and art will hardly be at a loss to discern equally noteworthy evidences of Spanish influence on seventeenth century France in his field as well.

The New York of Yesterday: A Descriptive Narrative of Old Bloomingdale. By Hopper Striker Mott. Pp. xxvi+597; 78 illustrations, diagrams, and maps. New York: G. P. Putnam's Sons. $10.

In 1906 the Bloomingdale Reformed Church celebrated its centenary. Among its officers was Hopper Striker Mott, descended on four sides, so to speak, from the original founders of the church, the members of the first consistory, Andrew Hopper, Jacob Harsen, James Striker and Philip Webbers (not to speak of his relation to the Motts of Bloomingdale). To Mr. Mott, as was eminently fitting, the church delegated the publication of a book which should be both a history of the church and also of the region in which it is situated. Bloomingdale, it should be said, is the old name for the west side of New York, from Twenty-third Street to Manhattanville, or the neighborhood of One Hundred and Twenty-fifth Street, and particularly for the upper two-thirds of that region.

With the exception of the Battle of Harlem Heights, the history of Bloomingdale is peaceful and, to the outsider, rather uninteresting. As becomes the name, it was, before the city overran it, a region of comfortable country homes and farms. To some of the old places, which he describes at considerable length, Mr. Mott contrives to give a larger interest, by connecting them with men whose names are known outside the limits of New York. At the foot of the present Ninety-sixth Street, a little cove set in from the Hudson (always known to New Yorkers as the North River), called Striker's Bay, from the mansion built there by Gerritt Striker in 1764. Before the middle of the nineteenth century this house had become a popular tavern, kept at one time by Joseph Francis, famous later as the inventor of the lifeboat. It was a favorite resort of not a few of the literary men of the day, among others of George P. Morris, whose poem, "Woodman, Spare that Tree," was inspired by the rescue of one of the grand old elms of Striker's Bay from the axe of a too materialistic denizen of Bloomingdale. Poe, moreover, at the time when he wrote "The Raven," was living with his "child wife," Virginia Clemm, in a cottage at Eighty-fourth Street, only about three-quarters of a mile away, and Striker's Bay was the frequent goal of his rambles. Bloomingdale was for a time the home of prominent French refugees, Louis Philippe, Mme. d'Auliffe, lady of honor to Marie Antoinette, and others residing in the Harsenville neighborhood, Seventy-first Street and thereabouts, during their exile. Here Louis Philippe is said to have taught school. Teaching was a favorite profession of the generally impecunious exiles; and one of these French schools, that of Mme. Petit, became very well known. All the feminine élite of New York were trained here, and one of Mme. Petit's sons married a Livingston. Of all the old time residences, which Mr. Mott carefully identifies, practically the only one still in existence is Claremont, near Grant's Tomb, built by Michael Hogan, about 1806, occupied for some years by Lord Courtenay, and now used as a restaurant, the property of the city.

To the native of New York city, this work possesses real value; for Mr. Mott has gathered from personal and family recollections, property records, and maps, and vital statistics as kept by the Bloomingdale church, matter that affects many families. The book, of which only 500 copies are printed, from type, is handsomely made, a thick and sturdy volume, as becomes its Dutch ancestry. The illustrations are numerous, and some are very interesting.

We note a few inaccuracies, which, while of no great importance, are the more exasperating because they might easily have been avoided. The Howland mansion (p. 16) is described as standing at the northeast instead of the southeast corner of Eighty-sixth Street and Riverside Drive; the present location of the school of the Collegiate Church (p. 109) is given as Seventy-sixth Street and West End Avenue, instead of Seventy-seventh; the Whitlock mansion (p. 24) is located at One Hundred and Eighteenth instead of One Hundred and Tenth Street. But, in general, the statements are correct and may be recommended to the confidence of the antiquarian.

Modernism. By A. Leslie Libbey. New York: Charles Scribner's Sons. Pp. xviii+227. $1.75 net.

Pope Pius X believes that Modernism must be condemned in order that the Lord's flock may be fed. It would, however, be another of the interesting tricks of history if the condemnation expressed in his encyclical *Pascendi dominici gregis* should accomplish his aim in a manner he neither intended nor desired. Already there are

signs of this possible result. At first, the denunciation was received by the devoted priests against whom it was primarily directed as a serious blow to religious progress, while it afforded momentary amusement for an intellectual and skeptical age. Its later effects have been different. For Modernism, even now, excites curiosity, not merely as a thing obnoxious to authority, but as a movement imparting courage to the progressive of all denominations and challenging the interest of the skeptical. The Pope's encyclical has thus directed the attention of intelligent persons, whether religious or not, to a view of religion and its place in the wodern world which abundantly repays serious study.

To the literature of Modernism, Mr. Lilley's book is a notable contribution. It is remarkable for the lucidity of its exposition and for its complete freedom from intellectual and religious frivolousness. It is genuinely philos phical and thorough in its understanding of persons and problems. Superficially the book is, with the exception of a few chapters, a collection of occasional notices previously published in the *Guardian*, the *Speaker*, and the *Commonwealth*. Their selection and chronological arrangement give, however, to the work a progressive and dramatic interest. They cover a period extending from October 1902 to December 1907, and combine with exposition of the movement contemporaneous comment on its progress. The concluding chapter, a critical examination of the encylical *Pascendi*, reveals with a sort of dramatic culmination the pitiable incapacity of the authors of that document to understand what they condemn. The whole is preceded by an introductory account of the movement which the succeeding chapters discuss in detail. The book gains additional interest from the fact that it is written by a loyal member of the Church of England and is dedicated to Father Tyrrell.

But what is Modernism? For answer we summarize a few of the leading ideas to which Mr. Lilley has directed attention. It is improperly called Modernism if it is really to merit what Mr. Lilley has called the Pope's "lyrical outburst of horror," *Procul, procul esto a sacro ordine novitatum amor.* It is rather a very old conception of religion and theology, and modern only in the sense that it attempts to speak to the modern man in the language and ideas of modern times instead of in a language and in ideas which he has discarded and which few can longer understand. Its criticism of the church is, thus, not that she no longer has the words of eternal life, but that she no longer utters them in intelligible speech. Her symbols are not convertible into ideas with which the modern man is familiar. They offer him no meaning which he can think out. By neglecting to recognize this fact the Church puts herself in the ridiculous position of making faith depend upon the acceptance of the unintelligible. She thus fails in her ministry and invites the contempt instead of the loyalty of modern men. They ask of her the words of eternal life and she replies in the propositions of a discarded philosophy. The sense, therefore, in which the term Modernism is appropriate to the movement resides in the demand that the message of faith should be made intelligible in terms of modern ideas.

Such a demand involves an initial conception of the relation between faith and knowledge. Mr. Lilley consequently points out that as a preëminently religious movement it owns kinship with mysticism. It is not, however, a mysticism which substitutes for knowledge the confused rhapsodies of faith, but a mysticism which confidently and instinctively believes that there runs through nature and history the continuous and progressive revelation of an absolute divine reality, and that knowledge, consequently, is the natural complement of faith and the means by which faith is interpreted in terms adapted to the understanding of any age. The dogmas of theology are, therefore, not the objects of faith, but its formulations, and are always relative to the extent of man's knowledge at the time of their making. The Nicene Creed, for example, expresses the faith of a period in the terminology of that period. The dogma of transubstantiation can be an acceptable expression of the mystery of the mass only so long as philosophy supports the doctrine of substance and accidents on which the dogma is based. Thus while faith is regarded as the fundamental spiritual activity of man, it does not thereby make knowledge unnecessary or unimportant. For knowledge "must not only affect the form of faith, but even assist in evoking its rational content."

Modernists, therefore, regard the claims of any religion to supremacy or of any religious institution to be authoritative, as claims which must be judged, on the one hand, by an appeal to history, and, on the other hand, by an appeal to contemporaneous service. This view gives content and method to their apologetics. Only by showing two things, namely that the Church has been supremely the possessor of a continuous revelation and that she has still a living message, can her position be made secure. She should, therefore, not only welcome critical studies of her historical foundations, but should actively promote them. It is inconsistent, Modernists maintain, to appeal to history and yet refuse to criticise the documents of history. Such inconsistency is really the admission that the Church cannot be defended on historical grounds. And if the Church is to be defended on the ground of contemporary service, she should be noted for her impress on the forces which stir the modern world. Has she promoted justice? Has she helpfully influenced science and democracy? By such questions Modernists would recall the Church to what they believe to be her present duty.

Although Mr. Lilley has confined himself in this volume to comment on the Modernist movement in the Roman Catholic Church, and more specifically to the exponents of that movement in France, he has made it clear that Modernism is a movement affecting the whole of Christendom. There are, doubtless, points in its philosophy which cause serious difficulties, but there can be little doubt that its appraisement of the place of Christianity in the modern world is of decided inportance These Modernists recognize that Christianity has lost, in large measure, the control of modern life, but they find the reason to be, not the wickedness or worldliness of men, but the ignorance and inefficiency of the Church. Severe critics of organized and dogmatic Christianity find their criticisms voiced by Modernist writers. What the world has been saying of the Church, distinguished members of the Church are now repeating. But they are repeating it with no abatement of religious faith or zeal. It is apparent, therefore, that they are securing for themselves an attentive hearing, and that they will meet with a hearty response if they have any genuinely positive and vital message for our time. The world at large is not surprised at their condemnation by authority; it is, perhaps, little interested in the details of their philosophy; but, just because they seem so clearly to understand the function of religion, it will be increasingly interested in their spiritual work.

The Philosophy of Loyalty. By Josiah Royce. Pp. xiii.+409. New York: The Macmillan Co. $1.50 net.

This homily of mine about the vanity of the lust for power is, of course, a very old story. You may think these remarks but wearisome moral platitudes. But we all have to learn this sort of lesson sometime afresh, and for ourselves (p. 91).

This incidental comment of Professor Royce may serve as an apt characterization of the lectures which he delivered before the Lowell Institute in 1907, and which have now been published under the title of "The Philosophy of Loyalty." The lectures are homilies. They contain philosophy, Professor Royce's philosophy of an absolute experience defined in terms of our own finite and partial experiences and yet including and completing them; but the homilies aim primarily at edification. Loyalty is defined and reasons are given for its worth and stability, but the burden of the book is, *Be* loyal. Moreover, the injunction is urged without pessimistic complaint or bitter denunciation. It is urged rather with a winning confidence in the attractiveness and supremacy of whatsoever things are of good report.

Although the term "loyalty" adds some novelty to the narrative and some emotion to the appeal, the "philosophy of loyalty" is the story of devotion to laws in which "the power of God is mighty and groweth not old." For what is loyalty? It is defined progressively. We begin with "The willing and practical and thoroughgoing devotion of a person to a cause," and end with "The Will to Believe in something eternal, and to express that belief in the practical life of a human being." The supreme virtue is, consequently, "loyalty to loyalty," and our duties are interpreted as special instances of its exercise. So "we want loyalty to loyalty taught by helping many people to be loyal to their own special causes, and by showing them that loyalty is a precious common human good, and that it can never be a good to harm any man's loyalty except solely in necessary defence of our own loyalty" (p. 215). Assuredly it is an old story! And the same thing is said so many times. Yet it is said with such mastery of the art of skilful repetition that the appearance of progress is often secured.

Reading the book has not led us to question the general soundness of the philosophy of loyalty. It has led us, however, to ask, Why is the preaching of moral platitudes which are true, elevating, and historically sanctified, so ineffective? Why do we lay down the book with the impression

that the vital point has, somehow, been missed, that the "world still lies forlorn"? For ourselves we answer thus: We need, no doubt, to see the beauty of loyalty portrayed and to feel the pressure of prophetic exhortation, but we need knowledge more. We need the information necessary to make loyalty intelligent and effective. So when we ask, for example, how can we best deal with social unrest we do not relish the reply, Help many people to be loyal and harm no man's loyalty except in necessary defence of your own. We want to be told about the causes of unrest, its extent, its intensity, the tested or probable efficacy of measures of relief. We want to know who or what is to blame. Such demands indicate the moral temper of the times.

Science.

The Shell Book; a Popular Guide to a Knowledge of the Families of Living Mollusks, and an Aid to the Identification of Shells, Native and Foreign. By Julia Ellen Rogers. 8 color plates, 96 black and white. (The Nature Series.) New York: Doubleday, Page & Co. $4 net.

In conchology some book of this sort, sufficiently extended to afford a *coup d'œil* of the subject, and dealing with American aspects of the science, has long been desired. Names count, and a shell named and put in position becomes a scientific acquisition. It has a new value and a larger meaning. And when the previously nondescript assemblage of specimens assumes the dignity of a related series of objects expressing ordinal, family, generic, and specific distinctions, the former vagrant along the beaches becomes a student and an investigator.

Miss Rogers's book supplies, therefore, a real need, and it comes beautifully printed and liberally illustrated. The style is graceful, not without touches of pleasant fancy.

In the preparation of a shell book three aspects of conchology enforce attention: the biological, the purely systematic, and the zoo-geographic (*i. e.*, the distribution of shells over the earth, and in its oceans, with a discussion of their faunal and palæontological relations). Of these three Miss Rogers has wisely selected the second as her dominant theme, and has written a guide to shells as we might find them in a cabinet, giving, of course, their habitat, some symptomatic glimpses into their life-history, and now and then an anecdote or a description.

There may be known to science to-day over 60,000 species of shells, and one might well doubt the practicability of preparing a serviceable descriptive nomenclature. It is obvious at the outset that a shell book must be selective, and that such a selection may be guided by distinction (beauty, size, frequency, etc.), or by locality. Generally, the most concise and useful results are attained by local circumscription, as in Dr. Keep's "West Coast Shells," and no more desirable work could be engaged in than the compilation of just such illustrated manuals, if pleasingly and authoritatively written. It is, indeed, possible to enumerate and describe the species of one genus or several related genera—as Hidalgo is now doing with Cyprea—but such a partial glimpse would hardly deserve the name of a "shell book." For the widest dissemination of knowledge, embracing a typical conspectus of the larger and cosmopolitan families of shells, there is an advantage in Miss Rogers's method of selection by "distinction," modified, for American purposes, by "locality," with an observable attention to families conspicuously popular, and with some reference to industrial importance. The book opens with two generalized chapters, "How to Know Shells," and "The Balanced Aquarium and the Snailery," which might have been somewhat enlarged by a broader description of the habits, distribution, and ecology of shells. In this section there are inserted two most attractive landscape photographs, one from Florida and one from central New York. Then follows the description of a typical shell, and the organs of its mollusk, and after that the systematic treatment, beginning with the *Muricidæ*, the Murices. Now, classification and taxonomy make up the body of the work, and its value must be determined by the lucidity and certainty of its guidance in identifying shells. In this respect it is strikingly good. Miss Rogers seizes on distinctive features acutely, and her phraseology is perspicuous and concise. She makes use of anything handy connected with the habits, reputation, uses, or distribution of the species to give relief to her description. In this way she succeeds in introducing information not strictly taxonomic, but most valuable. Take, for instance, our shore periwinkle (*Littorina littorea, L.*), which is a European immigrant: she stops a moment over the name; tells how it is sold for food in England, whence it came; its prosperous invasion of our coasts; its peculiar gait; its love of seaweed; describes its dental ribbon, and completes her portrait by telling us that, "knowing their feeding habits, the owners of oyster beds scatter periwinkles on their acreage to keep the hindering algæ grazed close."

The illustrations, which are an indispensable part of such a volume, are photographs, and tell their story well. There is a visible superiority in places, plainly due to the distinctiveness of the subject: *e. g.*, the rose-branch Murex, and the surprisingly lifelike pictures of *Pinna, Spondylus,* and *Lima.* Hand-work could not surpass these. Mr. Dugmore is to be congratulated on his satisfactory work in this unpromising field. There are eight color plates, admirable examples of mechanical work in pigments. (Plate IV. suffers from an unlucky "mix-up" in numbering, figs. 23, 24, 25 being quite misplaced). Ideally, a shell book should figure each species described, and should give line drawings and enlargements in the smaller shells. Monographic completeness, in that sense, was not aimed at, and, if observed, would have put the book out of the reach of those to whom now its pages will prove a help.

"The Bird Our Brother" (Houghton, Mifflin & Co.) is, like all Mrs. Olive Thorn Miller's bird books, a fascinating and sympathetic study of bird character in all its phases. Though her work is founded upon a rich personal experience, Mrs. Miller has taken great pains to fortify her conclusions by numerous quotations from reputable authorities, the scientific value of many of which is questionable. It seems invidious to criticise such an excellent book, but it must be confessed that the author is somewhat handicapped in her efforts to preserve a dispassionate attitude by her ardent affection for the world of birds. For example, in the chapter entitled "His Altruism," many tales of protection and help offered by birds to their fellows have, almost without exception, to do with the given bird's own immediate kin—a result, it would seem, not of altruism, but of a rather lower though not less useful instinct.

In his "Deutsche medizinische Inkunabeln" (Leipzig: J. A. Barth), Prof. Karl Sudhoff presents his last word on what has been the subject of his research for many years; he intends to turn next to medical incunabula in Latin. The present work is much more than a bibliography: it is a study of German civilization in the latter half of the fifteenth century from a medical point of view. The 450 odd titles are by no means taken exclusively from purely medical works; the list includes books on popular science as well; even cookery and the preparation of beverages occupy a prominent place. The medical books are chiefly *Volksbücher*, "chap-books," and just for that reason of particular interest to the student of civilization. The study is published as a double number in the "Studien zur Geschichte der Medizin," which Professor Sudhoff is editing for the Puschmann Stiftung of the University of Leipzig.

Gieserud's "Science of Anthropology" is the "outgrowth of an earlier effort to alleviate the worries and perplexities haunting the classifier of books as well as the amateur scientist, taking up this most unsettled and vaguely limited field of study." Thus the manual is aimed at the librarian even more than at the anthropologist. It cannot but be helpful to both: the librarian is provided with excerpts from a number of authors covering their conception of the scope of anthropology, and is offered a specimen classification; to the anthropologist is given a printed bibliography which, though confessedly not comprehensive, is yet of convenience and value, and a list of anthropological societies, museums, etc. Naturally, the quality of the classification calls for the bulk of comment. It might be said, first of all, that the confusion of terms, natural enough to a relatively new science, is very great, and that little that is definitive and at the same time definite can be expected from the collation of many terminologies. It appears sometimes that the etymologist could help out the social scientist a good deal. It is natural enough that the Greek terms, taking into account the stage of development of the Greeks, should hardly correspond to the conceptions of a much later age; there is, for instance, no word for a *society* in the general sense, as witness the hybrid *sociology.* But it yet seems reasonable etymologically to regard *anthropology* as inclusive of all the social sciences, to extend *ethnos* to cover race, and to make more use of the word *demos.* The author, relying upon his quotations, would seem to have grasped the main distinction between the "natural science branch" and "the historical science branch," but not to have attained the sim-

ple clarity of assigning the endings "-graphy" and "-ology" to the descriptive and analytical branches respectively. However, librarians have to do with terminology as employed, and can hardly be called to account in these matters. The cleanest-cut classification of the social sciences known to the present reviewer is one printed for use of classes, but labelled "not published," from the hand of Professor Sumner; this veteran scholar possesses the advantage over most of his peers of having at one time or another dealt with all the social sciences, and of having thus attained a superior perspective. The manual under review is not particularly happy in its style, as the quotation in the first sentence of this notice will indicate; but it is an excellent effort in the direction in which stress should be applied, viz., toward the better organization of a great and important discipline.

Drama.

John Jay Chapman has written, and Moffat, Yard & Co. have published, "Four Plays for Children," which, with one possible exception, cannot be said to be particularly well adapted to their professed purpose, although the author says that two of them have been successfully represented. A good deal depends, of course, upon what is meant by successful representation, which, it may be remarked, is something very different from the fluent recitation and mimetic action of which almost any ordinarily intelligent child is capable. Whether there is any urgent necessity for nursery drama is a question which need not be argued here. Certainly Mr. Chapman's pieces do not belong to that category. The stories of "The Lost Prince," "King Ithuriel," and "The Hermits" are in themselves sufficiently juvenile, but the dialogue, written with a magniloquence often approaching rhodomontade—in which all the little fishes talk like whales—is, as a rule, quite unsuitable for childish entertainment. It is, indeed, entirely lacking in the simplicity which is the prime essential in compositions of this kind. The best of the four pieces is "Christmas in Leipsic," which is founded upon a very pretty idea, developed with no small amount of sympathetic skill. But the acting of it would require powers only to be found among trained performers. Mr. Chapman's work reveals a considerable amount of literary facility and some appreciation of theatrical requirements, but scarcely indicates any special genius—such as that possessed by Mr. Barrie, for instance—for the very difficult task which he has undertaken, that of yoking adult intelligence with the fancy of childhood.

The following passage taken from "King Ithuriel" is a fair example of Mr. Chapman's verse and of the sort of matter which he offers as appropriate to the youthful mind. Roger the Hermit, is proposing parricide to the ambitious princess, Elaine, who applauds the plan:

ROGER.—Your ladyship will pardon if I speak
With frankness, for the urgency is great.
Suppose your father, with his holy zeal—
The people love him, idolize indeed—
Suppose he have discovered some lost heir
That his imagination can adopt.
This village outcast he identifies
With some old legend out of Arthur's time,
Transplants to court, bestows the diadem,
Dies in the fragrance of a holy deed.
And leaves your family to beggary.
ELAINE.—What dost thou say!
ROGER.—Why, it is very like!
The brainsick wonderland in which he lives
Teems with such issues—dragons, mysteries,
And magic happenings of fable-land.
ELAINE.—'Tis very true. Old men have need to die.
ROGER.—A bath of boiling bat's-blood is most good
To wash the whimsies out of aged heads.
ELAINE.—What dost thou say of bat's-blood?
ROGER.—Why, I say
The blood of bats is sovereign balm for saints:
Heaves them to Paradise. Not only so:
It breaks the magic of their godly lives
With magic blacker and more powerful;
Not only killing them, but stemming back
The angelic stream that makes their will prevail:
Without which conquest in the spirit-world,
To kill a saint is idle butchery.
ELAINE.—Speak in less dreadful terms. How many bats
Would make a proper bath for this old man?
For surely death must come to all alike,
And to the aged is a welcome friend.
ROGER.—A thousand bats if taken in the spring,
Or fifteen hundred—

The announcement that Rose Coghlan will support John Drew in W. S. Maugham's comedy, "Jack Straw," is a curious example of the effect of time's whirligig in the theatrical world. In his own rather narrow line, Mr. Drew is an admirable performer, who interprets one type of character exceedingly well, with infinite neatness, dexterity, and finish. But, of course, Miss Coghlan in histrionic range and accomplishments is greatly his superior, and there can be no doubt that she and Mr. Drew will afford each other the mutual support which is so indispensable to a satisfactory representation. We hear a great deal about this "support" in modern theatrical talk, but see very little of the thing itself in actual practice. One of the many disastrous consequences of the star system is that well-balanced performances, such as were common enough in the old stock company days, when "support" was not thought to be of so much importance as "coöperation," are growing more and more rare. It is a consolation to know that the public is prompt to appreciate them, whenever they do occur, as has been demonstrated lately in more than one instance. Miss Coghlan and Mr. Drew, in their earlier days, were both prominent members of notable stock companies, and will know how to play into each other's hands.

Miss Rachel Crothers's play, "The Three of Us," appears to be running along pretty smoothly in London, although the critics were not quite so enthusiastic over it as some of the cable press messages would have us believe. One well-known writer remarks that it shares with a good many other American plays the characteristics of a fresh atmosphere and a stale plot. It cannot be denied that the plot, if not altogether stale, is not free from conventional theatrical device. But the personages are human and vital, and make a strong appeal to the ordinary audience.

Laurence Housman's new play, "The Chinese Lantern," which has just been produced in the London Haymarket Theatre, appears to be a mixture of ancient fairy tale and modern satire. The scene is laid in the studio of a Chinese painter, who does nothing but lecture on a masterpiece—in which the soul of the original executant, Wiowani, is supposed to be embodied—while his assistants do all the work. Tikipu, the humble brushwasher, copies the masterpiece by night, while the Korean slave girl Mee-mee adores him. Presently he is discovered and his work destroyed, whereupon the spirit of Wiowani descends upon him and carries him off for three years. On his return the faithful Mee-mee is preparing to poison herself rather than marry the fat and hateful son of her artist master, but no sooner does Tikipu appear than she joyfully elopes with him, while the deserted household exhibit various manifestations of rage and grief.

Twelve years ago Jules Lemaître, the French Academician, completed a dramatized version of Madame de Lafayette's love story, "La Princesse de Clèves." The piece has just been produced at the Théâtre des Arts, in Paris. M. Lemaître has followed the main incidents of the story very closely, but has provided a new ending. In a brief final act, M. de Nemours and Mme. de Clèves are thrown together in the garden of the convent, whither the latter has retired after the death of M. de Clèves. M. de Nemours pleads his cause, and Mme. de Clèves, true to the memory of her dead husband, resists, but at the last lets fall a discreet word of hope to the duke. He is to return in a year to claim his own.

Music.

The Art of Singing and Vocal Declamation. By Sir Charles Santley. New York: The Macmillan Co. $1.25 net.

Sixteen years ago the eminent English baritone, Charles Santley, published a volume entitled "Student and Singer," in which he gave an entertaining and instructive account of his student days in Italy, and his subsequent career as an opera and concert singer on two continents. At the ripe age of seventy-four, he now presents another volume, embodying his experiences as a teacher, and containing much valuable advice. He himself, as he tells us, narrowly escaped having his voice ruined by injudicious advice. When he was only fourteen years of age, his father insisted on his singing tenor, though, in his own opinion, he was not a tenor. Three years later he "dropped into the bass clef," and it was not till 1859, when he made his operatic début, that his real register (high baritone) was revealed to him. In consequence of this narrow escape, and for other reasons, he holds that only one who is, or has been, a good singer can be a satisfactory teacher. How many such, one wonders, are there among the 10,000 singing teachers who are said to be busy in London alone?

After his return from Italy, where his experiences were rather doleful and discouraging, Mr. Santley had the good luck to become a pupil of the eminent Spaniard, Manuel Garcia, who saved Jenny Lind's voice from ruin, and who is acknowledged the greatest singing master of the last century. Students whose teachers inflict on them a lot of anatomical jargon will be interested to hear Santley on this point. Garcia, he says,

taught singing, not surgery! I was a pupil of his in 1858, and a friend of his while he lived, and in all the conversations I had with him, I never heard him say a word about larynx or pharynx, glottis, or any other organ used in the production and emission of the voice;

and Santley adds his own opinion, that the less pupils know about the construction of the vocal organs, the better.

Mr. Santley does not credit the foolish remark attributed to Rossini, that the three main requisites of a singer are "voice, voice, and voice," but thinks the anecdote has done much harm in encouraging pupils with "voices" to shirk work. If he himself were questioned as to the three requisites, he would answer: "Patience! patience! patience!" Apparently, the teacher needs this as much as the pupil, for, in his opinion, "a singing master has the most trying task of all teachers." Of his colleagues he has no high opinion; most of them do not know the difference between the "production" and the "emission" of the voice; most of them launch their pupils too soon into the study of difficult music; and as for enunciation, their pupils may be heard any day singing, "Ow, de-ah, now!" for "Oh, dear, no," and that sort of thing.

During his career as a singer the author suffered much from the defective acoustics of theatres and halls. A good deal has been written regarding the fact that in some parts of an auditorium the audience may hear much better than in others; on this Mr. Santley dwells, but he also presents the artist's side of the plaint. Why, he asks, was he able to go through his work in perfect comfort in one place, while in another he was glad to land safe at the end? He inveighs against the primitive waiting rooms, which are responsible frequently for sudden impairment of voice and disappointment of the audience. He also dwells at considerable length on the danger of having flowers in the artist's room or in drawing-rooms where artists are expected to sing. Close observation showed that he was often attacked with hoarseness when there were flowers in the room, and was relieved as soon as they were removed. Tobacco, on the other hand, soothes his throat. Nor will he admit that these are personal idiosyncrasies.

In the preface, Mr. Santley makes a contribution to the question: Are great artists happy? His experience does not in the least confirm the general notion that a singer's life is a merry one: "No gold nor amusement could repay the toil, worry, and disappointment of a singer's life as I know it."

The Aborn American Grand Opera Company, which had a successful career of thirty-one weeks last season in New York and Brooklyn, will be reorganized in September for a season of forty weeks, to be divided between New York, Brooklyn, Philadelphia, and Chicago. The repertory is to include some twenty operas, among them Offenbach's "Tales of Hoffmann," all in English.

One of the artists who has won special praise during the present opera season in London is Miss Destinn, who will be in our Metropolitan company next winter. Speaking of Gluck's "Armida," the London *World* says: "The great triumph of the production was Frl. Destinn as Armide—she looked magnificent, and sang and acted as if she had never breathed any atmosphere save that of chivalric romance, or sung in any music save that of the eighteenth century."

The Vienna Conservatory, which for nearly a century has been maintained by the Gesellschaft der Musikfreunde and brought to its present state of prosperity, will, on the first of next January, be handed over to the state. The teaching staff hopes by this change to obtain higher salaries as well as higher pensions.

Another sign of the times: At the Imperial Opera in Vienna, after a pause of twelve years, "Stradella," by Flotow, the composer of "Martha," has been revived. Richard von Perger writes in the London Musical Times that "the performance aroused unusual enthusiasm. This shows that the public, weary of tone effects, dissonances, blood, and adultery, finds pleasure in flowing and yet refined music. A quite childlike pleasure was taken in the melody, and in the droll humor of the piece."

Since Eugen D'Albert has become so popular as an opera composer, he has practically given up his piano recitals, but he has found time to do his share in the editing of Liszt's complete works, to be issued by Breitkopf and Härtel in Leipzig. The first two volumes, recently issued, were edited by him. They contain the first four of the symphonic poems, which created a new epoch in musical history. The other editors of this edition are Busoni, Mottl, Reuss, Stavenhagen, Stradal, Weingartner, and Wolfrum. There will be altogether about forty volumes, and it is expected that the work will be completed within twelve years.

The same publishers have issued volume I. of the complete works of Haydn. In Haydn's day composing was a less elaborate affair than in Liszt's, and no one who has read of Haydn's fluency and industry will be surprised to hear that there will be altogether eighty volumes in this edition. The editors are Kretzschmar, Seiffert, Kopfermann, Adler, Weingartner, and Mandyczewski, who has spent ten years in gathering data and sifting material. The volume issued includes twelve symphonies, some of which have not been printed before. The third of them contains a minuet. Most historians assume that it was Haydn, who introduced the minuet in the symphony, but he adopted the practice from older composers of the Viennese school. The sixth, seventh, and eighth of these symphonies are programme music, and they are the best of the twelve. The editors have ascertained that of the 150 symphonies attributed to Haydn only 104 are genuine. The others were written by his brother Michael, by Dittersdorf, Kotzeluch, Hoffmeister, and others.

Art.

Seals, by Walter de Gray Birch. Pp. xxvii +327. New York: G. P. Putnam's Sons. $7.50 net.

Of the Connoisseur's Library, edited by Cyril Davenport, we have reviewed in these columns the volumes on European Enamels, Ivories, English Furniture, Goldsmiths' and Silversmiths' Work, Porcelain, and Glass. The volumes are handsome and convenient, the paper is thick but not heavy, the printing clear, and the type unusually large for such handbooks. The volumes purport to be separate studies of first rate importance; and in most cases they succeed.

This book on seals, however, is less useful than we could wish. Thus, it would not be incorrect to say that except for ten pages at the beginning, the work is devoted to the seals of the middle ages and later times. It contains nothing about the seals of the Orient since the founding of Islam; and yet in modern times there is no part of the world where seals are used so commonly as in the Moslem East. There is no mention of the seals and stamps of the remote East, so much in question in studies of Chinese painting and bronze casting; nothing about the engraved gems of Greek and Greco-Roman antiquity, except as they appear in a few mediæval settings. Yet the true origin of the engraved gem, whether worn in a ring or otherwise, is the signet. Even those ancient seals which are touched upon in the first ten pages are treated cursorily, and without illustrations.

The very question as to what constitutes a seal is not properly answered; for no clear distinction is made between the seal proper, the counter seal, the private seal, the sign manual or signet, the special seal used for special documents, the metal bulla, or the seals stamped in plastic materials. Evidently the word means the final result, the impressed coat of arms, or emblem, or design which the matrix leaves when it has been stamped upon a yielding surface or upon a harder surface with color. Evidently the matrix itself is not strictly the seal; although our English usage gives both meanings. There can be no harm in this inclusive use of the term; and yet the student should be told in each case whether the descriptions and the plates stand for originals or for impressions. This would be evident enough if the illustrations were better, but despite all care, the figures are vague and hard to understand except in cases where the design is extremely simple. Of course many seals that are injured, or at least defaced and rubbed, are too important to be rejected. Yet with allowance for such defects, these illustrations fall short.

The book has only four pages of index for over three hundred of text. There is a glossary, but the heraldic terms are not made plain—to the layman. On consulting "dexter" and "sinister," the reader will not learn why these terms mean just the reverse of *right* and *left* on the escutcheon. Again, there is no reference from text to figures, no index to the figures, no explanatory "caption" to make the text useful to one who is studying the illustrations. Dr. Birch is known as a trustworthy guide in fields which he had made his own; and yet we must conclude that the vast deal of interesting information in this his latest work is limited in range and hardly made accessible.

The *Burlington Magazine* for June is concerned largely with the minor arts, containing illustrated papers on plate, porcelain,

etc., and (in the section on Art in America), on two recent panels of colored glass by John La Farge. The same section contains notes, by W. Rankin, on the Saint-Gaudens Memorial Exhibition and the Spring Academy. The frontispiece of the number is a reproduction of Millais's portrait of Tennyson—probably a good likeness, but not a very interesting work of art.

The special spring number of the *Studio* (John Lane) is devoted to "Art in England during the Elizabethan and Stuart Periods," but the art dealt with is that of domestic architecture and furniture, which is lavishly illustrated. At the end there is a short account of "The First Century of English Engraving," but there is nothing about painting and sculpture, or about many of the minor arts. The title of the number is much too inclusive for its contents, but the contents themselves are valuable.

We take pleasure in acknowledging from F. Gutekunst, of Philadelphia, an excellent portrait of Grover Cleveland. The photograph measures 16 by 13½ inches, and is well suited for framing.

Signor Rava's proposal to found an Italian archæological school at Athens, similar to those of Germany, Great Britain, France, America, and Austria, has met with the approval of the Italian Parliament.

A Roman marble sarcophagus has recently been unearthed in Rome outside the Porta Maggiore. It is in excellent preservation, and constitutes one of the most interesting finds of this sort during the last years. The chief subject represented is a scene from a battle between Romans and Parthians or Persians.

A new cave with prehistoric drawings has been brought to light by Dr. René Jeannel in the Department Ariège in France. Among the drawings are horses, oxen, and reindeers. Among the most interesting is the silhouette of a man—one of the few representations of the human figure found in prehistoric caves.

Venice is alarmed by the discovery that the campanile of San Stefano is again in danger. When this church was restored, four or five years ago, a buttress was built against one side of the tower. Now both tower and support prove to have followed an imperceptible movement of the ground. San Stefano is a Gothic church of the fourteenth century, notable for grace and lightness, and one of Venice's chief monuments.

The Hermitage of St. Petersburg has lately acquired some valuable Greek textiles, discovered in the neighborhood of Kertsch, in the Crimea. From other objects found with them they can be dated as belonging to the fifth century, B. C. The textiles are of three kinds—printed, painted, and embroidered. In the painted specimens the figures are left in the brownish color of the texture, and the background is filled in in red and black—a technique which recalls the red-figured Athenian vases.

Mr. Sotiriadis, ephor of antiquities in Athens, has delivered a report on his discoveries at Chæronea and Elatea, where he has been excavating certain tumuli. Neolithic dwellings have been brought to light in considerable numbers around and upon a large tumulus; great quantities of bones of animals, doubtless sacrificial, have been found; also some fine examples of neolithic vases, domestic utensils, stone implements, and terracotta idols. At a depth of eight or nine feet there were found several human skeletons, which make it probable that these tumuli, to which Mr. Sotiriadis assigns the approximate date of 3000 B. C., are funerary. The bones bear traces of burning. Some of the vases are of good shape and interesting decoration. There are many varieties; one shows white designs on a fine black ground; another group red designs on a white ground; and there are some vases with polychrome decorations.

Finance.

A REMINISCENCE OF THE 1893 PANIC.

The death of ex-President Cleveland has necessarily revived discussion of the relations of his Administration to the country's financial history of the past generation, and this discussion has already illustrated the persistency of an unfounded imputation, fostered originally by political prejudice. "A good man, but he brought on the panic of 1893"—this was the off-hand comment of hundreds of men of at least average intelligence, when they got last Wednesday's news. Yet nothing is more certain, as a matter of financial history, than that Mr. Cleveland did not bring on the panic of 1893, that he did great service in averting its worst after-effects, and that, in so far as public measures or public policies actually had a hand in the chaos of that panic year, they were measures and policies to which he was openly opposed, and which came upon the scene of action when he was not in office and when his party was not in power.

The theory that Mr. Cleveland's tariff policy caused the panic of 1893 misses dates. Whatever their theoretical beliefs, most people now concede that the plan of suddenly and radically altering the entire list of import duties is unsettling to business, for the reason that importers must necessarily move slowly, when such changes are impending, in order to avoid loss on their longer projects. A merchant who should import goods under high duties, and who had not disposed of them when the duties were lowered or removed and when his competitor had imported the same goods on the new basis, would naturally be undersold.

This, though it would scarcely make for panic, would be apt to create dull and narrow trade. But the tariff policy of the Cleveland Administration was not considered until the last months of 1893, or introduced in Congress until December 19, or enacted until the middle of 1894, whereas the panic began in May, 1893, and reached its climax in July. This would no doubt leave open the theory that fear of what the law might be had created panic beforehand; but the peculiar fact in that regard is that nobody on the financial markets paid any attention whatever to the tariff while the panic was raging, but that all attention converged on a very different law, enacted in 1890, and then operating directly and unmistakably to break down the public credit.

The position with which Mr. Cleveland was confronted, when his second term began in 1893, was this: A revenue law had been passed three years before, which, by removing the sugar duties, struck off upwards of $50,000,000 from the annual public revenue. Public expenditure, which was $297,000,000 in the year when that revenue law was passed, had risen to $383,000,000 in the year when Mr. Cleveland took office. Deficits in Treasury finance were beginning, and this happened when the government's floating debt, in the form of notes issued to purchase and store away silver bullion, under another law of 1890, was increasing at the rate of $50,000,000 annually. A banking concern in the position occupied by the Treasury in March, 1893, would have stood on the brink of insolvency. The gold reserve for redemption of government notes, which the law stipulated should be $100,000,000, stood at $100,982,000 when the Cleveland Administration took charge of it, and it had been kept at that figure only through the extorting of $7,000,000 gold from reluctant New York banks by the retiring Administration, in exchange for notes held by the Treasury.

Mr. Cleveland met this disastrous situation with four distinct and important actions. He personally declared that the law, in his judgment, required that the notes of 1890 should be redeemed, if the holder so desired, in gold. He forced on Congress the repeal of the vicious statute through which the government's floating debt was being uselessly increased, and its gold reserve depleted. When the after-panic trade contraction sent these notes by the millions back from general circulation into the banks started a gold-export movement, and thus again caused the notes to be used for procuring gold from the Treasury, and when, as a consequence, the gold reserve fell below $70,000,000, the Cleveland Administration utilized its lawful powers, in the face of a wild outcry of protest, and procured gold from the New York banks through public loans.

When even this recourse failed, because the banks drew the gold for their bond subscriptions out of the Treasury in exchange for legal-tenders, and when, in February, 1895, the gold reserve fell to $41,000,000—forced suspension of gold payments being apparently only one day off—Mr. Cleveland issued bonds to buy $65,000,000 gold from an international syndicate, on the pledge of the syndicate that the gold

would not be procured from the Treasury, and that further withdrawals would be averted.

No President in our history has faced such a clamor of abuse and misrepresentation as broke out on the announcement of this contract, and Mr. Cleveland knew beforehand that it would do so. But if he had flinched, and had let the relief expedient go by default because of its unpopularity, the United States currency, in March, 1895, would have gone to a silver basis. It was not Mr. Cleveland's habit to flinch in such a crisis, and he met the situation. It is worth asking whether the chorus of tributes of respect and admiration, paid to his memory last week even by opposing political organizations, was not in very considerable part a recognition of this achievement of 1895, and of the President's steadfast attitude during the panic of 1893 for which he was not responsible.

The Nation.

NEW YORK, THURSDAY, JULY 9, 1908.

The Week.

The first Democratic campaign tract, comprising 386 pages of edifying literature from the *Congressional Record*, lies before us. Bound in a superb green cover—suggestive, doubtless, of the verdant innocence with which it is undertaking to win the Presidency with W. J. Bryan—it sets forth Republican sins of omission and commission. Here is Mr. Bryan's famous speech, entitled "Thou Shalt Not Steal," Judge Parker's vindication from the columns of the New York *Sun*, eight pages devoted to labor, and then the speech of Congressman Henry of Texas showing just why the power of Federal judges should be curbed. The Honorable William Sulzer is heard in behalf of our downtrodden merchant marine, and there is a whole chapter on the election of United States Senators by vote of the people. To the question of the tariff and the Trusts are given a substantial seventy-eight pages, and nearly as much space is awarded to a consideration of our financial and industrial conditions. This subject of bad times is naturally the one of which we are likely to hear the most in the coming campaign. Republican extravagance, too, is to be one of the important points to be assaulted. It is the very first subject touched upon in the book, which is not without some skill in arrangement. But if there were a dozen such volumes, in all the colors of the rainbow, it would still be plain that this campaign is once more to turn largely upon personalities rather than principles.

Senator Foraker's conscience allows him to recommend Mr. Taft as heartily as the merchant recommended the young man who was able, energetic, enterprising, and only suffered from a tendency to break open the safe and run away with the contents. "He is known," says Senator Foraker, "as exceptionally agreeable, so far as his personality is concerned." That is. Mr. Taft is a nice, stout man, who means well. But—"the only objection I have to him is that he seems to believe that the country needs more of the so-called Roosevelt policies." Oh, what a but is there, my countrymen! "I have just shown you that Roosevelt policies have brought on panic, and within eleven months turned Cincinnati from a city with 20,000 skilled laborers less than she needed into a city with 22.000 unemployed. I have no need to remind you that if Taft spells anything to the country, it is Rooseveltism. That made him; that, so far as any declarations have come from Mr. Taft, keeps him. You will, therefore, understand with how warm-throb bing a heart, with what a flashing eye, with what a blazing enthusiasm, I announce my belief in Mr. Taft's eminent fitness for the Presidency, if once we overlook the fact that he stands unequivocally for a continuation of that Roosevelt régime which has brought the country to the verge of ruin." Decidedly, Senator Foraker is burying the hatchet; and to every reader who will enclose postage for reply, we will name, in confidence, the owner of the broad, solid back in which the Foraker hatchet is being buried.

Secretary Cortelyou's denial that there is, strictly speaking, any Treasury deficit at all, does not seem to be hailed with any great enthusiasm even by his own party. Republicans no doubt feel that a deficit of $60,000,000, with one of $150,000,000 impending in the next fiscal year, is an awkward thing to explain; but they are not quite ready to deny its very existence. One reason is that they have longer political memories than Mr. Cortelyou. They have not forgotten how savagely they denounced the Democrats in the national platform of 1896 for having incurred "an unceasing deficit." There was no excuse offered then for an absurd system of bookkeeping, such as the Secretary now alleges, nor would one have been considered for a moment. Moreover, the very plan which Mr. Cortelyou now suggests, of reckoning bond sales as a receipt, and paying for "permanent public works" out of borrowed money, instead of taxes, was repudiated in advance by the Republicans in 1896, when they arraigned the Democrats for "eking out ordinary current expenses with borrowed money." Mr. Cortelyou may have chosen to ignore these political aspects of the case, but purely as a financial measure there is strong objection to his proposal to classify the Treasury receipts and expenditures as "ordinary" and "extraordinary." This would tend to confusion, not clarity. It would place our system of public accounts in the same category with that of Russia. The Russian Finance Minister always reports a surplus, because the items which would make a deficit he transfers to the account of "extraordinary" expenditures. With the consequent borrowings and bond issues, Russian finance has long been the despair of statisticians and investors. Secretary Cortelyou's plan would introduce similar puzzles here. It would, in fact, be a step backwards towards our cumbrous methods during the civil war. The present form of Treasury statement may not be all that could be desired; but at all events it sets forth the facts accurately.

Secretary Cortelyou is quoted as predicting that there will be no "emergency" in this autumn's money market, and therefore no need for using the "emergency provisions" of the Aldrich-Vreeland bill. We do not doubt that the Secretary is correctly quoted, because he is a sensible man and in the habit of speaking truthfully. The predictions of the Senatorial cabal who hustled this legislative monstrosity through Congress in its expiring hours, and who attempted to justify their course by warnings that if their measure were not passed, next autumn would witness "another panic, worse than last October's," were either not sensible or else not truthful. With idle money piling up in the New York banks at a rate which brought the surplus reserve the other day to heights never but once exceeded in our previous history, and with money lending on Wall Street for a six-months' term at only 3½ per cent., the full absurdity of the Aldrich-Cannon plea is now manifest. There are faithful souls, we presume, who will ask why Mr. Cortelyou should make his party's Congressional action ridiculous, even by speaking out unpalatable truths. Is it because the Chicago platform "especially commended" this notorious measure, and had only a word or two of perfunctory recognition of Mr. Cortelyou's really great achievement—his prompt use of the public surplus to stop a general plunge into insolvency after the Knickerbocker failure?

The *Evening Sun* of this city has performed a valuable service in setting forth the precise facts as to the long continued strike in Chester, Pa., of the 150 street railway employees. Early in April, their wages were cut from 18½ cents an hour to 16 2-3 cents, and the men refused to work. The authorities and the bulk of the population siding with them, they for three months terrorized the town with the usual arguments of union men on strike—boycotting, assaults with intent to kill, the use of bombs, and the destruction of property. Dozens of injured have been taken to the hospitals, many of them innocent bystanders. The mobs assailed the State police, as well as the strike-breakers. Five cars have been dynamited, a sixth escaping by accident, and a bridge was burned down. The boycott has been carried to almost inconceivable lengths; for example, two elderly school teachers, who dared to ride on the cars in a rain-storm, were compelled to apologize to their school children—who struck at once—by publishing an apologetic letter. A young physician, who rode on the cars in response to calls from patients, has been compelled to leave the city, and several

policemen resigned rather than ride on the cars in the execution of their duty. Naturally, the city has paid a heavy price for this, directly and indirectly, by vacant houses and men thrown out of work, while the expense of handling the strike has been $5,000 a month. The company claims $150,000 in damages, and the total bill of the city and county is likely to be between $200,000 to $250,000.

To have killed a restaurant-keeper in the interests of labor is the very latest thing in Presidential qualifications. The Socialist Labor Party registers its protest against stupid conventions and old-fashioned decency by expressing its desire to send to the White House a young man who is now serving a twenty-five-year term for murder. There is certainly an advantage in crowning your hero with the halo of martyrdom before, rather than after, he takes the Presidential chair. The particular form of this martyrdom is bound to call forth the admiration and allegiance of those sympathetic multitudes who, every year or two, affix their signatures to the petition for pardon of some atrocious criminal. They will at once recognize their representative man, and rise up and follow him when he comes trailing clouds of glory from the prison-house which is his home.

Our land laws were once fairly adapted to existing conditions, but they are now antiquated and foster speculation and fraud—such is the accusation of Seth R. Humphrey in the July *Atlantic*. He speaks from long and official experience when he says that the root of the trouble is the fixed equal charge for public lands of all degrees of value. In the early pioneer days, it was put low enough to tempt hardy settlers into the unexplored West. But soon came the era of speculation and fraud. Men rushed in with no intention whatever of keeping or improving their land. When the Indian reservation was opened, the land-office made the settlers line up for the crack of a gun, and settle their "right" to lands by the speed of their legs, the hardness of their fists, and the quality of their firearms. Later it tried distribution by lottery. A fixed charge of $1.50 to $4.00 per acre was still absurdly maintained on land worth $5, $10 and even $25. And this old-fashioned nonsense of the "crustaceans of the land-office" is, as Mr. Humphrey shows, continued in the opening of the new tracts made available by the national irrigation policy. Unless these new acres, too, are to be made the spoil of the speculator, and their development neglected, the fixed-charge system, with its lottery annex, should be abolished. Mr. Humphrey's whole article is well worth attention at Washington.

Senator Everett Colby is to be punished for his insubordination, his repeated refusals to abide by the wishes of the leaders of his party. Hence a highly respectable candidate, Thomas L. Raymond, now first assistant prosecutor of Newark, has been put forward to contest with him for the Senatorship nomination on the Republican ticket. There is evidence that this has been engineered by the friends of ex-Senator Dryden and the corporate influences against which Mr. Colby has fought so long and so successfully. It is needless to say that Mr. Colby has done more to purify and invigorate his party in New Jersey during the last six years than any other man, and that its best chances of permanent success depend upon its ability to keep in public life men of similar character and aims. Mr. Raymond is a man of excellent reputation, but there is no reason apparent at this distance from Newark why he should supplant Senator Colby. He takes his stand, he says, squarely on the State and national platforms, but he is discreetly silent on the questions of limited franchises, the equalization of taxes, and excise. We decline to believe that Mr. Colby's highly intelligent Republican constituency will permit his retirement at the coming primary.

It is not true that the National Education Association, whose convention at Cleveland has just ended, turned a cold shoulder to the Simplified Spelling Board. The fact of the matter, explains Charles P. G. Scott, secretary of the Board, is that a motion was made to print the reports of the Association according to "our lists." "This motion was set aside at our own request, because we do not wish to force our spellings even upon a minority." Rare and charming delicacy on the part of the Board! If we may trust reports, however, this almost timorously considerate organization is girdling the earth with pickets. Gratifying reports come in from every side. The quick philological sense of the school children of Illinois has brought them into the fold without a struggle. Stewart L. Woodford and John Burroughs have sworn allegiance to the children of light. Nay, even "the most eminent philologists" of conservative Australia, South Wales, and New Zealand lift up their voices for reform. What is the secret of this irresistible march? Circular No. 19 of the Simplified Spelling Board throws some light on the question. "I venture to say," declares Professor Lounsbury, "that there is not either in this country or in England a single scholar in English, to whom other scholars would feel that deference is due, who is opposed to this movement in itself." Any persons of eminence who object "have attained eminence in some other field than English scholarship." Those who defend the present orthography display "the nakedness of their ignorance"; but the Board is gratified by signs of a decrease in this "indecent mental exposure." The Board will not force its spelling upon even a minority; but if you persist in remaining in the minority, the Board's fine scruples will not prevent its calling you a fool and an ignoramus. If you don't want your scholarship boycotted, join the union.

The recent meeting of the newly organized historical association of the Mississippi Valley represents a new movement. Until recently the West has appeared too young to attract the attention of the historical specialist, so that little real critical work has been attempted. Yet that country is rich in collections of historical sources. Early in the existence of most of the States individuals interested themselves in the preservation of the records; and, in many cases, there were founded at an early date State historical societies. The field for research is, therefore, fertile, and the whole of it should be worked over. There have lately been published several scholarly monographs in Western history. Those who have taken interest in this work have organized the Mississippi Valley Historical Association in order to keep in touch with each other and to promote the study of history throughout the whole region. This new association may become significant in the interpretation of the past of the nation at large. On account of the Civil War, Mason and Dixon's line has come to have for many almost the reality of a physical barrier. The development of the Eastern colonies and States emphasized this disunion, but such was never the case in the great valley of the West, where Southern men and Northern men settled side by side along the rivers and on the prairies. This unity of the West was long maintained by the easy communication offered by the Mississippi River. On its banks the feeling of nationalism was fostered. It was out of the consciousness of Western unity that the new historical association was born; and the alliance of historians from the North and South places a new emphasis on the facts of Western expansion.

Mr. Balfour went back to an old and congenial rôle of his when he addressed the Pan-Anglican Congress on the conflict between science and religion. The author of "The Foundations of Belief" was supposed to have made out a good case for the creed by maintaining that theological belief is no more irrational than scientific; and the blessing which his address of the other day bestowed was nearly as dubious. He admitted that recent scientific discoveries had made the old argument from design

practically "worthless," and declared that if one had to choose between religion and science he could not well avoid inclining to the latter. For in "the ministrations of science," Mr. Balfour said, "I am more and more driven to believe is the greatest mundane agent for good." But, of course, he did not concede that the scientific spirit and the religious spirit are in hopeless antagonism. On the contrary, he thought that they are approximating each other more closely than would have seemed possible, fifty years ago. Theology has become more tolerant; science more humble. Both stand dumb before the vast complex of the universe. And if both believe in a higher reason informing the whole, there is no really vital philosophic conflict between them. Ordinary frankness, however, compelled Mr. Balfour to say that theology had been profoundly modified by science. The two may dwell in peace, but only on condition of the stronger being allowed its way.

Marcel Prévost comments in the *Annales* on the differences in the attitude of the French and the English toward sports. In France, he says, interest is confined practically to individuals of wealth and leisure, and indulgence in sports is regarded as a social distinction. Every sub-prefecture in France, especially in garrison towns, has a tennis court, and Prévost has found it amusing to note the intrigues they give rise to—the pride of those who have admission to them, the hostility of those who have not. As soon as a particular sport becomes less exclusive, it loses ground among the aristocrats. Rowing on the Seine is now left to clerks, and bicycling is looked on as distinctly vulgar. Why automobiling has made such progress in France is obvious: its cost prevents it from sharing the fate of rowing and wheeling. But even to those Frenchmen who indulge in this or that sport, it is always a matter of secondary interest; their *grande passion* is something else. Attempts to introduce the English spirit in French high schools have failed, and Prévost does not seem to be sorry thereat; he holds the devotion to sports responsible for the fact, if fact it be, that the average Englishman is inferior mentally to the Frenchman or German of the same class.

New China is borrowing not only the railways, guns, constitutions, professors, and temperance movements of the West, but also its athletics. The world's conception of a Chinese athlete has probably been a fat man dozing in a chair. He is the companion figure to the traditional Chinese warrior who seeks to encompass the defeat of his enemy by flourishing a sword as large as Ko-Ko's and yelling. But we have it on the authority of the Shanghai *Mercury* that "there is growing up in our midst"—that is, in the midst of the Chinese—"a new order of native manhood, showing every reason to hope that it will be as good as it is new. The stamina of the native youth has increased." At St. John's College, Shanghai, the native students have the classical athletic programme of the colleges of the West. They have the sprints, the hurdle, and the jumps; play baseball, football, and tennis, and drill smartly. It is not stated in the *Mercury*, but they may be even driving motor cycles in Cathay. The results are noticeable. "In the competition for the Africa Cup the Chinese contingent did their ten miles march with arms and accoutrements without a single man falling out. They needed some reviving at the end, but"—but so does all China, for that matter, and so do Yale and Harvard crews.

It cannot be denied that in advocating a tax on bachelors, the German Emperor has scored both on Theodore Roosevelt and Mr. Bryan. We should not have believed it possible that the President would have let a mere German get ahead of him, particularly after having concerned himself both with race suicide and the cause of the child. But such is the fact; and the German press is now discussing the Emperor's proposal, which it takes with all seriousness. Thus the Berlin *Tageblatt*, while evidently favorable to the tax, doubts whether it can be imposed without also establishing a general income tax; it takes for granted that the new tax will be on incomes. Certain it is that if an Imperial income tax is put on, the married men could be made to pay their share, but the *Tageblatt* worries lest some people should consider taxing bachelors a kind of discriminating class legislation. The Kaiser has not yet unfolded the details of his plan. We presume, however, that the tax will decrease with the size of the bachelor's income. That is, the smaller the income the larger the tax, which will thus serve the double purpose of inciting to matrimony and stimulating the bachelor to become a more useful and valuable member of society. Upon this double ground we have no doubt the new tax will commend itself to economists everywhere, and win for itself a place in Mr Roosevelt's platform of 1912, next, perhaps, to old-age pensions, as that upon which he will make his strongest appeal for re-election.

A dispatch from Victoria, B. C., states that "news is brought by the steamship Empress of China from Korea that nearly a thousand pro-Japanese Koreans, members of the Il-Chin-Hoi, have been murdered by Korean insurgents." This is, of course, condensing into one dramatic incident what has really been the history of two years' internecine warfare in Korea. Even before the establishment of the Japanese protectorate, the Il-Chin-Hoi were hated by the masses of the people of Seul because of their consistency in playing into the hands of the Japanese. Since the protectorate was made a fact, the Korean patriots have carried on a war of revenge against the partisans of Japan. The slaughter of the pro-Japanese Koreans has been larger than that of Japanese themselves, because the protecting Power has been accustomed to avenge any attack on one of its own subjects with terrible severity. Yet against Japanese tyranny, too, the Koreans have risen repeatedly. The outside world probably knows little of the guerrilla warfare that has been going on away from Seul; only now and then one hears of an eloquent number of Korean executions. That the supposedly spiritless and cowardly Korean should venture to challenge the might of victorious Japan only shows how far the most "inferior" of nations will go in defence of its right to work out its own destinies.

The civil war in Persia will be cited by the British Opposition as more than justifying its criticisms of the recent Anglo-Russian agreement with regard to Central Asia. By that agreement Persia was divided into two political spheres of which the northern, including the capital and all other principal cities, was handed over to Russia. What Russian "influence" has succeeded in accomplishing in less than a year, the present anarchy in the Persian Empire shows. Now, the question that suggests itself and that cannot fail to be put by those who opposed the partitioning of Persia, is this: Would the Shah have delivered his *coup d'état*, would the Parliament have been dispersed, its leaders massacred, and the Constitution itself imperilled, if Great Britain had not practically agreed to give Russia a free hand with the Shah? It was under British auspices largely that the Persian liberal movement attained its first victories. The famous secession of 10,000 of Teheran's leading citizens, three years ago, which forced the late Shah to grant a Constitution, was to the grounds of the British Legation. From that it is a long step to having the Shah place his pickets about the British Legation and enforce the power of search on its inmates. Against this procedure Sir Edward Grey has protested; but that is scarcely enough. Unless Great Britain shows by unmistakable action that she does not consider the terms of her agreement with Russia tantamount to the establishment of a Russian protectorate over Persia, she will lay herself open to the charge of having betrayed the cause of Constitutional government and progress in the Middle East.

AN ERA OF NO FEELING.

Dulness has already marked this Presidential election for its own. Nobody pretends to be excited, or holds out any real hope of becoming so. Even the political *claqueurs*, in either party, who are hired to go through their simulated frenzy of delight, are doing it in the most modern fashion, like men with their eye on the clock and longing for the hour to knock off their distasteful job. Memory has to be racked to recall a campaign which started off so dead and alive. From the Monrovian Era of Good Feeling, we seem to have fallen to an Era of No Feeling.

Obvious causes have brought about this state of political indifference. For several months, the country has been face to face with two thoroughly discounted Presidential nominations. Now, no one can be thrown into transports over a foregone conclusion. We need the element of uncertainty, of prolonged doubt, of thrilling struggle. Politics no more than the theatre can hold close attention without dramatic suspense. But in the great political play now offered to the nation, the dénouement was given in the first act—rather, in the very prologue—so that there is nothing for the weary audience to do but sit it out as patiently as it can. The party ushers may urge the people to wait and see whether it "ends happily," but the fact is too plain that it has begun unhappily, however it may end.

Moreover, the spectators are convinced that such fighting as they are asked to witness and to cheer is mostly sham Insincerity is the great breeder of indifference; and it is evident that a good part of the thrusting and fencing which the two parties are now doing is only a stage duel. The hatred and fear are feigned, and the causes of quarrel hollow. When one considers the attempt this year to make out in the official platforms sharp issues between the Republicans and the Democrats, one merely gets a new impression of the confusion of current politics, and of the way in which old shibboleths and party watchwords have lost their force. This is partly, of course, a result of President Roosevelt's success in raiding Democratic preserves. Yet in breaking the point of traditional Democratic denunciations of Republican policy, he has also weakened the power of his own party to get up campaign horror over the nefarious designs of the Democrats. When both parties have come to the same things, neither can attack the other with anything but artificial zeal. How, for example, will it be possible to get up a battle, or stir enthusiasm, over the anti-injunction plank? If the Republicans had kept their hands off it, they might have appealed with something of their old success to the sentiment of reverence for the courts; but, after what was done about injunctions at Chicago, nothing that will happen at Denver is likely to appear revolutionary or dangerous.

If measures fail to divide voters angrily, may not men inflame them? Platforms may be ambiguous twaddle, but will not the candidates fire the hearts of their followers and make the contest exciting? Not according to the present outlook. Mr. Taft's chosen rôle is good humor and a reassuring smile. One cannot imagine him forcing the fight, or setting the multitude ablaze. His probable opponent is more aggressive, an unwearied campaigner, and an able conjurer of rhetorical emotions. But the difficulty with Mr. Bryan is that all his fireworks have been once exploded. His excitements are spent. Even if he undertakes to flog himself into new fury on the stump, his exhibition can seem at best only a tame imitation of what he has given before. The country will grow wild neither at him nor with him.

Hence, if there is to be excitement in the campaign, it must be extra-political. The truth is that sagacious observers are already looking more to the business than to the political situation. The former may easily dominate the latter. If conditions in the industrial world should not sensibly improve; if thousands of men remain out of work; if they see their savings disappear and the pinch of another winter coming, with no sure promise of better times, then, indeed, we might expect exciting times, which could not fail to be reflected in politics. The one critical sign which the shrewd managers of both parties are watching is the state of trade. If there is much to be said for the economic interpretation of history, there is more to be said for the economic interpretation of politics. Parties go solemnly through their motions, yet in their hearts they know that the result of the election may easily depend, not upon party creed or party leaders, but upon the reduced shipments of iron ore from the Great Lakes, the number of idle men in Pittsburgh and Youngstown, St. Louis and Chicago and New York, the size of the wheat and corn and cotton crops, and the prices they bring. Let him who wants real excitement eschew platforms and campaign speeches, and study grain reports and the iron output and the earnings of railways. They are to be this year bigger than all the politicians.

UNCLE REMUS.

Brer Fox, perhaps, might be able to explain why the great classics of the world's light literature should have been produced by men of serious interests, on the whole. Defoe's ardent pamphleteering soul could scarcely have been aware of what "Robinson Crusoe" would become to all English-speaking boyhood. That Lewis Carroll, mathematician and author of "Symbolic Logic" and "Principles of Parliamentary Representation," should also have written the history of Alice; that men of such a seeming incomparably serious occupation as Germanic philology should have been the authors of Grimms' "Fairy Tales"; that a secretary of the French Academy should have given to the world Mother Goose, Cinderella, and the Sleeping Beauty is argument in favor of the amateur as against the professional when it comes to the fashioning of elemental but lasting literature. Such perpetual delights for the world's simple appetite in reading, like some of the greatest achievements in the art of cookery, have been stumbled upon almost by accident, and most often not by the professional *chef*. It was a sporting English lord at the gaming table that devised the sandwich. It was not a professional student of folklore, but a Southern journalist, that first gave to the world the adventure of Brer Rabbit with the Tar Baby.

The field which Joel Chandler Harris opened has since been industriously ploughed by the folklorist and the short-story writer, to the greater glory of both. We have had reams of negro fable and tradition that come probably nearer to the scientific standard of anthropologic truth than the earliest narrative of Uncle Remus, and we have had fictive tales of negro belief that are, at first hand, cleverer in plot and dialogue, and more startling in orthography, than the colloquies of Brer Fox and Brer Rabbit. But whether Uncle Remus's combination of just that measure of truth with just that measure of art which makes permanent literature, has been equalled by others, is quite a different question. As a matter of fact, Mr. Harris, in his own later histories of Uncle Remus, showed a falling away from the perfect balance he struck in the first stories. He was deflected, sadly enough, too much towards the truth; began to gather negro lore with professional ardor, and let the formal side suffer. The decline, of course, was from the high standard which he himself had set. Compared with most of the grist that has come from the negro dialect fiction mill, what Uncle Remus had to say always carried with it something of the earth's freshness which it is not given to the clever magazine writer to put into his pages.

How near to a real folklore, in the sense of a native store of crude belief, Uncle Remus has brought us, will remain for years, we suppose, a mooted question with those interested in negro anthropology. The negro in the South is in more ways than one a source of vexation to the student of ethnic evolution. It will not do to bind the mind of the negro too closely to his African ancestry. What the plantation hand believes now that is to us primitive, what

he often says, what he often sings—is it an inheritance brought over from the Dark Continent, or is it the perversion of what he learned in this country from the white man long ago, and what the white man has forgotten? When Anton Dvorák declared that a national American school of music would be developed on the basis of our negro melodies, evidence was brought forward to show, we believe, that his supposed native negro music has its origin in old Methodist revival hymns set to European tunes. Into voodoo, so far as our knowledge of that dark realm goes, not all that enters is African; Indian and European superstitions are mixed in the hodge-podge. The attempt has been made to trace the history of meaningless words in negro song and dialect back to an African vernacular; but with no apparent success. How much of Uncle Remus that is not Joel Chandler Harris comes from the banks of the Congo, and how much was born on the banks of the Rappahannock and the Chattahoochee, has not yet been shown.

The elements are common, of course, to all peoples. Brer Rabbit and Brer Fox and Jedge B'ar do the same things, more or less, as Coyote, Fox, and Bear among the Plains Indians. But as our children know them they are thrice removed from the tales the original mind of Africa must have evolved regarding them, or their entrancing beasts' counterparts. Extra-African legend has imposed itself on the atavistic belief to make up the creed of the American negro, and the white man who tells the story for his whiter brethren introduces his own modifications. Perhaps we shall not get to the real kernel of the African's soul until one of his own race, following in the steps of a Paul Laurence Dunbar, shall act as interpreter. Until that problematic day, Uncle Remus may rest safely on his laurels. That they will ever be in serious danger, we greatly doubt.

MISREPORTING COLLEGE PROFESSORS.

President Stanley Hall of Clark University renews an old plaint with fresh emphasis in his railing accusation against newspaper reporters. Their chief aim in life, he declares, seems to be to "make college professors ridiculous." Those unhappy gentlemen, it should appear, cannot deliver a lecture or make an address or give an interview, without being made, by the perverse ingenuity of the reporter, to "look, speak, and act like a fool." Hence the need of an association of college men for self-protection against the press. Dr. Hall announces that he is working on a plan for such an organization, which is to include, if necessary, "a boycott against offending newspaper men and newspapers." We imagine that the Supreme Court, which has held the boycott to be illegal, will scarcely take judicial knowledge of this threat; so that President Hall and his associates will probably not have to take their stand alongside the mad hatters of Danbury.

Frank newspapers will not deny that there is considerable truth in President Hall's charges. The misreporting of what college professors say has been too frequent. It has been more due, however, to ignorance, or the pursuit of a sensation at all hazards, than to malice. Nothing, indeed, could well be more melancholy than the turning loose of an incompetent reporter upon a technical academic lecture. He has but the faintest understanding of what he hears, and does not know how to convey that intelligently. It is from his tribe that we get the news item about Professor Diplodoccus having "refuted Darwin," about Professor Echinoderm having discovered spontaneous generation, and the learned Dr. Schriftsteller having worked out a German source for Shelley's "Skylark." It must be confessed that science and theology fare badly at the hands of reporters who know nothing about either. Yet what they need is, not to be boycotted, but instructed, and meanwhile put on some other job.

The whole blame, however, cannot be placed upon the young lions of the press. Their sensational and often absurd roaring is in response to roars from within the academe. There are sensational professors abroad. They like the newspaper headline with their shrinking names in it; they are fond of startling both the academic world and the vulgar herd outside. So they cultivate the iconoclastic spirit, or spend their nights forging audacious epigrams, or carefully prepare assaults upon the honored names in literature or in philanthropy. And are they hurt when the sensational press exploits their calculated indiscretions? Not they; it would give them an "inward pain" like that of the hymn were all their flippancies and irreverencies *not* blazoned forth. Chicago University has had the name of being more misrepresented in the newspapers than any other institution. Not long ago, its authorities issued an official warning against crediting any Chicago professor with the crudities and absurdities which might be foisted upon him by the press. There was doubtless ground for this; yet it is also beyond doubt that a well-developed itch for publicity has afflicted some of the teaching force in Chicago University. It is not pure chance which has so often brought certain of their names into notoriety. The sensational reporter—usually, of course, one of their own students, trying to turn an honest penny by furnishing college news—has known to what class-rooms to go for his sensations. The judicious members of the faculty grieve, but the self-advertisers are well content, at the resulting hubbub.

Neither individually nor collectively are college professors such sensitive plants as Dr. Hall would give one to suppose. Instead of shrivelling at the touch of the great world, many of them expand and blossom under it. The still air of delightful studies palls upon them unless it is broken in upon now and then with shrill cries of "Extra!" It is well known that many colleges now have a regularly organized bureau of publicity. The aim is to keep the institution "in the public eye"; and the public eye is getting to have such a cold and fish-like stare of indifference, that all sorts of flaring things have to be exhibited to attract a look from it. Now, those who crave publicity, have to take the risks of publicity. One of them is the danger of being misreported. It would be well, of course, if all newspaper accounts were microscopically exact; but as they are known not to be, there is nothing for it but to remind college professors who seek to see themselves in print, that they must take the same chances as other mortals with errant type.

Even the truly retiring professor, who dreads invasion of his class-room by the jaunty reporter, has small resource except to grin and bear it. The late Professor Price of Columbia used to tell of an experience of his own, and the sound piece of advice he got from Charles A. Dana. One of his lectures had been fearfully distorted in a report in the *Sun* The professor wrote to the editor, pointing out how impossible it was that he could have said the ridiculous things put into his mouth, and asking for a correction. Mr. Dana replied, admitting the reporter's slovenly work and offering cheerfully to make the correction, if really desired, but explaining to Professor Price the general rule, which was that if a newspaper attributed nonsense to a man of standing, nobody believed it, but if the thing were formally denied, then everybody believed it! The professor saw the point and withdrew his request. He found silence under misrepresentation wiser than a boycott. So, in our opinion, would President Hall.

COSMOPOLITANISM AND DECADENCE.

In urging in the *Century* the claims of English as a world-language, Prof. Brander Matthews adopts one dubious line of argument. He says that English has a splendid literature—which is doubtless true; that "this literature reveals no hint of decay or decadence"—which is questionable: and that it is therefore especially well-adapted for conquering the earth—which does not follow at all. The moral of this linguistic imperialism is, as one would expect, that we should reform our spelling

out of hand; but the argument fairly raises, besides the mere questions of fact, the whole question of the relation of cosmopolitanism to decadence.

The important point to determine is the original state from which there has been "declension." Students of English literature are urged to become familiar with Anglo-Saxon, because in that tongue the spirit of the Anglo-Saxons is preserved in its original state. Now, the spirit revealed in the Beowulf, the Cædmonian and Cynewulfian poems, the prose of Bede and Alfred, is an essentially virile spirit confronting life and death bravely; an earnest religious spirit, tinged occasionally with a grave melancholy. The spirit that conquered and almost obliterated it was an essentially feminine and romantic spirit carried in the songs of troubadours and jongleurs—a spirit of wit, sentiment, gallantry, grace, mystery, amorousness, and license, fed by fairy tales out of Wales, Cornwall, and Brittany. Surely, it was not moral elevation that made mediæval French a world-language: and surely the old Anglo-Saxon spirit had declined or deteriorated when Gower the cosmopolite was writing in three languages in an effort to be all things to all men. The history of subsequent vital contacts of the English spirit with other national spirits points to the same conclusion. Italy swept over England in the works of Petrarch, Boccaccio, Bandello, Tasso, Aretino, with a host of the more unworthy, till English literature became, in turn, sentimental, fantastic, realistic, ferocious, and Roger Ascham exclaimed: "An Englishman Italianate is a devil incarnate." That was another period of decadence. After a brief period of sobriety, an emergence of the true England, came the debauch of the Restoration—the best example of all; for even the contact with the comparatively pure seventeenth-century France was too much for the equilibrium of the English spirit, and it went stark mad.

Now, no one would be so foolish as to argue that English has not profited by these communions with the other great literatures of the world. On the intellectual side, the profit is incalculably great. Abundance, richness, flexibility, tolerance, color, range are all cosmopolitan qualities, which, in great measure, English literature possesses. Yet to have all these without national virtues profiteth nothing; and it is only when a literature begins to lay aside its national virtues and becomes to a certain extent unmoral, or even immoral, that it enters triumphantly upon the conquest of the world. Be good and you will be lonesome. We may trust Mark Twain, in spite of Montgomery, Tupper, Longfellow, and Wagner of the "Simple Life." It was Byron, and not Wordsworth, that set Germany on fire, and was hailed as the greatest genius since Shakespeare. It was Poe, and not Hawthorne, that gave the great impulse to the short-story in France. It was Whitman, and not Thoreau, that went to Europe. It is Oscar Wilde, and not Stephen Phillips, that makes the hit in Vienna and Paris and Christiania. Conservative literary men in France have been complaining bitterly of late that it is only the misrepresentative fiction, the pornographic stuff, that finds an eager market abroad. It almost seems that the qualities which make for the federation of the world are not the national virtues, but the international vices. One touch of lubricity makes the whole world kin.

To allege of English that it "reveals no hint of decay or decadence" is merely to shut one's eyes to the facts. It has been trading for a hundred years in Nineveh and Babylon. Has it not produced whole shelves full of books on the strength of drink and opium? Has not its æsthetic school declined, decayed, or deteriorated into morbid nympholepsy and the so-called "Greek" idiosyncrasy? Has it not turned aside to the glorification of unbridled passion and brutality? Has it not gone adventuring for strange sensations among the white, the black, the brown, and the yellow-skinned races? Let the curious turn to the description of the "modern man" in the preface to a volume of poems by England's most accomplished young versifier. "Arms and the man," sang Virgil; arms and the soubrette, sings this modern Mantuan; and the burden of his lay is that, in the long run, decency is a great bore.

A world-language has terrible things to express. If English does not wish to become a vessel of wrath, it had better not dwell too long on its imperialistic dreams. It had better come home and fight for its altars and its fires, and revive its healthy loves and hates, not scorning its Puritan ancestry. Cosmopolitanism is a dear teacher, and the pith of its lesson is only this: A man cannot be all things to all men and be much of a man himself.

THREE NORTHERN UNIVERSITIES IN ENGLAND.

Each of the universities existing to-day in Manchester, Liverpool, and Leeds, which received their charters in 1903, began the business of education in a humble way. Of the three, Manchester is the pioneer. About the year 1840 a well-to-do citizen, John Owens, informed his friend, George Faulkner, that he intended to bequeath him his fortune of £96,000. Faulkner declined the honor, and persuaded Owens to found a college. Owens died in 1846; the trustees spent five years in finding a modest house in Quay Street, Manchester—once Richard Cobden's—in furnishing it and engaging a staff of five professors and two lecturers. The first lecture was given in 1851. At the end of the session there were twenty-five students and things promised well. But many were the ups and downs of Owens during the next twenty years. Women were out of question, as the college had been founded for "young persons of the male sex." At times it almost seemed as if the college would have to close its doors. A good story is told of Henry Roscoe, the eminent professor of chemistry. The college was in rather a poor neighborhood, and Roscoe stood at the top of the flight of steps late one evening when a poor workingman drew near.

"Maister," said he, "is this the neet [night] asylum?"

"No," said Roscoe, dejectedly, "but I dare say it soon will be."

Nevertheless, the professors clung on, and in the sixties became embarrassed with overcrowded class-rooms. What had been styled a "mortifying failure," due to the ignorance and incapacity of the Manchester people, was now on the high road to success. An appeal for funds to build a substantial college in Oxford Road, the present site, received a response to the amount of £80,000; a handsome building was erected and opened in 1873. Ever since 1836 London had been the great examining university for England; no matter where a man studied, or a woman after 1878, London would examine and stamp with degrees. But as time went on, Owens began to realize more fully its own importance, and to consider that Manchester, too, might confer degrees. In 1880 the Victoria University, a degree-conferring body, was founded, and Manchester was the first constituent college. Liverpool joined as a second constituent in 1884, Leeds in 1887.

There has always been a good deal of amiable rivalry between Manchester and Liverpool. The former could not be a port, but she must have a ship canal. The latter looked on the strange phenomenon of a great new college, in a city distant one hour by rail, with mingled feelings. In 1878 Liverpool declared that she, too, must have a college; but trade was greatly depressed at the moment, and the resolution was only carried into effect in 1880. A former asylum, modified for the purpose, was opened as a university in 1882, with ninety-three students. Six chairs were founded; wealthy merchants and citizens came forward with support, and as the work developed, more chairs were founded, lectureships added, bursaries and scholarships bestowed, so that the net might be cast more widely and reach every class of society. Liverpool has always leaned hard on her City Council; perhaps, one might say, her university is the child of her city government. Even to-day the institution receives an annual subsidy of £11,700 from the rates, and the Council requires that £1,000 at least must be spent on scholarships for the children of poor ratepayers.

The junior partner, Leeds, began business on even less capital than her sisters. About 1868 some citizens interested in education issued a circular announcing that a College of Science was needed, and inviting subscriptions for £60,000. Only £17,000 could be scraped together, but the courageous founders built and opened the college in 1874. On the first day one student enrolled. At the end of the session there were nineteen students. The staff was composed of four professors, who may be said to have since made their mark in the world of science and education. In 1878 the institution took the title of

Yorkshire College, and in 1887, as already said, became the third constituent college of Victoria University. Leeds is pre-eminently the technological college of the trio. The Clothworkers' Company has steadily befriended it, giving a subsidy of £4,000 annually, and building besides large, light, admirable departments for textiles, dyeing, and tinctorial chemistry. The Skinners' Company has also built a well-equipped department for the leather industries. Leeds, however, does not give a B.Sc.Tech. degree; she exacts a good general scientific training for two years, and two years besides in the special line a student may choose; the degree gained is that of B.Sc.

When Liverpool and Manchester proposed the disruption of Victoria University, each claiming a separate university, Leeds offered vigorous resistance. She did not care to stand alone, and, moreover, disliked the idea of multiplying degree-conferring bodies with the possible result that degrees might be cheapened. But the two great cities had wealth, power, and their municipal councils to back their petition. In 1903 Victoria University was dissolved. Manchester obtained the title of Victoria University of Manchester; Liverpool University and Leeds University being the titles conferred on the other colleges. Since the separation, progress has been marked all along the line. Each university senate busied itself with rearrangement of faculties and with starting fresh lines of usefulness suited to local needs. Thus Manchester has eight faculties and a department of education; Liverpool has five and classes education under the arts faculty; Leeds limits herself to four (arts, science, medicine, technology), but then she groups law, education, and commerce under the heading of arts. In numbers the students are increasing rapidly. The registered day students number:

Manchester	1,352
Liverpool	1,004
Leeds	746

There are also hundreds of evening students who attend classes useful for their occupations, such as banking, railway management, and the principles of commerce; at Liverpool alone these evening students number nearly 500. And the quality of the work has been maintained and improved. The objection of Leeds to cheap and valueless degrees, an objection rightly urged at the moment, will not hold. The standard is high, considerably higher than at Oxford and Cambridge. The pass degree there is not a high qualification. That of the new universities is the sign and seal of an excellent general education. The honors degree means specialization, and almost invariably requires evidence of original work. I spoke with many professors on the ease with which an idle youth may gain this pass degree at Oxford and Cambridge, after three years devoted to athletics, and a very short period to work. They were confident that this could not be done at the new universities; shirkers feel uncomfortable and usually leave before long. The prevailing spirit of devotion to work does not consort with their aims.

We find new social strata, new for university education, in the northern universities. Students belong to the middle-middle, lower-middle, and superior, ambitious working-classes. They come because they have their way to make in the world; their parents are making sacrifices to maintain them; they have every inducement to work. One university boasts that it attracts students from every class of society, beginning in the social scale with a princess and ending with the daughter of a lamplighter. One might expect that these local universities would draw from the city and immediate neighborhood. They do so to a large extent, yet Welsh, Scotch, and Irish students are found in every one of them; India, the Colonies, United States, Egypt, Japan, China, Spain, France, Germany, are all represented to some extent. A small town in northern Spain has for many years sent students to Liverpool; in one year as many as seven. Though Manchester did not begin with coeducation, she accepted it in 1871; women are admitted to every faculty in all three universities save engineering. A Vice-Chancellor informed me that he was a fanatic for coeducation; the results have justified the experiment.

The common life of students is vigorous, more so than one would expect in non-residential colleges, and debates, discussions, lectures, concerts, "smokers," flourish. Each university has a large and important students' union and various societies take charge of athletics, music, games, and so on. The students at Leeds arrange for their own religious services every Sunday of term time. All three universities have embodied in their charters absolute freedom of religious belief for professors and students alike. At Manchester a new Students' Union building, costing £20,000 and to accommodate both sexes, will shortly be erected.

For reasons already given, discipline is easy in the northern universities. One Vice-Chancellor stated that if any little difficulty arose he simply had to send for the president of the Students' Union and make known the wishes of the authorities in order to obtain his point. At a moment when London is suffering from Brown Dog* demonstrations, when women suffragists are breaking up political meetings, and the students of Aberystwyth College have prevented the University Court being held in November, when the spirit of rowdyism and hooliganism seems prevalent, it is satisfactory to note the order and discipline that obtain in the north, where courage at least is not lacking.

All the new universities are harassed with an insufficiency of accommodation, equipment, and funds. Professors often present the touching spectacle of good men struggling with adversity in the shape of lack of space. The inspectors appointed to apportion the government grant in aid made nine separate complaints of overcrowding and lack of due accommodation at Leeds; nor are the sister universities guiltless in these respects. But the rush to the universities, due in great part to the improvement in elementary and secondary education, has upset calculations and caused almost new buildings to be much too small. The niggardliness of the Imperial government towards university education is deplorable. That same Parliament that votes £2,000,000 to be spent on one battleship doles out £100,000 to be divided annually among fourteen universities or university colleges. Of this Manchester receives £12,000, Liverpool £10,000, Leeds £8,000. Not only is there no proposal for augmentation, but the inspectors proposed in 1907 to dock Manchester of £2,000 per annum, when no reason save uniformity can be urged for such a step The fees are not really low. An arts course costs from £10 to £25, a science course from £20 to £35. In France all university students pay 90 francs per annum with a small additional fee for use of laboratory. Compared with this, English university education is expensive. Considerable sums are available for scholarships and bursaries; and it may be said that university education can now be obtained by a class to whom it was denied before; it is admirable in quality, extensively useful. The endowment is usually small. The following balance-sheet will show from what various sources expenses are met:

LIVERPOOL UNIVERSITY.

Students' fees	£17,000
Endowments	16,000
Subscriptions and donations	4,000
Parliamentary grant	10,000
Parliamentary grant, additional	3,000
Liverpool City Council	11,700
Other nearby councils	2,300
	£64,000

It has always been England's proud boast that in her schools and colleges she aims not merely at learning, but at the formation of character. The new universities carry on this high tradition; they prepare for and confer degrees, but they also prepare for life. Manchester and Liverpool have each more than 130 students, many of them graduates of their own or the older universities, who carry on, frequently at their own expense, the great work of research. In this connection the admirable work of the Liverpool School of Tropical Medicine deserves honorable mention. Liverpool has not a single department in which original research is not carried on. Manchester has instituted new faculties in theology, technology, and commerce; it has also established a school of dental surgery. Degrees are given in all of these; to earn a degree in dentistry a five-year course is necessary. At Liverpool, new degrees have been instituted in architecture and engineering. Leeds, in conjunction with the Yorkshire Council of Education, conducts important experiments in agriculture; the university undertakes the theoretical instruction. Lecturers and travelling dairy instructors pass from one centre to another, spreading information and granting aid in conducting experiments. Such instruction is often given free save for local expense. It is only fair to say that a large proportion of the students are working for degrees. In the "pre-reformation" days not infrequently a student passed one of a three-year course for his degree in preparing for matriculation. This is no longer permitted; a three-year course at least is necessary after matriculation, sometimes four or five years.

Perhaps the greatest condemnation that can be passed on England's ancient universities is that they failed to train teachers, the missionaries of intellectual life in the middle and lower classes. In Scot-

*Anti-vivisectionists erected in Battersea Park a brown dog statue which gave offence to medical students.

land the case was different; the teachers in village schools were university bred men. There are now teaching departments and diplomas at Oxford and Cambridge; to some extent amends are being made for the evil past. At the new universities the great work of training future teachers, elementary and secondary, is undertaken with a vigor and knowledge that are beyond praise. Theories on education and experiments are tried in schools that, at least in the case of Manchester, have been founded by the university department of education itself. Among them the new universities are training 450 men and women teachers.

C. S. BREMNER.

London.

NEWS FOR BIBLIOPHILES.

Under the title of "The Shakespeare Apocrypha" the Clarendon Press has reprinted fourteen of those Plays which have at one time or another during three centuries been attributed to Shakespeare. The volume is edited by C. F. Tucker Brooke of Magdalen College, Oxford, who has supplied a bibliography, and copious and interesting notes about the earlier editions of the plays and the evidences of their authorship, as well as notes to the text. The early quartos of these plays are collected as Shakespeareana, and many of them excite keen competition when they come upon the market. The following list, although it differs but slightly from Lowndes's list of the spurious plays, may prove of interest:

(1.) "Arden of Feversham." First edition, 1592. First ascribed to Shakespeare in the edition of 1770, where it was "offered in favor of its being the earliest dramatic work of Shakespeare now remaining."

(2.) "The Tragedie of Locrine." First edition, 1595. Included in the third folio, 1664.

(3.) "The Raigne of King Edward the Third." First edition, 1596. Attributed to Shakespeare by Capell.

(4.) "Comedy of Mucedorus." First edition, 1598. This was another of the plays which was bound in with "Faire Em" in the volume in Charles II.'s library.

(5.) "The Life of Sir John Old-castle." There were two editions in 1600, the title of the first being without author's name, but that of the second reading "Written by William Shakespeare." It was also included in the third folio.

(6.) "The Historie of the Whole Life and Death of Thomas Lord Cromwell." The title-page of the first edition, 1602, reads "Written by W. S." It was included in the third folio, 1664.

(7.) "The London Prodigal." The title-page of the first edition reads "by William Shakespeare." Included in the third folio, 1664.

(8.) "The Pritaine or the Widow of Watling-streete." The title-page of the first edition, 1607, reads "Written by W. S." It was included in the third folio.

(9.) "A Yorkshire Tragedy." The title-page of the first edition reads "Written by W. Shakespeare." Included in the third folio.

(10.) "The Merry Devill of Edmonton." First edition, 1608. Said to be by Shakespeare when entered, a second time, by H. Moseley in the books of the Stationers' Company in 1653. When originally entered in 1607 no author's name was given.

(11.) "Faire Em the Miller's Daughter." First edition without date, the only copy known being in the Bodleian. Lowndes gives the second edition, 1631, as the first. A later edition, with other plays, formed a volume in the library of Charles II., which was lettered on the back "Shakespeare. Vol. I." Upon this slight authority and doubtful internal evidence the play was attributed to Shakespeare.

(12.) "The Two Noble Kinsmen." The title of the first edition, 1634, reads: "Written by the Memorable Worthies of their time, Mr. John Fletcher and Mr. William Shakespeare, Gent." It was included in the third folio.

(13.) "The Birth of Merlin." The title page of the earliest known edition, 1662, reads, "Written by William Shakespeare, and William Rowley." Notwithstanding this statement it was not included in the third folio in 1664.

(14.) "Sir Thomas More." First printed in 1844 for the Shakespeare Society, from a mutilated manuscript in the British Museum. Mr. Brooke's account of this manuscript, which consists of twenty sheets written in four or five different hands, one of which has been declared to be Shakespeare's own, is highly interesting. Regarding the text, he says: "The first 172 lines of the 'insurrection scene' appear to me more thoroughly in the tone of Shakespeare than any other passage in the doubtful plays." Thirteen leaves of the manuscript are older than the rest, and seem to be the original draft (a clean copy, written by a scribe) of the play which was submitted to Sir Edmund Tilney, the Master of the Revels, for license to act, and comments in his autograph occur on several pages. Corrections, interpolations, and additions, possibly by the author, were afterwards made in accordance with his suggestions. The manuscript was written, probably, between 1590 and 1596.

Perhaps the rarest book in Sotheby, Wilkinson & Hodge's sale of July 13 is a copy of the first edition of Milton's "Comus," first printed in 1637, with the title, "A Maske presented at Ludlow Castle, 1634; on Michaelmasse night, before the Right Honorable, John Earle of Bridgewater, Vicount Brackly, Lord President of Wales, And one of His Maiestie's most honorable Privie Counsell." It is described as perfect and "a large clean copy," and is bound with other pieces. This "Masque" was Milton's first publication. The dedication is signed by Henry Lawes, who says that he is printing it because "the often copying of it had tired my pen." Only one copy has been sold at auction in this country, bringing $425 at the Ives sale in 1891. The Rowfant copy, which had portions of the last three leaves in facsimile, brought £162 at the Van Antwerp sale in March, 1907. The next earlier London record was £150 in the Mackellar sale in November, 1898.

JOEL CHANDLER HARRIS.

The news of the death of Joel Chandler Harris, which occurred at Atlanta, Ga., Friday evening of last week, will bring a sense of personal loss to readers all over the English-speaking world. Few modern writers were more widely known, still fewer will be remembered more affectionately. His popularity was due chiefly to the dialect stories founded on bits of negro folklore, and filled with imagination, delightful simplicity, and characteristically quaint humor, but he had also a large body of other readers for his more ambitious stories and his miscellaneous writings. His literary success was largely the result of native genius and youthful associations. He was born in December, 1848, in Eatontown, in middle Georgia, and enjoyed no educational advantages beyond those to be gained in a few terms at the academy in that village. But he had a liking for books, and read all that he could lay his hands upon after he was six years old. It is said that even at that early age he could appreciate the charm of the "Vicar of Wakefield," and that he was from the first an earnest student of Elizabethan authors. At the age of twelve years he heard that Col. Turner wanted a boy to learn the printer's trade in the office of *The Countryman*. So Joel applied for the place and the colonel, who was a book lover and a discerning man, promptly engaged him. The boy here had the run of his employer's library, and it was in this way that he got what was in one sense a liberal education.

He was still only a boy when the march of Sherman through Georgia brought the civil war into his neighborhood and disturbed the peace of Eatontown. When the war ended, Georgia was in a chaotic condition, and young Harris sought and found employment on the press—successively in Macon, New Orleans, Forsyth, and Savannah. While in Savannah he married Miss La Rose of Canada, and he was winning fame when the yellow fever scourge struck the city in 1876, and almost decimated the population. This dreadful visitation was the cause of his removal to Atlanta, where he became a member of the editorial staff of the *Constitution*. Soon Mr. Sam W. Small, the writer of the "Old Si" negro dialect sketches for that paper, resigned, and as the articles had been very popular, the new editor was requested to try his hand at something in that line. He felt doubtful, but in his boyhood on the Turner plantation he had spent night after night listening to the folklore tales of the negroes; and, as he had never seen them in print, he decided to give a few to the public as an experiment. In the course of a few weeks the "Uncle Remus" sketches attracted attention everywhere, and were widely copied. Their author was encouraged to continue his work, which resulted in the volume entitled "Uncle Remus: His Songs and His Sayings." In 1883 was published "Nights With Uncle Remus"; in 1884, "Mingo and Other Sketches in Black and White"; and in 1887, "Free Joe and Other Georgian Sketches." All these books were reprinted in England, where they have commanded a steady sale to the present day.

During these busy years, Mr. Harris was working hard at his editorial desk. For twenty-five years he continued in the active discharge of his editorial duties, while producing these creations of fancy; but as his fame increased, he gradually withdrew from office work, and devoted himself entirely to literary creation. His earlier successes were followed by "Aaron in the

Wild Woods," "Tales of the Home Folks," "Georgia, from the Invasion of De Soto to Recent Times," "Chronicles of Aunt Minerva Ann," "The Making of a Statesman," "Gabriel Tolliver," and various continuations of the Remus tales, which seemed to be in perpetual requirement.

Mr. Harris in his private life was a most simple, unaffected, modest person, quite unspoiled by his good fortune, and always restless under any form of flattery.

Correspondence.

ANOTHER VIEW OF THE GRADUATE SCHOOL.

To the Editor of The Nation:

Sir: Since Dr. Sherman's letter in the *Nation* of May 14, with its fine tilting against the giants of philological method in literary study, there has been in your columns and elsewhere much brandishing of brains about the same subject. In almost every case, however, the exceptions taken to the position of Dr. Sherman have begged the question, or attacked him on the flank. The editorial on "A Graduate School of Authorship," which appeared in the same issue as the letter that called it forth, came to the conclusion that the chief purpose of the graduate school is to prepare teachers for efficient ministry to the needs of later students, and not authors for creative work. That, as Dr. Sherman retorts, in the issue of May 28, is his own idea, and he further proceeds to censure the present system by pointing out cases of inexcusable ignorance on the part of teaching doctors of philosophy whose information has supposedly been cast in the most rigid moulds of recent scholarship. On the same date was published the dignified letter of Professor Adams, with its assumption that there is a just distinction between culture and scholarship; the bland letter of Professor Matthews, wherein he accepted as literal an obviously exaggerated statement as to the fitness of men who become doctors of philosophy, which, if Dr. Sherman believes it utterly, does nothing but prove him a very modest man; and the indignant letter of Professor Keller, which took for its thesis two imprudent allusions to uninspired enumerators as "Darwinians," and forgot that Dr. Sherman's whole plea was for just some such lofty use of the imagination as Darwin typifies. Four weeks later Mr. Woodbridge suggested that the fault is not with the graduate school so much as with "the materialistic spirit of men who prefer the Ph.D. to the study of literature," or "the still popular fallacy that the degree is a certificate of training for teachers." In no case has the real kernel of the whole discussion been brought fully to light—the fact that there is not at present any common opinion among scholars and men of letters as to what the university's responsibility in the matter of literary study really is.

Now, it has been found by experience, as Professor Adams points out, that a backbone of hard work is ordinarily required if courses in literature are not to be considered mere child's play by many who take them. Consequently, in order to give such courses as much respect as is paid to those in science and mathematics, an attempt has been made to insist upon a large amount of philological and research work that has in time, like the ungrateful cuckoo, arrogated to itself strange rights. Its defenders are further characterized by the American weakness which would rather see a man build in three years a kennel for his immediate occupancy than lay the foundation of a noble mansion for his age. Being in this respect materialistic, and being further much in the majority, such teachers have forced it as an accepted convention upon several university faculties that only philological investigation or inquiry of a similarly scientific nature can properly be rewarded with the doctor's degree.

The truth of the matter is that the whole position of the champions of so-called "accurate scholarship" is founded upon a fallacy. They seem to assume that so far as the graduate student goes, nothing can be accurately known save facts of the lowest order. Yet any one with a sense of proportion ought to see that there are facts of different degree in the literary realm. It is one fact that Shakespeare wrote an execrably bad hand, and quite another that he was the author of "Hamlet." The names of all the novels in English between the death of Dryden and the appearance of "Waverley" are facts, yet he would be hopeless who could insist that the making of a complete bibliography of all the novels of the period would be as important for the writer or for his possible readers as a careful, intimate study of the critical theories which governed the novel-making of Defoe, Richardson, Fielding, Smollett, Sterne, and Goldsmith. Such a study would be of equal value to the future teacher or the future novelist, and at the same time allow just as much training in the accuracy essential to a scholar as would the compilation of a mortuary book-list. There are some students, indeed, who prefer doing bibliographical work, just as there are those upon whom the undeniable fascination of the science of philology is strong, and they should be humored in the top of their bent, but they should not be allowed to think that they are doing literary work. The words "accurate" and "scientific" must be interpreted in the fullest, not in the narrowest sense, before they can rightly be applied to the study of literature. In real science "accurate" means the same when applied to the counting of the scales on a partridge's leg and when applied to the formulation of the law of gravitation; likewise anything that is characterized by the truth-seeking spirit of the scientist, is "scientific." Yet in literature these terms are maimed and distorted to the discredit of science and the degradation of literature.

Not until graduate schools learn that they must be able to give encouragement to the student with a tinge of genius, as well as to those of industry only; not until, on the basis of a sounder comprehension of what the scientific method is, the processes of literary study are so reorganized that it is no longer necessary for a student of literature to dispense with his degree that he may have time for his studies; not until it is recognized that in the graduate study of literature, culture and scholarship must be inseparable, can we hope for surcease from the assaults upon the giants of the present system. Nor should we forget that, for all the stolidity of giants, they sometimes come to grief because of their very inertia.

Carl Van Doren.

Urbana, Ill., June 27.

Notes.

W. A. Craigie has edited for the Oxford University Press a volume of Icelandic ballads on the Gowrie Conspiracy, under the title "Skotlands Rimur." The ballads were composed by Sjera Einer, probably about 1620.

"American Playgrounds," edited by E. B. Mero, will be published soon by the American Gymnasia Company of Boston. It is said to be a practical book, dealing with every aspect of the question.

From L. C. Page & Co. we are soon to have a book on "Servia and the Servians," by Chedo Mijatovich, who, at the time of the assassination of King Alexander in 1902 was Servian minister to the court of St. James.

Early in the autumn G. P. Putnam's Sons will bring out an English version of "The Century of the Child," by Ellen Key, the Swedish writer. The book has gone through twenty editions in Germany and has caused much talk. The same firm is preparing a posthumous volume by the late Prof. F. W. Maitland, to be called "The Constitutional History of England."

Funk & Wagnalls make the following preliminary announcement of books to be issued in the autumn: "How to Get a Position and How to Keep It," by S. Roland Hall; "The Call of the City," by David J. Burrell; "The Palace of Danger," by Mabel Wagnalls; "A Junior Congregation," by Dr. James M. Farrar; "A Common-Sense View of the Mind Cure," by Mrs. Laura M. Westall; "The Union Prayer-Meeting Helper for 1909"; "The Poetical Works of William Cleaver Wilkinson"; "Mind, Religion, and Health," by Robert Macdonald; "A Working Grammar of the English Language," by James C. Fernald.

Literary papers from abroad report that Tolstoy has completed a new novel, "After the Ball," the fundamental idea of which is the regeneration of love. The work is not to be published till after the writer's death.

Bertram Dobell (No. 21 Queen's Crescent, London, N. W.) has in hand a new life of Sydney Dobell, and requests the loan of letters and documents bearing on the subject.

The Macmillan Company will publish the following books in the autumn: "The Diva's Ruby," by F. Marion Crawford; "Friendship Village," by Zona Gale; "Helianthus," by Ouida; "The War in the Air," by H. G. Wells; "India: Its Life and Thought," by John P. Jones; "Alaska—The Great Country," by Ella Higginson; "Highways and Byways of the Pacific Coast," by Clifton Johnson; "Mars, The Abode of Life," by Percival Lowell; "Some Notable Altars," by the Rev. John Wright; "Concealing Coloration in the Animal Kingdom," by Abbot H. Thayer and Gerald H. Thayer; "French Prints," by Ralph Nevill; "Roses and Rose-Growing," by Rose G. Kingsley; "The Flowers and Gardens of Japan," by Ella and Florence Du Cane; "Ancient Tales

and Folk-Lore of Japan," by J. Gordon Smith; "From Damascus to Palmyra," by John Kelman; "Kashmir," by Sir Francis Edward Younghusband; "New Zealand," by W. P. Reeves; "Southern Spain," by A. F. Calvert; "Geneva," by Francis Gribble; "The Inns of Court," by Cecil Headlam; "Moscow," by Henry M. Grove; "Isle of Wight," by A. R. Hope Moncrieff; "London in the Nineteenth Century," by Sir Walter Besant; "Seven Centuries of Lace," by Mrs. John Hungerford Pollen; "Silver Plate," by J. Starkie Gardner; "Sheffield Plate," by Henry N. Veitch; "A History of the United States," Vol. II., by Edward Channing; "History of the City of New York," by Mrs. Schuyler Van Rensselaer; "A History of Rome in the Middle Ages," by F. Marion Crawford and Prof. Giuseppe Tomassetti; "The Ancient Greek Historians," by J. B. Bury; "History of the United States," by H. W. Elson; "Dictionary of National Biography," by Sir Leslie Stephen and Sydney Lee; "Documentary Source-Book of American History," by William MacDonald; "Statistical and Chronological History of the United States Navy," by Robert W. Neeser; "The Wilderness Road," by H. Addington Bruce; "The Story of New England Whalers," by John R. Spears; "The Story of the Great Lakes," by Edward Channing; "Faust: A Drama," by Stephen Phillips; "The Golden Treasury of American Songs and Lyrics," by Curtis Hidden Page; "The Friendly Craft," by Elizabeth Deering Hanscom; "De Libris," by Austin Dobson; "Collected Essays," Vol. IV., by Frederick Harrison; "The Acropolis at Athens," by Martin L. D'Ooge; "Monuments of Christian Rome," by Arthur L. Frothingham, jr.; "The Evolution of Modern Orchestration," by Louis Adolph Coerne; "Herculaneum," by Charles Waldstein; "Social Life in Rome," by W. W. Fowler; "Greek Architecture," by Allan Marquand; "The Science of Jurisprudence," by Hannis Taylor; "The Government of European Cities," by William Bennett Munro; "As Others See Us: A Study in Progress," by John Graham Brooks; "Popular Participation in Law Making," by Charles Sumner Lobingier; "The State and the Farmer," by L. H. Bailey; "Principles of Taxation," by Max West; "Education and Industrial Evolution," by Frank T. Carlton; "The Principles of Anthropology and Sociology in their Relations to Criminal Procedure," by Maurice Parmelee; "Money and Banking," by David Kinley; "Wage-Earning Women," by Dr. Annie Marion MacLean; "Studies in the History of the New Testament," by Andrew M. Fairbairn; "The Seeming Unreality of the Spiritual Life," by Henry Churchill King; "The Educational Aim of the Ministry," by W. H. P. Faunce; "The Gospel and the Modern Man," by Shailer Matthews; "Introduction to the Study of Comparative Religion," by Frank Byron Jevons; "The Elementary Psychology of Feeling and Attention," by Edward Bradford Titchener; "The Spirit of God and the Word of God in Modern Theology," by Frank C. Porter; "A Course of Study for the Kindergarten Grades of the Bible School," by Lois Sedgwick Palmer; "Some Aspects of Rabbinic Theology," by Dr. Solomon Schechter; "Origin and Development of the Moral Ideas," by Edward Westermarck; "The Reformation in England," by James Gairdner; "Cyclopedia of American Agriculture," Vol. IV., by L. H. Bailey; "Flying Machines," by Sir Hiram Maxim; "The Physiology of Plant Production," by Dr. B. M. Duggar; "Bacteria in Relation to Country Life," by Jacob G. Lipman; "Agricultural Soils," by Lyons and Fippin; "Forage Crops in the South," by Prof. S. N. Tracy; "Administration of Education in the United States," by Samuel T. Dutton; "The Psychology of Thinking," by Irving Miller.

Vol. XXIII., No. 2, of the Publications of the Modern Language Association of America opens with an interesting paper by John W. Cunliffe discussing "Elizabeth Barrett's Influence on Browning's Poetry," followed by a paper by Edward A. Allen on "English Doublets." Milton A. Buchanan writes of "Segismundo's Soliloquy on Liberty in Calderon's 'La Vida es Sueño,'" and Frank G. Hubbard treats of the eternal "Undergraduate Curriculum in English Literature," F. M. Warren tries more certainly to fix "The Date and Composition of Guillaume de Lorris's 'Roman de la Rose,'" and John L. Lowes finds a theme in "The Date of Chaucer's 'Troilus and Criseyde.'" The well-prepared volume concludes with H. Carrington Lancaster's "Neglected Passage on the Three Unities of the French Classic Drama," and Raymond D. Miller's "Co-ordination and the Comma."

The reader who cares for his eyes will be gratified by the clear, black type, wide margins and the soft white paper of the Royal Library. (London: Arthur L. Humphreys.) Three recent volumes in the "belles lettres" series are "Maxims of Life" by Comtesse Diane, "Cleopatra" by Désiré de Bernâth, "Madame de Pompadour" by J. B. H. R. Capefigue. The maxims of the Comtesse are given in both French and English. The object of this very feminine La Rochefoucauld is expressed in the first of them: "It is not my desire to disillusionize men by forcing them to know themselves; I seek to interest them by affording them the pleasure of recognizing themselves." The "Cleopatra" and the "Madame de Pompadour" are historical studies written in a literary way around the lives of two of the world's most fascinating women. The "Cleopatra" omits the list of authorities, ancient and modern, given in the French version, and gives no hint of the translator. The "Madame de Pompadour" is also silent about the translator. None of these books contains a word of introduction. Though they are obviously not intended for learned readers, their interest and value would in every case be enhanced by a brief biographical or critical introduction. One never brings out a Shakespeare in these days without a short introduction making him known to the reader. In the popular audience to which these volumes are addressed, there will probably be more than one to whom even the versatile Capefigue with his hundred octavo volumes is a comparatively unfamiliar figure.

As a sportsman's manual "The Way of the Woods," by Dr. Edward Breck (Putnams), would be hard to surpass in its breadth and compactness of information, without sacrificing readability altogether. It is intended for the Northeastern United States and Canada, though most of it is applicable with but little change to a region extending much farther westward. In the matter of camp outfit, the author is not quite so strenuously exclusive as some, having no objection to comfort as such, even in the woods. The "tender-foot anomaly" of the folding bathtub, however, is beyond the limit of his toleration. The man who has not the stamina for a morning open-air plunge in stream or lake must content himself with a sponge-bath inside the tent. After dealing fully with the life of the camp, he takes up fishing, hunting, and trapping in turn, each with detailed attention to the necessary implements and the approved methods of their use. For the hunter who takes the chances of hasty shooting he has no toleration whatever. "You may find that your mark was a man, in which case go hang yourself at once, and rid the world of a criminal fool." While generally sound in the ethics of sport, he rather inconsistently comes to the defence of the repeating shotgun, or "pump gun," and of the automatic gaff. It is hardly enough to say that the "game hog" is born, not made by his weapons. The repeating shotgun has no qualities to commend it to any one who can content himself with clean sport, and the discriminating angler will cheerfully lose all fish that he cannot land without the aid of a steel trap, using the genuine gaff as infrequently as possible. A chapter on hygiene, medicine, and surgery, while short, is so definite, intelligible, and practical as in itself to commend the book to any one whose outing takes him beyond the range of easy access to physicians. In general, the frequency with which the author has seen fit to recommend the goods of definitely named business houses doubtless has its origin in the best of motives, but it is very easy to see that the literature of sportsmanship may suffer from such a precedent.

The British government has recently issued the fourth volume of its new series of the manuscripts of the House of Lords, 1699-1702 (1908). The first series, published under the auspices of the Historical Manuscripts Commission, carried the subject to 1693, and of that publication the new series is a continuation, being printed for the sake of convenience in the same form as the volumes already issued by the commission. The most important papers herein printed or calendared that relate to American history are as follows: No. 1,486, concerning the Scottish settlement at Darien; No. 1,503, concerning the importation of naval stores from Russia; No. 1,509, concerning the trade to the East Indies, in which many persons trading to Africa and the plantations were concerned; No. 1,634, concerning the reunion of the governments of several colonies and plantations in America to the Crown, with a large number of illustrative documents annexed; No. 1,645, concerning the naturalization of many French Protestants, some of whom had served in the West Indies; No. 1,717, tables containing abstracts of imports and exports to and from the English plantations, 1696-1699; No. 1,718, a report from the Board of Trade on the plantation trade, February 16, 1702, of great length (twenty-seven pages), and great importance. The illustrative documents annexed to No. 1,634, include nine letters from Quary, in Pennsylvania, written to the Admiralty and hitherto unprinted, though their essential contents are the same as are contained in Quary's letters to the Board of Trade.

Accompanying these letters are many enclosures, touching the quarrel between Penn and Quary, many of which are new. These papers furnish a substantial contribution to our knowledge of the colonial history of that period.

We heartily commend Michele Scherillo's edition of Petrarca's "Canzoniere," which has recently been added to the admirable Biblioteca Classica Hoepliana (Milan: Ulrico Hoepli). The editor, whose scholarship is well-known, takes the autograph codex (Vaticano Latino 3195) for his text, and Rigutini's edition for his groundwork; but he practically dispenses witb Rigutini and contributes a remarkable introduction of his own. His notes, brief, pithy, and sensible, will serve any reader who is not investigating textual variants, and, with the excellent type and paper, and the moderate cost, should make this the popular edition of the "Canzoniere."

M. Philippe Bunau-Varilla's "Le Détroit de Panama" (Paris: Dunod et Pinat) seems to suggest, in sporting phrase, that he is not a good loser. His book is a protest against the engineering solution adopted by our government for piercing the Isthmus. Whether he is right or not, is a question that must be left to the experts, but there can be no question that M. Bunau-Varilla has lost his temper (with more or less dignity, of course) because the solution recommended by him has been rejected. He has only himself to thank, if his argument does not altogether inspire confidence.

Ill printed and not over well written, Gen. Frédéric Canonge's "Jeanne d'Arc Guerrière" (Nouvelle Librairie Nationale) nevertheless commands interest from its subject. The purpose of the author is to show that so long as Joan retained liberty of action, her military instincts were sound, her means of execution correct, her action rapid and sure; in short, that from a mere professional point of view, her conduct of military operations stands the test of professional criticism. That her results were positive we know from other sources. In our opinion, the author has established his case, confirming the belief that the national heroine of France is perhaps the most extraordinary figure in secular history.

Maxim Gorki has ready for the press a new work called "Ispowjed" (Confessions). It is the story of the poet's youth.

Reclam's Universalbibliothek, begun in 1867 by Anton Philipp Reclam in Leipzig, which at an almost nominal price publishes in small booklet form the best literature, both German and foreign, in German translation, has recently issued the 5,000th part. It is an edition of Otto Ernst's stories and sketches, entitled "Vom Strande des Lebens."

Bernard Stern has published through the house of Hermann Barsdorf of Berlin the second volume of his "Geschichte der öffentlichen Sittlichkeit in Russland," a solid book of 652 pages, with twenty-one illustrations. On the basis of original investigation made by the author and from older and more modern reports, he describes particularly the dark sides of Russian society, from the Czar down to the lowest social strata. His work is divided into five parts, viz., Russian Cruelty, Women and Marriage, Sexual Morality, Prostitution, Folklore Documents. An exceptionally full collection of otherwise inaccessible data is here offered to the student of civilization and folklore.

Sperling's "Zeitschriften-Adressbuch," giving information concerning the periodicals and political papers of Germany, Austria, and Switzerland, has now appeared in its forty-fourth annual edition for the year 1908. The publisher is H. O. Sperling, in Stuttgart, price 6 marks.

In the new second edition of the Festschrift, published by a company of leading philosophers in honor of the eightieth birthday of Kuno Fischer, and entitled "Die Philosophie im Beginne des 20. Jahrhunderts" (Heidelberg: Winter), an additional chapter on Naturphilosophie has been added by Prof. Theodor Lipps of Munich. This addition is all the more significant since the author does not, like the other contributors, content himself with a mere objective presentation of the *status quo* of the subject he treats, but from the standpoint of an objective idealism unfolds a new system of natural philosophy, aiming among other things at adjusting research in this department to scientific thought and investigation in general.

Ten different societies, national in character and finding their common aim in their antagonism to the Church and to traditional Christianity, have united recently in Germany to organize a Wiemarer Kartell. The purposes of the new union are three, viz.: (1.) Free development of intellectual life and resistance to all suppression of free thought; (2.) Separation of Church and state; (3.) Complete secularization of the schools. This organization is the answer of the Liberals to the establishment of the Kepler-Bund by conservative and Christian savants.

Recent events in the history of church and state in France have given a present interest to the long unedited "De Ecclesiastica protestate," written by the Mediæval philosopher, Egidio Colonna, better known as Egidio Romano. Manuscript copies of this work exist in a number of European libraries, and Prof. P. Giuseppe Boffita of the Instituto della Querce has recently discovered another among manuscripts, belonging originally to suppressed monasteries, in the Biblioteca Nazionale of Florence. This copy has now been published by the Successori Seeber of Florence with an ample critical introduction by Prof. Giuseppe Ugo Oxilia. The tract was probably written at the same time as Dante's "De Monarchia," and deals with the struggle between the civil and ecclesiastical authorities under Philip le Beau and Boniface VIII.

From Rome the death is announced of Henry Brewster, a cosmopolite born in France of an American father and an English mother, and educated entirely in France. He possessed a notable library in his Roman home, and his circle of friends included all that was most brilliant in the city. His writings are well known abroad, especially his metaphysical studies: "The Prisoner, a Dialogue," "The Statuette and the Background," and "Anarchy and Law." He had recently finished two dramas in French verse, "Les Naufrageurs," and "Buondelmonte," which are to be published in Paris, with a preface by the author's friend, Édouard Rod.

Walter George Headlam, fellow and lecturer of King's College, Cambridge, has died in his forty-third year. He contributed many papers on Greek subjects to the *Classical Review* and other journals, and wrote the article on Herondas in the "Encyclopædia Britannica." He was himself fond of composing in the Greek, thinking it easier to write poetry in that tongue than in English, and his recent "Book of Greek Verse" was a work of admirable taste and learning.

We note the death of two women novelists: Miss Mary Elizabeth Hawker ("Lanoe Falconer"), author of "Mademoiselle Ixe," "The Hotel d'Angleterre," and "Cecilia de Noel"; and Mrs. Benyon Puddicombe, known for "By Berwen Banks," "Garthowen," "Hearts of Wales," and other Welsh stories.

With the death of T. O'Neill Russell in Dublin the National Literary Society and the Gaelic League lose one of their most distinguished members. He had published plays and poems in English and Irish during the last twenty years.

The Rev. Alexander Viets Griswold Allen, for forty-one years professor of ecclesiastical history at the Episcopal Theological School, Cambridge, Mass., died yesterday at his home in Cambridge, at the age of sixty-seven years. Professor Allen was graduated from Kenyon College in 1862. He was ordained deacon in 1865, and the following year was ordained priest. From 1865 to 1867 he was rector of St. John's Church at Lawrence, Mass., and then he was appointed to a professorship at the Cambridge Theological School, which he had occupied ever since. Professor Allen was widely known as a theological and biographical writer. Among his works are "Life of Jonathan Edwards," "Life and Letters of Phillips Brooks," and "Freedom in the Church." The last named book, which was published as the result of the deposition from the priesthood of the Rev. Dr. Algernon S. Crapsey of Rochester, a friend of the author, caused much comment in the church at large. The degree of doctor of divinity was conferred on Professor Allen by Yale, Harvard, and Kenyon.

Jonas Lauritz Edemil Lie, the Norwegian poet and novelist, died at Christiania Sunday. The first collection of his poems appeared in 1864. His most widely known novel, "Lodsen Og Hans Hustru" ("The Pilot and His Wife"), was published in 1874. Among his other works were "The Foreseer," "Tales and Descriptions of Norway," and "The Bark Future; or, Life Up North." A three-act comedy, "Grabows Kat," was successfully produced in Christiania and Stockholm. Born at Egan, Norway, on November 6, 1833, as a boy Lie showed a fondness for the sea, and his parents feared for a time that he might turn to the sailor's life. At eighteen years old he entered the University of Christiania, and, after receiving his law degree, he started practice in Kongvinger, a small town in the south of Norway. Few writers have described a sailor's life so well as Lie. The Storthing decided to accord him a state funeral.

RECENT VERSE.

The Pilgrims and Other Poems. By Nathan Haskell Dole. Boston: Privately Printed.

Lyrics and Landscapes. By Harrison S. Morris. New York: The Century Co.

In the Harbour of Hope. By Mary Elizabeth Blake. Boston: Little, Brown & Co.

Sonnets to Duse and Other Poems. By Sara Teasdale. Boston: The Poet Lore Co.

From Quiet Valleys. By Thomas S. Jones, jr. Clinton, N. Y.: Browning.

Songs and Poems. By T. H. T. Case. London: David Nutt.

The Earth Passion, Boundary, and Other Poems. By Arthur Davison Ficke. Cornleigh, Surrey: The Samurai Press.

A Bundle of Myrrh. By John G. Neidhardt. New York: The Outing Publishing Co.

The Ivory Gate. By Armistead C. Gordon. New York: Neale Publishing Co.

Voices and Visions. By Clinton Scollard. Boston: Sherman, French & Co.

The Last Robin: Lyrics and Sonnets. By Ethelwyn Wetherald. Toronto: Wm. Briggs.

Wild Honey from Various Thyme. By Michael Field. New York: A. Wessels Co. Importers.

Poems and Translations. By Frederic Rowland Marvin. Troy: Pafraets Book Co.

Nowhere, perhaps, does the lack of literary authority, of an imposing body of sane criticism, make itself more wofully felt than in current verse. There are a number of young poets of abundant ambition, generous promise, excellent parts, with considerable metrical dexterity, and often with good material, but without direction or standards, ignorant of what they want, catching frantically at the skirts of any popular favorite or even more frequently rebelling from every guide and example. Such, indeed, is the confusion that it is difficult to find any satisfactory clue through their work; though as a matter of fact it is capable of rough division into two classes. There are, first, the picture-poets, those who try to assimilate poetry with painting and delight to think and speak of the former in terms of the latter, who are anxious about their contours and "tone-color," who copy from nature and the fine arts, who are vivid, graphic, and picturesque. And there are, second, the music-poets, who conceive in movements and themes, compose in symphonies, fugues, and sonatas, and are curious of the right note and the proper key. Rough as the classification is, it is nearly exhaustive; for of the intellectual and moral element in poetry, of poetry as a serious "criticism of life" there are hardly enough representatives to form a class by themselves. They are all "artists" of one kind or the other, these young poets; and the bulk of their work is pretty enough, ocularly, or aurally, with an occasional strain of earnestness and purpose blowing through it like the echo of a receding horn.

As one of the most interesting and extreme examples of the second or musical class of verse, Mr. Dole's "Pilgrims," written in commemoration of the touching of the Mayflower at Cape Cod, may be recommended to the curious. It is a lengthy composition of 165 pages, and of very miscellaneous contents, consisting of four "movements," each including a number of motifs or passages or whatever may be their technical designation, with their pace and rhythm rather superfluously indicated by such comments as *presto, agitato,* and the like—an odd instance of linguistic involution or *potenzierung,* as the Germans would call it. The general intention or pretension of the *opus* may be gathered from Mr. Dole's rather complacent observation that his volume contains the first application of "the symphonic form" to English poetry. But beyond this amusing transference of nomenclature and a kind of lowering of intellectual tone it is impossible to see anything characteristically musical in Mr. Dole's research or to take it for more than an entertaining experiment.

That poetry should be well sounding, that it should appeal to the ear as well as to the mind, no one will deny. And while the confusion of the two forms of composition is only tedious or vexatious, there is always a hearing for one who, respecting the distinction, knows how to make the most of the euphony proper to language as a means of expression. Of such a blending of sound and sense Mr. Morris's "Lyrics and Landscapes" supplies several happy instances. His poems have no great philosophical content, perhaps; but in his ode to "Night" he succeeds unusually well in a kind of eye and ear impressionism quite legitimate after its own fashion:

And lo! thy music blown on quiet reeds
  Amid the little rivers, where thy feet
  Wade first, when Even leads,
  With shaded torch thy legionaries fleet.
Hearken unto the rhythmic heat,
  Down by the pebbles in some sedgy seat,
  Of atomies that blow—
  With fingers playing swift and sweet—
The lyrics of the vanished after-glow,
  The music that no mortal may repeat,
  Of grasses as they grow,
  And moon buds and the swelling wheat,
And scent turned into sound by witcheries they know.

Lean, with thy darkened coronet of stars
  Where hang the greatening fruits
  In summer's languid breeze,
And, thro' the black-enwoved orchard trees,
Listen! Vibrations, whimpers, sorceries;
  The muffled roll of elfin cars
  Across the enchanted turf; the glees
Of wood-nymphs at their mimicries,
And voices of old Dorian deities
  In many cadenced keys!

Nor, rhythmically considered, is Mrs. Blake's "Marching of the Grass" a bad illustration of what might be called the poetic instrumentation of a mood:

  O the marching of the grass!
  O the joy that comes to pass,
When the mighty, silent army, with green banners overblown,
Drags King Winter from his throne!
Conquers all his barren valleys, climbs the rampart of the hill,
Steals along by wayside hedges, fords the river calm and still,
Undermines the forest arches, overtops the castle wall,
Swift invading wins the cities and the hamlets brown and small—
  Till the whole broad world is captured;
  And the heart of man enraptured,
  Thrills with passion of delight,
  Sunny morn and dewy night,
As the joyous rhythmic measure marketh time for lad and lass
  To the marching,
    Marching,
      Marching of the grass.

In the class of picture-poetry Mr. Noyes's "Golden Hynde" deserves the preference, not only by the breadth of his canvas and the gorgeousness of his coloring, but also by the fact that he knows how to include in his composition something besides the mere splendor of vision. In particular is he fortunate in catching, as in his song "At Dawn," a little of the haunting regret and voluptuous melancholy which seems always to be inspired by the sight of the beautiful in nature:

How many years, how many generations,
  Have heard that sign in the dawn,
When the dark earth yearns to the unforgotten nations
  And the old loves withdrawn,
Old loves, old lovers, wonderful and unnumbered
  As waves on the wine-dark sea,
'Neath the tall white towers of Troy and the temples that slumbered
  In Thessaly?

When the mists divide with the dawn o'er those glittering waters,
  Do they gaze over unoared seas—
Naiad and nymph and the woodland's rose-crowned daughters
  And the Oceanides?
Do they sing together, perchance, in that diamond splendor,
  That world of dawn and dew,
With eyelids twitching to tears and with eyes grown tender,
  The sweet old songs they knew,
The songs of Greece? Ah, with harp-strings mute do they falter
  As the earth like a small star pales?
When the heroes launch their ship by the smoking altar
  Does a memory lure their sails?
Far, far away do their hearts resume the story
  That never on earth was told,
When all those urgent oars on the waste of glory
  Cast up its gold?

Though one of the rarer notes of current literature, this eternal nostalgia of the past, half-stifled by our self-complacency and our belief in human perfectability, is not entirely unvoiced to-day. Miss Teasdale, too, voices it rather well (though without Mr. Noyes's pictorial elaboration and richness of rhyme), in a sonnet to Sappho, remarkable, besides, for the unusual construction of the sestet:

Impassioned singer of the happy time
When all the world was waking into morn,
And dew still glistened on the tangled thorn,
And lingered on the branches of the lime—
Oh peerless singer of the golden rhyme,
Happy wert thou to live ere doubt was born—
Before the joy of life was half out-worn,
And nymphs and satyrs vanished from your clime.
Then maidens hearing parsley in their hands
Wound thro' the groves to where the goddess stands,
And mariners might sail for unknown lands
Past sea-clasped islands veiled in mystery—
And Venus still was shining from the sea,
And Ceres had not lost Persephone.

To the same order of the picturesque belongs Mr. Jones's "From Quiet Valleys"—much less vivid, to be sure, much lower and cloudier of tone, but attractive still by its sudden little sensuous touches. It is October, with

Her light feet tripping through the fallen leaves,

or Night ——

  On purple wings she cleaves the dusk,
    Far winnowing and silver-veined,
    Her sombre mantle rankly stained
  By juices of the moon-flower's musk—

or kindred aspects and seasons of nature which most inspire his volume and fill it with a kind of transparent violet shadow. While on the other hand in Mr. Case's "Songs and Poems" it is the etcher, the

lover of heavy contrasts in black and white, who has come to predominate over the colorist. His "Death Rides in Darkness" is an extraordinary piece of chiaroscuro, full of violent atmospheric effects like a heavy thunder storm:

High rides the moon, but all the stars are hidden.
Gressed violets nestling 'neath the black-hanked storm.
Wild roars the wind and all the stars are hidden;
And many a form
Of devil hastening hellwards through the storm
Sunders the gloom wherewith the stars are hidden;
And clear-seen suddenly, a giant form
Stands black against the moon,
Most imminent against the lucent moon;
Till as the stars, the holy stars are hidden,
He hides himself unholy in the storm,
The star-enfolding storm.
. . . . . .
Lo! Death, high-charioted, speeds through the heaven,
Stark in his chariot black against the moon;
Stars in his head that never shone in heaven,
And his fair crown all silver in the moon—
His crown of mothers' tears—
And round his throat love's withered roses, riven
From nerveless hands—mocked by the queenly moon.
So panoplied Death traverses the heaven,
While silver-seen, soft-silvered in the moon,
Glitters his crown of tears, of mothers' tears.
Behind, long silence, where the stars are hidden,
And far behind a strangled voice of woe:
Earth weeping for the children from her riven,
The strangled voice of earth's eternal woe.

In something the same way as this Mr. Ficke also shows a good deal of skill in interpreting the larger aspects of nature symbolically of humanity and the human spirit. Many of his applications, however, are cold and deliberate, ingenious rather than poetical. And like so many of his colleagues, he is at his best in such pieces as his "Monody in April," where he is able to visualize:

Were I a painter I would paint these marshes
With the sad mist upon them; the low shore
Of palest green beyond the mirror water—
A green thread on the gray of lake and sky.
And then, touching the brush most delicately,
I would add the mystery of the cold white rain
That falls at moments. And I think one bird—
A heron or a wild duck from the north,
Should hover like a leaf along the sky.

And yet fascinating as all these haunting strains and glimmering vistas may be—and there are few which have not charm of some kind to recommend them—still more satisfactory, because more genuinely lyrical, is the verse with sufficient emotion in it to purge away what is often at bottom only affectation or ingenuity after all—even though the passion may seem, as frequently happens, rather a matter of nerves than gristle. With this sort of feeling, a little forced and factitious, Mr. Neidhart's "Bundle of Myrrh" is a-tingle; and though it may seem at first as if the singer were straining a little impotently in the modern way to feel for the feeling's sake, yet the expression is not wholly feeble or insincere:

Dead Kin of mine,
O savage ancient Kin!
I call to you across the night of years,
I reach out groping toward you across the sea of centuries!
Mine eyes are dazzled with the light of Now;
Mine ears are weary with the babblings of the over-wise!

And in the nights I feel the breath of giant women;
I feel their coarse blonde hair about my face.
Their strong hands caress me.
Comforters of battling men are they,
Breeders of fighting men,
Sucklers of the big and unafraid!
Over our ancient temples are builded the cities of the Anæmic.
The gods of our old believing are fled,
And men of lesser dreams, hair-splitters and too wise,
Have builded little walls about a shriveled-up divinity!
While I—of ancient spirit and modern flesh—
Go blundering through the fragile scheme of things,
Feeling old loves and lusts and with a little voice
Shouting aloud rude snatches of old cries!

A little more conventional, though probably as full-pulsed, are the lines to Lancelot which Mr. Gordon, in his "Ivory Gate," puts into the mouth of Guinevere and which are unfortunately too consecutive for excision. While no less satisfactory in its own kind—in informing image and rhythm with the quieter, less passionate life of recollected mood—is Mr. Scollard's sonnet to a Dragoman:

I still can see him, lean and languid-eyed;
Beneath his fez his clear-cut features dun
With the swart touch of the Egyptian sun;
A trifle stooped, yet with a hint of pride;
I still can hear his soft voice like the tide
Of Nile at nightfall when the stars have won.
Their immemorial places, and begun
Their march across the desert, waste and wide.

I still can feel about him the strange spell
That dominates his land, a kindredship
With all inscrutable and ancient things,
And fancy, if he would, that he might tell
The secret of the Sphinx's sealed lip
And of the pyramids and mummied kings.

Fortunately for the balance of things, there still survive, among these practitioners of a modern and subtle art, a few followers of an older fashion—simple handlers of language, wholly careless of musical and pictorial effect, intent only on embodying a plain thought or "sentiment" in readable verse—like Mr. Wetherald, writing of solitude—and turning a good phrase indifferently and, as it were, by very virtue of their insouciance:

The man I cannot comprehend
Is he who dreads alone to be,
Who, if he cannot have a friend,
Would welcome e'en an enemy;

Who never knew the scholar's lust,
The artist's lone ecstatic day;
Who never strove because he must,
And not for praise or place or pay.

For some reason or other all the young Canadian poets like Mr. Wetherald—and their number is constantly increasing—are remarkable for their relative simplicity and ingenuousness, for a kindly, if rather naïve, feeling for nature in its more superficial aspects, and for a certain obviousness, as it would seem to most of us nowadays, in their sentiments. Partly for this reason, Mr. Field's "Mintha" is likely to appeal more tellingly to the sophisticated ear. Though not so very different in tone, it seems to have more point to it; it is faintly redolent, perhaps, of the lavender of the Greek Anthology and a "comely decadence":

Dark Mintha, purple-eyed, I love thy story—
Where was the grove,
Beneath what alder-strand, or poplar hoary,
Did silent Hades look to thee of love?
Mute wert thou, ever mute, nor didst thou start
Affrighted from thy doom, but in thy heart
Didst bury deep thy god. Persephone
Passed thee by slowly on her way to hell;
And seeing Death so sore beloved of thee,
She sighed, and not in anger wrought the spell
Fixed thee a plant
Of low close blossom, of suppressed perfume,
And leaves that pant
Urgent as if from specs of a tomb.

And finally, though slow and heavy as if blunted by disuse and doubtful of its appeal, the moral inspiration, the serious concern of things, makes itself heard again, severe and insistent, in Dr. Marvin's verses on Cleopatra's Mummy in the British Museum, like the clamor of a distant bell amid the tinkle of fife and lute:

A heap of crumbling bones,
Black with old Egypt's dust and grime;
A bit of shriveled skin;
And painted cloth,
Brittle from years,
And with bitumen stained.

Once were these crumbling bones
Clothed in a woman's beauty,
More fragrant than the breath of incense
Burned where tinkling bells,
And crystal fountains,
Filled with gentle music
The whispering groves of fair Dodona,
And the pale-eyed priestess
Breathed the hallowed air.
Here lies the dark-eyed daughter of the Nile,
Who nursed on golden bed,
The sucking asp.

The lonely shadows deepen,
And from the English sunset,
Dull and gray as sea-blown mists,
Dies the last flickering beam,
And all at length is still.
The visitors are gone:
The doors are closed:
The daughter of great Ptolemy,
In the London-town,
Slumbers unconscious of her shame.

CURRENT FICTION.

The Shoulders of Atlas. By Mary E. Wilkins Freeman. New York: Harper & Bros.

In the Aunt Sylvia of this tale Mrs. Freeman has produced another of her little masterpieces of New England portraiture. Sylvia and her mate are a grim, pathetic pair, troubled in their old age about many things, and about each other as much as anything. The story-teller, as usual, disdains to put a gloss upon their homeliness, their mental angularity, their reticence, their underlying emotional intensity, Henry's cherished grievance, Sylvia's almost savage fidelity to the course she has laid down for herself—of such tough strands the web of New England action is really woven. As long as Henry works in his shoe-shop and battles with his debts, he is reasonably contented with his grudge against the world. Solvency and a competency, depriving him of both work and grudge, make life a weary thing. As for Sylvia, she succumbs to a major temptation with the embittered thoroughness of her unco guid species. "Sylvia had the New England conscience, but, like all New England consciences, it was susceptible of hard twists to bring it into accordance with New England will." And the will is capable of altogether overbearing the conscience—for a time; for Sylvia's conscience inevitably triumphs, and her atonement is as thoroughgoing as the occasion deserves. The detail of her, the form and gesture and speech, are inimitable. A certain Miss Hart is suspected of poisoning a lodger:

"Arsenic in the peppermint!" repeated Sylvia. "You needn't tell me Lucinda Hart put poison in the peppermint, though I dare say she has some in the house to kill rats. It's likely that old tavern was overrun with them, and I know she lost her cat a few weeks ago. She told me so herself. He was shot when he was out hunting. Lucinda thought somebody mistook him for a skunk. She felt real bad about it. I feel kind of guilty myself. I can't

help thinking if I'd just looked round and then hunted up a kitten for poor Lucinda, she never would have had any need to keep rat poison, and nobody would have suspected her of such an awful thing. I suppose Albion Bennett right up and told she'd bought it, first thing."

This has the true ring of rustic comedy; Mrs. Freeman is, as usual, less successful with her urban characters. The Rose who arrives to trouble the conscience of Sylvia is an unreal person, an odd jumble of the country maid and the woman of the world as seen in novels. She tries to borrow a lady's maid on her arrival at East Westland, and asks her astonished hostess if people are "formal" in that quiet village. For a time she is all upon the high horse, then suddenly lapses from her society lingo to such comfortable rural colloquialism as "You don't suppose he's taken suddenly insane or anything?" Her amour with the local high school principal is of very moderate interest; not so the daring and appallingly realistic study of the girl Lucy; a common type ignored by convention. Upon her frail shoulders the Atlantean burden of humanity assumes a peculiarly distressing form.

The Last Duchess of Belgarde. By Mollie Elliot Seawell. New York: D. Appleton & Co.

The author of this light romance exhibits the old figures, and develops an old theme. The heroine, Trimousette, is the inevitable charming young girl, who, though quite silent, has a mind full of dreams and a heart full of love. At the opening of the tale, one of her dreams, to her astonishment and her delight, is on the eve of fulfilment. She is about to be married to the "dare-devil" Duke of Belgarde, the conventional hero of all romances, with whom she has become enamoured at first glimpse. She confidently hopes to regenerate her husband, whose whispered wickedness only adds to his attraction; but she finds her place in his affections usurped by the inevitable third person. Trimousette, however, has only to wait until the Revolution breaks out to reveal her courage, in contrast with the cowardice of her rival, whose love for the duke shatters with the first stir of danger. Trimousette aids her husband in escaping from prison; when he is taken again she goes to share his confinement and death; and she finds in the sacrifice of herself the way to her husband's heart. She does not, to be sure, enjoy for long the fruits of her devotion, since she and her husband are soon sent to the guillotine.

The characters, we may add, are mere paper dolls, the incidents few and not vivid. Yet despite the superficiality of plot and character, the tale has the merit of simplicity and lack of pretence.

Katherine Trevalyan. By Louise Maunsell Field. New York: The McClure Co.

This story is as English in quality as in name; and it is necessary for the reader to remind himself from time to time that the action is really supposed to take place in America. The circle in which we move is, to be sure, that pretty thoroughly Anglicized circle which gyrates between Fifth Avenue and Newport; and among such people there is little bothering with democracy and low characters. Chilton, Kavanagh, Dacre, Romeyn, Marrisford, are names which feelingly convince us what we should be; and the unique Dodkins, who is permitted to transgress these pages with his gross person and manners, is a Western portent as monstrous in his cis-Atlantic setting as he could be in London. Of purely local color, however, we have something like a glut in recent fiction. These people are recognizable enough as human types in their urbane trappings. Katherine Trevalyan is the girl cut off from her kind by wealth, courted but not loved, preyed upon by every sharper, social and other, and in danger of becoming hard and suspicious of her kind. Vernondee is the predatory beast who wins her for himself by feigned sympathy and disinterestedness. Kavanagh is the really disinterested and sympathetic male who appears upon the scene too late to rescue the maiden from the first consequences of her folly, but not too late to befriend the injured wife or to wed the unbereaved widow. A motor is the machine which capably mangles the villain when the time comes. The arch-villain of the book (for Vernondee is after all a poor figure of a scoundrel) is really Mrs. Dacre, later Dodkins—a veritable Becky Sharp as latter-day society knows her. The most engaging person in the story is certainly not Miss Trevalyan, a good deal of a stick when all is said, but good-natured, blundering, and incorrigibly innocent Jimmy Dane, a millionaire without fear and without reproach.

Diana of Dobson's. By Cecily Hamilton. New York: The Century Co.

Assuredly there is nothing new in the topic of the London shop-girl and her cold-blooded employers and the sordid conditions of "living-in." Nothing unsaid about the struggle for life of woman or man in the great London whirlpool. But though these, roughly speaking, are the themes of Miss Hamilton's story, she writes away from them, and gives her tale a quite original turn. For her heroine is a rebel, and when sudden fate puts a little money into her purse, she resolves not to put it by as she should, but to have one great gulping taste, a month long, of the world; to be well-clad, well-housed, well-associated, to travel and see cities and snow peaks. The month has its happy sequel, but a sequel secured in no obvious hackneyed way. The impression remains with the reader of a brisk little story written with perfect taste, while it is at heart a genuine song of the sons and daughters of Martha.

The Reaping. By Mary Imlay Taylor. Boston: Little, Brown & Co.

Nothing could be more conventional than the outline of this story. The background of present-day Washington, intrigues political and social, a spell-binding Congressman who is also a heart-binding gallant, a stormy-natured siren married to and tired of a member of the Cabinet, her husband giving diplomatic secrets to a half-foreign lady dimly supposed to be in league with Russia, a stern little moralist girl, a judge, an eminent portrait painter, with diplomats and gossips—the very catalogue itself bespeaks the usual. Nor in the construction of the story is there much to disappoint the expectation of a routine novel. Public and private aspirations, a hero caught between the opposing forces of an old love and a new, divorce, the reaping of a bitter harvest by the woman who makes her own happiness the aim of life—these convey scant message of novelty. Where credit for freshness is due is in the characterization. The figures are distinct and move easily along their allotted grooves. The gentle moralist, brought up refreshingly by her father, the judge, on "Old Testament Christianity," combines austerity and softness very humanly. The hero's alleged genius is not altogether palpable or his fits of self-abasement wholly credible, but his attitude toward his dilemma is sufficiently moving. The other woman, the most elaborate of the portraits, compounded of cruel caprices and sweet-natured inconsistencies, lives and moves and has a good deal of being. Perhaps the best drawn of all are the elderly women accessories. Various types of worldly-wise and worldly-foolish old dames show the author at her best.

The Government of England. By A. Lawrence Lowell. 2 vols. New York: The Macmillan Co. $4 net.

This is a sound piece of work. Its interest lies rather in detailed information, industriously gathered and painstakingly sifted, than in political philosophy. Professor Lowell is aware that his comprehensive method compels the inclusion of much dry matter, which he magnanimously advises the judicious reader to skip But we have found the arid sections few in which the irrigating knowledge and industry of the author had not produced good crops. Even in the second volume, which is mostly taken up with local government in England, one has a certain fascination if only in watching Professor Lowell cut his way through the immense jungle of overlapping jurisdictions and intertwined functions to make clear the exact status at each point. This part of his work, while the more repellent in form, at once represents severe labor and great usefulness. We know not where else to turn to find so clear and inclusive an account of the sucessive acts and grants of powers which go to make up English local government to-day.

Professor Lowell's *Beschränkung* to a single theme is well maintained. He dissects out his one topic neatly. The question he has set himself to answer is, How are Englishmen governed? And his answer is drenched in fact, with but the slightest infusion of history and theory. His method is, indeed, to recapitulate briefly the successive steps which have historically led up to present practice, but it is upon that practice that he expends his strength. He has given us literally a handbook of English government brought up to date. It sustains every test of accuracy. Indeed, with the full material and prolonged researches of the author, together with the advice and aid he has had from the chief living English authorities, it would be strange if his statement of the law and of custom were not practically impeccable.

If one were to hesitate a fault, or rather a defect in interest, it would be that Professor Lowell does not often enough make biography a handmaiden to his exposition of Constitutional rule and proce-

dure. There are, indeed, many references to the Lives of English statesmen, hut one misses the apposite anecdote with which Bagehot enlivened his page and drove home his point. Even the Austrian, Redlich, in his work on the Procedure of the House of Commons, has a greater readiness than Professor Lowell in quoting the actual words of public men to illustrate the matter in hand. What we mean may be seen in the chapter on the permanent officials of the civil service. That they are often the real rulers of England is convincingly set forth; but what may he called the personal literature of the suhject has heen ransacked for Professor Lowell hy one of his student collahorators, Mr. Evan Randolph. He went through all the memoirs of colonial officials, and the letters and diaries and biographies relating to famous permanent officials, upon which he could lay his hands, and got together material which is both instructive and amusing. How enlightening, for example, to find an under-secretary in the Foreign Office writing that he thinks his chief, Lord Granville, "will not meddle heyond what is required to keep us clear of political slips." One can understand how it could he said of such a permanent secretary by an indignant Australian, "These colonies . . . have been really governed by a person named Rogers." Our point is that this plan of enrichment and annotation out of living experience might have been followed in other parts of these volumes with excellent results.

As they stand, however, they merit high praise. Accurate and full, they are also impartial and dispassionate. Professor Lowell is never a partisan. He weighs judicially the evidence, and sums up rather than gives judgment. This spirit is well exhihited, for example, in the discussion of municipal trading, where the facts and the arguments, on each side, are given with great detachment. So the relations of party to government, with comparisons of the intensity and effects of party spirit in England and the United States, are passed in review with singular poise as of a judge. It is not often that Professor Lowell is drawn aside into abstract speculation. One instance is where he says that it is scarcely safe to say that the royal veto is extinct, since, if a Ministry should fall after a bill had passed the Commons, and then the Lords should proceed to enact it against the wishes of the new Government, the royal assent might he refused. But this is a kind of reasoning ahout extreme unlikelihoods which is hostile to the political genius of Englishmen, who, as the author remarks, "usually succeed in confounding utterly all general principles, and making all general statements inaccurate." It is pretty certain that some other way would he found out of the *impasse* which Professor Lowell imagines than calling from the dead the old *le roi s'avisera*. Ohjection might he taken, too, to the statement that Mr. Balfour's resignation in 1905 "involved an acknowledgement, if not of the necessity, at least of the propriety, of withdrawing from office" when a series of hye-elections showed that the opinion of the nation was against the Government. Anson, who, besides being a writer on the English Constitution, was himself a member of Balfour's Government, declares that the reason the Prime Minister resigned rather than meet Parliament was that he had no legislative programme to present. But it is invidious to raise minor questions about a work which moves on so strongly and surely in a difficult province of investigation, and which puts hoth students and public men under such real ohligation.

Essays Philosophical and Psychological in Honor of William James. By His Colleagues at Columhia University. Pp. 610. New York: Longmans, Green & Co. $3 net.

This beautiful volume is an honor not only to William James, but to the contrihutors. These nineteen memhers of the philosophical and psychological staff, not of Harvard hut of Columbia, claim him as a colleague because each acknowledges a debt to him as an inspiring teacher.

But Professor James is more than a teacher: hy nature he is an artist: had he followed his early inclinations he might have become a distinguished painter. It is of the essence of great art that it appeals to men of diverse types; and one cannot hut feel that it is largely due to Dr. James's artistic side that he is ahle to compel the sympathetic following of so many men who differ from him more or less radically. We are therefore not surprised to find these essays widely diverse in point of view, in suhject, and in quality. Yet no one of them would be what it is had not the master lived and written. One of James's own personal characteristics is exemplified in the philosophical division of the "Essays," a number of which are strikingly realistic in word, while idealistic in manner and tone. William P. Montague in his "Consciousness a Form of Energy," is the one bold realist of them all. Dickinson S. Miller explains in language flavored with idealism the nature of "naïve realism." Georgo S. Fullerton in "The New Realism" shows us, as he has in other writings, why being an idealist he prefers to be called a realist. Frederick J. E. Woodhridge in his "Perception and Epistemology" argues that the epistomological prohlem is not necessarily bound up with perception; *i. e.*, that the realist may close his ears to the questions in relation to illusion put to him hy the idealist. Therehy Professor Woodbridge tacitly acknowledges that the idealist's questions are not answerable in the terms he likes to use. Charles A. Strong calls himself a realist, but the argument of his "Suhstitutionalism" carries us so far away from realism of the naïve form that we feel impelled to ask for his doctrine some quite new name.

Turning to the doctrine called pragmatism with which Dr. James's name has heen so closely connected in late years, we find important essays by John Dewey, G. A. Tawney, Kate Gordon, and Edward L. Thorndike; while erudite philosophical criticism is represented by A. O. Lovejoy, Felix Adler, H. G. Lord, and H. C. Brown; and equally erudite psychological studies by such men as R. S. Woodworth, and J. McK. Cattell.

Within the hrief limits of a review we are, of course, unable to do justice to the mass of learning and original thinking covered by these "Essays," some of which we cannot even mention. The outline above will indicate, however, the breadth of the field and will suggest the intense interest of the collection. We may add that the volume contains as a frontispiece an excellent portrait of Dr. James.

Stuart's Cavalry in the Gettysburg Campaign. By John S. Moshy. New York: Moffat, Yard & Co. $2 net.

Col. Mosby's analysis of the movements of Stuart's cavalry in the Gettysburg campaign, in its originality of view and construction of the evidence, is as far removed as possihle from those volumes of general history relating to the civil war by authors for whom all previous writers on the suhject are authorities, and one hook has ahout as much value as another. Col. Moshy goes against all the accepted authorities; he takes to task all of Lee's biographers and staff officers; he makes raids in all directions upon historical positions, and he fires volleys here and there, some of which are effective and some of which go off harmless into the air. His main contentions are:

(1.) That Stuart's movements from Virginia around the rear of Hooker's army into Pennsylvania was by Lee's order, which necessarily separated Stuart from Longstreet and fixed his ohjective with Ewell near the Susquehanna.

(2.) That A. P. Hill and Heth went to Gettysburg on July 1, without orders or authority, and hlundered into a contest which involved Lee in a battle that he did not want to make.

Incidental to these two assertions are a numher of minor positions taken by the author. He holds, for example, that Stuart's ahsence from Lee's army until the battle had begun did nothing to promote Lee's defeat; that Stuart could have given Lee no important information which Lee did not have without him; that the historic story told hy Longstreet of the spy who was credited with hringing the news that Meade had succeeded Hooker and the Union army was north of the Potomac, is a myth; that Heth did not start to Gettyshurg on July 1, to get shoes; that Lee signed his first report of Gettysburg without reading it; and that Lee's failure to press the battle on July 1 was hecause his plan not to bring on a fight had been overturned by his subordinates Heth and Hill.

The author hegins with the battle of Chancellorsville; and, in common with nearly all writers, in assuming that Jackson's fall alone prevented the Confederates from cutting Hooker's communications with United States ford, ignores the fact that Meade, commanding the Fifth Corps, immediately sent a division on the douhle quick to cover the road to the ford. The description of the cavalry hattle at Brandy is not convincing, and needs to he compared with Gen. Gregg's recent account of it printed by the Pennsylvania Commandery of the Loyal Legion. Col. Mosby maintains that the Confederate infantry were not discovered by Pleasonton's cavalry; but the day after the engagement Pleasonton said that Confederate infantry had heen encountered, and that he was satisfied that there was a strong Confederate infantry force at Culpeper, which was true.

Sometimes Col. Moshy fails hy considering the situation only from the Stuart point of view. For instance he suggests that

Stuart prevented Gregg from falling upon the Confederate left at Gettysburg. In fact, Gregg's orders were to see that Meade's right and rear were not turned without notice; Stuart himself said that he had hoped "to effect a surprise upon the enemy's rear." This purpose Gregg's stout battle, with a force smaller than Stuart's, defeated. Likewise the declaration that Reynolds's action in supporting Buford was a blunder is too quick a jump to a conclusion. Reynolds had hardly arrived on the field when he was killed. What his purpose was is unknown. That he contemplated anything more than a temporary holding of the weak and untenable position in front of Gettysburg, which Howard unfortunately sought to extend afterwards, is improbable. The author also exaggerates the impression made upon Meade by rumors of Stuart's movements. Meade told Halleck while these rumors were coming in that he would have to view such excursions with equanimity. He threw his cavalry out to the right and left, and presently Buford located Lee's infantry.

Col. Mosby's book would have been stronger if a number of similar judgments had been excluded, and he had confined himself to his main contentions. Pleasonton's name is uniformly misspelled.

Grant, Lincoln, and the Freedmen: Reminiscences of the Civil War, with special Reference to the Work for the Contrabands and Freedmen of the Mississippi Valley. By John Eaton, Brigadier-General, Superintendent of Freedmen, Department of the Tennessee, etc.; in collahoration with Ethel Osgood Mason. Pp. xxxviii. + 331. New York: Longmans, Green & Co. $2 net.

This book makes a real contribution to our knowledge of the actual process of emancipation and of the two men who did most to compass it. The earlier chapters may be regarded as a sort of amplification of Grant's own brief account in his "Memoirs" (Vol. I., pp. 424-426) of the plan he adopted to deal with the great numbers of negroes who had either abandoned their masters or been abandoned by them and who were within the Union lines and in the neighhorhood of the Union armies. On November 11, 1862, being then at La Grange, Tenn., Grant ordered "Chaplain Eaton of the Twenty-seventh Ohio Infantry Volunteers" to take charge of the "contrabands" and set them to work on the plantations in the vicinity. In the summer of 1885, a few days before Grant's death, Gen. Eaton called at the cottage at Mt. McGregor and was sitting on the piazza talking with the ladies of the family when a door opened and Grant himself came out, very pale, and with the lower part of his face carefully covered with a bandage. Eaton rose to retire; but Grant, with "that characteristic gesture—the beckoning with all the fingers of his hand as it hung loosely at his side"—detained him, listened a moment to his expressions of sympathy, and then wrote on a tablet:

I am very glad to see you, and wish I could have some conversation with you. I should like to have see [sic] you something about our use of, and utilizing the negroes down about Grand Junction, Tenn. In writing on that subject for my book I had to rely on memory. No doubt there will be some mistakes, though they would not be so bad as errors in the military part—I intended submitting that part to you, but I was so ill while writing it, and so anxious to get through, that I did not have time. The first volume is now in print.

That was the beginning and the end of a very noble chapter in Grant's life—perhaps the noblest of all; and it has never before been told so well as Gen. Eaton tells it. Ben Butler receives due credit for really originating Grant's policy with the refugee negroes when he hit upon the idea of treating them as contraband, since as slaves they would help to keep the Confederate armies in the field. But it was Grant, with Eaton as his chief subordinate, who established the policy by putting it in practice on a large scale. Perhaps there is too much adulation in Gen. Eaton's telling of the story; but Grant would have been fortunate if all his admirers had praised so intelligently.

Lincoln appears rather as seconding Grant's work than as the originating mind. But without his instant sympathetic comprehension and thoroughgoing support the work might easily have languished. Incidentally, Gen. Eaton's relations with him seem to have become as intimate as with Grant; it was Eaton whom Lincoln, in the summer of 1864, sent to Grant at City Point to ascertain if he were lending an ear to the politicians who wished to make him a candidate for the Presidency. There are in the book pictures and stories of both its heroes which seem to possess us of the real quality of their greatness; and again it appears that in the case of these two Americans the essence of greatness was great-heartedness. Like nearly all perspicacious writers on the period, Gen. Eaton finds Charles Sumner wofully wanting when weighed in the balance with either of them.

Besides helping Gen. Eaton in giving acceptable literary form to his reminiscences, and in verifying statements of fact, Miss Mason has contributed a good introductory sketch of his own life.

In Spain. By John Lomas. New York: The Macmillan Co. $2 net.

The Soul of Spain. By Havelock Ellis. Boston: Houghton, Mifflin & Co. $2 net.

These two volumes are excellent exemplars, each of its kind, but there can be no question which kind is the one worth while. Mr. Lomas's book is a partly remade and freshened edition of his "Sketches in Spain, from Nature, Art, and Life," which dates from 1884. It is a full but utterly uninspired account of what the traveller would encounter in passing from the Spanish frontier at San Sebastian to Cadiz in the South, and thence from one to another of the Mediterranean seaports, up to Barcelona; afterwards, to Zaragoza, Bilbao, Leon, and Santiago. Many good photographs are more enlivening than the narrative, and a well-made and useful map is folded in after the index. The whole, however, is thoroughly pedestrian. Scarcely one illuminating remark is met with in the 344 pages. There is not even anything absurd, or glaringly incorrect, to flag one's interest.

Havelock Ellis, on the contrary, in the essays which he has brought together under the title, "The Soul of Spain," is the writer who interprets rather than describes. He is as industrious and patient as the next man in amassing material and accumulating observation, but he does not fling the details at one. He has pondered them, and what he gives his readers is the result of his thought—always philosophical, often deeply suggestive. His best chapters are the two on "The Spanish People" and "The Women of Spain." We have nowhere read a more fascinating attempt at Spanish psychology. The first impressions of the tourist, and, indeed, the lasting impression of many foreign residents, is the immense diversity of racial strains and manifestations of character in Spain. Ellis pierces towards the underlying unity. Long study and close scrutiny have convinced him that Spanish traits "coalesce into a more harmonious picture than is sometimes represented"; and it is that which he seeks to present in his brilliant sketch. His detection of typical qualities is sure, and his blending of them masterly. We can but instance the pages in which he illustrates the truth that "a perpetual insistence on suffering and death" is a part of the very texture of the romantic spirit of Spain. The light this throws, for example, upon Spanish art, is obvious to any one who looks at the repulsive yet prized canvasses of Rivera and Zurbarán.

One seldom catches Mr. Ellis tripping over a fact, yet he seems to have been too hasty in concluding that "the Spanish are, perhaps, the only audiences in Europe who still talk loudly and persistently during a concert." But he should have gone to the Teatre Real, when it was crowded at one of the concerts of the Madrid Philharmonic, and heard the angry hiss that ran through the galleries if any one ventured so much as to whisper or to cough when the orchestra was giving Tchaikovsky. This is a trifle. The book, as a whole, both pleases and stimulates. A certain amount of repetition, with an occasional appearance of contradiction, is involved in collecting the articles published at different times, but the net effect is scarcely impaired thereby. We can only hope that Havelock Ellis may be spared to complete his Spanish studies, and to give to the world his rounded interpretation of the genius of Spain. The subject is worthy his powers, and it has never been dealt with adequately.

Science.

Handbook of Flower-pollination. By Dr. Paul Knuth, translated by J. R. Ainsworth Davis. New York: Henry Frowde.

This is a second volume. The first, devoted to the history of the subject and dealing with its terminology and technique, has been already noticed in our pages (Sept. 27, 1906, p. 270) as an interesting and useful book. The volume now issued describes observations of flower pollination made in Europe and in the Arctic regions on species belonging to the great group of natural families commonly called polypetalous, together with a few which are gamopetalous. It is filled with facts indispensable to the student of biology and helpful to every serious amateur.

It cannot honestly be called interesting to the general reader: nevertheless, the general reader can make of it a good deal of use in examining plants from the new point of view.

This new point of view consists in the recognition of differences between plants, no matter how slight, and the grading of these differences in some regular order. Even the most casual observer can arrange them so as to give them expression in some graphic form, for instance, in certain curves. These differences vary in degree so widely that one must find terms expressive for all the grades. Hence have arisen the familiar terms, class, family, genus, and species, all of which have been long in use. But the differences below the grade of species have been almost neglected until within recent times. They have been, and are still, called varieties, races, forms, and the like, hut the degrees have not heen strictly noted. It is at this point that the new studies begin, and it is just here that such hooks as that of Knuth are of service to student and general reader alike.

If we have before us a field of some common species, huttercups, thistles, daisies, or what not, and set ourselves seriously about the task of detecting and recording even the slightest differences, we shall be surprised to see how wide is the range. Now if the observer will carefully bear in mind the distrihution of these differences, and will then watch closely the behavior of the insect visitants, he will see that the insects carry the fertilizing pollen apparently with little discrimination from one flower to another (always, however, of the same "sort"). Knuth's treatise is of assistance in indicating the visitant, and in showing how he effects the transfer of pollen. When this is clearly understood, one begins to realize that this transfer of pollen is practically a levelling process. It tends to repress or suppress eccentricities, and thus preserve the type. It is the most impressive illustration of the care with which nature endeavors to retain the type, even if she is careless of the single life.

There are some instances in which the flower is so constructed that the pollen cannot leave the floral envelopes, but must fertilize the ovules in that flower. Such cases are rather uncommon, and they mark the extreme of closc-fertilization. Next would come the near-hy flowers on the same stalk, or in the same cluster, for instance, in a thistle, and then follow the different grades, more or less akin, which we have mentioned, until we reach at last the limits of the genus. When there happens a fruitful transfer of pollen between two species within the limits of the genus, a true hybrid is produced. If there is a fruitful transfer of pollen hetween two well-marked varieties of a species, the result is generally called a cross-hreed, although the word hyhrid is too often loosely applied to it. The agents by which pollen is carried from one form to another appear, as we have said, to work in an undiscriminating manner, with the general result of maintaining the integrity of the type.

It is at this point that the new studies begin the work of separation. They have for their ohject the determination of results in the different transfers, instead of looking upon them as a simple averaging up or down, as the case may he, of a host of variations. The impulse to it came from the independent action of several hiologists who began to take exact measurements of differences. They had not proceeded very far, beforc it was discovered that a suggestion in regard to this sort of work had heen made a good while ago, in an unexpected quarter. It was found that in an obscure place the results of a great numher of carefully conducted and truthfully recorded experiments in this field had already been puhlished. And, furthermore, it was seen that the conclusions reached by this forgotten ohserver, J. G. Mendel, were extremely suggestive; among them some which aid in predicting the results to he ohtained in certain crosses and in certain generations. The application of Mendel's work to the study of the innumerable crosses hrought ahout by insects and the wind, and so on, is likely to be one of the most ahsorhing studies of the immediate future. And In this study Knuth's vast array of facts will be of incalculable assistance.

Two things will strike a botanist as he looks over this volume, namely, the use of the word Order in place of the term Family, and the use of the older sequence of families, now generally abandoned for one more natural. But these two blemishes will not materially interfere with the good which the hook will do.

This month Henry Holt & Co. will publish an untechnical history of "Biology and Its Makers," hy Prof. William A. Locy of Northwestern University.

In the twelfth Annual Report of the New York Zoölogical Society we have for the first time a comparative table of the various Zoölogical Gardens of the world. In total numher of living specimens New York leads with 4,034, this preëminence heing made possible by the Bird Department which numhers 2530 specimens as against 2,176 in Berlin and 1,665 in Hamhurg. London comes fourth with 1,621. In total number of species New York is fourth on the list with 865. The three long estahlished European Gardens with larger numbers of species of mammals, hirds, and reptiles are Hamhurg with 889, London with 1,268, and Berlin with 1,297.

The Keplerhund, the German society recently organized to promote an interpretation of the phenomena of nature in harmony with Christian ideas, has hegun the puhlication of a series of hrochures entitled Naturwissenschaftliche Zeitfragen (Hamhurg: Gustav Schloessmann). Five pamphlets have appeared: "Unsere Weltinsel: ihr Werden und Vergehen," hy Dr. J. Reim; "Die Welt des unendlich Kleinen," hy Prof. H. Gruner; "An den Grenzen des Lehens," hy Dr. A. Brass; Über den Bau der Knochen," hy Dr. E. Müller; "Das Wesen der Gärung- und der Fermentwirkungen," hy Prof. A. Mayer.

"The Vegetahle Garden," by Ida D. Bennett (The McClure Co.), is a thoroughly sensible and useful hook, designed for those who are within reach of a little land near their homes which they can cultivate in scanty leisure. But it is much more than this. It gives also plain directions for the preparation of the vegetahles when they are ready for the cook, although these culinary aspects of the subject are not so much as alluded to on the title-page. There are few avocations more illusory than the care of a home garden. The hard, rough treatment of the soil is back-breaking, the constant fight against plant enemies is heart-hreaking, and consequently a great deal of enthusiasm is required to hring the harvest through. And when one compares the cost of the potatoes and squashes which one raises with those which the peddler hrings to the door for sale, a large part of this enthusiasm is apt to disappear. It is just for the purpose of helping the weak-hearted that this hook has heen prepared. Considerahle emphasis is laid upon the fact that the cheap vegetahles purchasable at one's door are often the wilted left-overs from the marketplace, and, furthermore, that they are not unfrequently open to suspicion on account of the substances with which they may have been sprayed. This handy volume tells one how to employ simple methods for the treatment of the soil and seeds and seedlings, and the best processes for guiding kitchen-garden plants through periods of peril from their innumerahle foes. Almost any suburhan commuter might use this volume effectively, and excite keen envy in the breasts of his fellow commuters who work along the old lines of greatest resistance. The selections of vegetables here given might be improved in certain ways, but, on the whole, the choices are good, and the hints for the kitchen are extremely suggestive.

Drama and Music.

Gabriele d'Annunzio is composing in honor of Rome for the juhilee of 1911 a trilogy on an extensive scale, depicting the Rome of the period of the Kings, the republic, and the Imperial age. The trilogy is to he given in the Teatro Stabile.

The Italian dramatist Alfredo Testoni has just completed a play, the hero of which is the swan of Pesaro, Gioachino Rossini. In the fourth act, which takes place in March, 1860, in Paris, the author introduces Richard Wagner in a leading rôle.

The distinguished dramatist of Stockholm, Franz Hedberg, has died at the age of seventy-nine. He has to his credit more than eighty plays, many of which still hold the stage, hesides stories and theatrical sketches.

Mascagni is still manufacturing operas hy wholesale, hut little is heard of them outside of Italy. A few weeks ago he definitely decided upon the lihretta for his new opera, which he proposes to complete in six months, in order that it may he produced early next year. At the same time he has been negotiating with a French puhlisher concerning the composition of a three-act opera, to he produced in Rome, in 1911, during the celehration of the jubilee of the proclamation of Italian unity. His last opera, "Amica," has lately heen given at a numher of Italian cities under his own direction. "In his ahsence," as a Milan correspondent writes, "the success of these renderings of his work would have heen hy no means certain, but so great is his personal popular-

ity that a warm reception for the composer and his opera is everywhere assured."

Bad airs may keep people from a concert hall or opera house, and so may bad air. In the opera house at Stuttgart experiments have been made with an "ozonator," which is said by the action of chemicals to purify the air. The singers say it helps to keep their voices in good condition, while the hearers, instead of being fatigued to the point of somnolence, remain fresh, wide awake, and eager to come again. It is getting to be understood that many a singer and player owes his failure in this or that city to the fetid and depressing air of the hall in which he has to appear. "I am not a palm tree!" Hans von Bülow once exclaimed in protesting against the hot and sultry atmosphere of a hall he had to play in.

C. A. Bratter, who used to be musical critic of the New York *Staatszeitung*, has an article in the *Berliner Zeitung* which indicates that music in Constantinople is in about the same condition as in some American cities. The few genuine musicians living there have, he says, found so little encouragement that they have given up appearing in public, "leaving the field to the numerous self-appointed 'professors' and virtuosos. These dubious individuals make up the whole music-life of Constantinople, set the style at the amateur concerts, shrug their shoulders derisively if the names of real artists like Godowsky and Burmester are mentioned, and educate the younger generation to be the same kind of charlatans that they themselves are. It is really pitiful." Equally amusing are the players at the so-called operatic performances given occasionally. They are the very riffraff of the profession, who cannot even play simple dance music well; yet they "know it all," and refuse to take any instructions if they happen to be placed under an expert like Paul Lange.

The publisher of Strauss's "Salome" and "Electra," Adolf Fürstner, recently died at Nauheim. He was one of the most prominent of the Berlin publishers. Among the foreign works issued by him were the operas of Leoncavallo and Massenet. Years ago he took over from Meser the early operas of Wagner.

Art.

THE RIDDLE OF THE VAN EYCKS.

Hubert and John Van Eyck, their Life and Work. By W. H. James Weale. New York: John Lane Company. Pp. cxiv., 219. 41 photogravure plates and 99 other illustrations. Limited ed. of 400 copies. $30 net.

When it was known that the veteran investigator of the early Flemish school would publish an elaborate work on the van Eycks, expectations were naturally high. Mr. Weale combines the merits of the documentary and what we may call the critical schools, and aside from his numerous contributions to pure scholarship has, in his biography of Memling, produced a very useful and eminently readable work of popularization. We must confess to a certain disappointment in reading the present beautiful volume. It is to all intents and purposes what the Germans call a *Grundriss* of the subject, if its superb press work, illustration, and high price make it an anomaly in its sober class. It begins with a chronological display of original documents and passes through an elaborate bibliography, to a succinct biographical chapter. Then the bulk of the book is devoted to a catalogue *raisonné* with bibliographical *excerpta* of all the pictures by or attributed to the van Eycks. At the end, besides a full index, are a few general observations on Mr. Weale's method of distinguishing authentic from merely attributed works.

At first sight, there could be no greater boon to the student who happens to have a long purse or a library near than a treatise on a topic of capital importance which sticks severely to business and offers illustrations of a size and quality to serve as a real aid to study. But in accuracy the work falls far short of the German standard. Errors of the press abound, mistakes of transcription are often in evidence; less venial blunders are not unexampled. Since a very full list of corrigenda has already been contributed by an *Athenæum* reviewer, we need not dwell upon this disagreeable topic.

We hasten to add that the book as it is is immensely useful. Everywhere one marvels at the range of Mr. Weale's information. His caution, too, compels respect. This very richness and variety of the book forbids us to follow it in detail. We shall rather examine his canon summarily, and then speak of some of the broader issues of the subject, expressly excluded from his plan. Eleven paintings (six portraits and five religious subjects) Mr. Weale regards as beyond cavil. These are all authenticated by documents or contemporary inscriptions, and, we may add, with trifling exceptions, by intrinsic quality as well. The list includes the Maelbeke triptych, an unfinished and subsequently mishandled work, which has often been questioned, but we think unfairly. The grandiose yet forbidding head of Canon van der Paele at Hampton Court is reckoned as genuine, though not included in the enumeration. It seems to us of a technic much later than the van Eycks'. Of the remaining twenty-six works discussed—a roster that includes such notabilia as the Rothschild, Louvre, and Dresden Madonnas, the St. Francis, which has passed from the Heytesbury to the Johnson Collection, Philadelphia, and the Berlin Man with a Pink, now rechristened a Knight of the Order of St. Anthony—Mr Weale accepts practically all, regarding some, however, as copies of lost originals. In general, his attitude is cautious, for one of his authority almost unduly non-committal.

The subject itself, it must be admitted, makes for uncertainty. Our starting point is always the Adoration of the Lamb at St. Bavon's, Ghent. Of this glorious polyptych, we know, if we may regard as contemporary the inscription on the frame, that it was begun by Hubert, who died in 1426, and finished by John, in the year 1432, at the order of one Jodoc Vyt. To go beyond this and distinguish the share of the two brothers is sheer inference. Yet we may safely assume, since John in his independent works never shows any taste or capacity for elaborately ordered and carefully proportioned composition, that the actual design of the Ghent altar-piece is mostly Hubert's. Beyond this, it hardly seems safe to go. Mr. Weale believes that John invented nothing here but the stark figures of Adam and Eve and the minor designs on the backs of their panels. But if Jodoc Vyt, as the inscription implies, did not originally commission the altar-piece from Hubert, but acquired it in an unfinished condition, then the portraits of Jodoc and his wife can have formed no part of the original design, and must be attributed to John. For the work at large we remain in the unsatisfactory plight of having to regard it as Hubert *cum* John.

For Hubert Mr. Weale long ago proposed the test of deep religious feeling as compared with the relative perfunctoriness of John. On this basis the Three Marys at the Sepulchre of the Cook collection, Richmond, and the Dresden Madonna have been ascribed to Hubert, as well as the St. Francis of the Johnson collection. Of such a test one must say that it is highly subjective, and that connoisseurs, being frequently persons of limited religious imagination, are not in a position to apply it with certainty. We can take even less seriously Mr. Mark's interesting researches into the flora of the van Eyck foregrounds. Southern flowers might derive from a herbal, or even more probably from a travelled assistant.

In a certain massiveness of figure design, and studied beauty of arrangement in the Ghent altarpiece, it seems to us we have a criterion that may cautiously be used. This formal exquisiteness of arrangement and proportions is found in an even higher perfection in the Dresden triptych. Its spacing is so subtle that the architecture and figures, though their scale is mathematically preposterous, are convincing, taken separately, and blend in an extraordinary harmony. We may fairly say that in this respect the composition transcends the capacity of John as we find him elsewhere. A similar amplitude and ease of arrangement may be noted in the St. Anthony with a Donor, at Copenhagen, a picture which we have other grounds for regarding as the wing of a recorded altarpiece left unfinished in Hubert's studio. The actual painting seems to be that of a pupil. This special charm of arrangement is absent from the Three Marys, a truly delightful picture which seems nearly half a century later than Hubert's death; nor is it notable in the St. Francis, which has all the technical qualities of a fine example of John. When all is said, Hubert remains little more than the shadow of a great name to us.

John, up to a certain point, is a refreshingly tangible figure. There exist perhaps ten portraits, most of them attested by ancient and presumably authentic inscriptions on the panels or frames. These likenesses display a perfection of draughtsmanship and pigmentation, and an almost terrible revelation of essential character that forbid them to be confounded with any other portraiture whatsoever. And then we have an array of religious pieces, startlingly unlike in quality and sentiment, and often unequal in execution within the same panel, of which none but the tiny Madonna of Ince Hall, the van der Paele Virgin of Bruges, and the unfinished St. Bar-

bara at Antwerp, seem fully accredited. Within this score of religious pictures of manifestly Eyckian inspiration, we are confident that a full half may fairly be ascribed to John himself, hut a considerahle doubt attaches to many of the most famous. Neither in the Rothschild Madonna nor in its obvious derivative at Berlin (a relation curiously unsignalized by Mr. Weale. See plates opposite pp. 110 and 144), do the figures have the authority we associate with John. The Madonna of the Chancellor Rollin, in the Louvre, is even more baffling. Its discrepancies with the assured work of the master hardly outweigh its evident analogies. Possibly we should conclude that the master availed himself frequently of the services of pupils. In any case, Mr. Weale's vacillations and the conflicting critical opinions he has conscientiously chronicled possibly represent not so much the futility of criticism, as the intricate nature of the subject itself. Mr. Weale's conservative opinions may well serve as an acceptable *via media* between the optimism of official cataloguers and the ultra scepticism of the late Henri Bouchot.

This diligent but unduly irascible scholar has hardly had his deserts. His undisguised chauvinism and intolerance of non-Gallic excellence, together with his occasional vagaries, have unduly discredited his constructive work. He spent the latter years of his life trying to prove that there never was in any true sense an early Flemish school of Flemish paintiug. The artistic antecedents of the van Eycks were, he maintained, not Netherlandish but French. We must regard their work as a splendid offshoot of the old school of Paris. Now it is a choice hetween acceptiug this artistic genealogy for the mighty brothers or none at all. The Flemish partisans tell us that John learned of Hubert, who so far as one can tell learned of nobody. To so impotent a conclusion Mr. Weale is reduced in the bare sentence he devotes to the artistic origins of the van Eycks. But it is as incredible that the admirahle craftsmanship of these painters should have grown spontaneously out of nothing, without some sort of nurturing tradition, as it is that the painting of Antonello da Messina could be imagined without that of the van Eycks. And this nurturing tradition can have hardly heen other than French, for there is absolutely no evidence of any other developed painting that could have influenced the two great Flemings. Moreover, the priority and affinity of the Miniatures ascrihed to the Limbourgs is incontestahle. It is glory enough for the van Eycks that they so far improved upon their teaching that immediately the Flemish offshoot became more important than the native stock. And yet it is fair to admit that but for the political and military prostration of fifteenth-century France, the artistic revival, fostered hy the Burgundian dukes in the persons of John van Eyck and his followers, would presumahly have encountered serious rivalry at Paris, Tours, Bourges, and Avignon. In view of the professional animosity between Mr. Weale and the late M. Bouchot such an admission was hardly to be expected in the present volume. All the more reason then why a reviewer should do justice to a most erratic scholar who yet occasionally struck fairly in the white.

Mr. Weale has passed without discussion the hackneyed theme of the Eyckian "invention" of oil painting. It must have heen a temptation to do so, and yet in a book of reference we think his authoritative opinion should have been put on record. As a matter of fact the perennial dehate seems to come down to a quarrel ahout words. Since Eastlake nohody has supposed, nobody at least who took the pains to inform himself, that either John or Huhert invented or discovered any pigment or any vehicle that was unknown to their predecessors. On the other hand, there is equally no doubt that they did invent a new and very fine technique which was universally admired and widely imitated. The artists of the time regarded them as miraculous innovators, and took them as models, and artists are not readily fooled in intimate matters of their craft. Just wherein this technical improvement lay it would be difficult to say without committing a kind of sacrilege upon the surface of an indubitable van Eyck. In a word, their vehicle seems to have been a singularly pure and elastic varnish which united perfectly with the pigment, dried rapidly and permitted the picture to be carried out with a miuimum of over painting as if in one homogeneous enamel. In the brilliant and economical handling of these materials, the artists of the early Leyden school surpassed even the van Eycks. It has been surmised that amber was a chief component of this varnish, and certain restorers experimenting therewith have achieved excellent results. For art-lovers this slight rectification of the Vasarian legend of the invention of oil painting will be sufficient. Artists who would fain reproduce the inner glow and brilliancy, say of the Arnolfini portraits in the National Gallery, would doubtless welcome further and conclusive experiments.

We have merely suggested one or two lines of future research for which Mr. Weale's meaty book will serve as an indispensable point of departure. It is much to be hoped, though scarcely to be expected, that new documents may give us the birth years of the van Eycks. The first dated picture of John is 1432. But hy 1422 he was already court painter to John of Bavaria, Count of Holland. In 1425 John van Eyck was sufficiently famous to be besought by Philip of Burgundy, who paid the expenses of the painter's moving from Bruges to Lille. Such honors imply maturity, but we lack as completely evident juvenilia of John, as we do, save the amhiguous altar piece of Ghent, the mature works of Huhert. Are these works lost, or merely strayed into the limbo of the "school"?

The Prix Nationale (often called the Prix du Salon), valued at 10,000 francs, has been awarded to Auguste C. G. Cornu, for his group in carved wood, Le Nid, at the Salon of the Société Nationale des Beaux-Arts. The Bourses de Voyage have gone to Mlle. Henriette Desportes, André Marchand, and Anthony Troucct for painting; to MM. Camus, Guillivic, and Pourquet, for sculpture; to MM. Janin and Imandt, for architecture; to Madame Destailleurs-Sevrin, for engraving; and to M. Lecorchemont, for decorative art.

At Christie's the following pictures, belonging to Mrs. Stern and others, have been sold: Drawings: J. M. W. Turner, Inverary, £367; A. Mauve, Returning from Work, £1,627. Paintings: C. Troyon, Le Marché du printemps, £787; T. S. Cooper, Canterbury from Tonford, £546; J. B. C. Corot, A Landscape, £577; C. Fielding, Bolton Abbey, £336.

The reports of the German archæological work done at Miletus are being published in special parts, entitled "Milet, Ergebnisse der Ausgrabungen und Untersuchungen seit dem Jahre 1899," edited by Theodor Wiegand, and puhlished hy Georg Reimer of Berlin. Recently heft ii., "Das Rathaus von Milet," by Hubert Knackfuss, has appeared.

Miss Maud Cruttwell's "Guide to the Paintings in the Churches and Minor Museums of Florence" (E. P. Dutton & Co.) seems to be the first of a projected series of guides to the art collections of Europe. It is a guide book in the strictest sense—a book, not to read, hut to refer to for necessary facts. It is a painstaking and apparently accurate piece of work, and should prove of great value to the traveller interested in art.

The death is aunounced of the distinguished Belgian sculptor, Jef Lamheaux. He was born at Antwerp in 1852, and studied in Paris, where he frequently exhibited at the Salon. Among his better-known works are La Guerre, La Charmeuse de Serpents, Le Mendiant, Le Pauvre aveugle, Les Passions humaines, and his Faune Mordu which was refused at the Liège Exhibition.

Finance.

Miss A. R. Hasse's "Index of Economic Material in the Documents of New York" well maintains the high standard set by previous volumes in the series published by the Carnegie Institution. This bulky work of 553 pages indexes a great wealth of material for the economic student. No less than seventy-one pages of references are required for the documents relating to the New York canals; thirty-six for those relating to hanking; the same number for taxation; twenty-five for education; twenty-two for labor, and so on. Even then the "Index" deals only with the printed reports of administrative officers, legislative committees, special comuissions, and Governors' messages, laws and court decisions heing omitted, excent in so far as they are found in the classes of documents above mentioned. May the Carnegie Institution speed the day when similar voiumes shall be at hand for every State in the union.

Such an event as the recent panic always sets publishers and authors to furhishing up shop-worn wares that can he offered to the puhlic as "timely." Frederick A. Cleveland has taken down from the shelf his "Bank and the Treasury" (Longmans, Green, & Co), and has prepared a new and revised edition. The changes are confined to the insertion of an introduction, dealing with the crisis of 1907, and the addition of several new appendices, giving the

text of various currency bills introduced in Congress last December and January. Why publication of the new edition was not delayed long enough to enable the author to give us the text of the new currency law "right hot from the bat," we are unable to conjecture. Perhaps the omission can be corrected in a "newer" revised edition. Mr. Cleveland believes that our currency system should be reformed, but does not wish to see the Sub-Treasury system aboiished and does not favor "permanent issues of banknotes." In the text of the book we observe no material changes from the earlier edition.

With a similar desire to contribute to popular enlightenment Charles A. Conant has performed a noteworthy feat of editorial surgery upon his "Principles of Money and Banking," published in 1905 (Harper & Bros). This consists in bringing out the second volume, which deals with banking, as a new work, entitled "Principles of Banking." In a brief preface Mr. Conant considers the lessons of the crisis, and urges that something be done to remove "the fetters imposed by a defective currency upon American commerce in its contest for supremacy in the world's markets." The volume appears to have been reissued without changes in the plates, and the index contains all the original references to the first volume of the complete work. We think that even in these hard times the needed capital should have been secured for providing a new index.

Ex-Secretary Shaw has brought together a considerable number of his addresses and letters upon public questions in a volume which he entities "Current Issues" (D. Appleton & Co.). The topics treated range all the way from Imperialism to Youth, but the Tariff and the Currency Problem receive special prominence. Mr. Shaw's views are so well known to the readers of the *Nation*, and have been so often discussed in this journal, that it is unnecessary to present an extended review of "Current Issues." For students of the political thought and movements of the last decade the volume has no little significance.

THE ROMAN EMPIRE

B.C. 29, A.D. 476

By H. STUART JONES, M.A.

Fellow and Tutor of Trinity College, Oxford. Formerly Director of the British School at Rome.

No. 75 in THE STORY OF THE NATIONS

Crown 8vo, fully illustrated, $1.50
Half leather, gilt top, $1.75

This volume tells the story of the Roman Empire as founded by Augustus, tracing its history until the transference of the capital from Rome to Byzantium by Constantine, and treating the last century and a half of the Western Empire by way of epilogue.

G. P. PUTNAM'S SONS [NEW YORK and LONDON

International Documents

A Collection of International Conventions and Declarations of a Law-Making Kind

Edited, with Introduction and Notes, by E. A. WHITTUCK, B.C.L. Oxon., one of the Governors of the London School of Economics and Political Science. 8vo. pp. xxxviii-252.

This hand-book is intended to make the treaties it sets out in French and English more easily accessible, they being those which for the study of international law have most frequently to be consulted and compared. The Acts of the Hague Conference of 1907 have been included.

The Nation.

NEW YORK, THURSDAY, JULY 16, 1908.

The Week.

The Democrats, too, have named a man for the Vice-Presidency who is scarcely known outside of his own State, and whom no one would seriously think of for the Presidency. Mr. Kern of Indiana thus stands alongside Mr. Sherman of New York as a proof of the flippant way in which Americans set about filling the second office in the government. In either case, it is not personality, but geography, that has been the decisive factor. At Denver, also, New York might have had the Vice-Presidency had she wished. Her passive attitude is partly expressive, no doubt, of the feeling that Bryan's chances in this State are desperate, but was due also, we imagine, to the tacit plan of campaign which it is pretty clear that Bryan means to adopt. This is to fling himself upon the Middle West, and let the East go. Viewed in that light, Mr. Kern's nomination is not lacking in shrewdness. The hopes of Indiana Democrats are high. They have an excellent candidate for Governor, and Republicans admit that the State is doubtful. To assign it the Vice-Presidency may be expected to quicken local pride and yield some votes. At all events, it marks out the Middle West as the scene where Bryan expects to push the fighting.

If it is really true that Mr. Taft means to follow up his pledge to publish all campaign contributions by refusing to make any promises of patronage, even in doubtful States, this is certainly to be a record-breaking campaign. "If you will carry Indiana, you can have a place in the Cabinet or a foreign mission"—it hardly seems possible that no bait of this kind will be used this year. Are not the prospects of office at home or abroad to be held out to Republican editors everywhere in return for loyal and vigorous service? What a blow to the freedom and independence of the press! Mr. Hitchcock will, we presume, not be excluded from hope of the Postmaster-Generalship if his management proves successful. The new rule will have one drawback. It will enormously increase the pressure upon the candidate, after his election, from those who are confident that solely their services resulted in saving the country from the horrors of government by the other party. Knowing full well that their herculean efforts alone prevented New York or Ohio or Illinois from knuckling under to the enemy, they will insist on due recognition for their valiant and self-sacrificing labors. But this aside, Mr. Taft seems fairly bent on putting the campaign on a higher level than heretofore. May he travel far in this direction!

The Nebraskan will have to pluck fire from heaven if he surpasses the passionate and rubescent rhetoric of the Populist nominee. In his speech of acceptance, Thomas E. Watson exhorted his party to a holy war against class legislation, engineered by the golden criminals of industry. Mr. Watson has not read and written history in vain. "Populares," or Populists, he learnedly pointed out, has the same meaning as Democrats—it is only a question whether you prefer Latin or Greek. The Populist party is no mushroom growth. History is repeating itself; Vanderbilt against Alexander, Morgan against Cæsar, Rockefeller against Rome. Once more the many are bleeding for the few; the sweat of millions buys the American heiress her European coronet. The entire feast of Lucullus would not pay for the roses of a New York banquet. The pearls and diamonds of the laboring man adorn the necks of dissolute Cleopatras. In this florid vein Mr. Watson kindled the emotions of his hearers, and then cried, "Forward, march!" Where? —"Consecrate the temple, keep pure and perpetual the vestal service." To the Holy War.

Ingratitude, thy name is Gompers! After all these years of being an honored guest at the White House, holding sweet counsel, as one President with another; after being consulted about the law and the Constitution and the courts; after being wheedled and flattered and luncheoned—to turn square about and promise the 2,000,000 votes of the American Federation of Labor to Bryan! Not having the Oyster Bay vocabulary, words fail us to characterize such a display. It is flat *lèse majesté*, rising to treason, and reaching a climax in refusing to be fooled. To add to the injury, Mr. Gompers does not even wait to learn Mr. Taft's views about labor injunctions, which the dispatches from Hot Springs have been telling us were to be of a sort to please every trades union, but coolly assumes in advance that they will be unsatisfactory. Thus does Labor, warmed in the bosom of the Square Deal, sink its fangs into its benefactor. The result must be to give the President a much lower view of the labor vote, which he has striven so sedulously to annex. He may even be able to come over to the saner opinion that the larger part of that vote would be Democratic anyhow, and that the portion which Gompers can "deliver" will be, judged by past performances, pitifully small.

Of what use is it for Democrats or Republicans to urge that a Federal license be granted to corporations doing an interstate business? The submission of our Trusts and monster companies to Federal authority is complete; and, if we may believe the dispatches, there is daily evidence of the way the President's master mind exercises its sway over the once insolent and defiant but now cringing captains of industry. Here, for instance, is the news that the millionaires behind the new $300,000,000 Lumber Trust obtained permission of the President before organizing their company, just as Mr. Morgan and his associates did not absorb the Tennessee Coal and Iron Company until assured by headquarters that in doing so they would not only not be prosecuted for restraint of trade, but receive the gracious blessing of the White House. According to the report, the new Trust is to be a tame one, to eat out of the government's hand. It then continues:

> When the subject was first broached the President declared it was against the law, but when it was explained to him that the idea was to make it as beneficial to the government as to the promoters, he said any agreement arranged between Gifford Pinchot, the government forester, and Herbert Knox Smith, the commissioner of corporations, would be satisfactory to him.

This is the testimony of W. B. Stillwell, who is to be in the Trust. He says, also, that he was given a copy of the agreement between Messrs. Pinchot and Smith, by which the new concern promises to leave a certain number of trees standing on each acre. This, we presume, is not the only concession.

Is it possible for Mr. Roosevelt to be misinformed? Yes, says young Mr. J. G. Phelps Stokes, who calls the President's recent criticism of socialistic theory "monstrously unjust." And, on the whole, Mr. Stokes has made his point. Mr. Roosevelt ought to know that the modern Socialist takes pride in the immense distance that separates him from the early Utopians, whose creed was chiefly sentiment. Up-to-date Socialism is cold-blooded, matter-of-fact, scientific, vigorous, and harder on the wastrel and the criminal than the sharpest of present penal codes. Hence, when the President declared that under Socialism the idle and the vicious will give as little as they please and take as much as they desire, he is doing injustice to a social theory which aims to become the most efficient police system the world has ever known, as implacable in its vengeance on the social sloth

as an ideal Interstate Commerce Commission would be on the rowdy rebater. It is unfair to charge Socialism with crushing the individual and pampering him, at the same time; of the two charges the resolute Socialist would now much sooner plead guilty to the first than the second, adding the proviso that it would all be done for the good of the commonwealth. That is a position which Mr. Roosevelt should understand, even if he cannot accept.

If a steadfast heart and a cheerful mind are needed anywhere, they are needed by the man who believes in Spanish-American peace and progress. We are only a few months removed from the Pan-American love feast at Washington, and the dedication of Mr. Carnegie's peace temple, and already over the greater part of tropical America disorder is rampant or straining at its leash. Violence has broken out in supposedly immune Mexico. War rages in Paraguay. War is imminent in Central America. Columbia and Venezuela growl at each other. There is discontent at Montevideo; and Brazil is reported dreaming dreams of a great fleet, not because she wants war, but because she feels that she is entitled "to a natural frontier on the south," which means gobbling up Uruguay, if Argentina will let her. This is the situation as the pessimist views it. To his cheerful brother, it is only open to contend that, in spite of appearances to the contrary, progress there is. Outside of Venezuela foreign opinion seems to count more than it has done up till now, in restraining violence, and with time it is sure to count still more. When the Panama Canal comes, peace will be enforced on the Caribbean by every maritime nation in the world. It may be that the South American patriot, foreseeing some such final condition, is only making trouble while the sun shines.

On July 1, the Linnean Society held in London a special meeting in celebration of the 50th anniversary of the epoch-making paper submitted to it on July 1, 1858. This was the joint production of Charles Darwin and Alfred Russel Wallace, "On the tendency of species to form varieties, and on the perpetuation of varieties and species by natural means of selection." How far that little candle has cast its beams! There has been an enormous deal of profitless discussion over the question of priority of discovery, between Darwin and Wallace. The two investigators themselves always had a perfect understanding. Scientific jealousy was not an element in either's clay. And it was a remarkable feature of the celebration in London that Wallace himself should have been able to be present, with another still older friend and co-worker of Darwin's, Sir Joseph Hooker, both to give the occasion note and to place the facts forever beyond dispute. Dr. Wallace stated that it was true that the idea of natural selection and of the survival of the fittest had occurred to him and to Darwin independently; but he added that it occurred to Darwin "nearly twenty years earlier than to himself," and that during the whole of that time Darwin "had been laboriously collecting evidence and carrying out ingenious experiments and original observations."

Darwin's chief doctrine has remained unassailable and fruitful for all these fifty years. It is hard to imagine any single biological discovery being made to-day which could so profoundly modify men's ways of thinking, not only about science, but about theology, about society, about statesmanship. And it is impossible to think of a lonely scientist doing to-day what he accomplished in his Kentish home. Communication of scientific news is much too rapid now, and the advantages of having a thousand investigators all the while checking off one another's results are too great, to permit the student to work for years in unaided isolation. Letting his fellows know early what he is driving at is a sure way of saving his time and preventing him from falling into blunders. The multiplication of societies, the publication of a flood of papers and monographs, have made the task of the scholar in some respects easier, in others harder. He has to struggle to keep his head above the whelming material. He is forced to specialize. He knows that if he waits long he will be anticipated. Yet he has a sense of vast cooperation and a stimulus which must be more real and quickening than anything that came to the mighty but solitary students of an older day.

Dr. John E. White of Atlanta is the latest Southerner to tell the truth about the vicious leasing of convicts. The present system, he said in a recent sermon, is not so bad as that which existed from 1865 to 1899, when convicts were sold "as one would sell cattle," not only by the State, but by purchaser after purchaser. But if this has been ended forever, its evil spirit, as Mr. White points out, is inherent in the existing methods. From 1865 to 1899 the State got $7.50 a head a year for its convicts. Now it gets $136, but the lessee retails them as high as $570 a year, a percentage of profit that "would make Shylock sweat with shame." As a result of the better bargaining, the State makes $200,000 a year profit out of its convicts, and this revenue is the greatest obstacle to a reform. People do not want the State to lose that income. Here, truly says Mr. White, is a real evil of this policy—"the State has been trained to regard the convict as an asset, not as a liability; as a good fortune rather than a burden; crime has been constituted a necessary source of revenue." The increase of law-breakers, he adds, if regretted to-day, is ignored to-morrow when the dollars come rolling in. For remedy he mentions two proposed plans. One would confine the criminals in stockades and utilize their labor in building macadam roads; the other would put them to work on model State farms under the supervision of the State Department of Agriculture. Of the two, the latter is the better. Nothing kills a man's self-respect so quickly as to appear in public wearing the livery of crime, with shackles on his legs and men armed with rifles standing over him, as if he were a wild animal. On the other hand, the sight of the convicts in the streets is demoralizing to every one. Hence we feel that this change would be only a single step forward when there are many to be taken.

Lowell was admittedly a man of quick wit, yet he remarked to a friend in a London drawing-room: "I've often regretted that the best things I've ever said were addressed to the back of my coachman on the drive home." The brightest of us are in the same box with Mr. Lowell. Our most brilliant speeches, our most effective witticisms come into our minds only after the event which should have called them forth. Few possess the quickness of thought and action characteristic of the costermonger's wife who exclaimed: "She said I wasn't a loidy, she did, and the next minute I 'ad 'er 'ead in the gutter." Most of us require time; we are clever enough, brilliant enough, only it is always too late for us to convince others of these traits. Yet you must pot your epigram on the wing or your shot is no better than a blank cartridge. Since these things are sadly so, we can understand why it has been proposed in England to establish a course of conversation in our schools and colleges. Instead of wasting hours on mental arithmetic, time should be devoted to the cultivation of lightning-flash answers. Those gems of wit and jewels of insight with which our minds are scintillating, as we discover at our leisure, should be so placed as immediately to reflect the slightest gleam from any other mind. The advantage to our dinner parties would be incalculable. Monkeys and music would cease to be necessary. Professors to teach this new course might be difficult to find; we would suggest Augustus Thomas as eminently fitted to conduct such a class at Yale or Harvard, and perhaps Bernard Shaw might be induced to give a series of lectures on the subject. The fear that such training

might reduce every one to the same high level of brilliancy ought not to be a deterrent. It will be better to have your friends appear as clever as yourself rather than as stupid.

Prof. William James points out in the *Hibbert Journal* for July a path over which religious feet have walked for centuries: "Sincerely to give up one's conceit of being good is the only door to the universe's deeper reaches." There are within us, below the thick strata of weakness and pessimism and unbelief on which our daily life rests, deep wells of power and goodness to which the divining rod of reason will never dip. Specific religious experiences, which the psychologist cannot connect with any other, "point," says Professor James, "with reasonable probability to the continuity of our consciousness with a wider spiritual environment from which the ordinary man is shut off." This is a hopeful message. Break down the barriers around the stagnant pool of your own personality, and let the tide of the world's strength in. It is pleasant to find that Mr. Bryan is at one with the latest philosophical thought in his faith in the over-soul. Mr. Hearst, he says, is a man who has within recent years given up his conceit of being good, and has let the great, wholesome will of the people take possession of his entire nature. His feeble arms now strike with multiplied vigor drawn from his share in national aspirations. His "strength, like the strength of others who are strong with the masses, is due to the strength of the reforms to which he has attached himself." Here, surely, is hope for us all. And is it not touching at this hour when Mr. Bryan must have so many other things to think of, to see the nobility that is in him rising spontaneously to meet the nobility that is in Mr. Hearst?

A résumé of Dr. Stanley Hall's views regarding the evil effect on American life of feminine supremacy in school was printed the other day by the Berlin *Tageblatt*. It added, however, that while this warning might be needful in the United States, the women in Germany had not made sufficient progress to alarm any one. This is still more the case in Russia, where it seems as if the gains made were to be lost. The Minister of Education has sent a circular to the heads of the universities making the suggestion that access to lectures should be made more difficult, and adding, specifically: "Women must under no circumstances be admitted to the list of free auditors." If this is strictly carried out, women students will once more betake themselves to the Swiss universities. It was to arrest this movement that the influence of the court was used, in 1872, to establish high schools for women. It was not, however, till 1901 that the universities were opened to the women by removal of the clause that "men and women must not study together in the same halls." The language courses were thus opened to women with a view to securing teachers for the lower schools. Within the last three years the other faculties were made accessible to women students, at least as "free auditors." The recall of this privilege will leave open only the regular courses, and these are mostly overcrowded; as for medical courses for women, the announcement has already been made that no further applications can be considered.

Mr. Keir Hardie's resentment at not being invited to King Edward's garden party reveals a state of mind akin to that of Mr. Holloran, who met Mrs. O'Flaherty on the stairs, and said: "Good morning, Mrs. O'Flaherty, an' how are you to-day? Not that I care a hang, but just to make conversation." Mr. Hardie doesn't care a rap about royal garden parties; if he had been asked and had decided to go, he would have put on a "bowler," a red tie, and yellow shoes. But it makes good political conversation to turn the slight directed against Mr. Hardie and two of his fellow-members in the House of Commons into a Constitutional issue. England's King, because of the unwritten law which imposes on him absolute neutrality in his attitude towards Parliamentary parties, presents a peculiar embodiment of powers severely limited, united with prerogatives generously broad. He may play an active part in the formation of foreign *ententes*, but dare not exercise the slightest interference with the course of domestic politics. He may visit President Fallières and Nicholas II. whenever he pleases, and invite them to call in return; but he is not at liberty to decide who shall not come to his garden parties. In the present instance the apparent defence is that the King's objection to Mr. Hardie must have been personal, since the bulk of the Socialist members in the House of Commons were invited, and came. But it is undoubtedly a case of personal antipathy based in part on politics. For Mr. Hardie has but just returned from a journey to India and South Africa, where his speeches have been of a nature that the head of the British Empire might be excused for regarding as incendiary.

If things keep on with our Ambassador to Germany as they have been going these last few months, every future newly accredited diplomat to a foreign court will be wishing that the monarch might begin by calling him a liar, or at the least that the Minister for Foreign Affairs run over him in an automobile. For to Dr. Hill, in recompense for the slight unpleasantness that attended his appointment to Berlin, have come honors and amends in profusion. The Kaiser has received him with particular *empressement*. Society has followed suit. And now, undoubtedly at the royal wink, comes literature. *Persönlichkeiten*, a serial of biography published at Berlin, which in its twenty-one previous issues has treated of such eminent personalities as Von Bülow, Clemenceau, Tolstoy, and the Emperor of Austria, devotes its twenty-second number to "David Jayne Hill und die amerikanische Diplomatie." Dr. Hill's predecessor in the twenty-first number was Kaiser Wilhelm. From some thirty-six pages of eulogy we pick out here and there the facts that America recently passed "from the roughhewn *ex-improviso*-diplomat to the *Typus* Hill"; that "in grandeur of conception and breadth of historical outlook no work hitherto published in England or America can compare with Hill's 'History of European Diplomacy'"; and that "in David Jayne Hill's life philosophy (*Weltauffassung*), the principle of justice and equity lies uppermost."

The third Russian Duma closed its sessions on Saturday, prorogued and not dissolved. There was no reason why it should encounter any untoward fate. It met in November, 1907, a "Duma of landlords," chosen by a small minority of the nation, after the electoral law had been mercilessly mauled in defiance of the fundamental laws of the Empire. It has remained throughout a loyal assembly, slow to take offence from throne or bureaucracy, quick to appreciate the slightest ministerial favor, pacific because its majority is non-progressive and its minority has decided to submit to everything for the sake of keeping alive the merest spark of Constitutionalism. The Duma's activity has been concerned almost entirely with the budget. Its last important act was to sanction the raising of $1,250,000,000 in revenue. The business of expending that huge income may be safely left to the present régime. Of the real measures of reform that the Empire calls for, none has reached the stage of consideration by the Duma. Huge committees continuously labor and digest whatever material it pleases the government to supply them with; but agrarian reconstruction in accordance with Premier Stolypin's policy of breaking up the peasant communes is being carried on—by Stolypin. Even in Russia, of course, corruption may grow so rank as to enable men to speak and not be punished. Therefore the Duma has raised its voice now and then against anarchy in the Navy Department, and has actually been bold enough to decline voting the naval budget. On such meagre diet must hope of a liberal Russia feed for some time to come.

MR. TAFT BEGINS WELL.

In selecting his Chairman and Treasurer of the National Committee, Mr. Taft's long experience as a conciliator and shrewd manager has stood him in good stead. Not for nothing has he dealt with rhetorical Filipinos, the quarrelling Cubans, and the frogs in Panama striving to puff themselves into oxen. Factional Ohio politicians and offish Republican little great men were easy, after the others. And if anybody supposed that there was no clear judgment and force of will embedded in the Secretary's large good nature, last week's decisions at Hot Springs should correct the mistake. The Democrats may as well make up their minds to the fact that they have in Mr. Taft a formidable opponent. Certainly he begins his campaign as one having a just sense of the problems before him, and a firm resolution backing up his sagacity.

His announcement that there is to be complete publicity in regard to political contributions and expenses—everything to be down in black and white—is a master-stroke peculiarly well timed. The Democrats at Denver were preparing to make great play with the refusal of the Republican Convention to declare for publishing campaign accounts. The defeat of the McCall bill in Congress, too, was to furnish them with ominous proof that the Republicans were intending to raise a vast and secret corruption fund. But Mr. Taft has spiked that gun. Whatever his party leaders may have desired, or may have feared, he is for letting the public understand all about the finances of the campaign. But for this, his choice of Mr. Sheldon as Treasurer would have invited damaging attack. It would have been said that he had selected a Wall Street man, who was to combine wheedling with terrorism in order to extract money from corporate interests. Such charges would have seemed absurd to those who know Mr. Sheldon, but they would have had a certain sting unless Mr. Taft had drawn it by stating that the New York law compelling political treasurers to keep and publish full accounts would be followed by Mr. Sheldon, just as it was when he was Treasurer for Mr. Hughes in 1906. Thus at one step we have advanced to this great political reform, and, for the first time, the people will know what it costs to elect a President. Resolutions calling for this publicity have amounted to nothing, and laws to compel it have failed, but the action of Mr. Taft has inaugurated a political custom which is almost certain to become established from this day forth. That is the way we do things in America. We agitate, we cry aloud, we fumble and flounder, and nothing seems to be accomplished. But suddenly, sentiment crystallizes into deed, and deed becomes habit.

As for Mr. Bryan, he was first represented as waiting to "see what the Republicans will do." He noted that they are for publicity "after the election." In order to do better than that, he has induced the Democratic Committee to pledge itself to publicity before the election and all the way through. On October 15, a full account of all contributions above $100 is to be published, and thereafter all sums given up to the day of election. This insures a healthy competition between the parties. On this subject, Mr. Bryan is on the right track. And if Mr. Sheldon is correctly reported as saying that he should openly ask contributions from corporations, some one ought to call his attention to the "act to prohibit corporations from making money contributions in connection with political elections" which was passed by Congress and became law on January 26, 1907.

Mr. Hitchcock, as the manager of Mr. Taft's canvass for the nomination, fairly won his spurs; and his selection as Chairman makes sure a painstakingly minute and cool and dexterous management of the Presidential campaign. In the larger questions where general policy and personal tact enter, the candidate himself will, of course, have the final word; but for grasp of detail and a perfect gluttony for work, Mr. Hitchcock has shown himself unexcelled. Republican talent for political management is surely going to be needed this year, with the situation so complex and confused; but the party's reputation that way has long been great, and it is apparently drawing upon its best supplies. Mr. Taft has begun well; and whatever the result of the campaign, the whole country is in his debt for having freed the raising of money for political purposes from the scandals which went on with the consent of McKinley in 1896 and the active coöperation of Roosevelt in 1904.

WEAKER AGAINST BRYAN.

It is a sound piece of advice a French statesman gave when he said that we ought to take political events seriously, but not tragically. In that spirit, Bryan's third nomination should be received. It is, in any aspect, a momentous thing. No discounting of the occurrence in advance can blind thoughtful men to its significance and its gravity. That this man and what he stands for should have so permeated, so drenched, the Democratic party as to make all opposition futile is not a fact to be lightly dismissed. It testifies to pervasive political conditions which it would be folly to ignore. Bryan is not to be disposed of by calling him a charlatan and adventurer. He has not lifted himself by his own bootstraps. He has been borne aloft by a great wave of discontent and desire for radical changes, which has swept over large parts of the country. That is the serious thing. No one can look through Bryan to the political forces which have made him what he is, and not have some troubled moments. Yet it is no time for treating the matter *au tragique*. The part of sober citizens is to look about them and see what resources they may count upon in resisting the attempt to turn the government over to a flighty and unstable agitator.

No intelligent survey of the nation's defences against Bryanism can blink the truth that they have been greatly weakened during the past four years. It is not possible to-day to rally the conservative forces of the country in opposition to Bryan so splendidly as in 1896. Everybody knows the reason why. You cannot revile a man whom you have imitated. A party that has appropriated Bryan's ideas cannot, with good effect, attack his person. At the very beginning of the Republican campaign, it is the part whether of frankness or sound generalship, to admit that power of resistance to Bryan has been much broken by four years of yielding to him. President Roosevelt's avowed and deliberate purpose has been to head off Bryan by stealing his issues. The argument, or threat, which he has constantly used, has been: "If you do not go half way with me, you will have to go the whole way with Bryan." Well, we see now what comes of the plan of fighting a dangerous enemy by surrendering to him. The Bryan who was to be extinguished is exalted higher than ever.

Attempt the comparison between 1896 and 1908, anywhere along the line, and see where you come out. In the former year, Bryan was opposed as being impulsive and voluble, a man who lived upon sensation and would rule by clamor, an agitator who would stir the masses to frenzy by declaiming about the rich and mouthing against corporations. With what face can any Republican repeat those charges this year, after what the leader of his own party has been doing for four years past, amid vast popular acclaim? Turning from personalities to doctrines, we shall similarly find Republican arraignment of Bryan halted by the public memory of what the Republicans themselves have done or attempted. In 1896, Bryan was fought vigorously as one who would lay a rude hand upon the courts. The Bryan platform this year goes much further in that matter than it did twelve years ago. Its ambiguous phrases thinly cloak the purpose to impair the usefulness and validity of the writ of injunction, and to legalize the boycott. But what Republican mouth will not be closed on that subject? There is not a penny's worth to choose between the two platforms, in that particular; while President Roosevelt's utterances and wishes in regard to injunctions as brought to-

gether in Congressman Littlefield's cruel review of them, go so far as to give away the whole case against Bryan's attitude towards the courts.

Republicans are loath to admit these things to-day, but if Bryan were to beat Taft in the election, they would not only admit but assert them. They would say that the triumph of Bryan radicalism had been brought about by Roosevelt radicalism. They would point out how long the President hesitated over the true policy to follow; how he for a time took up the reform of the tariff, but when he found that unpopular, began to appeal to class feeling, to rouse the slumbering passions of the have-nots against the haves, to strike at great wealth in order to win great applause, with the net result of provoking a demand for extreme measures which neither he nor his party could satisfy, and which inured to the benefit of Bryan. If these things would be true after the election, they are true to-day.

It is necessary for all who regard, as we do, the election of Mr. Bryan as highly undesirable, to look all the facts in the face, and act upon the situation as it exists, not as we might like to have it. The campaign will be difficult. It is absurd to talk of a walk-over for Taft. He himself makes no secret of his belief that Bryan's chances of election are better than they have ever been before. The Republicans will know that they have been fighting, before the battle is over. They cannot bring out their old bogeys. The country is not going to be frightened into rejecting Bryan; it may be persuaded. To the task of persuasion, Mr. Taft and his supporters must devote themselves. They cannot hope to outbid Bryan in radicalism: stakes in that coinage he is always ready to double. The real hope must be to conduct a campaign in the interest of quiet and stable government; to meet outcry with reason; so to contrast an experienced and steady candidate with one who is constitutionally erratic, as to convince the voters that the country is safer in the hands of the former.

SOCIAL DISSIPATION IN COLLEGE.

Among the things brought to the attention of the Princeton authorities at the last commencement was the increasing social pressure upon students. It is regarded by thoughtful graduates as almost a greater menace than the glorification of athletics. At Yale, too, the faculty has set about curtailing the "week-end" privileges, which usually mean social dissipation, if no other kind. Elsewhere there are discernible qualms of the academic conscience on this subject. On many a campus last month the voice of the "old grad." was lifted up in complaint that "the former days were better than these."

What impresses the returning alumnus, after a quarter-century's hard work in his business or profession, is to find young Magnus Chartus of the graduating class with four automobiles at his beck and call in front of a mausoleum-like looking structure which his proud but startled father is told is a students' clubhouse. He knows, in a general way, that the standard of living expenses has risen since his own college days, but he is rather staggered at this concrete exemplification of the fact. Like the poet, he passes beside "the reverend walls" in which of old he wore the gown, and, like the poet, he feels

The same, but not the same—

but for very different reasons. The analysis of the change in social conditions of undergraduate life interests him more deeply than athletic triumphs or academic architecture.

The truth of the matter is that there has been a progressive secular invasion of what ought to be the sacred leisure of the college student. By leisure, of course, we do not mean idleness, an otiose academic existence tempered by mere bookishness, but a period kept measurably free from the distractions of business and the exactions of what is termed polite society. If young collegians from eighteen to twenty-two do not find in college a chance for a serious, unbiassed scrutiny of letters or philosophy or history or science, in nine cases out of ten they will never again get the opportunity; and, so far as the real purpose of university life is concerned, they might better waste their time and their fathers' money at home. Bitter experience of the present generation of college life goes far to justify what we were rashly inclined to regard as the amiable or picturesque crochets of early educators. It was not without a substantial reason that colleges originally took on the semi-monastic mode of life, with a common garb, a common meal, and a communal life. It segregated the scholar from the world during his scholastic apprenticeship, and reduced distinctions to a minimum within the cloister. It may seem a far call from the mediæval college to our military academy at West Point, but the scheme of social organization is not dissimilar. The uniform donned at entrance amalgamates into a common body the farmer's son and the financier's heir. The mess table and the barracks life do not reduce the cadets to a dead level, but make for the emergence of real, not fictitious, merit. The unquestioned efficiency of West Point as an educational machine is in large part traceable to a modern adherence to tried educational methods of the past, and to an enforced exclusion of parasitic interests that infest our colleges and universities.

From whatever angle viewed, the social constitution of college life in our older and wealthier colleges betrays just the defects that naturally spring from the intrusion of alien interests into what ought to be the sanctuary of learning and true culture. The so-called decay of college democracy, the lamented inversion of the ambitions and interests and activities of the college student, the coagulation of the wealthy students into particular dormitories—all these and other disquieting symptoms reflect the secular desecration of what used to be called the academic shade.

It is scant consolation to be told that this decadence is but the necessary reflex of a wealthy civilization upon institutions of learning. The fact that wealth singles out the colleges and universities as a place of residence for its sons is an admission that it covets the distinction which academic association conveys. If the colleges were to be actuated by no other motive than self-preservation, they must see that a challenge of luxury and a resolute return to some of the Spartan virtues of the simple life are their only means, in the long run, of preserving their influence either with the general public or with their own students.

THE QUESTION OF FREIGHT RATES.

It is evident that the railways are seriously proposing to increase freight charges 10 per cent. This is at least true of the roads east of the Mississippi and north of the Ohio and Potomac. Interviews and letters by their presidents and other officers make the intention clear. And the Interstate Commerce Commission has been sounded at Washington, and declares that it has no right or power to forbid such an advance in the rates on freight. Shippers may contest the new charges, after they are made, and possibly the Commission will hold some of them unreasonable, but the railways have a free hand, to begin with. It is plain, too, that they count upon acquiescence, if not a tacit encouragement, by the Administration. Put forward as a plan to prevent the reduction of wages, it could not but appeal to President Roosevelt, with a difficult campaign on his hands, and the labor vote escaping in droves from his corral. Moreover, the Democrats would find it hard to contest a scheme ostensibly to avoid cutting down wages. Hence it would appear that the railroad managers think the time auspicious to do some skilful and profitable fishing in troubled political waters.

The project seems to us vicious and indefensible on every ground. Financially, it proceeds upon the theory that the cure for extravagance is more extravagance; from the business point of view, it assumes that when your services are not in demand, it is the very time to charge more for them; while in the matter of public policy, it would be

one more load piled upon the consumer, with the labor unions standing as a privileged class and not lifting with one of their fingers the general burden.

The immediate need of the railways, no railway man could with a straight face argue that the marking up of freight rates would meet. That need is more business. Idle cars still total nearly 300,000. Freight is not coming forward. Business has to be hunted up, instead of being freely offered. Earnings, both gross and net, keep on sagging. The great demand, therefore, is to get more freight to move. But this plan of a 10 per cent. advance in rates is one to stimulate already reluctant and timid shippers by making their freight bills greater! This is veritable Sibylline Books finance—the less you have to give, the more you will get.

Ah, says the vice-president of the New York Central, but you forget how much more money the railways would spend, if they could only enlarge their revenues. They would begin buying right and left, and prosperity would be back before we knew it. Mr. Brown states this so gravely in his letter to the protesting Manufacturers' Association that we must quote his exact words:

> If the railroads could resume the purchase of equipment and material and the great and vitally necessary work of improving their facilities the present depression would, in my opinion, vanish in a day, and the reëmployment of the hundreds of thousands of idle workmen would, by their purchasing power, start running to their capacity thousands of idle manufacturing plants all over the land. I believe these results would very speedily follow the taking effect of the suggested increase in freight rates.

This is on a par with the intimation from Washington that the President is driving the departments night and day into making contracts and purchasing supplies so as to spend several hundred millions as speedily as possible. That plan of waste and extravagance, too, is to "end the depression." In other words, the Administration sympathizes with the professed view of the railways that it is possible to "make work" where none exists, and to do it by putting out a lot of money. Yes, but whose money? In the case of the government, of course, that of the taxpayers. Already overburdened and forced to economize in every way, they are to be made to divert still larger sums from their own business, in order that their wiser rulers may create business. Similarly, the consuming public is to be made to pay more for railway freights, in order that the railways, by laying out a part of the money, may make everybody prosperous. This is the political economy of bedlam.

The defenders of the scheme pathetically labor the point that the tax per capita would be so exceedingly small. Mr. Brown figures it out that the purchaser of a refrigerator would have to pay only about 7½ cents more for it; the buyer of a range no more than a cent or two a year for its natural life. Are consumers so unpatriotic that they will refuse to give up a few cents in order to start the wheels of industry? We notice, however, that Mr. Brown does not venture to put this question to railway employees. He shows that their wages have advanced, and are now very high. Why not ask *them* to surrender the few pennies which, from the consumer, would put the railways in funds and restore general prosperity? The reason is that the employees would strike. But the consumer never strikes. He is there only to be struck. When you can throw back the cost of a measure of spoliation, whether governmental or corporate, upon "the whole community," then you may feel safe. Individuals will fight; classes will protest; but the whole community is so patient a beast of burden as to make the uncomplaining ass look restive.

The objections to the increase of freight charges are so numerous and weighty that we can scarcely believe the avowed purpose to be the real one. These astute railway men must have some other objective than the one they name. They cannot really expect to cure the evils of high prices by higher prices. It would seem, rather, that they are looking far ahead: taking advantage of the political exigencies, just as the Steel Corporation did in securing the President's assent to absorption of the Tennessee Coal and Iron Company, they would establish, in adversity, their claim to higher pay for their services at a rate which, in good times, would put vast sums at their disposal, for dividends and for speculation.

LITERATURE AND CRIME.

The recent publication of M. Seghele's book, "Littérature et Criminalité," has reopened in France the discussion of the relation of crime to literature. The French have often singed their wings in this flame. Every one feels that the printed word may be a source of corruption; is certain that the public should assume some responsibility in checking the evil; but no one has devised any practicable means of attack. Official purity, it is generally agreed, is too often official prudery which condemns the just and the unjust alike. Fifty years ago Flaubert underwent arraignment on the score of "Madame Bovary." His advocate, M. Sénard, maintained that the defendant was a man of severe and august character, actuated by the highest artistic purposes. Only the other day, when M. Georges Lecomte was protesting before the Société des Gens de Lettres against the indecency of contemporary literature, he declared that, had he been present at that celebrated trial, he would have done homage not only to the conscience of the artist, but also to the nobility of the book.

The type of literature which is most cried out upon in this country is perhaps the least dangerous—that dealing frankly with arson, highway robbery, adultery, and murder. It may suggest the means, but—excepting boy brigands, inspired by the Penny Dreadful—seldom the motive of wrongdoing. It takes root only in minds already fertile in evil impulses. The letter accompanying the fatal gift of poisoned ale in Philadelphia ironically requested that the brew be recommended to the victim's family. There was in this something suggestive of the cold-blooded facetiousness of the Borgias. Life puzzles the observer with a specious mimicry of literature. In New Rochelle an Italian trapped his unfaithful wife. Drawing his stiletto, he ran her through the neck and then stabbed the lover, who fell dead beside her. As if more completely to mimic a scene in the theatre, innocent children were playing in the adjoining room. Yet one cannot think that this fruit-peddler's mind had been debauched by D'Annunzio's "Francesca da Rimini." A more plausible case is that of the young man who drank poison and died to waltz music in a public theatre, after the fashion of the heroes of Ford and Massinger. This instinct for the dramatic among criminals appears rather to be fed than stimulated by literature. M. Claretie cites in the *Temps* the celebrated case of Charles Lemaire, who killed his prospective step-mother on the eve of her marriage. Showing his hands red with blood, he exclaimed in Shakespearean phrase, "Fine gloves for my father's wedding!"

In so far as literature presents crime as crime, it is comparatively innocuous; it becomes dangerous when it presents crime as duty, as self-realization, as experience, or as æsthetic gratification. In a letter published in the *Public* of June 26, the writer reviles the Chicago authorities for their treatment of Emma Goldman. In her lectures at Portland, Ore., he says, that excellent woman spoke on the revolutionary spirit of modern drama, "dealing in a very sympathetic and intellectual manner with Ibsen, Hauptmann, Shaw, and Sudermann. You might as well send police to the meetings of the trustees of the Chicago University." The Chicago authorities, however, recognized Emma Goldman as a perilous link between these dramatists and the bomb-throwers. They have become distrustful of the so-called "peaceable anarchy." They have learned that a certain kind of literature begets dynamite, and they are not ashamed of panic when a fanatic, educated to a sense of his duty, rushes out bomb in hand, burning for martyrdom.

The literature which exalts self-realization as an ultimate end is older than the German storm and stress period, and as young as the latest novel of the Jack London school. It appeals powerfully to the masculine spirit endowed with a rich animal nature. It furnishes a religion to the religiously emancipated, and a sanction to the strong man with vividly surviving instincts of the barbarian. Under the guidance of the German madman whom so many innocents have taken for a god, it would bring back nature red in tooth and claw. It teaches—to use Tolstoy's words in summarizing a philosophical work published a few years ago in Chicago—that "all laws, commandments, or doctrines as to not doing to another what you do not wish done to you, have no inherent authority whatever, but receive authority from the club, the gallows, and the sword. A man truly free is under no obligation to obey any injunction, human or divine." It is the creed of the lions of the Renaissance, the creed of Napoleon, the creed of red anarchy, and the creed of many of the great business men of America.

A somewhat different criminal motive is that furnished by the type of literature which presents experience as an end in itself. The man whose aim is self-realization attempts to crush all else into his own personality; the man whose aim is experience attempts to crush his personality into all else. Not quality is desired, but variety, intensity, and strangeness. The hero of experience leads a fundamentally histrionic life; his success he measures by the number of rôles he has played. He lays his past aside like a garment. He gives no pledges to the future. He lives in the present moment, like the epicurean; but, unlike Epicurus, he delights as much in the sty as in the wreathed roses. Sin and terror allure his imagination. He is a vivisectionist, physical and spiritual, for the quaint excitement of anguish. A good illustration of this instinct in its most morbid form was furnished by the instructor at Cambridge, Mass., who two years ago gave his wife arsenic, hoping, since he loved her, to see her soul depart from the body in the moment of death. He had been preparing a thesis on insanity in German literature.

The literature which makes æsthetic gratification the end of existence defeats its own end. Pursued as an ultimate goal, it leads sooner or later into quagmires. The æsthete wanders from home in the quest of new and strange beauties. His truant feet stray from the classic to the romantic, and thence to the grotesque; from the moral to the unconventional, and thence to the illicit; from the sound to the unsound, and thence to the insane; from the chaste to the unchaste, and thence to the indecent. Yet the price of illicit æsthetic pleasure is the loss of all æsthetic pleasure. The unhappy man, as M. Lecomte says, who little by little allows himself to be soiled with all that filth, becomes finally insensible to a vigorous thought, an expressive portrait, or the proud wing of poetry. Dulled and stupefied by the contemplation of obscene images, he is incapable of feeling true beauty, of understanding, for example, the look and smile of La Gioconda or the harmonious and living majesty of the Victory of Samothrace.

WORDSWORTH.

I.

There is not a great deal that is new in Mr. Knight's "Letters of the Wordsworth Family,"* and the editing can only be described as chaotic; yet we may be thankful to have the correspondence of the poet and his household brought together in any form. Perhaps the nearest approach to a discovery is the clearer figure of Coleridge seen in the communications to and about him—a dethroned deity of the upper air, not commanding the winds, but tossed hither and thither by every breath of the heavens. As for the letters of Wordsworth himself, their character is already known. They are not precisely entertaining, but read thus together and in this companionship they impress one the more by the hard dry light of the intellect they display. When prejudice was aroused or his moral sense outraged he could indeed be amazingly perverse. It would not be easy to find a word more wantonly inappropriate for Byron than "dunce"; nor is "the damnable tendency" of such works as "Don Juan" likely to be diminished by branding "the despicable quality of the powers requisite for their production." Wordsworth might have learned from that poet's satire on himself—

> Who, both by precept and example, shows
> That prose is verse, and verse is merely prose,
> etc.—

how much more effective it is to exaggerate the virtuous weaknesses of an enemy than to belittle his vicious strength. But these errors of judgment are not common. In general, his critical remarks turn on a dogged determination to bend language to the minute exigencies of thought and emotion, and show how from this passionate integrity of mind, rather than from any peculiar sensitiveness to beauty, he also learned "that poetry is infinitely more of an art than the world is disposed to believe." And when, in the intercourse with a sympathetic friend, he speaks of his intimate ambition, there is something in his unflinching self-assertion and clear vision that rises almost into Milton's sublimity of egotism.

On lower ground these Letters may be considered, and so I would consider them here, as a fresh chapter in that mass of writings—the Fenwick Notes, Dorothy's "Journals," De Quincey's "Reminiscences," first of all—that present Wordsworth's poetical life to us in its minutest details. For the real question to-day is not so much the value of his greater works in themselves—these have their assured place—as of that chosen and cherished habit which lends a prophetic power to his meanest words. I have been struck by a passage in Prof. Walter Raleigh's monograph, which expresses aptly a thought derived ultimately from Matthew Arnold and common to most present-day admirers. "These three poems," he says, and the reader may supply their names from a dozen in his memory, "judged by any purely literary standard, are almost devoid of merit. They could find no place in a volume of Selections chosen for beauty and glamor of expression; they would even be called silly by many a critic competent to choose such a selection. But they are poetry in the making; they lead us by the way that the poet trod, and bring us at last to the 'Ode,' or to the 'Sonnet' composed on the beach near Calais, with quickened perceptions and an understanding that recognizes how much of the stuff of human experience was distilled in these masterpieces." That is but a cautious way of saying what a magazine-writer has recently stated more epigrammatically: "Those enjoy Wordsworth the most, and appreciate him the best who see that his verse is never really prosaic." Is it so? Is it true that his meanest poems are noble because they are part of the utterance of a whole poetic life? Shall one dare to hint that, on the contrary, some error may be suspected in his philosophy just because it resulted in these ignoble poems?

"This will never do!" wrote Jeffrey, in the opening of his review of "The Excursion," and for those four words he has been the most abused and best hated writer of the age; he has been held up as an eternal example of the folly and conceit of criticism. Well, I humbly take my place on the pillory with Jeffrey; I say, It never will do. I know there are sublime passages in that "vasty version," as did the irascible Scotsman; but I swear that in judging its total effect the *Edinburgh* was right, that, compared with the earlier poems, it has "less boldness of originality, and less, even, of that extreme simplicity and lowliness of tone which wavered so prettily, in the 'Lyrical Ballads,' between silliness and pathos," and that the manner of it exhibits imitations of Milton and Cowper, "engrafted on the natural drawl of the Lakers—and all diluted into harmony by that profuse and irrepressible wordiness which deluges all the blank verse of this school of poetry, and lubricates and weakens the whole structure of their style." A Daniel, I swear, come to judgment!

II.

It is common to admit that Wordsworth had no humor, as, in truth, he had not; but one may agree with the Wordsworthians in disregarding that as a venial fault. Humor is a blessed boon in a world governed by a superciliously solemn Nature, in whose eyes there is no shadow of laughter, when she seems most to jest with our own solemnities. But humor as a final criterion of literature is the mere cant of the day; impartially applied, it would athetize half the great poems of the world. The fault of Wordsworth lies deeper than that; it is the more serious lack of native vitality. One feels this lack throughout the correspondence; it will be

* *Letters of the Wordsworth Family.* From 1787 to 1855. Collected and edited by William Knight. In three volumes. Boston: Ginn & Co.

recognized instantly by comparing his letter of self-revelation to Lady Beaumont, magnanimous as that letter is, with Milton's similar confession in "The Reason of Church Government"; it leaves his trivial letters merely trivial, just as the superabundance of vitality in Byron imparts a catching vim and interest to his most insignificant note. The failure was primarily physical, I believe. No doubt, it is due to this that none of his portraits betrays the likeness to Milton that De Quincey discovered in his face, or the light within his eyes which seemed "to come from unfathomed depths." That he was all his life physically active is no disproof; walking for him "stood in the stead of alcohol and all other stimulants." And one remembers that scene on the road when Dorothy was behind Wordsworth and a certain Westmoreland clergyman of "a fine, towering figure," and Dorothy would exclaim at intervals to her companion, "Is it possible —can that be William? How very mean he looks!" Some of De Quincey's petty gossip you will say; but, with a bearing on larger issues. And much of the prattle in Dorothy's own "Journal" points to the same conclusion. How often the pathetic entry recurs in the prolific Grasmere days: "William worked at 'The Ruined Cottage' and made himself very ill"; "William wrote out part of his poem, and endeavored to alter it, and so made himself ill"; "William got to work, and was worn to death." Not physical elation, but endless fatigue went into the making of those poems; and there went into them also, vicariously, the life of a saintly woman. "I was oppressed and sick at heart, for he wearied himself to death," she writes one day, not knowing, or caring, that the weariness meant not death to him, but, as the world is made, to her shattered nerves, and imbecility, and for recompense a shadowy place *inter odoratum lauri nemus*.

One may detect this same low vitality at the bottom of much of Wordsworth's political philosophy. He has been denounced, and variously excused, for his desertion of the principles underlying the French Revolution, but I do not know that any one has attributed the change largely to a merely physical revulsion at the sight of violence. He himself has told of his early enthusiasm at the time when Europe

> . . . was thrilled with joy,
> France standing on the top of golden hours,
> And human nature seeming to be born.

It does not, in reality, appear that his political ideas changed essentially with his later conservatism; always he was full of pity for the "sorrowful reverse of all mankind"; even amidst his agitation over the English Reform bill he declared that he was not an anti-reformer, and at the end of his life he could still say, "I am a democrat." It was not principle so much as the aversion to limitless action that turned him against France when the Revolution began to work itself out in fact. Then it was, rather than when idling in "academic bowers," that a feeling of blind disease entered into his soul:

> I trembled,—thought, at times, of human life
> With an indefinite terror and dismay,
> Such as the storms and angry elements
> Had bred in me; but gloomier far, a dim
> Analogy to uproar and misrule,
> Disquiet, danger, and obscurity.

It is not without bearing on this trait of his character that Napoleon, the man of ruthless activity, was to him merely a "remorseless desperado," whose very name caused a shiver, whereas to Hazlitt, another romantic revolutionary but different in his nervous vitality, he was to the end a divine agent.

III.

And Wordsworth's art was affected in the same way by his temperament. In the poetry of events he was always dismally weak. He himself, long years after the composition of "The Borderers," could speak with complacency of his "turn for dramatic writing," but any one who has read to the end of that youthful indiscretion knows that it is one of the falsest and most desperately mawkish plays in the language. In the same way the stories that make up the section of "The Excursion" called too appropriately "The Church-Yard," need only be compared with Crabbe's "Tales," whose plots in several instances they almost duplicate, to see how impossible it was for Wordsworth to pass from reflective sentiment to character as an agent. Love he commonly avoided as a theme because he thought himself by nature too passionate! It was rather the dynamic force of love, the power of love as the supreme mover and perturbator of men, that frightened him from the theme. In the beauty of a woman's face Marlowe saw the energy that launched a thousand ships; *militat omnis amans*, said Ovid, and from that inner and external battle Wordsworth turned by a native instinct. He has, indeed, left a little group of love poems almost perfect in their restrained beauty; but it is the shaping influence of nature he admires in the grace of that undiscovered "Lucy," and in her death he is awestruck by the sense of passionate absorption, if the phrase is allowed, into the passionless life of the world:

> A slumber did my spirit seal;
> I had no human fears:
> She seemed a thing that could not feel
> The touch of earthly years.
>
> No motion has she now, no force;
> She neither hears nor sees;
> Rolled round in earth's diurnal course,
> With rocks, and stones, and trees.

This is not the love that commonly stirs the determination or the despair of a bachelor of twenty-nine; it is neither the pandemian nor the uranian Venus of the poets, neither the god Eros, with his flaming sword, nor the boy with his flower-tipped arrows. It is rather another step toward that communion with nature, that business of contemplative revery, into which the terror of events was driving him. Such a musing withdrawal of the soul cannot, of course, be separated from the general romantic movement of the age, but its special form was determined in Wordsworth by his individual temperament and its value as a priestly lesson must be measured in some degree by our understanding of his unconscious motives. Now there is a passage in one of his letters (No. cccxviii. of Mr. Knight's collection) which suggests a way of throwing these motives into a high light by comparison. He is rebuking his friend Gillies for quoting Lord Byron's "famous passage on solitude" ("Childe Harold," canto ii., stanzas 26 and 27), which, as he thinks, "does not deserve the notice which has been bestowed on it" and as composition "is bad, particularly the line:

> Minions of grandeur [splendor] shrinking from distress;"—

and he goes on to clinch the criticism:

> To illustrate my meaning, and for no other purpose, I refer to my own lines on the Wye, where you will find the same sentiment, not formally put as it is here, but ejaculated, as it were, fortuitously in the musical succession of preconceived feeling.

Wordsworth's "Tintern Abbey" is in the memory of every lover of poetry to-day, but Byron's stanzas must, I fear, be quoted at length, or the point of the comparison will be lost:

> But 'midst the crowd, the hum, the shock of men,
> To hear, to see, to feel, and to possess,
> And roam along, the world's tired denizen,
> With none who bless us, none whom we can bless,—
> Minions of splendor shrinking from distress!—
> None that, with kindred consciousness endued,
> If we were not would seem to smile the less,
> Of all that flatter'd, follow'd, sought, and sued;
> This is to be alone; this, this is solitude!
>
> More blest the life of godly eremite,
> Such as on lonely Athos may be seen,
> Watching at eve upon the giant height,
> Which looks o'er waves so blue, skies so serene,
> That he who there at such an hour hath been
> Will wistful linger on that hallow'd spot;
> Then slowly tear him from the witching scene,
> Sigh forth one wish that such had been his lot,
> Then turn to hate a world he had almost forgot.

Now, as composition, these lines may, perhaps, be called bad; they do not display the scope of their author's genius, while beside Wordsworth's masterpiece not only are they wanting in rapturous beauty, but in mere expression they touch upon insincerity; and for this reason they do not, like Wordsworth's, awaken in the reader the full emotion felt by the poet. So much must be admitted. But when it comes to the underlying ideas, I am not so sure. I cannot, in the first place, convince myself that the parts of "Tintern Abbey," if carefully considered, do not contradict one another, that the sentiment of those lines which find the mystic charm of nature in its power to voice "the still, sad music of humanity," is quite congenial with that of the passage which presents this same nature as a consolation for "the sneers of selfish men" and "the dreary intercourse of daily life." There is likely always to be this irreconcilable contradiction between the general sympathy and the particular distaste of the enthusiast who sees the mystery of mankind refracted through the mist of setting suns. The illusion of the nature-worshipper and the deception of the humanitarian spring, indeed, from the same substitution of revery for judgment, and it is worthy of remark that Wordsworth, who mused so pathetically on the lot of the dalesmen about him, had no power of entering into their individual lives and was commonly distrusted by them. I discover no such mingling of the sentimentalist and the cynic in Byron's stanzas, but a cynicism which, however shocking, is certainly consistent. And, going further, I feel a doubt in regard in Wordsworth's essential philosophy of nature. Byron's monk of Athos I can understand and allow for. Finding intolerable his loneliness amidst the conflict of egotisms we call society, he seeks the peace of real solitude where from his undisturbed lookout the world lies beneath him like a silent panorama. There, unvexed by the need of opposing will to human will, he can cultivate the higher will

to refrain and lift his mind above nature into serene communication with itself and with its God. That is a different life from Wordsworth's worship of nature, at least as that state of submission is expressed in "Tintern Abbey":

> . . . Therefore am I still
> A lover of the meadows and the woods,
> And mountains; and of all that we behold
> From this green earth; of all the mighty world
> Of eye, and ear,—both what they half create,
> And what perceive; well pleased to recognize
> In nature and the language of the sense,
> The anchor of my purest thoughts, the nurse,
> The guide, the guardian of my heart, and soul
> Of all my moral being.

"Nature never did betray the heart that loved her," he adds in the new flush of his pantheistic creed; yet as one reads the letters written in later life, when death had found an entrance to his chosen valleys, when disease had troubled the mind of his dearest companion, and other cares had stolen upon him in his retreat, it becomes clear that Nature did betray and cast him upon other consolations. Nor are his letters alone in presenting the decline of his life as clouded by a certain inner distrust. In June of 1849 Miss Fenwick writes that "his darker moods are more frequent, though at other times he is as strong and as bright as ever. . . . His is a strong but not a happy old age." And Mr. Yarnall, who visited him from America in the same year, found that "the expression of his countenance was sad, mournful I might say; he seemed one on whom sorrow pressed heavily." Something of this sense of betrayal sounds to my ears in one of his pathetic admissions, made to an unknown correspondent:

> What I lament most is that the spirituality of my nature does not expand and rise the nearer I approach the grave, as yours does, and as it fares with my beloved partner. The pleasure which I derive from God's works in his visible creation is not, I think, impaired with me. . . .

That is not the tone of his earlier confidence in pantheistic revery to lighten and sustain the soul. From Nature he has turned to a very old-fashioned God of nature; and in the end we may believe that he discovered in religion the true peace he so beautifully boasted of in his youth. "I am standing," he writes to a friend across the estranging ocean of this world, who was solicitous about the poet's fame—"I am standing on the brink of that vast ocean I must sail so soon; I must speedily lose sight of the shore; and I could not once have conceived how little I am now troubled by the thought of how long or short a time they who remain on that shore may have sight of me."

No, we may as well come to admit that there is something hollow and at bottom false in that blessed mood of revery by which we are laid asleep in body and become a living soul at one with the motion and the spirit of the wide-expanded world; that, on a lower scale, there is something unsatisfactory—dare I say ludicrous?—in thus consecrating a life to nature as, in reverence to Wordsworth, we have so long talked of doing. Solitude as a means of ascetic discipline may have its brave and terrible rewards; life in the country with its various duties may be salubrious, and may add to work its purifying exaltations; but to go out into scenery as "a dedicated Spirit," to cultivate a chronic habit of admiration, to hang upon the seasons' every mood for the sake of harvesting the "gentle agitations of the mind," to prod the imagination deliberately that no day may lack its "matins and vespers of harmonious verse," in a word to make a poetical business of nature—this will never do.

IV.

The habit in Wordsworth's case was more specially, it should appear, the result of that low physical vitality, which made him shrink from action, joined to a fervid moral sense, which sought ease of conscience in communion with a passive unmoral nature. For the world the result was a great volume of dull verse, which we have been compelled to regard as consecrated in a way to which no other poetry can quite lay claim. It is time we were emancipated from that romantic illusion. Yet withal I trust I am not blind to the great, if spasmodic, accomplishment of Wordsworth. It is perfectly true that we may read through pages of weary metaphysics and self-maunderings of tortured prose, and then suddenly come upon a passage whose inevitable beauty flashes upon the soul like a burning search-light. Who, for example, shall forget his first surprise when, reading in "The Prelude" of the college kitchens and their "humming sound, less tunable than bees," he passed to the description of Newton's statue:

> The marble index of a mind for ever
> Voyaging through strange seas of Thought, alone?

And there are amid his lesser works that waver "between silliness and pathos," whole poems—it is unnecessary to name them—of a lyric grace that forever sings itself in memory, or of a naked classic grandeur that awes and subdues the mind. Only, I cannot see why the purple patches on "The Prelude" and "The Excursion" should make us think the fact that the former would have been better as a whole in prose, and that the latter would have been better not to have been at all. Nor can I see why, to appreciate the melody of "The Solitary Reaper," whose voice, like the song of a bird retreating into the forest, draws us on to follow the lure of the world's undiscoverable secret beauty—

> A voice so thrilling ne'er was heard
> In spring-time from the Cuckoo-bird,
> Breaking the silence of the seas
> Among the farthest Hebrides.
>
> Will no one tell me what she sings?—

why we should need to pass through the initiation of Poor Susan's doggerel:

> At the corner of Wood Street, when daylight appears,
> Hangs a Thrush that sings loud, it has sung for three years.

The wonder is that the same poet should have written both poems, and that a critic like Matthew Arnold should have given them equal value in his book of selections.

V.

The poet's temperament and manner of composition may in part account for these anomalies. One seems to see him starting out with a hard determination to flog his sluggish blood into motion; as he proceeds, he grows into a tense nervous state of expectancy:

> My apprehensions come in crowds;
> I dread the rustling of the grass;
> The very shadows of the clouds
> Have power to shake me as they pass:
> I question things and do not find
> One that will answer to my mind;
> And all the world appears unkind.

One can see the haggard search for inspiration in his eyes: "They were fires half burning, half smouldering," said Leigh Hunt, who himself never needed to jog his jaunty muse, "with a sort of acrid fixture of regard, and seated at the further end of two caverns." Too commonly the fire merely glimmered and smoked to the close; but at times and without warning, most often, one fancies, in moments of extreme lassitude, when the will to write had succumbed to the fatigue of the body (or in other happier moments when the will was caught entirely off guard)—then suddenly the wayward breath of heaven blew upon him, the flame leaped up clear and warm, and the miracle of perfect verse was wrought. So, at least, one thinks to explain the "inevitableness" of his greater work amid so much of sad mechanic exercise. It is almost as if Nature at these times took the pen out of his hands and made him her spokesman, in spite of his self-willed consecration.

And for us may be the profit of those golden moments. For with all the talk of these years the world is indeed too much with us, and little we see in nature that is ours. It is a question whether, despite our poetic convention, we have really as keen and single-hearted an enjoyment of the Outworld, to use Henry More's term, as did the ages that preceded Wordsworth, whether he were not in fact a voice coming at the end of a period rather than at the beginning. For the most part, we are like Alphius of the Latin poem, always about to abandon ourselves to rustic delights, yet still tangled in the toils of the market. And so we may come honestly to this poet as to one who held in his gift the divine medicine of contemplation—

> But where will Europe's latter hour
> Again find Wordsworth's healing power?

We shall not be true if we speak of his life in nature as a wholesome ideal, for such revery as he taught is but a surrender to the ever-intruding sense of the world's defeat, and human fate is something greater than stocks and stones, the stars that control our destiny higher than the constellation of mountain flowers, and the meaning of mankind is better guessed in the clamor of society or in the still voice of the heart withdrawn into its own solitude than in the murmur of the evening wind; but all of us may drink in fresh courage and renewed vigor from seasons of wise passiveness. His excess may be our balance, and in his inspiration we may learn to regulate the gusty, self-wearing passions of the mind:

> Ye motions of delight, that haunt the sides
> Of the green hills; ye breezes and soft airs,
> Whose subtle intercourse with breathing flowers,
> Feelingly watched, might teach Man's haughty race
> How without injury to take, to give
> Without offence; ye who, as if to show
> The wondrous influence of power gently used,
> Bend the complying heads of lordly pines,
> And, with a touch, shift the stupendous clouds
> Through the whole compass of the sky; ye brooks,
> Murmuring along the stones, a busy noise
> By day, a quiet sound in silent night;
> Ye waves, that out of the great deep steal forth
> In a calm hour to kiss the pebbly shore,
> Not mute, and then retire, fearing no storm;
> And you, ye groves, whose ministry it is
> To interpose the covert of your shades,

BURLINGAME PUBLIC LIBRARY

Even as a sleep, between the heart of man
And outward troubles, between man himself,
Not seldom, and his own uneasy heart:
Oh! that I had a music and a voice
Harmonious as your own, that I might tell
What ye have done for me.

P. E. M.

Correspondence.

THE GOVERNMENT OF THE PHILIPPINES.

TO THE EDITOR OF THE NATION:

SIR: With the general argument of the editorial, "Tact in Ruling Races," in the *Nation* of June 25, one may agree, and yet no one acquainted with the facts can fail to protest against the inferences to he drawn from some of its statements, particularly with reference to the present Governor-General of the Philippines. For one thing, Governor-General Smith has not thought "it beneath his dignity to learn a foreign tongue." He was speaking Spanish before he became Military Governor of Negros Island, in 1899, and has for nearly ten years been using it fluently in constant intercourse with Filipinos. In passing, it may be worth remarking that, in the conferences held this year between committees of the Philippine Assembly and the Commission, upon bills whereon the two chambers differed, the interpreter has been a superfluity, for, like the Governor-General, Commissioners Worcester, Forbes, and Shuster (till his departure on leave) as well as the Filipino commissioners, Pardo de Tavera and Luzuriaga, all speak Spanish fluently.

To represent the attitude of the American authorities in the Philippines regarding the Assembly's resolution on the subject of independence as one of "incredulity and contempt," is hardly fair or just. First, it is not correct to paraphrase the Assembly's resolution so as to make it declare "that nothing but independence would satisfy the national desires, and that it ought to be granted quickly." It is no less incorrect to paraphrase Governor-General Smith's cablegram, thus:

That the resolution of the Philippine Assembly amounts to nothing; that the natives do not know what they are talking about; that it is ridiculous to speak of their being fit for independence, and that the whole movement may safely be ignored.

Governor-General Smith has been under fire, privately as well as publicly, just because he has been disposed to show both by speech and act his sympathy with the Filipino aspiration for independence, and just because he would not attempt to manipulate proceedings in the Assembly or try to throttle it. A large majority of Nationalist representatives were elected last year, many of them making great boasts in their campaign about "demanding" of the United States "immediate independence," and leading many voters to believe that Nationalist victory would really mean "immediate independence." Of course, these representatives were all intelligent enough to know that they could not deliver what they promised, some openly, some by innuendo. A good working majority of the Assembly—be it said to their credit—have, from the outset, shown their readiness to work with not to obstruct, the American government in the islands. Yet these conservative Nationalists would have stultified themselves, in the face of their preëlection declarations, by refusing to vote for a resolution for independence. Various radically worded resolutions have been suppressed in committee. The resolution, as passed, was apparently a simple declaration by one house of the Philippine Legislature that the Filipino people aspire to independence, and that they are already fitted for complete self-government. In view of the history of the "campaign for independence" in the Philippines for a year and a half back Governor-General Smith cabled that this resolution should not be interpreted as a victory of the radicals and obstructionists, that it is no "demand" by intransigents, but is, as it were, a *pro forma* expression of Filipino sentiment. That this is the correct view of the matter, fuller mail advices will quite certainly show.

Finally, is it not rather ridiculous, in the face of what has been happening of late in India, even with the Liberals in power in England, to brand our course in the Philippines as "pure repression," and by inference to hold up for our imitation Mr. Morley's government's policy in India? Over against recent events in India, set our programme of stimulating universal education and local self-government in the Philippines, our grant of real legislative powers to an elective Assembly, our policy of keeping hands off when Filipino demagogues made their campaigns for election to that body by appealing openly to the popular desire to get rid of alien government, and our leaving that Assembly to settle for itself the problem of reconciling the ebullitions of "Nationalism" with the hard facts of the situation. No criticism of the British government for its recent acts in India is here implied; the very fact that its measures to repress agitation are taken under Mr. Morley is sufficient evidence that they are deemed strictly necessary. Nor is it safe to pursue far a parallel between India and the Philippines. But to imply that our government in the Philippines is one of "repression," as compared with that of India or any dependency of Great Britain—even Egypt, not strictly a dependency—is certainly straining the critic's license. JAMES A. LEROY.

Fort Bayard, N. M., July 6.

THE TRUE ECONOMY.

TO THE EDITOR OF THE NATION:

SIR: It is often asserted that such great combinations as the Standard Oil Trust are of great economic advantage to society. It is urged that a given amount of business can be more economically handled by such machinery than would be possible if the same work were done by a multitude of small and independent companies.

In a question of this kind there are many conflicting interests to be considered. For instance, who is to apportion the advantages thus gained among the parties in interest? Again, may there not be disadvantages arising from such great development of economy in a special direction?

Every electrical engineer knows that in all power plants there are heat losses in the line wires between the power plant and the customer. The larger the copper conductors are in cross-section, the less of such waste there will be. In every power plant in existence this waste could be reduced to one-half its present amount by doubling the cross-section of the conductor, and it could be practically obliterated by the use of copper cables one foot in diameter. But no engineer would consider such a plan of economy. It would involve an increase in other losses. The same company which is paying for this waste of power would be called upon to pay an enormously greater interest loss on the increased cost of construction and material. Every engineering project must involve many such compromises between conflicting features. The economy in such heat waste must not be made too great.

When we consider society as a whole, the same conflicting elements exist. It is greatly to be desired that the average man should live in his own house. He should make his own plans, in the management of his own business. He should thus learn to become an independent thinking unit, capable of taking the lead in any project which demands power of initiative and intelligent action. The mistakes which he makes contribute to his education.

We welcome the kind of machinery which releases men from the drudgery and bondage of manual labor. But we do not welcome the advent of a system which converts the men themselves into elements of a machine.

Such legislation as the Sherman law represents the nation's attempt to defend its highest interests.

It would seem to be the part of wisdom that the managers of these intangible economic machines should learn to obey the law. There are multitudes of insignificant people in this country who still possess the capacity to think and to act, and who are determined to defend themselves.

FRANCIS E. NIPHER.

St. Louis, July 8.

Notes.

John Lane has two books of special interest for the coming hunting season. One is a reprint of Nimrod's work on horses, "The Condition of the Hunter"; the other is Carlisle's "Fox Hunting, Past and Present."

Among the autumn publications of the Baker & Taylor Company are "Mediæval Architecture," by A. Kingsley Porter; "History of Architecture," volume II., by Russell Sturgis; "The Appreciation of the Drama," by Charles H. Caffin; "Browning's England," compiled by Helen A. Clarke; "Books and Reading," compiled by Alfred Harcourt and R. C. Gaige; "Life of Lincoln," by Henry W. Whitney; "Bird Legend and Life," by Margaret Coulson Walker; and "Contemporary Ireland," by Paul Dubois.

Houghton Mifflin Company makes the following preliminary announcements for this autumn: "Lewis Rand," by Mary Johnston; "The Leaven of Love," by Clara Louise Burnham; "The Lighted Lamp," by C. Hanford Henderson; "Though Life Us do Part," by Elizabeth Stuart Phelps; "The Fair Mississippian," by Charles Egbert Craddock; "The Calico Cat," by Charles Miner Thompson; "Amedee's Son," by Harry James Smith; "Peter Moor's Journey to

Southwest Africa," by Gustav Frenssen, translated by Margaret M. Ward; "Marjorie Daw," by Thomas Bailey Aldrich, holiday edition; "Cupid's Almanac," by Oliver Herford and John Cecil Clay; "Ye Butcher, Ye Baker, Ye Candle-Stick Maker," by Robert Seaver; "The Life of Thomas Bailey Aldrich," by Ferris Greenslet; "William McKinley," by Thomas C. Dawson; "John Keats," by Albert E. Hancock; "Lincoln, Master of Men," by Alonzo Rothschild, anniversary edition; "University Administration," by Charles W. Eliot; "The Ideal Teacher," by George H. Palmer; "The Home Builder," by Lyman Abbott; "By the Christmas Fire," by Samuel M. Crothers; "A Happy Half-Century," by Agnes Repplier; "Park Street Papers," by Bliss Perry; "Dryden's Poetical Works," Cambridge edition in one volume, edited by George R. Noyes; "The Poems of Richard Watson Gilder," household edition; "The Poems of Edmund Clarence Stedman," new household edition; "Poems of American History," edited by Burton E. Stevenson; "Poems of New England," edited by Henry W. Longfellow; "Heracles," by George Cabot Lodge; "Wisconsin," by Reuben G. Thwaites; "Minnesota," by William W. Folwell; "The Confessions of a Railroad Signalman," by J. O. Fagan; "The Lay of the Land," by Dallas Lore Sharp; "Business Accounting," by William M. Cole; "The Beginnings of Industrial Education," by Paul H. Hanus; "The History of Boston Theatre," compiled by Eugene Tompkins and Quincy Kilby; "Immortality as Conceived and Taught in Northern Buddhism," by William S. Bigelow.

Miss Grace Norton, the best authority in America on Montaigne, who has already given us three valuable books on the essayist, now publishes two companion volumes, "The Influence of Montaigne" and "The Spirit of Montaigne" (Houghton Mifflin Company). These announce themselves modestly on the title pages as only "compilations," but they are such compilations as call for more preliminary reading than many an "original" book. The first volume contains, drawn from French and English writers, comments on Montaigne, allusions to him, and plagiarisms from his writings. The second is made up of parallel passages expressing thoughts like those of Montaigne, among which the works of Bacon, Locke, and Rousseau stand foremost. Many of these last come very near the line of plagiarism, and Miss Norton must have hesitated into which category to place some of her material. No more interesting and useful monument to a great writer can be made than a history of the ups and downs of his posthumous fame, as Roger Le Brun recently did for Corneille in a volume in some respects not unlike Miss Norton's, though arranged according to a different plan. These two books of Miss Norton's, together with the recent investigations and editorial work of M. Villey and M. Strowski among others, show that Montaigne has lost nothing of his sway. Perhaps we shall yet have a society of students of Montaigne, like the one now devoted to Rabelais, the other great prose writer of the sixteenth century, whose books Montaigne thought, indeed, "simplement plaisants."

The University of Chicago Press has issued another volume of Prof. Walter C. Bronson's anthology, "English Poems." This, the third in a projected series of four volumes, deals with "The Restoration and the Eighteenth Century (1660-1800)." In preparing this series, which is intended especially for use with college classes, the editor has aimed:

(1.) To choose poems representing the different phases of the work of poets and schools of poetry; (2) to print entire poems or entire parts of poems, whenever possible; (3) to follow the latest accessible text approved by the author; (4) to modernize spelling and punctuation as a rule, but to retain the original form when change would affect rhythm or rhyme; (5) in the notes to explain difficulties of expression and allusion, give the poet's view of poetry in his own words, furnish material (chiefly variant readings and literary sources) illustrating his mode of work, and throw some light, by extracts from contemporary criticism, upon the literary standards of different periods.

As the editor says in his preface, so much of the poetry of this period consists of long reflective, satiric, or descriptive works that it has been necessary to include a good many extracts. The authors represented are Samuel Butler, Etheridge, Sackville, Sedley, Aphra Behn, the Earl of Rochester, John Oldham, Congreve, Dryden, the Countess of Winchelsea, Addison, Prior, Swift, Pope, Thomas Parnell, Gay, Allan Ramsay, Matthew Green, John Dyer, James Thomson, Young, Robert Blair, Samuel Johnson, Shenstone, William Collins, Gray, Akenside, Christopher Smart, Thomas Warton, Churchill, Falconer, Goldsmith, James Beattie, Chatterton, Cowper, Robert Fergusson, John Skinner, Burns, Blake, and Crabbe. As we noted in our comment on the volume on "The Nineteenth Century" (see the *Nation* of Feb. 13, 1908, p. 153), one of the most valuable features of this admirable series is the critical apparatus. Professor Bronson's long experience in teaching literature has familiarized him with the needs of the average student in the matter of elucidations. More important, however, than his glosses of the text are his extracts—as from Dryden's numerous prefaces—giving "the poet's view of poetry in his own words" and the attitude of contemporary critics. These passages are remarkably illuminating, and offer in brief compass the very thing that so many students lack, a sense of historical perspective. The volume is well printed and bound.

Prof. W. H. Bennett's "Religion of the Post-Exilic Prophets" (imported by Scribner's) is the first of a series of ten volumes, to be published under the general title, "The Literature and Religion of Israel." Other volumes are announced: Foundations (Jastrow), Institutions and Legislation (A. R. S. Kennedy), History (Hogg), Psalms (Gray), Pre-exilic Prophets (Kennett), Wisdom Literature (Skinner), Historical Apologues (James Moffatt), Apocalyptic Literature (Charles). The volume before us exemplifies the general features of the scheme. The first part takes up the several prophets and prophetic writings in chronological order, setting them in the light of their times and surroundings, and giving a summary of the contents of each book and an outline of the individual teaching. The second part is a Biblical Theology of the prophets of the period, in a systematic arrangement under such topics as The Nature of Man, Righteousness and Sin, Rewards and Punishments, Atonement and Final Reprobation. There is a meagre index of subjects and a full one of scripture passages. "Respectable" is the word for Professor Bennett's volume. Apart from the call to contribute to the series, he would probably have felt no call to write it—there is no mark on it of a fire shut up in his bones. But, the occasion being given, the task is diligently and intelligently performed. The general plan of the series is open to serious criticism: it involves a vast deal of repetition, and provides for no unity or correlation. Each volume, so far as appears, is to be an independent work, dealing, not with a certain period in the history of the religion, but with the theology of a particular form of literature, which may run through all periods.

Thick paper and large type, like all things made for man's well being, are capable of perversion. With their aid many a half-dozen slim newspaper articles have been turned into a book and assumed a virtue that they never had. Such a volume is Frederick Moore's "The Passing of Morocco" (Houghton Mifflin Company), which consists, in part, of letters written to the *Westminster Gazette*—letters that do not rise to any particular distinction, even as products of the facile journalistic pen. At the time when the pages must have been sent to press, in the early months of the present year, nothing had as yet happened in Morocco which would justify the title of the book. What has occurred since then makes the propriety of the name still more dubious. No European statesman is in a position to say now how soon Morocco will pass or whether it will pass at all. Nor does Mr. Moore offer an argument of his own to justify the position he presumably maintains. There is little account or estimate of the forces at work, nor even an adequate description of the terrain on which a difficult problem is being worked out. The only phase of recent Moroccan history that is capable of being definitely chronicled at the present time is the fighting between the French and the Moorish coast tribes and between the two rival Sultans. But neither of these does the writer touch upon in any fuller degree than we have seen the matter reach in our newspaper dispatches. One point only is made which we have not seen sharply brought out elsewhere, and that is the ruthlessness with which the French have been carrying on the campaign against the Shawia tribesmen. Mr. Moore charges the French army of pacification with taking no prisoners in battle or in the course of their punitive raids. He repeats the charge with an insistence that leads us to believe the book to have been compiled for that specific purpose; and on the whole it is a point which merits the outside world's attention.

George Ridding, headmaster of Winchester College from 1866 to 1884, and first bishop of Southwell from 1894 to 1904, took part in some of the most picturesque of those transformations by which rights vested for spiritual purposes bring themselves up from time to time in England to the standard of current secular ethics. In 1393 Bishop Wykeham founded the College of S. Mary Winton to increase the supply of clergy, who had been depleted by the black death. The foundation was poor, but became rich as time went on. After the Reformation the warden and fellows

married, became non-resident, and made themselves rich by starving the scholars and masters. At the accession of Queen Victoria, the school was still poor, but the income of the foundation was £20,000. Readers of Trollope will recall Hiram's Hospital, and will realize the consternation of the governing body when by act of Parliament in 1868 they were allowed one year in which to disgorge and reform. The history of Dr. Ridding's action, of his personal generosity and self-sacrifice, of his acuteness in preserving the antique while surrendering the antiquated, is full of interest. Having saved and rejuvenated the moribund at Winchester, he was sent to superintend the growth of the new, raw, ill-conditioned diocese of Southwell. Before the bishop of "The Servant in the House" becomes fixed in the American mind as the typical spiritual peer, it is well that note be taken of the simple straightforward way in which Bishop Ridding gave his money, his comfort, his talents, and his life to the service of his see. The story is ably told, though with inevitable eulogy, by his wife in "George Ridding, Schoolmaster and Bishop" (Longmans, Green & Co.).

Whatever may have been Napoleon's own judgment upon his career, there can be little doubt that interest in his work as a statesman is tending to supersede the battle histories. It is part of the general transference of emphasis which is remaking history to-day—the attempt to view the past not merely as a passing show, but as the working-out of obscure yet potent social forces. This socializing of history—the study of movements which leave permanent results, rather than of the changing spectacle of the results by themselves—meets its supreme problem in the genius of a man like Napoleon, and nowhere else more fully than in the reconstruction of France during the Consulate. We ought therefore to be grateful for an English translation of one of the important sources for that period, hitherto difficult to procure, even in French. The edition of A. C. Thibaudeau's "Mémoires sur le Consulat," which has been prepared by Dr. G. K. Fortescue and published under the title, "Bonaparte and the Consulate" (the Macmillan Co.), will be welcomed by all students of the period, and by many who are not students. Thibaudeau was a member of the Legislative Committee of the Council of State, and watched the process of that judicial and administrative creation which remains the chief glory of the Consulate. He was on intimate terms with Napoleon, and his account of what was going on in the inner councils of the government is a valuable historical source. Yet, while remarkably clear and sober, it is not all that the editor claims for it. Its conversations are not to be taken as verbatim reports, but rather as the substance of well-remembered incidents, which literary skill clothes again in something like their original form. One must not place too great confidence in the literal truth of such a narrative. The best of memoirs need most careful weighing in the balances of historical criticism. Time and circumstance mould and color them, and they remain honeycombed with errors of the most elementary character. The general reader, however, cares little for these matters, and we need only say that among the many memoir writers of the French Revolution there are few more interesting or more worth reading than those of Thibaudeau. They reveal Napoleon at the greatest period of his career, not in the distorted view of a Bourrienne, but as he stood before the best of Frenchmen, guiding that work which cleared up the disorders of the Convention and the Directory, and established the institutions of modern France. Dr. Fortescue has done his work with the utmost care. The translation is well rendered, and the text is supplied with abundant notes. There are short biographies of every one mentioned in the narrative and helpful explanations of obscure points. In addition, there is a long introduction, while prefatory notes go with each chapter. In fact, all has been done that could be done to make the book useful.

Harper's "Indoor Book for Boys," by Joseph H. Adams, is even a better handbook of its kind than the "Outdoor Book" published a year ago, its superiority lying in the fact that it trains the hand and mind of the boy more consistently along lines of permanent value, rather than of temporary recreation. The chapter on bookbinding and repairing, for instance, is so simple and complete in its directions that it may easily furnish all the instruction necessary to provide any boy (or girl) with a serviceable home accomplishment, or a means of livelihood. Carpentry, woodcarving and turning, picture mounting and framing, various kinds of metal working, clay modelling, and plaster casting, pyrography, printing, stamping, embossing, and stencilling are among the various topics treated, and all with a plainness and comprehensiveness that leave few if any insoluble problems to an intelligent boy reader. The parent who places this book in the hands of his boys must face some expense for tools and materials, which should be of really serviceable quality, if enthusiasm is not to be dampened by inevitable failure. A sufficient investment to insure the parent's active interest, however, is no disadvantage, but a great gain. The idea that a child's education should all be reduced to some form of play is a monstrous fallacy, but anything which gets genuine education out of the energy which boys and girls put into a rational amount of amusement is so much clear gain. Let a word of caution be added to anyone who puts this volume into the hand of a boy: Encourage him to do the things described in it merely for the youthful joy of successful accomplishment, and leave the later material advantage to take care of itself. In other words, put the book clearly on the side of his pleasures and pastimes, not of his serious work, and depend upon him to transfer the results to the other side of the account when the proper time comes.

"Verhandlungen des ersten deutschen Hochschullehrertages in Salzburg," is the official report of the transactions of this new educational body, in which burning questions of higher university education are discussed. The brochure is published by K. Trühner, in Strasburg.

In the recent work by Arthur Drewe, entitled "Der Monismus, dargestellt in Beiträgen seiner Vertreter, I. Band: Systematisches" (Jena: Diederichs, 7.50 marks), we have an objective presentation of this newest philosophy and religion by its own adherents. Drewo discusses the different types of Monism, and six others discuss The Relation between Monism and Dualism, Monism and Individualism, Monism and Ethics, Monism and Religion, Monism and Art, Monism and Christianity. Four others discuss these special themes: The Monism of the Law, Faustian Monism, Parmenides, The Six days of Creation. The object of this quasi "official" work is to furnish a popular presentation of the principles and practical workings of Monism in all its forms.

"Deutschland und die grosse Politik," an instructive annual, giving a thoughtful report of the foreign politics of Germany, has been published since 1901 by Prof. Th. Schiemann, the historian of the University of Berlin. The volume for 1907 has just been issued by Georg Reimer of Berlin.

Under the title "Aus einem anarchistischen Idealstaat" (Hanover: Göhmann), Dr. Wilhelm Schaefer, the well-known professor of political economy in Hanover, describes in a series of humorous and satirical sketches the imaginary city Anarchopolis, the capital of the State of Anarchia, in the South Sea. This work, though light in tone, is serious in purpose.

The four days' sale of the library belonging to Mr. Hoskier of South Orange, N. J., held by Sotheby, Wilkinson & Hodge, June 20 to July 2, brought a total of about £4,600. The collection of French Almanachs Royals went for £395 and was bought by the Paris bookseller, Theophile Belin. This remarkable series, extending from 1694 to 1883 (excepting 1695 and 1699), comprised 186 volumes, of which 131 were in full morocco, including specimens of binding from all the leading court binders of the period. A number of the volumes bore the arms of Louis XIV. or Louis XV., and others those of famous French families. A portion of the Marriage Contract, dated 1710, signed by Louis XIV., Louis XV., Madame de Maintenon, and more than 150 other members of the leading families of France, brought £75. A similar contract of marriage, dated 1748, sold for £55, and a third, dated 1785, signed by Louis XVI., Marie Antoinette, and others, for £100. On July 27 and 28 the same house sells the library of Sir Arthur Vicars, Ulster King of Arms, and other property, including an important series of original grants of arms dating 1467 to 1672, formerly owned by Sir John Fenn, and now sold by A. H. Frere. A Taverner Bible of 1539; the first Welsh New Testament, 1567; the first edition of John Lilly's "Euphues," 1581; the first edition of "The Vicar of Wakefield," 1766, in the original calf binding; and a parcel of Oriental books taken out of the palace of Delhi at the siege in 1857, are among other interesting lots.

The first Prix Gobert (9,000 fr.) has been awarded to Camille Jullian, for his "Histoire de la Gaule," and the second (1,000 fr.) to Paul Courtault for his "Blaise de Montluc, Historien." The Prix Thérouanne has been divided into four portions (1,000 fr. each), two of which go to the Abbé Pierling for "La Russie et le Saint-Siège," and two to F. Rousseau for his "Règne de Charles III. d'Espagne." The Prix Bordin (3,000 fr.) is divided among M. Delaruelle, A. de Gubernatatis, Albert Cassagne, G. Huszar, and M. Piat-Clo-

dius. Half of the Prix Marcellin Guérin (1,000 fr) is awarded to Christian Maréchal for his works on Lamennais, Victor Hugo, and Lamartine. One-third (1,000 fr.) of the Prix Guizot is obtained by Étienne Dejean for his work "Un Préfet du Consulat, Beugnot," and a like share of the Prix Saintour goes to Edmond Huguet.

The death is announced at the age of thirty-six of Philip Sidney, the author of a number of historical works, among them "Jane the Quene," "Who Killed Amy Robsart," "The Sidneys of Penshurst," "The Gunpowder Plot," "The Headsman of Whitehall," and "Modern Rome in Modern England." Mr. Sidney was also a contributor to the *Westminster Review*, *Hibbert Journal*, and *Gentleman's Magazine*.

From Mans is announced the death of Gen. Hardy de Périni in his sixty-fifth year, distinguished both as soldier and author. Among his books on military subjects is "Batailles françaises," and he has also written poetry, stories, and romances under the name of "Jean de Villeurs."

With the death of Dr. Adolf Frantz, the University of Kiel has lost a distinguished Professor of State and Church Law. Dr. Frantz was the author of "Die Litteratur des Kirchenrechts" and "Lehrbuch des Kirchenrechts." He died at the age of fifty-six.

THE FAITH OF HELLAS.

The Religious Teachers of Greece: being Gifford Lectures on Natural Religion, delivered at Aberdeen. By James Adam; edited, with a Memoir, by his wife, Adela Marion Adam. Imported by Charles Scribner's Sons, New York. $4 net.

The posthumous issue of these Gifford lectures will bring a renewal of regret for the death of Professor Adam last year, in the prime of life, and the Memoir added by his wife, herself a Greek scholar who had been his pupil at Girton College, will make known to a larger circle than his immediate friends the character of a man, who through all his scholastic occupations remained "amans, amabilis, amatus." It may give heart to more than one discouraged student to read the career of James Adam from his humble Scottish home to the University of Aberdeen and thence to Cambridge.

Our concern, however, is not with Professor Adam's life but with its literary fruit. He was particularly a student of Plato, and his edition of the "Republic" is well-known. That was a living book to him—"the greatest book in the world," he calls it in one of his letters—and he went to it for present inspiration as well as for pedagogic material. "I have finished Socrates," he writes in another letter, "and am now deep in Plato. Of course he knocks all the others into cocked hats; there is no one like him, none. It is tremendous how he searches the depths of one's whole nature. You really must devote a year or two to the exclusive study of his works, if you mean to do anything useful for the interpretation of religious thought." It was in this spirit he approached the composition of his Gifford lectures, and the result is before us. We have heard a little too much, relatively, of the æsthetic side of the Greeks, of their sense of harmony and form, and the like. As a consequence a good many people regard them as a race of happy dilettantes, crowned with flowers and melodious with song. If anything can restore Greek literature to serious consideration, it will be rather such a work as this of Professor Adam's, which deals with the religious and moral aspect of Greek writers and applies their ideas to life. Plato is not alone among them in searching the depths of one's whole nature, and the man who has once looked at the problems of private and public conduct from their ancient point of view, carries with him, so to speak, an anchor against the shifting tides of opinion.

Professor Adam's plan is simple and effective. Taking as his text the famous passage of the "Republic," which alludes to the hereditary feud between poetry and philosophy, he first studies the poets, beginning with Homer, who presented the gods in anthropomorphic and too often immoral guise, and then the philosophers, who, repudiating mythology, sought for purely physical or metaphysical causes of the universe. The two streams are at the end brought together in Plato, whose deity is at once the efficient and final cause of all, and whose conception of morality is an ὁμοίωσις τῷ θεῷ, a becoming like to God. If any part of the book has disappointed us a little, it is these concluding chapters on Plato. Perhaps we expected too much; perhaps they suffer from loss of the final revision at the author's hands to which the earlier chapters were subjected. They are good—excellent in the difficult discussion of "ideas"—but they leave something still desired. Plato is still not made to the reader quite the *præsens auxilium* he seems to have been to the author. It is a subject to try out all but the finest and most heroic spirits.

For the rest, with the further possible exception of the chapters on Homer and Sophocles, Professor Adam is sound and adequate, though he may not exhaust the field. And by "sound" a great deal is meant. At almost every step the student of Greek is met by a host of German pamphlets and books, each striving to present the subject in a new light, some of them merely foolish, some dishonest attempts to attract notoriety to the author, almost all lacking in the control of common sense, here and there (*rari nantes*) one of indispensable value. To sift out this mass of rubbish, to keep the head clear and the heart alive through this dusty wilderness, to hold fast to the simple and in most cases the common traditional truth, calls for no ordinary degree of courage and integrity. In this task Professor Adam has been uniformly successful. Thus, the question of Justice was evidently much in the mind of Euripides and plays an important part in his drama. Now comes a commentator, Herr Nestle, who undertakes to show that "Euripides hypostasizes Justice as a quasi-personal being, the *Weltgeist* or *Weltvernunft*, not transcendent, but immanent, operating in the spiritual as well as in the material sphere, in man no less than in nature." It is, one sees, peculiarly a product of the lecture-room, an attempt to reduce the groping sentences of a very human poet to a rigid metaphysical theory. Professor Adam rightly draws back from this forced product of the intellect, and finds the true Euripides rather in such questioning passages as this from the "Hippolytus":

> When faith overfloweth my mind, God's providence all-embracing
> Banisheth griefs: but when doubt whispereth, "Ah but to know!"
> No clue through the tangle I find of fate and of life for my tracing:
> There is ever a change and many a change,
> And the mutable fortune of men evermore sways to and fro
> Over limitless range.

Another characteristic case meets us in Socrates. It had been the custom to regard the portrait in Xenophon's "Memorabilia" as a true likeness from the hand of a contemporary. No, says the learned Professor Joel, in "Der echte und der xenophontische Sokrates," the real teaching of the master is to be found in Aristotle, and hereafter to preserve our human Socrates we must be either ignorant of German or strong enough to resist this ignis fatuus. And so it runs through the whole field; few scholars have a brain sufficiently robust, for instance, to forget the ocean of folly that has been poured about the Homeric poems. Few men, having read through that library of folly have strength or eyesight to read anything else. Not the least of Professor Adam's merits then has been his steadfast hold upon common sense, even at the risk occasionally of appearing commonplace.

In carrying out his intention of treating Greek literature as a permanent expression of man's religious instinct, Professor Adam is led constantly to compare ancient and modern, pagan and Christian, forms of the same idea. His comparisons, so far as they go, are generally excellent, but we could wish he had not confined one side of his parallel so closely to a Christianity of Anglican hue. Once or twice this tendency draws him, we think, into false or forced analogies. Thus, Plato's marriage of the *nous*, or rational part of the soul, with pure Being or Beauty, should not be likened to the union of the soul and God in Christian mysticism, save with the most precise reservations. Such comparisons are apt to be misleading and harmful. More often Professor Adam's Anglican preoccupation merely contracts his range of illustration. At the very beginning, he misses the opportunity (as, it is fair to add, all other scholars hitherto have missed it) of showing how the religious emotions and ideas beneath Homer's fanciful play of mythology correspond to those of modern times under the hardened crust of dogma. Again, in his study of Heracleitus, he might well have stopped to compare the Ephesian's doctrine of flux and fire with recent physical theories of energy. And, once more, when he comes to Archelaus, the pupil of Anaxagoras and, according to tradition, the teacher of Socrates, we could wish he had related the famous saying that "right and wrong have no existence in nature, but only through convention or law," to the similar doctrine of Hobbes. These are not fanciful excursions of wit; they are fruitful in lessons of conduct and art, and only through such lessons can the value of Greek be forced to-day upon reluctant pupils. However, Professor Adam's book is in the right direction; it is at once scholarly and alive; and for what we have we are thankful.

CURRENT FICTION.

The Husbands of Edith. By George Barr McCutcheon. New York: Dodd, Mead & Co.

An unblushing piece of news-stand literature which will doubtless please the audience at which it is aimed, and should augment the number of Mr. McCutcheon's portraits in our journals of popular book-gossip. Considered severely it is a crude and drawn-out farce based upon the masquerade of a bachelor as a married man. For state reasons it is necessary for an Englishman, Roxbury Medcroft, to be nominally in Vienna at a certain date, but really in London. He appeals to an American friend, one Brock, to personate him abroad, the desired piquancy being given to the situation by the fact that Mrs. Medcroft is to accompany the sham husband. The presence of a baby, a dog, two maids, and a sister, protects the lady from any excessive embarrassment upon the journey, and in Vienna a working ménage is easily arranged. The complications which ensue are of the obvious sort, and lead over the verge of scandal to difficulty with the authorities. Of course, the appearance of the real Medcroft at the convenient moment, leads to a comfortable éclaircissement. Everybody, including the German authorities, is able to regard the thing as a huge joke, and there is nothing left to arrange but the marriage of the American and the beautiful sister, which is promptly attended to.

A Man of Genius. By M. P. Willcocks. New York: John Lane Company.

In "The Wingless Victory" M. P. Willcocks produced last year an exceptionally strong and interesting story. In "A Man of Genius" we have a novel that comes unmistakably from the same hand; but that is all that can be said of the book. There were in the earlier novel a possible excess of sentimentality, an over-insistence on the pathos of human fate as shaped by the inexorable laws of evolution, and a consequent tendency to make use of race psychology where individual characterization would have done. But the persons were nevertheless clearly drawn, the plot was dramatic, and the action moved forward of itself. In "A Man of Genius" the sentiment cloys, while the characters move forward with no volition of their own and evident effort on the part of the author. The dialogue is reminiscent of Mrs. Humphry Ward's earlier manner, at her worst. There is a Church of England clergyman, who is an elderly Robert Elsmere, belated by twenty years. He has a daughter who is a weak copy of Marcella. The hero is Mrs. Ward's David Grieve freshened up with slight injections of Weismann, Nietzsche, Tolstoi, and Joseph Chamberlain. The heroine, though too vividly female, would be real enough if she were not so amazingly conscious of her sex and abstained from speaking of herself in terms that would be appropriate only in the mouth of a student of eugenics. So, for that matter, do most of the other persons speak, when they are not discussing Art in its relation to Life and Duty. The cosmic fallacy runs rampant. We are reminded of Jack London, when hero and heroine, instead of calling themselves man and woman, call each other "mate." They are drawn together not by what the world at large is content to call love, but because in Thyrza there clamor forth the demands of unborn generations, and in her lover there surges up the pride of the master and the life-giver, and all that sort of thing. It is a common failing of our modern women novelists that when they wish to be strong, they have recourse to physiological terminology; from that they swing to lyricism. Thomas Hardy has no need of such heroic methods when he writes of primitive people much akin to the Devon folk in our present story. The heroine of "A Wingless Victory" merited comparison with Sue in "Jude the Obscure," but "A Man of Genius" evokes no such parallel.

The Chauffeur and the Chaperon. By C. N. and A. M. Williamson. New York: The McClure Co.

The characters are an American girl and her English stepsister; an American artist with a Scotch aunt; a young man Dutch throughout; another of Dutch Republic paternal ancestry, and for his mother the daughter of a hundred or less English earls; a dog described as "geared ridiculously low," and concerning whom it is said that "When he's troubled, and a lot of lines meet together at one point in the middle of his forehead, his face looks exactly like Clapham Junction"; and finally, the Chaperon. The sisters have received a legacy of a small sum of money and a motor-boat situated at the moment in Holland. Thither they repair, and there is set in motion the usual Williamson landscapegracery. Nor are the familiar machine gods omitted; not only does the motor-boat "teuf-teuf" and "cough" itself through the waterways of Holland, but it tows a barge which serves as studio and kitchen, while motor-cars of varying sizes and colors are waiting at every dry point to whirl the travellers along dykes, and even it is to be feared in forbidden roads. We trust the enterprising Williamson chauffeur will not attempt Venice, but the future looks dark. To all who like amphibious excursion and farcical story combined the book will be welcome, for the journey is charming and the company merry.

The Heart of the Red Firs. By Ada Woodruff Anderson. Boston: Little, Brown & Co.

"To those few remaining pioneers who knew the Nisqually Trail into the great solitudes, in times before the logging railroad devastated the Puget Sound hills, and the wilderness began to recede at the coming of the builder of town sites." Thus explicitly, and, as it were, exhaustively, is our romance dedicated. Once again is chanted here that pæan of Farthest West, which begins already to be haunted by the plaintive elegiac strain. So short-lived is our pioneer phase in this land of rapid transit and transition. "The Heart of the Red Firs" is evidently written by a true lover of the region, not a mere seeker for local color. It is more effective in description than in narrative. Indeed, the persons in the story, with the exception of a young half-breed, are rather conventional figures. The heroine is that remarkable young school mistress who has done so much for Western fiction. She is as beautiful and self-possessed as ever, as generally pursued, and as fitly won. She is near marrying that kindly old gentleman, her guardian, and even nearer being kidnapped by that elegant smuggler, the villain. Heaven somehow saves her for the hero, as it manages to do in fiction, and the hero is as vastly surprised as it is his duty to be. We do not mean to suggest that the tale is altogether stupid or commonplace: it is neither. But it has, so far as it is a story and not a chant, just that degree of creditableness which marks, say, the upper half of our present-day fiction, and which cannot be endearing to persons whose province it is to survey the field as a whole.

The Girl and the Game and Other College Stories. By Jesse Lynch Williams. New York: Charles Scribner's Sons.

No one but an author with a private circle of very indulgent readers would have dared to publish such an entirely stupid book as this. Some time ago Mr. Williams was something of a pioneer in the field of the short story of college life. Innumerable people were eager to see our young Barbarians at play, and so the Princeton pictures were heartily welcomed. But now the vein seems completely worked out. A good college story is perhaps almost as difficult to write as a national hymn; the stories in this volume are not in that species. They are without wit or humor, they are crudely constructed, they are even trivial and silly. At page 222 they have the grace no longer to pretend to be stories, but frankly break down for the next hundred pages into "Talks with a Kid brother" on hazing, horseplay, dissipations, the best thing in the world, and finally end with "an unofficial baccalaureate." Perhaps this is the kind of stuff an old graduate writes to his "kid brother"; it certainly should have gone no further.

Encyclopedia of Mississippi History: Comprising sketches of Counties, Towns, Events, Institutions, and Persons. Planned and edited by Dunbar Rowland. 2 vols.; quarto; pp. XVI. 1010, 1024. Madison, Wis.: Selwyn A. Brant. $12.00.

At first sight of these huge volumes, one wonders how on earth Mississippi, still considerably less than a century old, can have had history enough to fill them. One may also feel a little amused at the idea of devoting an encyclopædia to any single State. But if one chances to have wrestled in any way with the question of how best to present the history of an American State, one may also recall one's despairing conviction that a merciful providence never intended that any writer or group of writers should be required to put such material into really readable form. Whatever form may be given to the history of any State, two or three excepted, the book is far more likely to be consulted than read. Why, therefore, may it not be a good idea to throw the facts into encyclopædia form and thus make it easy to find what is desired and leave the rest alone?

Dr. Rowland and his helpers seem to have carried out the plan fairly well. The scale is too generous. There are some failures to meet successfully a difficulty inseparable from the form—the problem, namely, of

where and under what titles to place matter which does not fall naturally under a proper name or an ordinary topic-name. One finds, for example—but by accident, not by searching—a considerable mass of not uninteresting information under the caption: "Advent of the Flag"; and one doesn't find any cross reference under "Flag" or "American Flag." But there is a good introductory account of sources, the work is really comprehensive, and facts are presented clearly and without any tiresome attemnts at literature.

For so young a State, Mississippi has, in fact, a good deal of history, albeit much of it was made before she became a State. She has even more biography, if one may so express it, and some of the biography is decidedly picturesque. J. L. Alcorn, F. L., J. F. H., and W. C. C. Claiborne, Thomas Dabney (the hero of Mrs. Smedes's delightful "Memorials of a Southern Planter"), D'Artagnette, Jefferson and Reuben Davis, DeSoto, Andrew Ellicott, Henry S. Foote, N. B. Forrest, D'Iberville, L. Q. C. Lamar, S. S. Prentiss, John A. Quitman, Winthrop Sargent, Jacob Thompson, Robert J. Walker, E. C. Walthall—these names will indicate the rather extraordinary range of the biographical sketches.

There are no special bibliographies attached to the longer articles, and no list of the writers. The work would also be better for an index.

The Letters of Fernando Cortes to the Emperor Charles V. Translated and edited with a Biographical Introduction and Notes, by Francis Augustus MacNutt. Two vols., pp. viii., 354, and 374. New York: G. P. Putnam's Sons. $10 net.

"The letters of Cortes to the Emperor Charles V. are an historical monument . . . of the greatest authenticity and value," wrote the Scottish historian, Robertson, a century and a quarter ago. Despite the progress of historical science and the discovery of a vast number of manuscripts in recent times the verdict to-day must be much the same, and the appearance of the first English translation of the complete series of these letters is an event which all students of the early records of Latin America will hail with great satisfaction. The term "letters" scarcely conveys an adequate idea of the contents of the five "Relaciones," as they are sometimes more aptly called, which are here published. They average more than one hundred printed octavo pages apiece, and contain a minute and straightforward account of the conquest of Meixco from 1519 to 1527, told almost in the form of a diary, composed at different times and places and under varying circumstances of fortune. The first of the letters, it should be added, was written by the judiciary and municipal authorities of the town of Vera Cruz, and supplies the place of the first of the five reports of Cortes which has never been found, but is known to have been practically a duplicate of this, perhaps a little less detailed. This letter, and also the fifth, were first discovered by Robertson in the Imperial archives in Vienna in the eighteenth century, while the second, third, and fourth were all printed in folio in Spain within two years after they had been written, and have since been translated into Latin, Italian, French, English, and German at various times.

Mr. MacNutt has edited these valuable reports with care and ability. An admirable life of Cortes (in which not the least interesting item is the wrangle, taken from Lord Lyttelton's "Dialogues of the Dead," between the ghosts of the conqueror of Mexico and the founder of Pennsylvania, concerning the merits of their respective undertakings in North America), a copy of his last will and testament, and a clear and succinct bibliographical note precede the text of the "Relaciones" and occupy the first 119 pages of the work. The translation of the letters is good, and renders well the simple, soldier-like style of their author. A number of useful appendices, eight maps and illustrations, and a well-prepared index, enhance the value of the book. The printer has not been uniformly successful in coping with Spanish names and phrases, but the blemishes on the whole are few and slight. The general impression of Cortes that one derives from this interesting work, is undeniably correct, and much more favorable than the popular conception of him would allow—a typical sixteenth century Spaniard, who should be judged by the standards of his time, brave, devout, probably less, rather than more, cruel than the mass of his countrymen, and one who was treated by his Imperial master at the last with an ingratitude scarcely less ignoble than that which hastened the end of Cardinal Ximenes.

Science.

In the annual report of the Department of Marine Biology of the Carnegie Institution there is given a preliminary account of the interesting researches of Prof. J. B. Watson on the breeding colony of Noddies and Sooty Terns on Bird Key, Tortugas. Some fifteen of these birds were marked and taken away from their home Key on a steamer, shut up in coops on the decks. At distances varying from twenty to eight hundred miles, individuals were released, and it was subquently found that thirteen of the birds had unerringly returned to their nests, notwithstanding that a number of them had been carried north of Cape Hatteras. Excluding migration experience, sight memory, wind and other physical aids, as this experiment does, we have little left to explain the remarkable feat except that birds are possessed of some mysterious sense of direction of which we know nothing. If this proves to be true, the many unsolved problems of migration become clear and the whole matter shifts to the province of the physiologist or psychologist. These experiments promise to open up a new and fascinating field of inquiry.

In a quarto of 230 pages, with three colored and ten uncolored plates, Dr. Hubert Lyman Clark has produced a monograph of the "Apodous Holothurians" (Smithsonian Contributions to Knowledge, No. 1723). The classification of the two families of the group, *Synaptidæ* and *Molpadiidæ* is first disclosed, and in Part ii, is given an annotated list of the specimens in the United States National Museum. Of the first family, twenty-three species are listed, and of the second, twenty species. Two new genera and eight new species are described. The remaining space is devoted to a most thorough account of the morphology, embryology, physiology, and ecology of the group, with artificial keys and an account of each species considered specially in relation to geographical distribution. The monograph ends with a bibliography of over three hundred titles and a synonymic index which practically sums up all the work which has been done upon this branch of the Echinoderms. The nomenclature is in strict accord with the principles laid down in the International Code and thus should be acceptable to scientists the world over. This is a notable contribution to the literature of marine invertebrates, and may well be cited as an excellent model of a concise yet thorough monograph of a limited group of organisms.

Prof. Albert M. Reese has spent part of the last three summers in the heart of the Florida swamps in search of embryos of the American alligator, and has just published the results of his study of the development of this reptile, as number 1791 of the Smithsonian Miscellaneous Collections. It is illustrated with twenty-three plates of excellent figures. Frequent reference is made to the work of Prof. S. F. Clarke, and this, together with the results of the careful technique of Dr. Reese, gives us an admirable outline of this important subject, forming indeed a summary of all the work which has thus far been accomplished in the field. The results are as interesting to ornithologists as to herpetologists. The alligator in its earliest stages was obtained only with great difficulty, as the embryo is more or less advanced at the time of laying. Newly made nests were watched and the eggs and embryos removed and fixed as soon as possible after deposition. It is strange that internal development of the embryo takes place to such an extent in a "cold-blooded" animal. The white of the fresh egg is so dense that the entire interior may be emptied from the shell and handled without danger of rupturing either the mass of albumen or the enclosed yolk. In the course of the research it was found that of the gill clefts, three clearly open to the exterior and probably a fourth also. A fifth cleft was seen in one surface view and in sections. No connection can be seen between the first rudiments of the sympathetic nerves and the central nervous system. The choroid fissure is a very transitory but well-marked feature of the eye.

"The Physiology of Stomata," by Dr. F. E. Lloyd, is the subject of publication No. 82 of the Carnegie Institution. The results obtained from a series of experiments on and the microscopic examination of the stomata of two species of desert plants, a *Fouquieria* and a *Verbena*, seem to negative the idea that has been held by many that there is a close correlation between the daily periodicities of transpiration and of stomatal movement. It seems likely that the extreme possible diffusion capacity of the stomata for water vapor is never reached, at least in the plants studied, since wide positive changes in the transpiration rate may occur at any particular size of the stomatal pore. The most important observation is that no adap-

tive behavior of the stomata to the high temperature and the low humidity of the desert environment was noticed. "That the activities of such apparently very important organs as the stomata, though subject to the exigencies of the desert, have not changed adaptively in the course of uncounted centuries, makes it appear improbable that plants have become gradually fitted to this environment, but that, being fitted, they have survived."

Drama and Music.

THE CHELSEA PAGEANT.

The fashion of the pageant has spread like a fever through England, since the first, at Sherburne, three years ago, until it has become something of a national institution. This summer as many as three have been arranged: two in the provinces, at Dover and Winchester, and one in London itself. It was proposed early in the winter to commemorate the history and growth of the whole town, or rather the collection of towns and villages that London really is, but this larger scheme had to be given up for the time, Chelsea having already undertaken a commemoration of its own.

Fortunately, Chelsea has an interesting, picturesque local history to hang a spectacle on, and takes great pride in it. It has, moreover, a beautiful background for a spectacle in the old Ranelagh Gardens, which, though put to a very different use, still survive. And, as the quarter is a sort of Montmartre, or Montparnasse, for London artists, many took an active part, both in the arrangement of the scenes and in the performances. Indeed, one of them, G. W. Lambert, who swaggered through the part of Admiral Seymour with something of the vivacity and vigor with which he swaggers in paint on canvas, carried off the chief laurels as actor.

The history may be disposed of in a few words. Ten episodes were found that supplied the necessary situations for pomp and ceremonial. Chelsea, claiming a past that is said not to belong to it, began with the Romans, under Julius Cæsar, crossing the Thames, and, if the events of the crossing were not as they are represented, they should have been, for none could better answer the purpose of a pageant. The intervening ages having been briefly and lightly summed up by Tamesis and Unda, as a sort of chorus, a Synod that most people probably have forgotten, if, indeed, they ever heard of it, brought the chronicle down to the eighth century, while, after this, a May Day festival in Chelsea Fields carried one swiftly on to the sixteenth. Visits of royalty to Chelsea —of Henry VIII. to Sir Thomas More, who lived there, of Elizabeth on two occasions, of Charles II. when he founded Chelsea Hospital—the funeral of Anne of Cleves; the meeting of wits and scholars in the gardens of Don Saltero's famous Chelsea tavern; a fête at Ranelagh, completed the history to the middle of the eighteenth century. It was the right period, those with an eye to costume may believe, with which to end it. Others might think that, for the sake of distinguished men who have lived in Chelsea—Carlyle, Rossetti, Whistler—it need only have ended with yesterday.

This was the plot. The play evolved from it was a series of shifting scenes where beautiful figures in beautiful dress met and arranged themselves into beautiful compositions, a succession of dances and processions and stately ceremonial; century after century contributing all that was finest and most typical in it to be woven into the picture of a moment for the pleasure of London through the late hours of a fine June afternoon. The stage was one of the loveliest gardens in England, or anywhere. It has not, it is true, the wide vistas that have added so much to some of the Pageants in the Provinces, but the players and scenes were so artfully disposed upon it, that there was no sense of smallness or of limited distances. The spot selected was an almost circular space, with a cluster of wide-spreading May trees in the centre that broke up the groups and gave wonderful variety; glades led from the two sides and from the far end opposite the audience, as if designed for theatrical effect. The Pageant began at four, and, as the performance went on, the long shadows lengthened, the gold of the London summer afternoon filled the sky, and birds sang and called to each other from the near trees. A strange effect of reality was given to the first scene with the wild rush of the British soldiers, savage as Zulus, down a leafy glade, followed by Druids and Druidesses, in green draperies, who formed their magic circle in the open by the May trees; above all, when the British patriot whirled into their midst in a chariot drawn by three white horses, and the Roman soldiers marched across the green. There was not a figure that was not fine in itself, not a costume the archæologist could have found fault with; the action was admirable; and sham as was the battle, you seemed to get something of the passion, the fury of it. No doubt this was in a large measure due to the outdoor setting, civilized though it was for the fights of the early Briton. But no scene painter, however cunning and realistic in his art, could have made the boards of a theatre so appropriate a background, or could have produced so realistically the feeling of a wild life close to Nature. Not a scene that came after was more suggestive and dramatic, or better done.

Impressive as I found this opening episode, it was not entirely free from one of the two serious defects of the pageant as a whole: the action was interrupted by too much talk. A pageant, by its series of pictures and eloquent movements, should explain itself with no more words than are absolutely indispensable. Besides, the noblest and most poetic dialogue must lose in the open air, where speakers either cannot make themselves heard at all, which was the case with many at Chelsea, or else have to labor so hard in the endeavor, that the beauty, or meaning, of their words is lost in the ugliness of the effort. There was comparatively little speaking in the first episode, though I thought that little too much, but in the second, the episode of the Synod, there was not much else. It was a relief when a troup of gray nuns came down the glade, chanting. Indeed, the music throughout, most of it composed for the pageant, was so good that it made the talk seem the more superfluous. But the scene dragged deplorably. Had it not come so soon in the performance, it would have proved tedious beyond endurance. This defect was felt still more seriously in the fourth episode, when Sir Thomas More received the visit of Henry VIII. In costume, no episode had greater beauty and dignity. More and his family might have stepped straight out of the portraits by Holbein, from which they had been intelligently and sympathetically copied. It was a pleasure simply to look at the group moving about in the sunshine and shadow of the golden June afternoon, as Holbein may often have seen them coming and going in their Chelsea garden. Henry also was admirable, a living portrait, to the very stride. But the talk was interminable, most of the time inaudible, and Mr. Laurence Binyon's lines, written, I believe, for the occasion, were quite thrown away.

How unnecessary the talk was, the scenes where there was the least of it explained. The May Day episode, almost silent save for song, was altogether charming with its dances on the green—Morris Dances and *Danses Gaillardes*—its May poles, and its games of bowls, its mummers passing in their cart, while dozens of children played and skipped and ran about; the spirit of the thing evoked and expressed with a reality and animation that showed how people in the sixteenth century should have amused themselves. The funeral of Anne of Cleves was an impressive scene, and it also was independent of the spoken word, nothing breaking the silence but the sad, solemn *De Profundis* of black-robed nuns. It was the more solemn because the robes of priests and servitors have altered so slightly with the ages, that it might have been the funeral of the great dead of to-day, though to-day we might not perhaps see so vivid and sumptuous a burst of color as in the banners of arms borne by the heralds. But to me nothing was so spectacular, so effective, so genuine, as the children's masque of Spenser's "Faerie Queene," performed for the greater honor and entertainment of Queen Elizabeth, on her visit to Lord Howard of Effingham, at Chelsea; a masque within a masque. It was the triumph of the pageant, and Miss Hawtrey, who wrote the few descriptive lines, and I suppose suggested the arrangement and presentment of the various scenes, cannot be praised too highly.

When I remember the beauty and interest of these scenes, it seems ungrateful to criticise the pageant at all. But it was so good in some ways, that its unnecessary failure in others is the more to be regretted. I have seen nothing in London to which it could be compared, except, perhaps, the Masque given several years ago by the Art Workers' Guild at the Guildhall. But the resemblance between them lies chiefly in the fact that both were carried out mainly by artists and enthusiasts who depended upon no more professional training and assistance than was necessary. The Guild Masque was as wholly an allegory as the "Faerie Queene," in the children's interpretation before Queen Elizabeth. It was held on a frankly artificial stage by artificial light. The pageant was a series of historical pictures arranged in

the open air, under clean, strong, summer sunshine. The masque was more complete, hetter rounded out, and so short as never to become tedious. The pageant had whatever romance there is in a green garden, and the glory of the perfect summer afternoon, rare in London, hut the more transfiguring when it comes. The defects were simply the result of the same zeal that made it a success, despite its length and halting episodes. N. N.

When Prof. J. Fred Wolle, who made the whole country talk ahout his Bach festivals at Bethiehem, Pa., accepted the chair of music at the University of California, he intended to start a Bach choir at Berkeley. The destruction of San Francisco upset his plans for the time heing, but it is now announced that he has organized a new Bach choir, which already numbers 125 singers. He expects before long to have a chorus of 500, made up of amateurs from Berkeley, Oakland, and San Francisco.

Victor Herbert is the most strenuous musician of them all. He will have five new works on the stage next season. Two of these are completed, two others are practically so, while the fifth is in reservation as to its character and ownership. Those completed and those nearly ready are as follows: "Algeria," book hy Glen MacDonough, announced as the opening attraction at the Broadway Theatre some time In August; "Victoria," book by George V. Hohart, to have an early production hy Joseph Brooks; "The Prima Donna," book by Henry Blossom, to be the successor of "Mlle. Modiste," for Fritzi Scheff's use; "Little Nemo," book by Harry B. Smith, a gorgeous musical spectacle under the management of Klaw & Erlanger. The last named Is the stage verslon of a series of pictures in a newspaper supplement, whose use was conditioned upon the guarantee of the musical collaboration of Mr. Herhert.

Strauss's next opera, "Electra," will be no longer than his "Salome." It will he in one act, with nine scenes, and there will be four important rôles in it.

A Schubert festival is to be held in Vlenna next October. There will be a festival concert; a service in the St. Stephen's Cathedral, including his mass in C major; performances of one or more of his operas; and an excursion to Hinterbrühl, where his "Milier Songs" are said to have been written.

Probahly the most successful book on musical topics ever written in America is Miss Amy Fay's "Music-Study in Germany" (Macmillan Co.). It has passed through about twenty editions, and is still in demand, though written in 1880. Liszt liked it so much that he had it translated into German, and now a French version hy Mme. B. Sourdillon has been issued in Paris under the title "Lettres intimes d'une musiclenne américaine." It has a preface hy Vincent d'Indy, who relates therein how, as a youth, he went to Weimar and there associated with Liszt and his pupils, one of whom, with a "très réel talent," was Miss Fay. He heard her play a Bach fugue "not in the manner of a vain virtuoso, hut like a true artist, who is capable of feeling and expression."

Art.

Jewellery. By H. Clifford Smith. Pp. xlvii. +410. New York: G. P. Putnam's Sons. $7.50 net.

This is an instructive study of such jewelry as may be worn upon and ahout the person, and as made and used in European lands. The jewelry of antiquity is treated in fifty pages; and then comes the work of the migrating nations which broke up the Western dominion of Rome. Beginning with page 80 is the "mediæval period, tenth to fifteenth century"; the Renaissance follows—the Renaissance treated in that large and inexact sense common in English hooks, so as to include the sixteenth century, and even Elizahethan England. There are long chapters on the seventeenth and eighteenth centuries, and with page 325 hegins "Nineteenth-Century Jewellery—the Modern Revival." A too-brief chapter is devoted to peasant jewelry, and then follow chapters on frauds and forgeries and on memorials of death.

That which is most admirahle in the hook is the author's strong sense of the artistic value and significance of jewelry. The inferior importance of variety and cost, the greater significance of color and ornamental treatment, the need of reckoning with the semi-precious stones, "aquamarine, peridot, zircon, tourmaline, and chrysoprase"—all this is good. The cast-iron jewelry, as of Berlin in the Napoleonic era, is well characterized, and the brass pendants of Spain have notice. Good, too, is the comparison hetween the designs of different periods of time. And best of all, because least to he expected, is the attention given to artists and workmen of our own time, the real originators of a new period of decorative design. The plates are not very attractive, but they are generally intelligible, and the system of cross reference between plates and text is well maintained.

The scheme of The Connoisseur's Library, to which this volume helongs, does not seem to include Oriental or non-European art; and if this condition were stated it might be accepted with no great reluctance or surprise. In the absence of such declaration it does seem odd to find—when peasant jewelry Is under consideration, as on p. 341 of the volume now in hand—a description of that of the North and of the South, the East and the West, of Europe, and never an allusion to the armlets and anklets of India.

From a list of all the volumes puhlished or in preparation, printed on a fly-leaf of the present work, it now appears that there are to he twenty volumes in the series.

The latest issue of George Bell & Son's Miniature Series of Painters is "Leonardo da Vinci," by Hohart Cust. Mr. Cust writes hriefly hut with adequate knowledge of the life and art of Leonardo, and the illustrations include most of the undouhted works of the master.

"Deutsches Leben der Vergangenheit in Bildern. Ein Atlas mit 1760 Naehbildungen alter Kupfer- und Holzschnitte aus dem 15.-18. Jahrhundert," edited hy Eugen Diederichs, with an introduction hy H. Kienzle, of which the first half has appeared from the house of Diederichs in Jena (New York: Lemcke & Buechner), may he regarded as a supplement to the "Monographien zur deutschen Kulturgeschichte" issued by the same house. The editor has thoroughly ransacked the larger collections of pictures and libraries of Germany, Switzerland, and Austria, and has hrought together a mass of material, much of which has never hefore heen reproduced, illustrative of the puhlic and private life of the Germans, beginning with the rigid masters of the Reformation period and coming down to the famous copper plates of Nilson and Chodowiecki. The second and final volume is promised for the near future, the whole to cost 27 marks.

At Christie's, the following pictures from the collection of the late S. G. Holland were sold—on June 25: Vicat Cole, Leaves of Wasted Autumn Woods, £462; Constahle, Arundel Mill and Castle, £336; F. Dicksee, A Love Story, £378; The Passing of Arthur, £420; Slr L. Fildes, An English Maiden, £420; Gainshorough, The Harvest Wagon, £735; A. C. Gow, The Garrison Marching out with the Honors of War, Lille, 1708, £756; J. Holland, Venice, looking up the Grand Canal, Sunset Sky, £1,207; The Colleoni Monument, Venice, stormy sky, £651; Venice, the entrance to the Grand Canal, £693; Greenwich Hospital, £367; J. C. Hook, The Mackerel Take, £378; Sir E. Landseer, Otter and Salmon, £378; J. F. Lewis, A Turkish School in Cairo, £1,312; A. Kihoh Shop, Scutaria, £1,050; J. Linnell, Carrying Wheat, £1,995; The Brow of the Hill, £651; E. Long, Thishe, £346; Millais, Caller Herrin', £1,890; W. Müller, Gillingham, £346; P. Nasmyth, View near Godstone, with a peasant carrying a scythe, £840; Forest Scene, with woodcutters and felled timher, £630; Sir W. Q. Orchardson, Napoleon on board H. M. S. Bellerophon, £1,680; Mrs. Siddons in the Studio of Sir Joshua Reynolds, £420; J. Pettie, Treason, £556; Sir L. Alma Tadema, The Juggler, £315; Turner, Mortlake Terrace, view looking down the rlver from the garden of a house on the left of the picture, summer evening, £13,230; The Storm, raging greyish green sea, figure climbing to the wreckage, £5,775; The Morning after the Storm, £8,085; H. Woods, On the Steps of the Scuola, San Rocco, Venice, £420. On June 26: G. Barret, Tivoli, two shepherds with a dog, sheep and goats in the foreground, £693; D. Cox, Lancaster: Peace and War, £945; E. Duncan, The North

JUST ISSUED

BOOKS THAT SHOULD ADD TO THE TRAVELER'S PLEASURE

16mo, limp covers, full gilt, in the general style of Lucas's "Friendly Town" and "Open Road." Each $1.56 postpaid (leather, $2.56).

Poems for Travelers

Compiled by MARY R. J. DUBOIS.

Covers France, Germany, Austria, Switzerland, Italy, and Greece in some three hundred poems (nearly one-third of them by Americans) from about one hundred and thirty poets. All but some forty of these poems were originally written in English.

The Poetic Old World

Compiled by Miss LUCY H. HUMPHREY.

Covers Europe, including Spain, Belgium, Greece, and the British Isles, in some two hundred poems from about ninety poets. Some thirty, not originally written in English, are given in both the original and the best available translation.

The Nation.

NEW YORK, THURSDAY, JULY 23, 1908.

The Week.

The official figures of the appropriations made by Congress at the recent session give the appalling total of over a billion of dollars—$1,008,397,543, to be exact. Yet so completely does our indirect system of Federal taxation blind us to the fact that such enormous sums are being taken from our pockets, that most people remain cool and indifferent. Indirect taxes are like opium, both in their insidious effect and in their grip on their victims. The story is told of a famous French Minister of Finance who bade the Deputies, when the annual expenditure first reached a billion francs, to salute the figures, inasmuch as they would never again be reached. They have since grown fourfold—a sinister comment on governmental extravagance in France. Perhaps more eloquent than our grand total of a billion dollars expended is the distribution of the expenditure. Of the entire increase—amounting to $87,000,000—54 per cent. is attributable to the army and navy. The total naval expenditure authorized is over one hundred and twenty millions, and this does not include the estimated cost of the two new battleships, two colliers, ten torpedo-boats, and eight submarines for which contracts were authorized. The increase in pension appropriations—over $16,000,000—comes next in order to naval outlay, while in the deficiency appropriation the increase over that of last session is $44,000,000. Tucked away in this deficiency appropriation are two notable items—$12,000,000 for the Panama Canal, and $12,000,000 for public buildings.

That Mr. Taft would take a hand in the Ohio fight was not to be believed. He has properly declared that he has no candidate to succeed Foraker, and if President Roosevelt will but stand on the same platform, there is an excellent outlook for Republican harmony in Ohio. That need surprise no one. Republicans are accustomed to sink their differences prior to election and present a united front to the enemy. To oppose Mr. Foraker would be exceptionally bad politics, not only because he is a dangerous fighter, but because his opposition to the President has won him friends where he never had them before. Any attempt to defeat him now would be regarded merely as an attempt to punish him for exercising a Senator's right to think for himself and vote independently of party orders. Such conduct is so rare that it may he welcomed, whether in a Foraker, a La Follette, or a Hale.

Since Mr. Gompers announced his intention of supporting "Bryanism," there have been dull murmurs of disapprobation—not to say contempt—from several quarters of the Socialist and labor camps. It does not appear that Mr. Bryan has been able to persuade the working man of his whole-hearted friendship, and President Gompers's vows of allegiance are not regarded as having any binding effect on federated labor. In fact, there seems to be some resentment at the ostentatious and, on the whole, futile way in which Gompers swung the labor club over two conventions. The union men will vote according to their own consciences, and not according to his. As Mr. Dougherty, secretary of the International Brotherhood of Book Binders, says, "the Republican union men will vote the Republican ticket and the Democrats the Democratic ticket, just as Protestants and Roman Catholics will continue to go to their respective places of worship." The *International Socialist Review* scouts the idea that the working people can be "bound, gagged, and delivered to Tom, Dick, and Harry by Gompers or anybody else." As for the Socialist, he cracks a smile at the great leader's discomfiture at Chicago, and scornfully sniffs at his attempt to make the "reds" desert their party and "permit themselves to be thrown from one capitalist-bunch to the other."

Mr. Bryan's avowal of his intention, if elected, of making his running mate, Mr. Kern, an unofficial member of his Cabinet, is an interesting suggestion, formed with a proper idea of enhancing both the dignity and the usefulness of the President's understudy, but aimed, we fear, in the wrong direction. If Mr. Bryan's proposal hardened into habitual usage, we should discover its drawbacks. Incompatibility of temperament between the Chief Executive and the Vice-President might be cited in a large number of recent instances. Can one imagine that President McKinley would have been exactly happy to have had sitting at his council board the gentleman who succeeded him? How surely could Mr. Sherman be counted on to uphold the "Roosevelt policies" in case Mr. Sherman sat at Mr. Taft's right hand in Cabinet meetings? The truth is that an able and trusted occupant of the Vice-President's chair, such as the late Mr. Hobart, is not unlikely to be taken into the confidence of the President, unless—as so often happens—both are nursing antagonistic "booms" for themselves or others. The Vice-Presidency, we fear, will continue for some time to suffer under the disability that deprives it of greatness except when an emergency calls its occupant to surrender it. At the same time, Mr. Bryan is on the right track in making a protest against the use of the position as a mere consolation prize for a disgruntled political faction.

"Bryan After Hearst Party—Plans to Get Independence League Endorsement"—thus runs the heading over a press dispatch from Lincoln. That Bryan would be glad to get these votes is undeniable. Mr. Taft himself would not refuse them. That Mr. Bryan will succeed in capturing Mr. Hearst's private following is far less certain. A few of the men who have been looking to Mr. Hearst as their prophet have already come out for Bryan; a few of the local organizations—several in Brooklyn, for example—have passed resolutions favoring Bryan. But we venture to say that the party as a whole will not break away from Mr. Hearst until he is ready to let go of it. In the history of American politics there has been no more remarkable example of a party paid for and pocketed by a single man. Pot-hunting politicians throughout this country have flocked to the Hearst standard, and they have served under it so long as they have found such service more profitable than working for a living. Of late, however, there have been signs that Mr. Hearst's ambition is flagging and his generosity is reaching its limit. He has other ways of spending the revenue from the family mines; and the hungry sheep look up and are not fed. But we doubt whether they will try to eat from the hand of Mr. Bryan; for that hand is apparently empty also. If the Republican managers can secure enough money and promise enough offices, these unswerving foes of plutocracy who have vowed eternal fidelity to Hearst will speedily perceive that Mr. Taft is the real saviour of the country. On the other hand, astute politicians, like Mr. Hitchcock, may discover that the Hearst party is not worth buying at any price.

The decision of the Anti-Imperialist League to support Bryan was to be expected. Many of its members and sympathizers stood by him in 1900, not because they cared for him personally, but because they regarded the Imperialist issue as the all-important one, and his position against it as sound and historically correct. No doubt the Democratic plank of 1908 also is more dis-

tinctly anti-Imperialist than the Republican:

We condemn the experiment in Imperialism as an inexcusable blunder, which has involved us in an enormous expense, brought us weakness instead of strength, and laid our nation open to the charge of abandoning a fundamental doctrine of self-government. We favor an immediate declaration of the nation's purpose to recognize the independence of the Philippine Islands as soon as a stable government can be established, such independence to be guaranteed by us as we guarantee the independence of Cuba, until the neutralization of the Islands can be secured by treaty with other Powers. In recognizing the independence of the Philippines our government should retain such land as may be necessary for coaling stations and naval bases.

To this topic, it is announced, Mr. Taft will pay special attention in his letter of acceptance. Meanwhile, his own party says briefly enough of its rash colonial venture:

In the Philippines insurrection has been suppressed, law established, and life and property made secure. Education and practical experience are there advancing the capacity of the people for government, and the policies of McKinley and Roosevelt are leading the inhabitants step by step to an ever-increasing measure of home rule.

So far as the platforms are concerned, the adherent of old Constitutional policies will prefer the Democratic. But when it comes to the candidates, we must not forget that it was Mr. Bryan who served in the war with Spain, and then, after denouncing it, brought about the adoption of the Treaty of Paris, which fastened its grave consequences upon us. Yet he has rendered great service at home and abroad to the cause of peace. Mr. Taft, on the other hand, thoroughly approves the military policy of Mr. Roosevelt; and his attitude towards the independence of the Filipinos is tantamount to keeping them in leading strings forever. But every one knows where Mr. Taft will always stand; no one can tell from year to year where the unstable Bryan will land.

The seventh annual report of the Philippine Civil Service for the fiscal year ending June 30, 1907, contains too much of interest to be overlooked because it has only just appeared in print. The director of the service, William S. Washburn, has been compelled to report that the withdrawals of competent and desirable men increase; twice as many resigned as in the previous year. Of the 500 who resigned, more than 100 were university or college graduates, including scientists, civil engineers, surveyors, physicians, etc., as against forty of the same educational qualifications who resigned in the year ending June 30, 1906. The loss of these men, says Mr. Washburn, "is in many instances irreparable." "Good men," he continues, "were evidently discouraged and apparently lost hope that the Philippine public service promised a career that would justify their remaining in it." Should these conditions remain unchanged, Mr. Washburn thinks that all hope of "establishing firmly a dignified and efficient civil service in these islands, composed of men above mediocrity and grafting tendencies, must be abandoned." Five changes Mr. Washburn thinks essential, if the service is to be made both attractive and worthy. There must be tenure of office for the efficient as secure as in any other branch of the Federal service; promotion by merit when vacancies are to be filled; pensions for disability or after a fixed term of service, the appointment of Filipinos to all positions they are competent to fill; and, finally, the prompt retirement of any man who is no longer efficient, or whose work is done by subordinates. As for the pensions, Mr. Washburn himself is in doubt as to whether the time has arrived to establish such a system. It is not necessary, he says, in order to induce high-grade Filipinos to remain in the public service. It is undoubtedly true that other nations pension their colonial officials; but since the United States does not pay civil pensions at home, it seems impractical to offer them in the islands. The elimination of the unfit is the grave problem of our own civil service boards, Federal, State, and municipal. If Mr. Washburn can devise an equitable way of getting rid of the drones he will have rendered a national service. It is gratifying to note that the relative number of Filipinos increases yearly. In 1903 the service was made up of Americans and Filipinos in equal numbers, above the grade of laborer. On January 1, 1907, there were 2,616 Americans and 3,902 Filipinos, and the change under Mr. Washburn's direction since then must be even more marked.

Would not Tolstoy, if he looked toward Canada, find that the problem of government and governed is not so simple as he would have it? The Dukhobors, that throng of primitive pietists whom the Count helped to emigrate to Canada some years ago to escape the persecution of the Czar's government, are in trouble again. They have been almost continually in trouble since their arrival. On two or three occasions these simple followers of the communal life have put away their tools and their clothes and started out, in the heart of winter, to search for the Lord. And one day last week, at Yorktown, in Saskatchewan, a band of 100 Dukhobors fought for three hours against a squad of mounted police, and a dozen of them were finally put into jail. Now, the Dukhobors have attained that state of pristine simplicity which Tolstoy demands as the basis of peace in society. The Canadian government, especially in distant and roomy Saskatchewan, is far from being like the Czar's. It has favored the Russian immigrants and been indulgent to their peculiarities. Yet in Saskatchewan, as in Russia, Count Tolstoy's sad vision will find the common curses of our own civilization, hatred, prisons, and war.

The annual report of the Hamburg Shipowners' Association will afford cold comfort to the advocates of a subsidy for our American merchant marine. The plight of the freighter and the passenger packet is laid at the door of the world-wide industrial depression. One might imagine that, under the circumstances, the Hamburg shipowners would grasp at a government subsidy as a dying man at a straw. But they have learned wisdom from observation. They condemn the subsidy policy as unbusinesslike and pernicious. Subsidies, except for mail service, they regard as certain to result in a plethora of ocean carriers, and in a more desperate rivalry for tonnage. They therefore advocate an international conference for doing away with ship subsidies. The suggestion of the anti-ship-subsidy conference is approved by such an eminent authority as Herr Ballin, the director-general of the Hamburg Line, in an open letter to the *Frankfurter Zeitung*.

Portugal's welter of misrule, murder, and theft would seem to be moving steadily towards the overthrow of the monarchy, if there were not the drag of an illiterate and untrained population. Servia alone among European states can offer the parallel to the present situation in Portugal. Two political parties, alternating in office and playing into each other's hands, have for years been stealing the public funds. The only perceptible reason for their respective names is that the Regenerationist leaders used the nation's money to regenerate their personal fortunes, and the Progressives made rapid progress in piling up a huge national debt. The ruling house suffered from the prevalent disease of itching palm, and ministers to curry royal favor advanced "loans" to the King in his counting-house, the Queen in her parlor, the maid-of-honor in the garden. Then the party thieves fell out among themselves; and King Carlos, restless undoubtedly under the obligation imposed by Progressives and Regenerationists, frightened probably by the spread of the republican agitation, and perhaps stirred in conscience a bit, determined to make an end of the dual plunder system, chose Franco for his Minister, and made a clean sweep of the Constitution. He went too far. The

politicians of the old parties, out of fear of exposure, hit upon the plan of making King Carlos the scapegoat. The republicans did not object to violent means. And hence we have the spectacle of a King murdered as the result of a conspiracy in which the men who now rule the country accuse each other of being implicated; and the young King dare not look for the truth, or reveal it, if, as is probable, he knows it.

So far as the outside world is concerned, the new Cabinet in Japan is the same that guided the country through the war with Russia. The Premier is the same, Count Katsura, and the foreign portfolio goes back to Baron Komura, who negotiated peace at Portsmouth with Count Witte. The Saionji Cabinet, which came into office in January, 1906, fulfilled a necessary, if thankless, function. It had to guide the Japanese people back from the highways of victory and exalted hopes through the hard path of reaction and bitter payment for the glories of war, to the humble realization that the world is, after all, not Japan's. Immediately after the war the Katsura Cabinet had to go specifically because of the profound disappointment aroused by the terms of the treaty with Russia. But if it had survived that crisis, it would have fallen, as the Saionji Cabinet fell, sapped by the decline of aggressive militarism as the war retreated into the distance. Premier Saionji was too precipitate in his efforts to force recognition of complete equality for Japan in the sisterhood of nations. The result has been a quickened sense of Japanese "peril" on every shore of the Pacific. And now we have direct assurance by the new Premier, that armaments will be reduced, and that the peace of the world shall have no complaint to bring against Japan.

The Legislative Council of India has been hard at work to devise means for the prevention of bomb-throwing. In supporting the recently introduced Explosives Bill, Sir H. Adamson, as reported in the Calcutta *Englishman*, declared that the forces hostile to the government are not the scum of the lower classes, but "educated men banded together against all the interests that keep society alive—men who, like pirates, are the enemies of the human race." This is surely a two-edged charge. The Explosives Bill provides that the bare possession of explosives constitutes a criminal offence, unless the possessor can show that he has no evil intentions. The most original part of the bill is the "definition clause." An "explosive" includes not only the finished bomb, but the uncompounded ingredients. "If you allow a man to have in one room sulphuric acid, in another room nitric acid, and in another room glycerine, and you are to await till he combines the three, he will defy your law." How far beneath material evidences can the law probe? Sir H. Adamson followed up the Explosives Bill with an Incitement to Offences Act. It is bootless, he urged, to remove the temporary effect without removing the permanent cause. The *Yugantar* newspaper, five times prosecuted for incitement to offences, has lifted up its diminished head after each chastisement. It has been connected time after time with outbreaks of the most atrocious and anarchistic nature. The only way to deal with such a catlifed journal is to confiscate the press and extinguish it utterly. But why stop with the press? Extinguishing the *Yugantar* will not extinguish its editors, nor the people whose passions it foments. If the law recognizes as an offence the possession of glycerine, nitric and sulphuric acid in adjoining rooms, why should it not take cognizance of hunger in a man's stomach, hatred in his heart? These dangerous ingredients also compound swiftly.

The University of Berlin has successfully revolted against his Imperial Majesty the Kaiser and the entire Prussian government. We reported the other day the extraordinary action of the government in creating a new professorship in economics at the university, and appointing to it a little-known and young professor, Ludwig Bernhard, who has been doing a useful political service to the government in defending its treatment of the Prussian Poles. The university authorities knew nothing of this project until the position was created and filled. The Minister excused the anomaly by saying there was no time to communicate with them—although the university is but ten minutes' walk from the Ministry of Education. But the philosophical faculty, exercising its legitimate powers, has come to the rescue of the university by positively refusing to accept Professor Bernhard as a colleague; not, it is expressly stated, for any reasons derogatory to him, but because of the action of the government in not consulting the university authorities in advance. Simultaneously, it is announced that Professor Bernhard will give up the teaching career and will probably accept a handsome offer from a large corporation.

The latest delay in starting the longest voyage ever undertaken by a heavily loaded and well-manned airship does not discourage the seventy-year-old inventor, Count Zeppelin. The second of this month was the eighth anniversary of his first ascent with his first dirigible balloon, and in these past eight years he has sacrificed several fortunes and gone on experimenting with all the ardor of youth. It was only the other day he maintained, in his address before an assembly of German engineers at Dresden, that with proper preparations one of his airships could rise and land without difficulty or danger. The accident which has again injured his most successful invention will not therefore shake his faith in his own theory; but it will confirm many a doubter who refuses to take this invention at the value placed upon it by the German Emperor and press until it has proved invulnerable in a sudden and a heavy storm. Something like this was in the mind of the German Minister of War, Von Einem, when he demanded that Zeppelin should operate his craft in a storm before its acceptance by the government. Zeppelin himself, however, in his Dresden speech asserted flatly that the movement of his airship could in nowise be affected by sudden change of atmospheric pressure. He is, at least, justified by actual results in exulting over the great scientist, Von Helmholtz, who once declared that such airships as Zeppelin proposed were impossible.

For the rigid type of airship the Count is enthusiastic. It can go further in the same time than one of the semi-rigid kind. An injury to the single gas chamber of the latter is dangerous, because the airship loses not only its ability to stay aloft, but the form necessary for successful steering, whereas the rigid balloon retains its shape even when it has lost some of its buoyancy; the loss of one of its gas chambers is comparable to the flooding of a single compartment in an ocean liner. And that the rigid airship retains its form quite independently of the action of its motors is another point upon which Zeppelin dwells. He is, moreover, particularly satisfied with his new Daimler motors, which are heavier than any he has used heretofore. His belief in relatively small and rapidly revolving propellers is fortified by his most recent experiences; and in the extraordinary impermeability of the covers of his gas-bags he sees another step forward. As for the two watertight aluminum cars which hang beneath the gas-bag, dispatches report that the living quarters are so commodious and well arranged as to have given a special impulse to the formation of a large company to undertake an aerial passenger service. This may be discounting the future, but there is no denying that the world has entered on a new era in airship construction. The feverish activity among inventors everywhere—even in China—is certain to have results. Even our own army authorities have suddenly become convinced that there is something in the new devices for flying, and they deem it worth while to hold out inducements for military airships.

COMPETITION IN POLITICAL PURITY.

In the lively contest in political purity between Mr. Taft and Mr. Bryan, Mr. Taft has just scored a point by announcing that the Republican National Committee will not accept contributions from any corporation. Mr. Bryan had already made a declaration to the same effect. The honors between the two leaders seem now to be about even, though in view of the intimate relations between the Republican Committee and the corporations in recent campaigns, Mr. Taft has made the greater renunciation. The spectacle of the parties bidding against each other in the matter of opening the campaign subscription books and in spurning "tainted" money is as exhilarating as unexpected. What Congress refused to do, what the Republican Convention shied at, has been brought about by the candidates. Each of them has perceived whither public sentiment is tending, and has sought to get into accord with it. The first move was made when Mr. Taft sensibly and shrewdly took a position in advance of his party, and gave orders that an account of all moneys given to aid his election should be made public after the voting was over. Then came Mr. Bryan, announcing that *his* publicity will begin on October 15, and extend over every day thereafter until the campaign closes. This is in line with the McCall bill, which provided that a sworn return of funds obtained should be published before as well as after the election. The arguments for such a course are obvious. If we are going to have publicity at all, we may as well have it real and entire. A huge campaign fund disclosed only after it had done its corrupting work would add more to our national mortification than to our wisdom.

It seems probable that the Republicans, in spite of statements to the contrary, will be obliged to follow the Democratic lead. When Mr. Bryan's committee tells the public on October 15 how much money it has raised, Mr. Taft's committee will be almost forced into equal frankness. Refusal would wear too sinister a look. The Democratic press and candidate would at once cry out that Republican pretensions of willingness to let the people know all were hollow; that Mr. Taft's managers had been resorting to the old tricks of tariff blackmail and corporation favoritism, and dared not let the whole truth be known. Under such circumstances, political expediency, if not very shame, will dictate a publication of the facts. The Republican Treasurer, Mr. Sheldon, may as well make his preparations to do this. It will come with better grace as volunteered than if extorted. The large fact is clear that this Presidential campaign is going to differ from any that has preceded it, in letting the voters know how large the party fund is, and who gave the money.

The great evils of secrecy in the raising and expending of money to carry elections are not confined to direct corruption of the suffrage by outright purchase of votes. Far too much of that has been done. When Harriman wrote that the $260,000 which he raised for Roosevelt in the closing days of the campaign of 1904 meant a change of 50,000 votes, he undoubtedly implied that they were bought like so many railway shares. In the two campaigns which Mark Hanna conducted so lavishly, doubtless an appalling amount of the coin found its way to the pockets of venal voters. But even more demoralizing and shocking are the secret arrangements of the party managers with large contributors. They are given, for their money, a first lien upon legislation, or are promised that they will be looked after when it comes to distribute good things in office. If the books of the two McKinley campaigns, and of Roosevelt's in 1904, could be inspected by the public, it would get an insight into many mysteries of law-making—and failures to make laws, such as those revising the tariff—and also understand why some apparently inexplicable appointments were silently made. This scandal has pursued and hurt both parties. It will not be forgotten that Mr. Whitney based the claim of a rich Newporter to the Italian embassy upon a contribution of $50,000 or so to the campaign fund, nor that President Cleveland tried to carry out the bargain. Who buys owns, has been the tacit or avowed maxim of wealthy men in sending large checks to campaign committees.

Unlike mercy, the secret contribution of a great sum of money to politicians curses both him who gives and him who takes. It is a source of political debauchery wherever tolerated. In England, it has embarrassed both parties and caused the nation to blush. The public has seen brewers suddenly converted into barons, and bankers into knights, and has understood perfectly that the only reason was a generous subscription to the expenses of the party. The matter has been brought up again and again in Parliament; and Liberal Premiers have vied with Conservative Prime Ministers in making shame-faced explanations of the "birthday honors," which do not explain. If this kind of purchased distinction is to be tolerated at all, we should like to see it adopted in the case of our own large contributors to party treasuries, rather than the form of reward which we do practise. To enable a man to write "Sir" before his name would tickle his vanity as much as making him an Ambassador, and would do less harm to the public service.

Cynics are questioning both the sincerity and the thoroughness of the publicity promised for this campaign. It is hinted that rich contributors will find a way of hiding their $25,000 checks behind 250 plain citizens—Smiths and Robinsons—who will each give $100, and not have to make a report, the sum being small. That a certain amount of trickery and deception will be attempted, it is highly probable. But in the main, we are confident that both committees will set forth an honest transcript of the facts. The country will know all, even if it does not pardon all. To have achieved no more than that is to have made a great political advance. Other reforms will seem less unattainable, now that campaign publicity has come to be established in a way so quiet and unforeseen.

A BISHOP PUBLICIST.

Bishop Potter was an eminent ecclesiastic who was yet better known as a public man than a churchman. He may have had distinction as a theologian, but of this the generality knew nothing. Nor was he of the priestly type. He was not, either in appearance or in the habit of his life, one of those devout, ascetic, saintly souls, to whom, as Mr. Gladstone said, "men look up as to the stars." Bishop Potter's robust personality and direct contact with the world about him reminded one, rather, of those English bishops who are half-churchmen, half-statesmen. It would be hard to name another American bishop who would have seemed so naturally placed in the House of Lords alongside, we will say, Magee.

Of recent years, age and the demands of his diocesan work had compelled Bishop Potter somewhat to abate his secular activities. Less in the public eye, it was easier for a short-memoried people to forget the prominence he long held in this city, and the useful part he played in civic and, indeed, national affairs. From about 1885 to 1898 no one was more in demand as a speaker on public occasions, and no one who spoke so often spoke better. He had a fine presence and manner, and he usually had something to say. It is clear that he valued highly such extra-clerical opportunities to impress himself upon the community. It was, to him, a part of the prophetic function of his ministry. There were times when he rose to its full height. One of them was the celebration of the centenary of the Presidency of the United States, in 1889, when it fell to Bishop Potter to preach the sermon in St. Paul's, with President Harrison in the audience. The preacher took advantage of the general disgust at the way in which the time and strength of the new Administration were being frittered away in the division of the spoils to utter a few pungent words about the impossibility of imagining George Washington devoting his chief

thoughts and energies to such office-broking. It was a sort of Nathan to David address, and produced an effect as wide as the nation. That Bishop Potter carefully weighed his message in advance is shown by the fact that he consulted Mr. Godkin about it before it was delivered. Naturally, that stout civil-service reformer bade him strike and spare not; and, after the prophetic rebuke had been delivered, wrote to him: "I think it is the bravest, timeliest, and most effective piece of pulpit oratory which this generation has heard, and a noble use of a great occasion. If it hurts any one, it will show that he is very sick, and finds in you his physician."

Being so completely a man of his period, Bishop Potter could not but share in that sense of "social compunction" which Mrs. Ward has said distinguishes our age. The fortunate feel for the unfortunate as never before; the educated for the ignorant; the safe for the imperilled. In many forms of humanitarian work, even when not calling itself religious, the Bishop of New York took interest. He gave name and pen and voice and time to charitable causes. His independent mind did not permit him to refrain from criticising philanthropy, when he thought it mistaken, and at times his reformatory zeal took a turn which exposed him to ridicule, as in his proposals for church saloons. But his good nature and firm poise enabled him to take the raillery, and even the denunciation, with a smile. He had the saving grace of humor, for lack of which too many social reformers have been a trifle forbidding in their earnestness.

It would be stretching eulogy to say that Bishop Potter always escaped the dangers which beset a churchman engaging freely in civic and political movements. People expect a clergyman to bring to such work higher standards, finer motives, and a more unyielding conscience than the average layman. But, unhappily, the children of light are not always wiser than their generation. They do not invariably rise superior to their environment. When they find all men compromising, they are very apt to compromise, too, and to bow down in the House of Rimmon. This is bad for them personally, and it is bad for their sacred calling. We do not like to see our spiritual guides acting as if they were no better than politicians. So it was necessarily with something of a shock that people saw Bishop Potter recant his first strong words about the recreancy to American principles involved in our treatment of the Filipinos. This had a disheartening tendency, in the public mind, to classify him with Chauncey Depew.

One cannot, however, have in this world a quality without the hazard of its defect. In general, Bishop Potter represented a most useful form of religion—that which does not hold itself aloof from the world, in cell or oratory, but goes to mart and university and forum, to meet and study human nature in the concrete, to take as well as to give, and learn while teaching. In the large division of labor of the church—what the Apostle recognized as "diversity of gifts"—there is room for many types of service. Some are called to the brooding life apart, their looks commercing with the skies. Others do their best work in touch with their fellows, letting all the streams of tendency play full upon them, and endeavoring to influence life at many points. The late Bishop of New York will be most missed because his death marks the disappearance of what was long a great civic figure.

THE PARTIES AND THE PROFESSIONS.

Mr. Bryan's speech on Saturday to a visiting delegation of teachers and scholars serves not to settle a question, but to raise one. Passing from "the divine law of rewards" to the importance and special qualifications for the work of teaching, Mr. Bryan emerges with the query, "And yet what is your remuneration?" The complaint is not a new one. It is only an irritant, political version of Johnson's Grub Street couplet:

> There mark what ills the scholar's life assail,
> Toil, envy, want, the patron, and the jail.

The real question it raises is the interest of professional men as a class in the economic and political struggles which loom so large to-day.

Upon this subject there are two sharply antithetical views. The one is that of Prof. Werner Sombart of Breslau, the historian of Socialism, who insists that professional people are "outside the class struggle" between capitalists and the proletariat. According to Sombart, those who render personal and professional services are not welded together by any feeling of class unity. They attach themselves to one camp or the other according as they are inclined individually by personal ties of kinship or acquaintance with individuals in either camp. Instead of reckoning on the *intellectuels*, or the learned proletariat, as eventual recruits for Socialism, the Breslau professor looks at them as an atomic agglomeration prospering each like a parasite, only as that party prospers to which professional people as individuals are attached.

A sharply opposed view is taken by an American scholar, Prof. J. C. Van Dyke of Rutgers College, in his recent vivacious little book, "The Money God." After inveighing against the relative and the absolute disparity in pay presented by a statistical comparison of artisans' wages and the average earnings of clergymen, lawyers, and teachers in the United States, Professor Van Dyke ascribes the low remuneration of professional men to a two-fold cause. They are not organized into aggressive political units like the trades unions, and are consequently victimized by predatory wealth and a robber tariff. They scorn, moreover, says their apologist, to prefer their class interest to the general interest of the community, and reap the reward of their altruism in their meagre compensation. Artists and authors, for example, would be ashamed to suggest the exclusion of European competitors or their products.

The chances are that in each of these opposing views there is a blend of truth and falsehood. Sombart's assumption that professional people "stand outside the class struggle" and have nothing to gain as a class, whether capitalists or trades unionists have the ear of the Legislature, is probably untrue. It comes dangerously near the exploded notion that unless a man's labor takes definite, tangible, vendible shape, the labor is unproductive or socially useless. If this were so, the man who trains horses is a producer, while the man who trains men is an economic parasite. The German savant is probably right, however, in emphasizing the absence of a distinct class interest among all grades of professional men. Their class interest is not focused, at all events, and so is often politically negligible. On the other hand, our American defender of the professional man probably imputes to his brethren somewhat too large an infusion of disinterestedness and altruism. The exceptionally gifted lawyer is said not to scruple to exact large fees; and the same thing has been hinted even of eminent specialists in medicine. But with due allowance for these failings, it is incontestably true that the interests of professional men have been systematically neglected, and even betrayed by legislators and politicians. A British finance minister once contended that the most heavily taxed people in England, in proportion to their means, were the small income-tax payers, "where the cloth coat leaves off and the fustian jacket begins." And it would be nothing surprising if the same thing were true to-day in the United States.

So far as the present campaign is concerned, it cannot be said that the economic interests of the professional classes are likely to be very carefully treated by either party. These classes will still sell their services in a competitive market and buy their supplies of tariff-fed Trusts and their labor of the "job-Trusts," *alias* the unions. Mr. Bryan's solicitude will be discounted by many of the teachers and other professional men. They will remember how ready he was to confiscate their savings and shrink their insurance policies in 1896, "without waiting for the aid or consent of any other nation." They will

recall with alarm his approval of special legislation to legalize the boycott and to weaken the equity powers of the courts. They will remember his versatility in lending an ear to the loudest note in the welkin, now donning the uniform of the volunteer colonel, and now lecturing on "The Prince of Peace." They may even notice that, though the platform plank promising a Cabinet portfolio to a labor representative has his hearty approval, it does not occur to him that a Minister of Education could be of any service at his official council board. Nor has the Republican party, as a party, any claim on the professional classes. It has restricted the importation of books and scientific apparatus and put a tariff on works of art. It has raised the professional man's cost of living without any corresponding compensation, and shorn all uncomplaining consumers in ways without number. But for all this, the old adage that the frying pan is preferable to the fire will occur to many a weary-hearted and well-robbed professional man.

LESSONS FROM A FRENCH NOVEL.

It is risky to suggest going to school to the French novelist; but we should learn of our enemies as well as love them. In the best French fiction there is a quality that is almost unknown in the American novel—a fineness of flavor and workmanship that makes our six best sellers seem amateurish and flat. When a choice is possible, many readers will still prefer an unknown novel from France to a native product, and on perfectly valid grounds. The English writers who are so clamant for Latin liberty in dealing with matters not hitherto openly discussed in polite English society, by no means possess the whole secret. It may well appear to thoughtful minds that the limit set by Anglo-Saxon taste is not a thing to chafe at, but to be thankful for. There are areas of the higher moral life secured by it which are scarcely dreamt of in the French philosophy. There is no great English novelist of whom it can be said, as was said of Balzac, that he could not portray a good woman. There are national as well as individual specialties; and it is a credit to the English that they have not much striven to excel in the field proscribed by their own traditions and already preëmpted by the French. In commending the French novel it is necessary to add the caution to throw away the worser part and live the purer with the other half. It must be esteemed, as Matthew Arnold esteemed it, for the virtues in which the English race is particularly deficient.

The occasion of these reflections is a new novel, "Ciel rouge," of which two parts have appeared in the *Revue des Deux Mondes*. The author is Baronne Aimery de Pierrebourg ("Claude Ferval"), whose earlier novel, "L'Autre amour," was crowned by the French Academy. The plot of "Ciel rouge," so far as it has been published, is startlingly conventional. It is the very old story of a dreamy, inexperienced girl, Laurence Bertal—nourished, by the way, on Balzac's "Le Lys dans la vallée"—given in marriage by worldly-wise parents to Ivan de Kermor, a lieutenant in the army. Lieut. Kermor is a man of property and a strong sense of proprietary right in every part of the household, including the members of his family. Of spiritual sympathies and aspirations he is destitute. The customary disillusionment follows for Laurence. The care of a growing daughter fills her hungry heart for some years; but eventually, in her mature womanhood, she meets in the drawing-room of her own father a poet whose heart is as hungry as her own. "Il sembla à Laurence qu'ils se tendaient l'un à l'autre la coupe vide de leurs cœurs." This is enough of the story to point the moral, deplorable as it is. Indeed, it is only on the technical side that "Ciel rouge" offers us anything of value.

The American mind athirst for novelty must regard such a plot as intolerably commonplace; why read the story at all? The Frenchman, on the other hand, would probably no more think of making that objection than the Athenian would have made objection to the "Prometheus" of Æschylus on the ground that he had heard the fable before. For the French novel seems to have reached a stage in some ways analogous to that reached by the Greek drama in the age of Pericles. The wise tragic dramatist, Aristotle pointed out, did not waste his energy in the search for unexplored material and strange themes. Prior to the classic age, to be sure, writers had made all manner of experiments; but the best practice of the great days confined itself to a few familiar subjects—Thebes or Pelops' line or the tale of Troy. The originality of the poet was exhibited in his invention within the limits of the well-known story, in the beauty of his diction, and in the profundity of his comment on life. So far as plot and material are concerned, the French novelist has comparatively little to decide. It is merely a question of a few formulas within one of which he must work.

Now precisely where the French novel is strong the American novel is weak, and vice versa. We feel, perhaps justly enough, that our fiction is more wholesome and more fairly representative of our life. We have not yet produced *the* American novel, and probably never shall. But we have a large body of more or less deciduous literature, which, taken together, mirrors in its crude way the American scene. We have New England novels and novels of the great Northwest, Chicago novels, and novels of New Orleans; and, on the whole, we are pretty well pleased with the variety and abundance of our literary output. But this large and heterogeneous mass of fiction has the defect of its qualities; it lacks choiceness and distinction. Prof. William James asserts with incorrigible optimism that "without too much you cannot have enough of anything. Lots of inferior books, lots of bad statues, lots of dull speeches, of tenth-rate men and women, as a condition of the few precious specimens in either kind being realized." As the condition, yes; but as the cause, no. We can never have the precious things in literature merely by adding to the multitude of cheap things. We can never have a fine piece of fiction merely by seeking some new thing. On the rock of novelty many of our writers split; they are mortally afraid of conventionality. Their search is all for new themes, new theories, new social groups to exploit. The result is a great increase in raw material, but little or no progress in the art of using it.

When American fiction reaches the classic age, we shall find its authors taking more thought for the morrow. They will remember that in a little while their novelties will be very stale, and recognize that nothing can preserve their work from oblivion but some special grace and fineness of workmanship. Consequently, they will accept with gladness the conventional and obvious plot as giving them leisure to devote themselves to transmuting their raw materials into the refined and precious product of art. They will work, for the most part, in harmony with the established order, discerning that pamphleteering for upstart social and political causes is foreign to the spirit of their calling. They will cordially refrain from offending the noble moral prejudices of the race; for they will find in them the helpful limitations of their best work.

THE PERIL OF THE BOOK STORE.

The recent statement of Frank H. Dodd, president of the American Publishers' Association, regarding the decision of the Appellate Division as to right to fix prices of copyright books contains some significant comment on conditions in the book-trade. He says:

> The object which the publishers have all along had in view is not to increase their own prices or profits, but to guarantee dealers in books a fair profit such as will enable them to maintain themselves, and thus to preserve the book store from decline or even extinction. . . . The publishers have tried not only to conserve the book stores, but to foster the business of department stores in the better class of literature. . . . Should they be unsuccessful, the inevitable outcome will be a lessened output of the more serious and valuable books. The difficulty of selling these

has already increased to a serious extent. The progressive publisher will, of course, adapt himself to the market, and should it become necessary for him to publish nothing but light fiction, he can do so. But if the business had no higher ideals than this, many of those who have given their lives to it would be engaged in other and more remunerative callings.

The phrase "higher ideals" implies that in the production and sale of books, as of other works of art, other considerations than the purely commercial must enter. Books are not to be viewed as a mere commodity, like pork and wheat, to which no sentiment attaches. The author, the publisher, the retailer, and the buyer must each in the long run get a fair return for their outlay of brains, of capital and business skill, and of money, but that fair return is not to be reckoned wholly in terms of dollars and cents. There is a margin, often small but none the less real, to be charged to other accounts.

In the case of the author the fact is clearly enough recognized. The writer who will go on turning out pot-boilers at the most rapid pace, who will sacrifice the quality of his work to quantity simply for the sake of money, is everywhere condemned. He is an artist who prostitutes his art to sordid ends. This common feeling—and it is at bottom just—explains the outcry when Trollope's "Autobiography" was published. To the casual reader Trollope appeared to be turning out fiction by the yard, just as a cotton-mill turns out sheeting. Trollope's emphasis on his method of composition certainly lent color to the notion that his chief concern was to fill as many pages as possible and led people to forget that he was also a careful artist. We like to think of our author as writing only when in a fine lyric rapture, and as living patiently on oatmeal till he is seized by the inspiration. The rest of us are at liberty to plod along mechanically at our more highly paid tasks; but in the realm of literature we insist that no one shall work for money and no one shall work for fame.

Nor does this obligation stop with the artist. The ideal publisher is a man who is primarily interested in disseminating sound literature. We admit that he should make a fair profit, but if profit is all that he looks for, he should devote himself to what Mr. Dodd calls "other and more remunerative callings." And our ideal is often realized. The long list of notable publishers is made up of men who have brought to the undertaking the standards not of a mere trade, but of a profession. They have felt a compulsion to seek for good books regardless of immediate return. That is the honorable tradition established through several generations, say, by the Murrays of London. That is the tradition maintained by the foremost firms in this country. "I like to bring out my books through Mr. ———," said a writer on philosophy recently, "because he is something of a philosopher himself and takes a personal interest in the matter." The phrase applies, *mutatis mutandis*, to all high-minded publishers. They are men of education and taste who will not print a book in which they and their kind may not take a legitimate interest. Granted that in publishing there are shysters as in law, quacks as in medicine, and sensationalists as in journalism, the fact remains that the best men in the business are governed by an intellectual and ethical code different from that of the maker of steel billets.

And this code, as Mr. Dodd plainly intimates, must be extended to the retailer if our purveyors of literature are not to come to grief. The difficulty with the book-counter of the average department store is that the books there are treated exactly as if they were calico, breakfast food, or wash-tubs. They are bought in vast quantities at the lowest possible cost, and are indiscriminately sold at bargain prices. We do not deny that a few of these book departments are competently conducted or that the cheapest and worst of them may be useful in bringing books to the attention of people who might otherwise never dream of buying them. But in general the book department which is but a small section of a huge shop can never be a substitute for the regular well-stocked book-store which it seems to be killing. The busy, hurried, crowded aisles of the big store do not invite to sauntering, and a leisurely tasting of this book and that till one has hit upon something that catches the fancy. The brisk young woman, whose ignorance of literature, except the last popular novel, is so abysmal, cannot take the place of the well-read bookman who is glad to have you sample his wares and who can, if asked, give you judicious advice as to the flavor of almost any volume on his shelves. The picture of the real book-seller has often been drawn from life—the man who actually loves books, and delights to handle them and to discuss them with an appreciative purchaser. The genus is, we fear, becoming extinct. In a few of our smaller cities he still survives and leads a precarious existence; perhaps half a dozen of the tribe may be found in the wilds of Manhattan. Wherever he lives he is a humanizing influence which we cannot afford to lose in this age of iron and concrete. If the publishers can do anything to keep him alive, they will deserve well of the republic of letters.

But the publishers cannot bear the burden alone. The rest of us also have a duty to discharge. A well-stocked and intelligently managed book-shop may be regarded as an important public institution. It deserves consideration and support beyond that accorded to most mercantile enterprises. If we ask author, publisher, and book-seller to make some sacrifice for the sake of literature, we must also do our share. It is worth our while to buy at the good book-shop, even if we occasionally miss a bargain in cheap reprints, shop-worn or shoddy bindings, or cut-rate novels at the department store. The great truth that man shall not live by bread alone applies to buyers quite as much as to the makers of books.

NEW ZEALAND LITERATURE.

SYDNEY, June 1.

None of the Australasian experiments in government has attracted more attention in foreign countries than the system of industrial arbitration first projected in South Australia, then established in New Zealand, and next imported by New South Wales and Western Australia. None has provoked more controversy. In the United States alone the system has been written of with mere eulogy, and the colony has been described as "the land without strikes." These treatises Henry Broadhead believes to be dangerously misleading. They have been composed by casual visitors, who looked at the system from the outside, and never once saw the real nature of the thing they professed to examine. Mr. Broadhead is differently situated. For seven years he has been the secretary of the Canterbury Employers' Association, and for three years he has sat on the Canterbury Board of Conciliation. His dealings with arbitration have therefore been many and intimate, and in his "State Regulation of Labor and Labor Disputes in New Zealand" (Christchurch: Whitcombe & Tombs), he has clearly stated the results of a long inquest.

What is his verdict? Briefly, that the system has had but a partial and limited success and has been largely a failure. He does justice to its few good deeds. It has made an end of strikes. So, at least, it seemed twelve months ago. A formidable strike was then legally suppressed with a decision that spoke volumes for the efficacy of the method. The triumph was, we can now perceive, short-lived. For months past another strike has been on foot, and, though the machinery of the new law was put in motion in the same manner, the strike still drags on. We may further add that, in New South Wales, the same system sits paralyzed in presence of a strike. Next, Mr. Broadhead admits that it has stopped sweating. Has it? In many industries in Sydney the worker receives only the old wages, while he signs books which show that he is receiving the wages fixed by the Court of Arbitration. The chief business of the court has been to fix a minimum wage—an attempt which, Mr. Broadhead pronounces "very unsatisfactory." We can now go still further and affirm that it has been mischievous and unjust. Since the book was published, Sir Joseph Ward, premier of New Zealand, has admitted, what keen observers long ago predicted, that the minimum wage has in practice proved to be the maximum wage. As the minimum wage has commonly been made higher than the industry could afford, the masters have had to cut down the wages of the more skilled

workmen. And Sir Joseph avows that legislation will have to repair the injustice—that is, undo its own handiwork!

Mr. Broadhead puts his finger on the most salient defect of the system by showing that it has been made an instrument for the creation of "industrial disputes," and he gives pungent examples of the way such disputes are got up. He carefully examines the effects of the working of the system. It has raised wages, but it has also raised prices, and the increase of prices, and especially of rents, has been so disproportionate that, according to the secretary of the labor department, "soon only the empty shell of an apparent prosperity will be left." The effects on trade have been serious. Several industries have been driven from New Zealand; and for some years hardly any new industries have been started. The prices of locally manufactured articles have risen, the volume of imported commodities has increased out of all proportion to the increase of the population. There is, moreover, no prospect of finality in industrial legislation. An amending bill was introduced last session, and the other day the system was completely recast in New South Wales. Factitious disputes, artificial rises of wages, consequent unreal prosperity, industrial unsettlement, and a probable collapse of the system when hard times arrive—such is the gist of Mr. Broadhead's indictment against state industrial arbitration in New Zealand.

The ambitious new series, Makers of Australasia, opens auspiciously with a work on "The Explorers of Australia," by Ernest Favenc (Whitcombe & Tombs). The author is the highest authority on all matters connected with the geography and exploration of Australia, and in a dozen different forms—endless articles in the colonial press, tales, and poems, but especially in a classical "History of Australian Exploration," published twenty years ago—he has poured forth his knowledge with a lavish hand. The new work is no mere *réchauffé* of the earlier treatise. It is supplementary and complementary. Having had access to the unpublished diaries of many of the explorers, to the private letters and memoranda of persons in all the States, and to contemporary newspapers, Mr. Favenc has been able to add a mass of details to the story he had already told. Himself a successful explorer, he has given the narrative the local coloring that could flow only from the pen of one who had personally experienced the vicissitudes of the explorer's life—its high hopes and visionary dreams, its joyful or splendid surprises, the first freshness of dawn in new scenes, and the lying down in despair to die. The work is exhaustive, because the achievement it records is complete. The vast island-continent has been thoroughly traversed. All but one of the larger explorations were carried out by government officers, or at the cost of government. The only notable exception was the heroic journey of E. J. Eyre (afterwards Governor of Jamaica, and a hero of Carlyle's) across the Great Australian Bight, and that was fruitless. Only one explorer—the unfortunate Dr. Leichardt—was in a high degree scientifically equipped, and he lacked the still more necessary qualities of bushmanship and the leadership of men. Again, all was done in the light of day. Pierre de Coubertin laments that a crowd of French explorers of Louisiana worked and died in the dark. We can follow the track of every Australian explorer save one, who was mysteriously lost in the desert. Of the rare tragedies, and no less of the useful work, Mr. Favenc tells the story with a minute accuracy never before approached, save by himself. Thus he corrects the error that attributes to Count Strzelecki the discovery of Gippsland. The value of the book is greatly augmented by fifty portraits, many of them now first published.

A small but useful treatise, "Modern Education: Its Defects and Their Remedies," by the most widely experienced and successful of New Zealand educators, Dr. Macmillan Brown, covers the whole field of education, from the primary school to the university. He denounces the system of examinations as at present conducted; he deplores the worship of "the isolated fact," to which the tyranny of examinations has led; and he condemns the "Liebigized text-books" into which knowledge is now boiled down.

In 1830, a book with the modest title, "The New Zealanders," was published by the Society for the Diffusion of Useful Knowledge. As it bore the name of no author, and as the society had Lord Brougham for its president, the statement was strangely made, and has often been repeated, that the "work was revised and parts written by" the versatile ex-chancellor. It is now known to have been the production of George Lillie Craik, one of the authors of that admirable collection of treatises, "The Pictorial History of England," and afterwards professor of English literature in Queen's College, Belfast. The whole book is excellent, but its main value now resides in eight chapters describing the manners and customs of the Maoris. They were in substance taken down by Craik from the mouth of John Rutherford, a runaway sailor, who escaped from an English ship touching at New Zealand and sought refuge among the Maoris. The savages made much of him and gave him two daughters of a chief in marriage. Escaping a second time, (for he grew to loathe his wild life), he got back to England, where Craik interviewed him and drew from him this extremely instructive account of a savage people. The chapters containing the record, doubtless much manipulated, have been cheaply reprinted by Whitcombe & Tombs ("John Rutherford, the White Chief") and introduced afresh by James Drummond, the biographer of Seddon. Another valuable reprint by the same publishers is "Adventure in New Zealand, from 1839 to 1844," by E. J. Wakefield, son of the eminent colony-founder, Edward Gibbon Wakefield. It abounds in matter especially interesting to the student of colonization. Believers in the origin of society by means of a "social compact" will find two striking instances in this volume. The first shaping of new communities is described by a qualified observer; the more picturesque sides of their relations with the indigenes are well illustrated, and there are pen-portraits of notable Maori chiefs. A biographical introduction is supplied by Sir Robert Stout. The chief justice of New Zealand, who was at one time its premier, takes the opportunity of sketching, in a superior manner, the establishment of parliamentary government in the colony.

J. C.

EARLY BOOKS ABOUT NEW JERSEY.

The earliest printed books relating to New Jersey are a series of small quarto tracts prepared by the Scottish and English proprietors for the purpose of encouraging emigration. Six of these tracts are known, dated from 1676 to 1685; but, as they are all extremely rare, it may be possible that others were printed though now lost. The earliest now known has the title: "A Further Account of New Jersey, In an Abstract of Letters Lately Writ from thence, By several Inhabitants there Resident. Printed in the Year 1676." Since this is called a "Further Account," it is reasonably certain that some earlier "Account" was prepared, though it may have been circulated in manuscript and never printed. The first letter in this "Further Account" is from Richard Hartshorne, who lived in Middletown, N. J. Four copies are known—two in England (in the Britisb Museum and the Huth collection), and two in America (one in the Lenox Library, and the other, in a private library in this city).

The second publication, a similar collection of letters, has the title: "An Abstract, or Abbreviation of some Few of the Many (Later and Former) Testimonys from the Inhabitants of New Jersey, and Other Eminent Persons. Who have Wrote particularly concerning that Place. London, Printed by Thomas Milbourn, in the Year, 1681." Five copies are known—two in private libraries in this city, one in a private library in Newark, one in the John Carter Brown Library, in Providence, and one in the British Museum.

The next year, two pamphlets were printed. Of one, "Proposals by the Proprietors of East Jersey in America for the Building of a Town on Ambo Point," only a single copy is known, in the John Carter Brown Library. Of the other, "A Brief Account of the Province of East Jersey in America," there were two editions, or issues, as the two known copies differ. In the John Carter Brown Library copy, the earlier variety, the names of the proprietors are printed on a slip which is pasted down on the last leaf. The second copy, recently discovered and acquired by a private collector in this city, has the list of names printed on the title page. This pamphlet was reprinted by Smith in his "History of New Jersey," 1765. This "Brief Account" was prepared and printed in London by the English proprietors, William Penn and others. The next year, 1683, there was printed in Edinburgh, "A Brief Account of the Province of East New Jarsey in America: Published by the Scots Proprietors Having Interest there." Four copies are known—in the Lenox and John Carter Brown libraries, and in private collections in New York and Chicago. One of the two latter is the Barlow copy which Sabin thought to be the only one known.

The sixth and last of these quarto tracts is "An Advertisement Concerning the Province of East-New-Jersey in America. Published for the Information of such as are desirous to be concerned therein, or to transport themselves thereto. Edinburgh, Printed for John Reid, Anno Dom. 1685."

Only two copies are known—one in the Lenox Library, the other in a private library in this city.

A thick, small 12mo was also issued by the Scottish proprietors in 1685. It was compiled by George Scott and printed in Edinburgh by John Reid, who printed several of the quartos. It has the title: "The Model of the Government of the Province of East-New-Jersey in America; And Encouragements for such as Designs to be concerned there. Published for Information of such as are desirous to be Interested in that place." There are two issues, alterations having been made on pages 37 and 38. In the earlier form intended, it is said, for circulation in Scotland, there is a passage recommending religious freedom as an inducement for emigration. This was modified in copies intended for circulation in England. The earlier form is the rarer. This book is much more common than the quarto pamphlets, some sixteen or more copies being known. A copy of the first issue brought £120 at Sotheby's in June last.

The Lenox Library has the only known copy of a folio broadside "Advertisement, To all Trades-men, Husbandmen, Servants, and others who are willing to Transport themselves unto the Province of New-East-Jersey in America, a great part of which belongs to Scots-men, Proprietors thereof."

Other rare early printed pamphlets relating to New Jersey are: "A True Account of the Dying Words of Ockanickon, an Indian King," 1682, a copy of which brought $1,450 in the Weeks sale in 1902; "The Planter's Speech to his Neighbors & Country-Men of Pennsylvania, East & West-Jersey, And to all such as have Transported themselves into New-Colonies for the sake of a quiet retired Life," by Thomas Tryon, London, 1684, of which only one copy is known in this form; and Thomas Budd's "Good Order Established in Pennsylvania & New Jersey in America," 1685.

Correspondence.

THE "BURNING REPORT" OF 1779.

To the Editor of The Nation:

Sir: In studying the materials in the Papers of the Continental Congress, I have traced an incident which appears to be almost unknown, and on which the records themselves are not complete. It concerns the policy of the Continental Congress in the matter of making retaliations for destruction, more or less wanton, committed by the British troops; and the suggestion of action came from Washington himself, whose horror of all the cruelty that war necessitated is to be found in his acts and correspondence. No doubt the conduct of the English and Hessians, commanded at times by men who had been closely connected with the colonies as residents or officials, was particularly exasperating. A particular instance was the issue of a proclamation to the inhabitants of Connecticut by Sir George Collier and Major-Gen. Tryon, then on a marauding expedition in that State. They breathed threats of destruction against all who should be acting under the State government, and asserted that "the existence of a single habitation on your defenceless coast ought to be a constant reproof to your ingratitude." But the attitude taken by Congress on this occasion was quite as extreme, and that position is defined by the two documents now printed for the first time.

On July 13, 1779, Washington sent to Congress the Collier proclamation with other papers relating the cruelties perpetrated by the English in their raid into Connecticut, and added: "If it is practicable, it seems to me high time to retaliate by destroying some of their towns." Six days later his letter was read in Congress, and that body was much stirred by the disclosures. The papers were first referred to the Committee of Intelligence, whose sole function was to prepare matter for publication in the press. They were also referred to a special committee of three, composed of Gouverneur Morris, William Carmichael, and William Whipple. Of these, Morris was the ablest and possessed some imagination, as well as a facile pen; Carmichael was respectable, and is best known for his service in France and Spain; and Whipple was known to be versed in shipping interests. Considering the importance of the questions involved, it was not a strong committee.

Nor did this exhaust the action of Congress. On a motion of Drayton, of South Carolina, seconded by Penn, of North Carolina, the Marine Committee was directed to take the most effectual measures to carry into execution a threat of retaliation formally made by Congress in the previous October, "by destroying the towns belonging to the enemy in Great Britain and the West Indies." This motion was adopted by a close vote, five States in favor, four against, and three divided. It is significant that the States most exposed to the enemy were either opposed to the motion (Rhode Island, Connecticut, Delaware, and North Carolina), or were divided in opinion (New York, New Jersey, and South Carolina). Morris voted against it, Carmichael for it, and Whipple's vote is not recorded.

What was the action of the Marine Committee? The evidence is to be found in a paper, without date or signature, among the Washington letters to the Congress. It was doubtless placed among them in error, for if it had been submitted to the general for his views, some mention of it would occur in his correspondence. Thomson states that it was returned to the secretary's office by the committee of three, so the letter could hardly have been sent out before that committee reported. The handwriting is the only clue to the writer, and that is of William Whipple, who was at once a member of the Marine Committee and the Committee of Three. The paper was unquestionably prepared for the former committee, but there is nothing to show that it received the endorsement of the full Marine Committee. It must have been submitted by Whipple to the special committee, and guided its action. The document is as follows:

Sir: Inclosed you have a certified Copy of a Resolution of Congress dated July 19, 1779; by which you will perceive the Marine Committee are empowered and directed by Congress to carry into Execution their Manifesto of the 30 of Octr., 1778. In pursuance of this Authority, and for the more speedy accomplishment of the Ends proposed, we authorise and most earnestly request you, to take every Measure in your power to aid and assist us in the Execution of this Business.

It is not our intentions to confine the Measures to be used on this Occasion to open and hostile operations; But on the contrary it is expected, and we wish and desire that you would cause, at the Expence of the United States, any of the Towns of Great Britain or the West Indies, secretly to be set on fire. In particular London, Bristol, Liverpool, Glasgow and Edinburgh are to be considered as the first objects of national retaliatory resentment; and above all, London, the Seat of Royal Residence and vindictive rage, and the quarter from which have issued the orders for the conflagrations which have by the Enemy been lighted up in these United States.

America would have the Monarch see, that when provoked she can light up fires even at his own Doors. And in this Business it is requested that you will use every possible Exertion. This Measure, in which so many Calamities are involved, and so contrary to the known and acknowledged Humanity with which Congress have heretofore carried on the present war, has at length become, for the sole and direct purpose of self-preservation, absolutely and indispensably necessary, from the cruel and unprecedented Manner in which our Enemies are daily carrying on the present War. Our Villages on the Sea Coasts are numerous, most of them defenceless, and all of them, with very few Exceptions, exposed and easily accessible to a naval Force, which renders them at any Time a prey to a savage and desolating Enemy.

The Towns of ——— here to fore laid in ashes, the late successful attempts in burning and destroying the Villages of Fairfield, Norwalk and Bedford in Connecticut and New York, and the unquestionable proofs Congress have received, that the Vengeance denounced against these States in the Manifesto of the British Commissioners will be executed in its fullest extent, has induced them, as the only effectual Means, to put a stop to the further destruction of our Country, to retaliate upon our Enemy by destroying, if possible, some of the most distinguished Cities in Great Britain and the West Indies.

Our Countrymen have long complained of the slow and forbearing disposition of Congress when every day announces to them the destruction of some part of their Country. To meet these Ideas, they have at length solemnly determined to revenge themselves on their Enemies, and to leave untried no exertions for carrying into execution their Manifesto of the 30 of Octr., 1778.

A few desperate [determined] Men, under the promise of handsome rewards, and well acquainted with the Situation of the large Towns in England and Scotland, will perhaps be the best instruments that can be employed for the accomplishment of this Work. We do not however wish to point out any Mode that shall be obligatory upon you; your own Judgment and observation will readily suggest to you such steps as are most likely to answer the Ends proposed.

As the avowed determination of the enemy, as set forth by the British commissioners, is to render us of as little use as possible to our ally, perhaps it would not be improper, if Capt. Jones should be in France, and his own force is inadequate, to request further aid, and attempt the destruction of some of their towns by a naval surprise.

How such a measure will accord with the sentiment of the court of France, your situation will best enable you to determine. If it should appear to you improper to communicate the matter at all to the Minister of France, you will then forbear to do it.

We cannot conclude without once more earnestly pressing upon you, the Necessity of striking some blow similar to those suggested in the resolution of Congress: The destruction of a single village would instantly convince our Enemy of the Danger to which they are exposed, and the Necessity there will be of desisting from the

present destructive mode in carrying on the War.

It is very doubtful if the letter was ever sent to Franklin, and more than probably it was retained by the Committee of Three, and so was never laid before Congress. Dr. Hays informs me that nothing in the Franklin papers shows that he ever received it, nor can any specific instruction to the commanders of American vessels in Europe be traced to this draft. The committee of three reported August 2, and the report, embodying some of the phrases of the Marine Committee paper, was prepared by Gouverneur Morris. The Journals merely state that it was read. There are no marks on the manuscript to show that it was considered, amended, or modified. Thomson has endorsed on it the words "Burning Report," and here the matter appears to have rested. The report is as follows:

Your Committee to whom was referred Genl. Washington's Letter of the 13th July, 1779, with the Enclosures, Beg Leave to report,

The following Draft of a Letter from the Presidt. to the Minister Plenipotentiary of the United States at the Court of Versailles.

SIR: The Burning of Suffolk in Virginia, Fairfield, East Haven, Green's Farms and Norwalk in Connecticut, together with the Ravages committed in Georgia and South Carolina, form a cruel Commentary upon the Proclamation of the British Commissioners. This Proclamation was defended in their Parliament as meaning no more than that in future the War was to be carried on agt. America as agt. other Nations. It becomes therefore a common Cause of all Nations to punish a People who so daringly violate the Rights of Humanity; and it is particularly incumbent upon the United States as well to check their present Barbarities as to conform to the Manifesto published in Answer to the Proclamation above mentioned and to deter all others by striking Examples from a Breach of those Laws which are held sacred among civilized Nations. I am therefore to instruct you that you employ Incendiaries to set fire to the Capital of the British Dominions, particularly the royal Palace, and to such other Towns in Great Britain as may be most expedient. And as soon as some great Object of this sort can be accomplished, you do in a proper Manifesto avow the same as having been done by the Order of Congress, declare that they are determined at all Times to meet their Enemies in whatever Kind of War they shall chuse to carry on, whether it be of civilized or of savage Nations, and call upon all the Powers of Europe who may have formerly suffered by the Pride and Cruelty of Great Britain, who feel a just Indignation over her present Conduct, to join their Efforts in vindicating the insulted Laws of Humanity. I am, etc.

In the meantime the Committee of Foreign Affairs was so deeply involved in the unfortunate differences among its agents in Europe, that its books and papers were on the table of Congress and its activity in a state of suspense. But one of its members, James Lovell, whose capacity for mischief was measured only by his intense partisanship, wrote to Franklin, July 16, in the name of the committee:

Will no one under a commission from these United States retaliate on the coast of England for the burning of our beautiful Fairfield? A single privateer might, I think, show there a striking sample of the species of war carried on by Britain against America.

The letter reached Franklin while he was receiving news of the little American squadron under Jones, which had been sent out to intercept the Baltic convoy, and had alarmed the north coasts of England, leading to some very expensive movements of troops for their defence. A proposed descent upon England from France, under Lafayette, had been abandoned.

Congress did intend to make some lasting memento of the "barbarities" of the British, and collected on this subject some material, which seems to have been sent to Franklin, so that when the facts should be published, Europe might be impressed, and perhaps aroused. That clever man entertained two plans of publication. Coins of copper were to be made, on one side of which would be some pious, moral, prudential or economical precept (it was a contest between the Proverbs of Solomon and the maxims of Poor Richard); and on the other "good designs, drawn and engraved by the best artists in France, of all the different species of Barbarity with which the English have carried on the war in America, expressing every abominable circumstance of their Cruelty and Inhumanity, that figures can express, to make an Impression on the minds of Posterity as strong and durable as that on the copper." Four months later his plan had changed:

It is expected of me to make a school Book of them [barbarities], and to have 35 prints designed here by good artists and engraved, each expressing one or more of the different horrid facts, to be inserted in the Book, in order to impress the minds of Children and Posterity with a deep sense of your bloody and insatiable Malice and Wickedness.

Fortunately the Burning order was not sent, the coins were not made, and the school book was not prepared.

WORTHINGTON C. FORD.

Washington, July 15.

TRIPLE HONORS TO PROF. HENRY JACKSON.

TO THE EDITOR OF THE NATION:

SIR: The many friends of Professor Jackson of Cambridge, England, will be glad to hear of the triple honors recently conferred on him. Among the birthday honors recently awarded by King Edward VII. is the following:

The Order of Merit.
Central Chancery of the Orders of Knighthood.
Lord Chamberlain's Office, St. James's Palace, June 26, 1908.

The King has been graciously pleased to make the following appointment to the Order of Merit:

Henry Jackson Esq., D.Litt., Regius Professor of Greek, Cambridge.

A few days later the new Sheffield University at its first degree congregation, under the presidency of the Duke of Norfolk, made Dr. Jackson a Doctor of Letters (*honoris causa*).

A week later the University of Manchester gave him one of the honorary degrees voted on the nomination of the new Chancellor, Viscount Morley, on his accession to office.

W. W. GOODWIN.

Plymouth, Mass., July 14.

"THE TWO NOBLE KINSMEN" AND THE SHAKESPEARE FOLIOS.

TO THE EDITOR OF THE NATION:

SIR: The statement in "News for Bibliophiles" (July 9), that "The Two Noble Kinsmen" was "included in the third folio" is incorrect, though also made by several critics and editors, including Dyce and Dr Hudson.

The second (1664) issue of the folio of 1663 included seven spurious or doubtful plays—the other six mentioned in the *Nation* and "Pericles," the only one of the seven in which Shakespeare certainly, or even possibly, had a hand. The fact that "The Two Noble Kinsmen" was rejected by the editor of the 1664 folio is strongly against its being partly Shakespeare's. It was not included in any edition of his works before Dyce's of 1857.

By the way, Dowden, in his invaluable little "Shakspere Primer" (1877), after referring to the "seven additional plays" in the third folio, makes eight of them by printing "The History of Sir John Oldcastle; the good Lord Cobham"—the two being parts of a single title. The mistake has not been corrected—or pointed out, so far as I am aware—in the many reprints of the book for the last thirty years.

W. J. ROLFE.

Cambridge, Mass., July 13.

Notes.

The Bobbs Merrill Company is bringing out a complete and definitive edition of the "Poems of Madison Cawein." Edmund Gosse furnishes a preface in which he has words of cordial praise for the Kentucky poet.

Sir Harry Johnston announced at a recent meeting of the Royal Geographical Society, that he was about to publish a comprehensive work on the regions of the Congo. His material has been derived largely from the researches and notes of the late George Grenfell, and other members of the Baptist mission in that region, which have been placed in his hands by the secretary of the mission for analysis and publication. This accumulation of ethnographic and linguistic material will enable one to realize, he says, that "nowadays most missionaries are at the same time men of science, in one direction or another, earnestly anxious, at no profit to themselves, to place before the world as much accurate information as they can obtain concerning the countries in which they dwell."

For the Mediæval Town Series (The Macmillan Co.), D. A. Chart writes the story of "Dublin." But the history of Dublin is inseparable from the history of Ireland, as a whole, and in this compact little volume of 355 pages the reader will find omitted none of the essential facts of that tragic tale. Dublin, which figures successively as a Danish stronghold, an English outpost, a disaffected Irish subject town, and an Anglo-Irish capital, is, throughout, the heart of Ireland, racked by invaders, wasted by civil war, never genuinely reconciled to England, never likely to accept submissively the domination of the "Castle" and all that it implies. Yet, like the rest of Ireland, Dublin has always shown herself capable of assimilating and turning into patriotic Irishmen the colonists who were meant to Anglicise her. Bestowed as a present on the citizens of Bristol by Henry II., she cheerfully absorbed the crowds of

Bristol men who came over to take possession and to develop Irish commerce, as she had already ahsorbed the Danes. The story of Dublin (Duhh-linn, the black pool) covers ahout two thousand years, for her regular chronology begins ahout 150 A. D. Mr. Chart moves cautiously among the legends of the tribal wars, in which Dublin was always the centre of the storm, and gives an impartial account of the long, tedious conflict with England and of those great Irish fighters and orators who "went forth to war but always fell." Meanwhile, her public buildings and streets were slowly developed, and Mr. Chart, in whom the historical interest is strongest, does not fail to give a complete account of all the monuments of the city. On the whole, it is not exhilarating reading, this story of a city that had every right to become a true capital, and has, so far, failed. Mr. Chart evidently does not look to England for the sequel that may yet transform Dublin into a centre of prosperous national life. The hook is well furnished with good illustrations by Henry J. Howard, maps and an index, and is written in an admirable style.

"Dublin," in the Ancient Cities Series (E P. Dutton & Co.), by Samuel A. Ossory Fitzpatrick, is a guide book, rather than a history, though a good deal of condensed history is included. Its author evidently sympathizes with the Gaelic revival, and gives the Erse equivalents for names of places and persons. The volume is not so attractive in style or dress as Mr. Chart's, but as a guide to Dublin, old and new, it is equally exact and useful. The illustrations, by W. Curtis Green, are attractive, and an appendix furnishes a detailed itinerary for visitors. There is no modern map.

"Edinburgh," in the same series, by M. G. Williamson, is charmingly illustrated by Herbert Railton. The national records of Edinburgh have twice been destroyed by English invaders, under Edward I. and Cromwell, but there are chronicles that fix the date of the building of the castle at 989 B. C., nearly 300 years before Rome was founded. The usual claim is made as to marriage connections of Edinburgh's earliest rulers with the Trojans. The city's consecutive history begins in the fifth century A. D., and from that date the author carries down his narrative to the nineteenth century. He includes a good account of the Golden Age of Edinburgh society in the seventeenth and eighteenth centuries, and of the literary men of Old Edinburgh. The volume is a good, historical guide hook, and contains an itinerary, hut no map of the city.

"Windsor" (the Macmillan Co.) is a handsome addition to a series of books illustrating the beauties of England. There are twenty full-page colored illustrations from the paintings of George M. Henton, described by Sir Richard R. Holmes. The text is a rapid historical commentary on Windsor and its castle from the time of the Normans to the present reign. The chronicle of the lords and kings whose names are associated with this hive of memories is enlivened by well-chosen extracts from Froissart, from the poems of the unhappy Surrey, and from Evelyn, the diarist. The feature of the book, however, is the illustrations which remind one somewhat of the work of Jules Guérin in the Château country of France. The drawing is fine enough to give a clear notion of architectural detail, while at the same time the rich, subdued colors soften the outlines and poetically interpret the charm and mellow antiquity of Windsor. It is a book that will allure the artistic traveller.

If the other Latin-American countries received as much attention as Mexico, students would no longer have cause for complaint that they lack trustworthy information concerning the people and the institutions of the republics of this continent. Although Frederick Starr's "In Indian Mexico" (Chicago: Forbes & Co.) does not pretend to be anything more than a book of travel, it is the work of a keen observer, whose description of the picturesque customs of the Mexican Indians has a deeper significance than a mere collection of interesting details. Combining the qualities of a trained ethonologist with a rare sense of the picturesque, he has given us an altogether admirable book. He has performed for southern Mexico a service similar to that done by Lumholtz for the northern section of the country. His chief interest is in the Indian population; he does not, in the present work, give the scientific results of his investigations, but an account of travel and experiences during the period occupied in collecting ethnological material. Nevertheless, the hook contains observations of great value to the student of primitive peoples. From no other source can one secure so clear an idea of the organization and operation of local institutions in the southern States of the Mexican republic. The numerous interesting illustrations are from photographs taken by the author.

"Mexico of the Twentieth Century" (Dodd, Mead & Co.), hy Percy F. Martin, although more pretentious, is in reality less valuahle than Mr. Starr's book. In his two volumes he attempts to cover the entire field of history, political organization, social customs, industry, and commerce. The monographic studies of the individual States are by far the most valuable portion of the work, and constitute a real contribution to our knowledge of Mexican affairs. Students of Latin-American affairs, therefore, owe him a debt of gratitude for the painstaking care with which he has undertaken a most difficult study. The book is profusely illustrated, but the pictures are not selected with the same care as in the work of Dr. Starr.

N. Newnham-Davis's "The Gourmet's Guide to Europe" (New York: Brentano's) lives up so honestly to its title that it seems almost unfair to censure it for being less delightful than it is. This, however, is the fault of the opening pages, which raise the high hope of a Continental journey in the company not only of an epicure, but a philosopher. The epicure persists with us until the end, displaying a sympathetic intimacy with the palatial resources of Scandinavia, Lusitania, the Near East, and all the Russias, that is little short of amazing. The philosopher abandons us after a while, and the greater part of our way lies through a succession of menus and national tastes that is instructive, interesting, and valuable from the practical point of view, but lacks the touch that makes literature. For instance, the author of a treatise on food who is earnest enough to declare, on page 3, that "the calf which has been fed on milk and yolk of egg, and which has flesh as soft as a kiss and as white as snow, is only to be found in Parisian restaurants," raises expectations to an exalted degree. When we are told that at Voisin's on the ninety-ninth day of the siege of Paris hy the Germans, ordinary food then being very scarce, the bill of fare included *Consommé d'éléphant, Chameau rôti à l'anglaise and Chat flanqué des rats*, the appetite is whetted for further anecdote. Such expectations the author does not redeem in his later pages, though always, as we have said, there is the same vast detail of information offered in convenient and agreeable form. Still, the acute observation and the light jest crops up now and then. At Monte Carlo, claret wines are extraordinarily cheap because the "winners drink nothing but champagne, the losers water or whiskey and soda."

"Literary and Biographical Essays," by Charles William Pearson (Boston: Sherman, French & Co.), is one of those unnecessary books which the world will willingly let die. In dealing with the larger figures, the author is cautious. He thinks that Pope had much good sense, that Macaulay was weak on the spiritual side, that Tennyson divined evolution, that Browning was a good husband, that Ruskin was not so well balanced as Shakespeare, that Lincoln and Washington were our greatest Presidents. More interesting is his judgment of Anne Bradstreet in his essay on "Early American Poetry." At Andover, Mass., one evening she drew from the Merrimac River "an inspiration worthy of Chaucer or Burns or Tennyson." Furthermore, "she is likely to be remembered and honored more and more as the centuries pass." Another striking critical dictum is this: "The Son of Man is the central figure of modern poetry." "Theodore Hook, an English dramatic poet, who lived in the early part of the last century," would he a helpful hint to an illiterate woman's club. One is a little surprised to learn that Sir Philip Sidney was a friend and patron of Shakespeare; the common report goes that Sidney was dead in 1586, about the time Shakespeare probably left Stratford. "If it be a sin to court honor, I am the most offending man alive" is misquoted by Mr. Pearson and attributed to "Percy of Northumberland." The lines were spoken by Henry V. and should read:

> But if it be a sin to covet honour
> I am the most offending soul alive.

Perhaps they will not mind such little slips in the great poetic age to come: "When our present tongues have ceased," says our author, "men in the likeness of angels as they walk by the river of the water of life and stand amid the splendors of the city of pearl and gold, will still treasure poetry."

To the expert, Edmund Dale's "National Life and Character in the Mirror of Early English Literature" (Putnams) may be of help; chiefly as a collocation of passages, references, and allusions. But in the hands of a beginner the book will, we fear, do more harm than good; for the author is neither methodical nor adequately trained for his self-imposed task. We can put no faith in any one who mixes up indiscrim-

inately Bede's History, the Beowulf poem, Gildas, Nennius, the Chronicle, the Judith poem, Henry of Huntingdon, *et al.* In any case, the Beowulf poem is altogether too conspicuous; it is high time to admit that the poem, though English in speech, is Danish in substance, a story of Seeland and the Island Danes told in conventional formulas handed down from a past that was misty even in the sixth century. Its allusions are still the despair of every cautious scholar. In the absence of clear data we should reject every attempt at reconstructing the mind of the Anglo-Saxon. It is conceivable that he looked with disfavor upon the stone walls and buildings left from the Roman occupation, p. 35, and preferred to build for himself wooden houses in the open; but is it probable? That the author's knowledge is at fault in very many places, we have not the space to demonstrate in full; we can give only one specimen. On page 87, Aelfric's description of the devil's personal appearance "seems undoubtedly to have come from an English picture"! As a matter of fact, Aelfric is here (Homil. i., 467, we supply the reference which our author fails to give) merely following the description given in the apocryphal Acts of St. Bartholomew (see the Edinburgh translation of the Apocrypha, p. 437). The portraiture is probably Jewish, certainly Oriental. The latter portion of the work, the Norman-Angevin-Plantagenet period, rests upon safer ground, yet is not wholly free from exaggerations and errors.

Miss Marie V. Williams's six essays on "The Platonic Theory of Knowledge, as Expounded in the Later Dialogues and Reviewed by Aristotle" (New York: G. P. Putnam's Sons), are a thoughtful and creditable piece of work to have been produced during the "tenure of a studentship at Newnham College." Beyond this, the critic's estimate will depend on the school of Platonic interpretation to which he belongs. Miss Williams is a pupil of Henry Jackson and Mr. Archer-Hind. She endeavors, while presenting in the main their view of the Platonic metaphysics and the alleged modification of the theory of ideas in the later dialogues, to correct some of the undeniable errors that have been pointed out in their presentation, and to meet or evade the criticisms which it has called forth in the *American Journal of Philology* and elsewhere. Much reading between the lines would be required to determine how far her phrasing represents the second thoughts of her teachers, how far it is dictated by the becoming deference and gratitude of a pupil. We cannot reargue the question here, but must limit ourselves to a typical illustration of her method. She has apprehended the fact that the "Parmenides" and the "Sophist" represent the ideas as a sort of necessary Kantian postulate or precondition of conceptual thought. But instead of recognizing that this is a sufficient explanation of Plato's maintenance of the paradox in the face of the objections which were as patent to him as they can be to his critics, she infers (p. 13) that the revised Platonic doctrine is "that predication is a *sine qua non* of logical analysis, and that no transcendental explanation need be assumed." So again (p. 21) she says: "We have vindicated the right of the soul to pass judgment on any data supplied to her without the mediation of any exalted and mysterious existences called ideas." The true Platonic inference, of course, is that the transcendental basis remains a necessary postulate even if we cannot fully explain its nature.

The second volume of Prof. Sydney J. Chapman's "Work and Wages" (Longmans, Green & Co.) deals mainly with trade unions, arbitration, and workingmen's insurance. The introductory chapter, however, supplies an excellent statement of the laws of wages and profits and the effect of combination upon wages. It is in the main a hopeful picture that Professor Chapman draws. Labor organizations have accomplished much good as well as some harm; they may be useful in promoting industrial peace; and all the evidence points to a steady improvement in the condition of labor. He does not favor old-age pensions, and estimates that a pension of five shillings a week would enable only a very limited number of destitute aged persons to leave the workhouse. He favors, instead, expenditure to secure the best possible development of the young in health and intelligence. The volume contains a brief introduction by Lord Brassey, author of the work upon which Professor Chapman's is modelled.

"The Derbys of Salem, Massachusetts," by Robert E. Peabody, is noteworthy as being the college exercise of a Harvard junior of such interest that it has been published in the Historical Collections of the Essex Institute. It is "a study of eighteenth century commerce carried on by a family of typical New England merchants," the trade being largely with the West Indies. But it was not all peaceful, as appears from the statement in regard to Elias Hasket Derby that "of the 158 armed vessels fitted out from the port of Salem during the Revolution, he appears as owner, or part owner, of twenty-five, and it is safe to say that he had shares in and helped fit out twice as many more." After the battle of Lexington, the Provincial Congress employed Capt. John Derby of the schooner Quero to carry to England a document giving the American version of the affair, and he arrived before the vessel bearing Gen. Gage's official dispatches, though he sailed four days after. In 1783 Capt. Derby was at Nantes in command of the Astrea, and, learning that the preliminaries of peace had been signed at Paris, immediately set sail and was the first to bring the news of the close of the war to America. "A fortnight after Capt. Derby's arrival, Washington ordered the cessation of hostilities, and thus brought the war to a close." The Derbys now disarmed their ships and embarked in the trade with the East Indies and China, of which they were practically the founders. The conditions in New England towards the end of the war are indicated by the prices of standard commodities given in a letter written in 1780: "Pins at 1s. apiece, needles at 2s. . . . A suit of clothes which cost five guineas here [England] would cost five hundred dollars in Boston." Several portraits and pictures add to the value of this unique pamphlet.

"The True Story of Andersonville Prison," by James M. Page and M. J. Haley (New York: Neale Publishing Co.), is avowedly a defence of Major Henry Wirz. Lieutenant Page, whose military experiences the volume records, was a prisoner at Andersonville from February to October, 1864. He had the good fortune to make the acquaintance of Wirz, and to have several interviews with him on matters connected with prison life and discipline; and while the unique relationship did not result in any mitigation of the narrator's own sufferings or blind him to the horrors of the place, it showed him a side of Wirz's character which many writers on this phase of the Civil War have either grossly misrepresented or completely ignored. So far as his own experience and observation go, Mr. Page feels able to deny *in toto* the oft-repeated charges of robbery, brutality, and neglect which survivors of Andersonville have lodged against Wirz; and he cites a number of acts of consideration and even kindness on the part of Wirz and his subordinates which one would fain believe were typical rather than exceptional. That Wirz was, in the main, a victim of circumstances; that the dreadful conditions in the prison were due in part to the poverty and demoralization of the Confederacy, and in part to the refusal of the Federal authorities either to exchange prisoners or to provide for the relief of Union captives; and that Wirz was hanged less because he was guilty of the offences charged than because Northern vengeance demanded a victim, are facts which records now available tend strongly to confirm; and Mr. Page's volume, though written not without obvious prejudice, adds interesting personal testimony to the same effect.

A second edition of Wilkin Updike's "History of the Episcopal Church in Narragansett, R. I., Including a History of Other Episcopal Churches in the State," brings before us, in much enlarged form, a useful work which was first issued in 1847 and soon became a "bibliographical rarity." D. B. Updike (who publishes the three volumes at the Merrymount Press, Boston) long had in mind to reëdit the work of his grandfather, but, being obliged to relinquish the undertaking was fortunate in getting Dr. Daniel Goodwin, sometime rector of St. Paul's Church, Wickford, Narragansett, to take up the task. Dr. Goodwin was already known as the author of a brief monograph on the "Old Narragansett Church," which will be found in Bishop Perry's "History of the American Episcopal Church" (Vol. I., pp. 595-7), and his editing of the present edition shows his eminent fitness for the work. He has preserved in its integrity the original text, and has added notes, biographical and explanatory, which have greatly increased the value of the work, and doubled its bulk. Thus of the 622 pages in Vol. I., his notes cover 314; of the 605 pages in Vol. II. his notes fill 222, and 145 comprise the records of St. Paul's Church, Narragansett from 1718 to 1774; and of 339 pages in Vol. III., 132 pages include eleven appendices, and 207, a full Index of Proper Names, facilitating greatly the ease of reference. A further valuable addition is the fifty portraits of noted men and women connected with the church, after old paintings, representing the art of the most distinguished American painters, such as Lincoln, Swibert, St. Mémen, Copley, Blackburn, Gilbert Stuart, Feke, Malhone, Lawrence, Trumbull, Cosmo Alexander, and others.

There are also views of noted houses. The book is a genealogical and historical repertory for the families connected with this church. The Merrymount Press is to be praised for the excellence of the typographical work.

Part vi. of the Aryan Series of "Anecdota Oxoniensia" contains the first fasciculus of Herman Ethé's edition of the text of "Yusuf und Zalikha" (New York: Henry Frowd). The critical apparatus is full, and is printed in a convenient manner in footnotes. Professor Ethé's grounds for regarding Firdausi as the author of the poem are given at length in the Proceedings of the Seventh International Congress of Orientalists (Vienna, 1888). The treatment of the text of such a work is a somewhat difficult problem. Ethé has chosen, no doubt properly, to adopt the longer form, following in the main the manuscripts B, M, and W; but he holds that "the only possible way with Persian poets to produce a readable text is to make the best selection of verses from all available MSS., provided that careful attention is paid to the individual peculiarities of the author in question." It may be a question, however, whether it would not be more satisfactory to print the best manuscript and give the variant readings in footnotes, together with such corrections as grammar and sense required. This would at least furnish a unitary instead of an eclectic text. The second fasciculus will give an index of words and phrases, variants from the copy of Sir William Jones, and a list of errata.

The fourth volume of the translation of Alexandre Dumas's "Memoirs," by E. M. Waller (Macmillan), includes the years 1830 to 1831, the Storm and Stress period of French Romanticism. Like its predecessors, this instalment treats of all the miscellaneous matters and persons that came to the writer's mind—kings, statesmen, politicians, writers, or actresses. It is, with its mass of anecdotes, a work that can be picked up and dipped into at any page.

It is to be regretted that E. F. Scott's treatise on "The Apologetic of the New Testament" (G. P. Putnam's Sons) has not a more popular title, or at least one which would tend to give it general circulation. Many individuals who are repelled by theological terminology might be attracted to a study of the practical purposes the New Testament writers had in view, and an exposition of the manner and spirit in which they met the attacks which were levelled against them. Mr. Scott has conducted such a study in an able manner and presented its results in attractive style. He says:

> We cannot understand the New Testament itself, without some appreciation of the controversial motives which were present in the minds of the writers. They were not secluded thinkers but men of action, who never wrote without a practical object. They addressed themselves to the immediate needs of the early church, and their acquaintance with these needs determined the form and, in large measure, the substance of their message. In the case of each of the writings we have to take account of some polemical purpose which was almost certainly in the background; and when this is understood the argument of the book begins to explain itself.

From this point of view each of the principal writings of the New Testament is examined, and the development of the lines of Christian defence traced. Mr. Scott has a subject of great interest and importance, and his volume is a worthy companion of his work on the Fourth Gospel, which is recognized as the most thorough and enlightening examination of the Johannine writings that has appeared in English in recent years.

The Rev. Dr. Samuel T. Carter, formerly of Huntington, Long Island, has been for many years a sturdy opponent of the theology of the Westminster Confession of Faith. His agitation began when it required no small courage for a Presbyterian divine to attack the Calvinistic system, and his persistent appeals did much to bring about the revision of the Westminster standards. Although now retired from active service, Dr. Carter can not remain idle while the Presbyterian Church still requires subscription to the Confession and while so many clergymen nominally adhere to it. His brochure, "Wanted—A Theology" (The Funk & Wagnalls Co.), is a vigorous onslaught on the entire Calvinistic system, with a plea for a milder doctrine. His spirit will be evident from the following:

> I want it to be well understood that I do not write the present treatise to say that the old theology has room for improvement, is not well adapted to the present time and ought to be revised and corrected, and then adopted at ordinations and councils. My purpose is very different from this; it is to express my utter abhorrence for the whole system as a system, to declare that in the light of the present day it is simply abominable, something that neither God nor man can bear any longer. It has been a dreadful burden for ages, it is an unendurable burden for this time, and should be utterly swept away with the besom of the hot indignation of the whole mass of the people.

With these vigorous sentences should be placed the following:

> I am persuaded that many of my readers think that I use strong language on this subject. That is not my difficulty; rather it is of the opposite sort, that the English language was not constructed with reference to the old theology and has not expletives enough or strong enough to set forth its cruelty.

The house of B. G. Teubner of Leipzig has begun the publication of a new monthly journal, entitled *Monatshefte für den naturwissenschaftlichen Unterricht aller Schulgattungen*, edited by B. Landberg and B. Schmid. It takes the place of *Natur und Schule*, which is now no longer published.

In order to publish works of independent research in the Biblical field, the Aschendorff'scher Verlag in Münster has begun to issue two series. One is entitled Neutestamentliche Abhandlungen, edited by Prof. A. Bludau of the Catholic theological faculty in Münster and the other, Alttestamentliche Abhandlungen, edited by Prof. J. Nikel of Breslau. The former series has just been begun by a volume, "Jesus und die Heidenmission," by Professor Meinertz; the latter will offer as its first instalment a work by Dr. Paul Heinisch, on the influence of Philo on early Christian exegesis.

The next number in the Religionsgeschichtliche Volksbücher series (Tübingen: J. C. B. Mohr), will be "Der Modernismus," by the young Berlin Church historian, Prof. Dr. Karl Holl.

The recently deceased Freiherr Hermann von der Goltz, a pronounced advocate of a type of Christian Socialism, had completed the first part of his "Grundlagen der christlichen Sozial-Ethik." This, his son, Eduard von der Goltz, has just published through the house of Mittler & Sohn of Berlin, and has supplemented it, from the outline sketches of the author, with a second part of a more practical nature.

Of the monumental work of Protestant scholarship, Hauck's "Realencyklopädie für protestantische Theologie und Kirche" (Leipzig: Hinrichs), the twentieth volume has now appeared. One more volume will complete the undertaking. In the present volume leading articles are contributed by Buddensieg, Kattenbusch, Hunziker, Haussleiter, Harnack, Kirn, Mirbt, Lobstein, and Boehmer.

The house of E. J. Brill of Leyden has just issued the first instalment of the "Encyklopädie des Islams," in sixty-four two-column pages, including words from Aaron to Abd-al-Rahman. This work promises to be a monumental geographical, ethnographical and biographical dictionary of the Mohammedan races, and is published with the financial support of the International Academies of Sciences, and with the coöperation of a large corps of specialists from many lands. Prof. M. Th. Houtsma is editor-in-chief.

We can do no more here than invite attention to "Ferdinand von Richthofen's Tagebücher aus China" (2 volumes; Berlin: Dietrich Reimer), arranged and edited by E. Tiessen, with the consent of the author's widow. It was always Richthofen's plan to publish these diaries himself, but he never carried it out. His journeys lie relatively far back in time, but for that reason are perhaps to-day all the more valuable as records. Roman text is used, and there are a few sketches by the author. The style of the work is simple and clear to a degree unusual in German.

R. A. von Minckwitz has prepared for the Charles E. Merrill Co. of New York a new edition of Goethe's "Hermann und Dorothea," basing his work on the Jubiläumsausgabe, and adorning the text with several illustrations after well-known German paintings, and a portrait of Goethe by Stieler. There is a biographical and historical introduction, a chronogical table of Goethe's life and activity, a bibliography, copious notes, and a vocabulary; but one of the best features—and one that might oftener be introduced into texts for classes—is a series of critical opinions from Boyesen, Carlyle, Kuno Francke, Lewes, Scherer, Bayard Taylor, and others.

Gustav Schüler, who already enjoys a high reputation as a lyrical and religious poet, has added materially to his fame by his latest collection, entitled "Auf den Strömen der Welt zu den Meeren Gottes" (Leipzig: Fritz Eckard). He represents the best type of modern religious feeling, divorced from the dogmatic tone of past generations. In not a few places a semi-mystical spirit pervades his compositions such as has not been witnessed in German secular poetry since the days of Novalis. The gems of the collection are found in the first two parts, "Leben und Natur," and "Liebe."

The military spirit of the German people finds expression, during these piping times of peace, in depicting the wars of the future with a characteristic vast display of

minute erudition. There has been more than one book dealing with the inevitable war between Germany and Great Britain. The anonymous author of "Bansai" (Lemcke & Buechner) speaks as a friend of our own. How Togo destroyed Admiral Sperry's fleet in the Pacific; how Gen. Nogi overran the Pacific Coast, and demanded an indemnity of two billion dollars, with the establishment of a dual American-Japanese régime in California, Oregon, Washington, and Nevada; and how the enemy was finally overwhelmed in a Titanic battle in the Rocky Mountains the reader may learn for himself.

A specimen of the kind of nonsense likely to contribute to international prejudice is found in "Der Krieg von 1908: Um die Vorherrschaft im Stillen Meer," by John Crabapple (imported by G. E. Stechert & Co., New York). The author, in the introduction, reviews the sending of the American fleet to the Western waters, and intimates that the American government can have but one purpose in so doing, and that is to take away from Japan her hard-earned mastery of the Pacific, which, of course, Japan will never allow without a struggle and a naval battle that will show the Yankees where they really stand. The book itself is made up of real or imaginary private letters and newspaper cablegrams and editorials from the great London dailies. There is a letter from a Dutch banker in Amsterdam, who has valuable inside information showing that the Washington government deliberately caused the recent financial panic and depression, in order to draw gold to America and to prevent Japan from raising a war loan in Europe. Telegrams tell of the initial attack of the Japanese fleet on the forts of Manila, and finally a sea-battle, which is still more vividly described by "Leutenant Smith, U. S. N."

Ciro Trabalza's "Storia della Grammatica Italiana" (Milan: Hoepli) is a work of indubitable importance. It is an account of the progress of grammatical and rhetorical studies in Italy from Dante's day to our own, and every grammarian of consequence finds his proper place in its five hundred and fifty octavo pages. But to an admirable erudition Signor Trabalza adds a grasp of fundamental principles which is at least unusual in a work of this kind. His is no mere catalogue of rhetoricians, but a philosophical study of the evolution of grammatical thought. The book is dedicated to Benedetto Croce, whose influence on historical and critical studies in Italy has been momentous. The grammarians of our own tongue still await so intelligent an historian.

Canon George Albert Cooke, formerly a fellow of Magdalen College, has been appointed Oriel professor of Holy Scripture at Oxford in place of Professor Cheyne.

Further prizes have been announced by the Académie Française. The Prix Montyon (valued at 19,500 fr.) was divided into 35 portions, among the recipients being Gen. Gallieni for his "Neuf ans à Madagascar," Louis Gentil for his "Explorations au Maroc," Pierre Baudin for "L'Alerte," and M. Denis for "Christian Garnier." Among the other awards are one-half of the Prix Juteau-Duvigneaux (1,000 fr.) to Canon L. Lenfant for "Le Cœur et ses richesses," 1,500 fr. from the Prix Sobrier-Arnould to Albert Cim for "Le Livre," the Prix Née (3,500 fr.) to the poet Charles Le Goffic, the Prix Vitet (2,500 fr.) to Georges Goyau, the Prix Kastner Boursault (2,000 fr.) to Maurice Maindron, and the Prix Maillé-Latour-Landry (1,200 fr.) to Georges d'Esparbès.

The awards have also been announced by the Académie des Sciences Morales et Politiques: the Prix Audiffred is divided, 5,000 fr. going to Émile Bourgeois of the Sorbonue, for his "Manuel historique de politique étrangère," 2,000 fr. to Christian Pfister for his "Histoire de Nancy," and 1,000 fr. to M. Jacob for his "Devoirs." The Prix Gigner (3,800 fr.) is obtained by François Pillon for "L'Année philosophique."

A medallion of Mrs. Oliphant in gilt bronze, from a cast by Pittendrigh Macgillivray, was unveiled July 16 in St. Giles's Cathedral, Edinburgh, by J. M. Barrie.

We regret to report the death, on July 20, of Louis Dyer, for many years a valued contributor to the *Nation*. He was born in Chicago in 1851, and after studying in Switzerland and France, he went to Harvard, from which he was graduated in 1874; four years later he received the bachelor's degree from Balliol, Oxford. From 1881 to 1887 he was assistant professor of Greek at Harvard and since 1890 he had lived at Oxford. He was lecturer at Balliol, 1893-6; acting professor of Greek at Cornell, 1895-6; lecturer on art at the University of California, 1900; and he repeated his lectures at many of the leading universities in this country. Among his books are: "The Greek Question and Answer" (1884), an edition of Plato's "Apology" and "Crito" (1886), "Studies of the Gods in Greece at Certain Sanctuaries Recently Excavated" (1891), a translation of Prof. Luigi Cossa's "Introduction to the Study of Political Economy" (1895), and "Oxford as It Is" (1902). He was a contributor to the Harvard Classical Studies, and to the *Journal of Hellenic Studies;* and he represented the American subscribers on the London Committee of the Egypt Exploration Fund, and was a member of the Council of the Society for the Promotion of Hellenic Studies.

Bishop Henry Codman Potter of New York died at Cooperstown July 21. He was born in Schenectady in 1834; and, after studying at the Episcopal Academy of Philadelphia and the Theological Seminary of Virginia, he served as rector in Greensburg, Pa.; Troy, N. Y.; Boston, and also at Grace Church in this city. In 1883 he became bishop coadjutor of New York, and in 1887 he succeeded to the bishopric. Among his writings are "Thirty Years Reviewed," "Our Threefold Victory," "Young Men's Christian Associations and Their Work," "The Church and Her Children," "Sisterhood and Deaconesses" (1873), "The Religion for To-day," "The Gates of the East" (1877), "Sermons of the City" (1881), "Waymarks" (1892), "The Scholar and the State" (1897), "The East of To-day and To-morrow" (1902), "The Industrial Situation" (1902), and "Law and Loyalty" (1903).

Ralph Olmstead Williams died at New Haven last Friday at the age of seventy. After graduating at Yale he was for some time connected with the New York publishing house of Holt & Williams. He assisted in the compilation of Webster's Dictionary, and was the author of "Our Dictionaries, and Other English Language Topics," and of "Some Questions of Good English Examined in Controversies with Dr. Fitzedward Hall."

Frederick Louis Otto Roehrig, A.M., Ph.D., M.D., a noted Oriental philologist, educator, and piano composer, died July 14 at Pasadena, Cal., in his ninetieth year. He was born in Halle, Prussia. He was a graduate of that university and of Leipzig and Paris. At one time he was Prussian attaché at Constantinople. About 1853 he came to this country and was made assistant librarian at the Astor Library in New York. He became professor of Sanskrit and modern Oriental languages at Cornell University in 1869, and in 1886 instructor of Sanskrit at the University of Southern California. In 1895 he was appointed university lecturer on Semitic languages and Oriental philology at Leland Stanford, Jr., University. He published a number of books in various languages.

The death is announced of Sir Thomas William Moffett, formerly president of Queen's College, Galway. His chief publication was "Selections from Bacon's Philosophical Works, Translated with Notes."

Dimitrios Bikelas, the Greek author, who was born in 1835, died at Athens July 21. For a considerable part of his life he had resided in Paris. He had translated the works of Shakespeare into modern Greek, and had written a number of popular patriotic hymns. His novel, "Louki Laras" (1879), has been translated into several other languages. His chief historical works are "The Greeks of the Middle Ages," "The Rôle and the Aspirations of Greece in the Eastern Question," and "Greece, Byzantine and Modern."

EARLY ENGLISH LITERATURE.

The Cambridge History of English Literature. Edited by A. W. Ward and A. R. Waller. Vol. II. The End of the Middle Ages. New York: G. P. Putnam's Sons. $2.50 net.

The second volume of this great work shows an improvement on the first. For one thing, the repetition and overlapping, with even occasional conflict of opinion between the different contributors, which marred the earlier publication, are pleasantly absent. The proportion of recognized authorities among the contributors, too, is larger. The volume completes the treatment of the subject down to the end of the fifteenth century, including writers like Dunbar and Hawes, whose activity extended into the sixteenth. There is one conspicuous exception, however—the mediæval drama, which is reserved for treatment in "the earlier of the two volumes which will deal consecutively with the general history of the English drama from its beginnings to the closing of the theatres under the Puritan régime," and will, accordingly, be subsequent even to the volume on the Renaissance and Reformation. It is a pity that so essential a part of the literature of the Middle Ages should not find its treatment in the proper place, and, notwithstanding the apologies of the editors, this must be accounted an unfortunate arrangement of material.

The first chapter, "Piers the Plowman and its Sequence," by Prof. J. M. Manly of

Chicago, is one which is likely to attract the most attention. It sets forth the author's well-known views as to the plural authorship of the poem or poems which have hitherto gone under the name of William Langland. Opinions will differ as to the discretion of the editors in admitting to the volume so controversial a treatment of this highly important subject, but, perhaps, the fact that they have done so will hasten the threshing out of a theory, which requires a more detailed discussion from every point of view than has yet been given before a satisfactory conclusion can be reached. Meanwhile, we confess that we do not feel convinced by Professor Manly's present observations on the style of the different versions. Not only ordinary men, but the greatest poets, as we all know, differ remarkably in their work in different periods of their lives, or, indeed, in the same period; and the examples of Tasso and Keats prove that even those distinguished for their art are capable of marring their best work by revision. The strongest argument in favor of the theory is undoubtedly the fact pointed out by Professor Manly, in *Modern Philology* two years ago, that the author of the B text did not observe the manifest omission or displacement of a leaf in the A text (in the description of "The Seven Deadly Sins") which he was revising.

In the chapter on Chaucer from the ever-ready hand of Prof. George Saintsbury, we have the customary sneers of this writer at philology, for which he makes amends by adopting the results of the practisers of the despised science in nearly every case. It is an error of some magnitude, nevertheless, when he speaks of Chaucer's first journey to Italy as having occupied "a great part of the twelve-month between the November of that year (1372) and the next." As a matter of fact the poet's absence from England lasted only from December to May, as appears from the "Compotus," which F. J. Mather, jr., published as far back as 1896. Seeing that there is a general agreement now as to the Chaucer canon, except in the case of the fragmentary "Romaunt of the Rose," Mr. Saintsbury devotes a disproportionate space to his account of how the spurious works once foisted upon the poet have been dropped. The principal merit of this chapter, however, lies in the vigorous criticism of Chaucer's qualities as a poet, in which respect it furnishes excellent reading. The same writer's chapter on the English Chaucerians is decidedly inferior to the corresponding one on the Scottish Chaucerians by Prof. Gregory Smith, which in amplitude of knowledge and critical skill is one of the best in the whole volume. Interesting in his earlier chapter on the Scottish language is Professor Smith's refutation of the current view as to the large indebtedness of the Middle Scots vocabulary to French.

Among the remaining chapters deserving of special attention are those on Gower by Prof. G. C. Macaulay (the recognized authority on the subject), and on early English printing by E. Gordon Duff, which deals very little, however, with the contents of the books printed; also the chapters by our countrymen, Profs. F. M. Padelford and F. B. Gummere on Transition English Song Collections and the Ballads respectively. The last-named may be recommended as the best brief treatment of this difficult subject, although the author has not, even yet, dispelled the haze which must ever hang over his theory of authorship "by the people." Miss A. D. Greenwood has given us readable chapters on the prose of the period—only in her discussion of Malory she commits the customary mistake of crediting this author with an originality in the handling of his materials which is hardly his due. The most inadequate pages in the work are those on Political and Religious Verse, from the pen of A. R. Waller, one of the general editors.

A serious deficiency in the present volume is the want of a general characterization of the period—a survey of its literary and intellectual development, as a whole, in its relation to general European development. Such a survey is indispensable to correct the unavoidable defects of the treatment by monographs.

CURRENT FICTION.

The Intoxicated Ghost. By Arlo Bates. Boston: Houghton, Mifflin & Co.

These stories have the prim finish, the quaint self-consciousness, which belong to Professor Bates's gentle New England pen. He is the well-bred and accomplished amateur of fiction, and the *pince-nez* literature he produces is excellent in its kind; if neither markedly spontaneous nor powerful, always intelligent and pleasant. The title story is by far the most trivial in the book — rather consciously and not quite successfully Stocktonian, one would say, as "A Problem in Portraiture" is indifferently well conceived and executed after the manner of Hawthorne. Professor Bates is neither *farceur* nor mystic, but a quiet fancier of both those rare birds. The story in which he is most himself—which one is least inclined to docket as belonging to this or that familiar category—is "Miss Gaylord and Jenny," one of the best stories of "dual personality" yet written. Its special effectiveness is due to the simple and circumstantial manner in which the disconcerting fact is stated. Alice Gaylord is a decorous and rather colorless Boston girl, who is betrothed to a Dr. Carroll. She undergoes the strain of a long experience of filial nursing, and is finally released a nervous patient of the man who has hoped to marry her. She becomes a victim of self-hypnotism; and in the hypnotic state another personality gets the ascendency, a vivacious and vulgar and charming personality which calls itself Jenny, and sets itself to win away the doctor from his decorous Alice. He feels her charm, and is finally driven in self-defence to threaten her with a red-hot poker. She casts herself at his feet. "The wail of her pleading almost unmanned him. . . . The thought surged into his mind that perhaps she had as much claim to consciousness as Alice; he seemed to be murdering this strange creature kneeling to him with streaming eyes and quivering mouth." However, he stands firm to his guns, and in spite of the wiles of Jenny succeeds in marrying his proper Alice; after which it conveniently happens that Jenny is heard of no more, though in Alice's daughter she is destined to gain a sort of foothold in the flesh. To make such a story credible, as it is here made, is certainly more than a bit of literary sleight-of-hand.

The Mystery of the Yellow Room. By Gaston Leroux. New York: Brentano's.

For sheer originality and ingenuity we reckon this the best detective story published for some time. A scientific investigator and his daughter are living in a lonely house outside of Paris. The daughter is nearly murdered in a room from which there appears to have been no mode of exit for the criminal; a young newspaper reporter, who has his friendly "Dr. Watson," solves the mystery in the face of the official detectives. As stated the plot is familiar enough, being compounded one might say of "The Murder of the Rue Morgue" and of any one of Sherlock Holmes's adventures. But the peculiar manner of sustaining the uncertainty to the end, while suspicion is thrown upon this and that person, not without hints of some mystical force of nature discovered by the scientist, is as original as it is fascinating. Not often does a detective story end with so total a surprise, which, nevertheless, when known, seems logical and natural. The writing of the book is above the average, although the translator has allowed a few gallicisms to slip in. And the characters are more than commonly interesting for the *genre*.

The Traitor's Wife. By W. H. Williamson. London: T. Fisher Unwin.

The traitor is a Russian who, true to no party, is known in different circles as a reliable official, a revolutionary, and a spy. His private and public betrayals of trust entwine themselves with the movements of a band of patriots, Russians and English with Russian affiliations, who are working for the cause of liberty, but are not friendly to bomb-throwing. A plot to carry off in a motor-car the Czar's little son and hold him till terms can be dictated to the Czar is worked out by them and fails of success only through the indiscreet disclosures of a woman who is playing at politics for the sake of interesting a man. Though it is the traitor who on this occasion thwarts the "Illegals," he meets his fate at their hands later when, as Governor of a province, he refuses to protect the citizens.

Into the story are cleverly woven threads of love affairs, heroism, politics, rivalries, loyalties, and treacheries. The book maintains a high level of interest throughout, not only from the swiftly moving action, but from an absence of the crude extravagance that often stamps the Russian story. Although it is published in England and makes mention of what "we English" do, there is marked internal evidence of translation.

June Jeopardy. By Inez Haynes Gillmore. New York: B. W. Huebsch.

Romance up to date: a midsummer night's dream on Beacon Hill and environs! *La jeunesse dorée* of Boston leave a masquerade ball to meet an unknown bevy of delightful Blondes captained by the mysterious heroine Thethry. She is athirst for romance—frankly in quest of a hero who can hurry at need, whistle with expression,

take cold-water baths, smoke with grace and precision, and receive compliments delicately. Two diamond necklaces furnish the clue. Real thieves heighten the excitement. Thethry captures her golden youth and lets the thief go. The characters are piquantly innocent yet intensely sophisticated. The author's apparent passion for old furniture, old hooks, curios, and gems bursts into page long ecstasies suggesting the influence of Théophile Gautier and Oscar Wilde. Here is a brief excerpt:

The colors of these gems ran the gamut from the flashing pure white of stones of the first water, downwards through scintillant canary, somhrely-glowing amber, hot-looking red-browns, sullen, rutilant stones, flaming with orange and scarlet, and upwards, through shimmering rose to the fare of gems the color of absinthe, through apple-green, pale and beaming, to the sparkling white again. Queening them all was a big velvety blue diamond so deep in blue that it was only differentiated from the sapphire by the fierceness of the peacock glints in its glistening heart.

In like manner the heroine's reading list helps one to understand the maudlin catholicity of modern romantiicsm:

My favorite poet is Omar or Herbert when it is not Chaucer or Henley or any nonsense jingles. My favorite memoirs are Cazanova and St. Augustine when it is not Brantôme or the Book of Job or Pepys. My favorite play is "Lear" or 'Everyman" or "The Gay Lord Quex" or "Sister Beatrice," when it is not the latest melodrama. My favorite stories are "Tom Jones" and "Mademoiselle de Maupin" when it is not "Alice in Wonderland" or any Jane Austen or the latest dime novel. Now choose from all the sides of my character if you dare.

The Cobbler. By Elma A. Travis. New York: The Outing Publishing Co.

The cobbler so-called of this story is son of a real cobbler, and keeps the paternal sign swinging over the paternal door long after he has hegun his own unpractical career. Peter Caverly is, need we say, a genius. From childhood he has been as brilliant and irresponsible as the formula demands. He condescended to spend two years at Harvard, where, though he went his own way as usual, he "was the best coach at Cambridge, and his literary stunts made the fellows sit up and take notice." He then tried journalism for a time, but lacked the necessary habit of subordination and routine work. So he returns to his village and marries off-hand—or is married by—the daughter of the village magnate, at whose house he has been practically brought up. She is in many ways his opposite—a singularly unimaginative girl, hitten with the mania for scientific "research," hy which she understands the piling up of facts. She annexes Peter as on the whole a desirable possession, returning placidly to college and the pursuit of her specialty, and leaving him thereafter pretty much to his own devices. Titolike he becomes involved in an affair with a little Bettina, his own part being mainly chivalrous, yet not altogether blameless as it must be judged by the world. She becomes mistress of a little establishment in the country, where, under her soothing influence, he is able to do much of his best writing. She is as ignorant of his work and his purposes as his wife; but she gives him the right conditions. And presently comes in his casual path a third, the daughter of "Ennis," a famous American painter of landscape. It is for her to give him everything in the way of sympathy and understanding. They love each other and nobly part for the sake of the child who has been born to Peter and his lovely scientist. In due time it befalls that the ocean separates Peter from wife, child, and nohle, abnegating lady-love, and only the little farm on the Hudson, with its vineyards and its Bettina, remains to him. Suddenly, he is summoned by cable to England, and is about to make off, not knowing whether to wife or lady-love, when Bettina stabs him. Lady-love dies opportunely, and wife returns to nurse husband back to life and eventually to herself.

The story is told gracefully, and is unburdened by moralizing or flippancy. It remains to be said that, as is common in tales of the kind, the eminence of the hero seems to consist far less clearly in what he does or is than in what his creator says of him. We learn that he is the greatest writer in America, perhaps in the world, and are dumb; for no specimens of his work are adduced for proof or disproof of the statement. But when we hear of "the suhtle reference, the whimsic inference, the daring paradox of Peter's hrilliant talk," we have a right to a shrug of the shoulders. Surely exhibits in this kind may be given in a novel, if anywhere; and Peter's talk, like his behavior, is, so far as we are allowed to know, simply that of a good-natured, amusing, rather blundering hoy. The alleged virtuoso is sadly overworked just now as hero of fiction; why not let the cheerful boy be a cheerful hoy, without decking him in this absurd flummery of artistic achievement?

Studies in the History of Venice. By Horatio F. Brown. 2 vols. New York: E. P. Dutton & Co. $6 net.

We welcome Mr. Brown's Venetian Studies. He has long heen known as the author of delightful sketches of life on the Lagoons and of a well-articulated history of Venice. The professional students of history are also indebted to him for the Calendar of State Papers running from 1581 to 1613. The present volumes of essays round out his Venetian work and show on what an exhaustive scale he devotes himself to any topic which he takes up.

By arranging these essays in the chronological order of their subjects he produces the effect of writing an almost continuous commentary on Venetian evolution. There are, of course, gaps; hut in one essay or another we find an allusion to, if not a hrief account of most of the facts, elements, and personages that would appear in a complete history. The longest gap occurs hetween the first essay, which surveys the founding and early centuries of the city, and the second, which deals minutely with Bajamonte Tiepolo's conspiracy. Then follow an account of Marino Falier, and, again after an interval of less than fifty years, the plot and destruction of the Carraresi. Less than a generation later Carmagnola appears. Then there stretches nearly half a century before we come to Caterina Cornaro. The two remaining historical themes of primary importance are Fra Paolo Sarpi and the Spanish Conspiracy; but the essay on Cardinal Contarini and his friends—to wit, Pole and Sadoleto—introduces us to a sixteenth century hy-path, seldom explored by English readers; and "An International Episode," and "Marcantonio Bragadin" give strange but typical glimpses into two very different sides of life at the same period. The "merely literary" reader will turn to the pages on Shakespeare and Venice, the historian to "Cromwell and the Venetian Republic." Besides these subjects, the commercial and fiscal policy of Venice, the Constitution and the state archives, the Venetian "Index Librorum Prohihitorum," the Venetian printing-press, political assassination, and Venetian diplomacy with Turkey in the sixteenth century, have each a separate chapter devoted to them.

We list the titles of these articles because we have not space to discuss any one of them fully; hut it is right that we should call attention to the richness and variety of Mr. Brown's output. It will be seen that he discusses several of the most hotly dehated points in Venetian history. His conclusions will be carefully weighed, whether they be always acquiesced in or not. A few of them we may set down here. Both Bajamonte Tiepolo and Falier he regards as men fighting for more than a personal grievance—as champions of a class. He finds that the Repuhlic was justified in putting an end to Carmagnola's shilly-shally and in executing him. His analysis of the Spanish conspiracy, in which he shows the douhle-strand of plot, is the hest in English. The same may be said of his Taylorian lecture on "Paolo Sarpi, the Man," into which he has packed most of the essential personal information, and has given a clear statement of Sarpi's political theory. It is to be hoped that this essay may popularize among Americans a knowledge of one of the greatest of statesmen and one of the most admirahle of men. In defending Venice against the aggression of the Roman Curia, Sarpi furnished for all time arguments and an example for citizens who would preserve their state from clerical encroachment. Mr. Brown epitomizes in his paper on political assassination the results of several recent investigators: he deals not so much with concrete cases of poisoning and of other means of getting rid of an enemy, as with the underlying doctrine and the pleas by which the crime was justified.

In several of the essays we have fresh views, hased on his own researches, extending now over thirty years, among the Venetian archives; in all, we have well-considered statements, controlled by familiarity with the latest or best evidence to he had. Mr. Brown has placed within reach of American and English readers a *corpus* of information full of interest, which ought to help to disperse many of the legends about Venice that romancers, melodramatists, and members of the historical section of the Ananias Club still circulate. We think it a mistake that he introduces into his text untranslated passages in Venetian or Latin; but this is a slight blemish on so valuable a work. His British readers will be gratified to find that he is on the alert for every connection between England and Venice—as when he traces the relations between the Spanish Con-

spiracy and the expansion of English influence in the Mediterranean, or reproduces the Venetian ambassadors' accounts of Cromwell.

Which College for the Boy? Leading Types in American Education. By John Corbin. Boston: Houghton, Mifflin & Co. $1.50 net.

A census of the students now attending any of our older colleges would quickly show how the question of Mr. Corbin's title is ordinarily settled in families in which the father or any other near relative is a college graduate. College loyalty ordinarily passes from generation to generation with comparatively few breaks, and these few are mostly due to other causes than a positive preference for another institution. Even families with no previous college history are more likely to select the institution patronized by some personal friend than to base their choice upon any comparison that goes much deeper than the one matter of expense. Such a study as this of Mr. Corbin, therefore, has no chance of taking place as a handbook for the actual settlement of the question which its title raises. Its influence will be rather upon the colleges themselves than upon prospective students. The reader may easily imagine that since the publication of Mr. Corbin's work, one of the institutions considered is taking quiet measures to lessen the place of the beer saloon in the social life of its undergraduates, that another is casting about for means to season its strenuous utilitarianism with a fuller recognition of the essential value of cultural studies, and that some of the better "small colleges" are seriously debating the propriety of exorcising altogether the devil of desire to become great universities and are devoting themselves to the consistent development of the ideals which they advertise.

It is a notable fact that with all Mr. Corbin's preference for the humanistic type of education, the one chapter in his book which the authorities of the institution studied could circulate with confidence as an advertising document is his description of "a Utilitarian University," the term by which he characterizes the University of Wisconsin. Here more than in any other chapter the writer is roused to a genuine enthusiasm, in spite of his preference for a radically different kind of education. He finds the community at Madison more single-minded in devotion to the ideals which it has chosen than is the case with some institutions which, ostensibly at least, have chosen the better part. Is it not possible that the earnestness in the work in hand so characteristic of the University of Wisconsin is distinctly favored by its very lack of that organized "social development" upon the alleged necessity of which Mr. Corbin is continually laying so much stress? A few students are so richly endowed with energy and ability as to be leaders in the highly developed *extra curriculum* activities of college life without any disastrous drafts upon the strength and freshness which should go into serious study, but the rule is the other way. The current student quip, "Don't let your studies interfere with your college education," is a jest which is only too painfully serious. If the students at Madison have been so keenly interested in its utilitarian ideals that they have neglected to build up a social system complex enough to tempt to mental and physical distraction, possibly they deserve no commiseration. Humanistic culture might not suffer if some of the institutions in which it is supposed to stand highest were to get as busy with Plato and Sophocles, Cicero and Tacitus, Dante and Goethe and Montaigne, as the Madison boys with their implements of applied science.

Through the Magic Door. By A. Conan Doyle. New York: The McClure Co. $1.25 net.

Persons who buy this book under the impression that it is an addition to the stirring tales of Sir Arthur Conan Doyle will want their money back. The magic door is that which admits us to the world of literature, and the book is an account of Sir Arthur's reactions to the marvels of that world. Students of his works will perhaps hardly credit him with the qualities that make a critic, and it is fair to say that he lays no claim to such qualities; the present book is merely a rambling account of what he likes and what he does not like. One would perhaps guess in advance that what he wants from literature will be mainly supplied by prose. Two or three pages of admiration for the verse of Scott and of Macaulay, a passage in praise of "The Battle Hymn of the Republic," and another in praise of Henley's poems constitute his entire tribute to the muse of poetry. As he takes issue with Matthew Arnold on a question of poetic diction, it is interesting to note what his own ear can do for him when he cites with enthusiasm the following lines, admitting that they may not be quite right:

> He prayeth best who loveth best
> All things, both great and small,
> For the dear Lord who fashioned him
> He knows and loveth all.

In prose Macaulay is his ideal. Nothing is too strong for him. "A universal shout of laughter from the Tagus to the Vistula informed the Pope that the days of the crusades were past," is one of the sentences that "used to fill me with a vague but enduring pleasure, like chords which linger in the musician's ear." Scott is the subject of some rather interesting technical remarks, but Sir Arthur's idolatry does not balk even at "Count Robert of Paris"; "if it had been the first," he says, "instead of the last, of the series, it would have attracted as much attention as Waverley." He has the courage to resent the superstitious reverence for Johnson that Boswell has foisted upon the world; he enjoys Gibbon, swallowing him whole; he is great upon "Pugilistica" and the literature of the ring in general; he hails Poe as the master of tellers of tales, and most modestly acknowledges his own debt to him; he does not care for Nathaniel Hawthorne, preferring "the short work of his son Julian"; he praises "The Cloister and the Hearth" "as being our greatest historical novel, and, indeed, as being our greatest novel of any sort"; "Vanity Fair" is the second, and "Richard Feverel" the third; he reads with gusto the French chroniclers, the Napoleonic memoirs, and the "Conquest of Grenada" (*sic*).

In general, Sir Arthur likes books for their subject matter. Wars and high affairs, stirring matters of all sorts, and great emotions he loves as does a boy. And as far as the question of style affects him at all, his taste is all for rhetoric, as is a boy's. It may easily happen that many a boy, already under his influence, may be led by this book through the magic door. He has a piece of practical advice specially commendable to young readers:

> It is an excellent device to talk about what you have recently read. Rather hard upon your audience, you may say; but without wishing to be personal, I dare bet it is more interesting than your usual small talk.

Science.

Psychical Research and the Resurrection. By James H. Hyslop. Pp. 409. Boston: Small, Maynard & Co. $1.50 net.

The reader who in opening this book hopes to discover some positive deductions relating to the nature of a future life will surely close it with disappointment. A large part of the book is given up to such discussion of cases as is familiar to those who see the Proceedings of the Society for Psychical Research; and this leads the author to an attempt to explain why we gain practically no knowledge at all of anything non-terrestrial through the mediums, or "psychics," as they now call themselves.

Nor do we find this discussion of cases in itself very satisfactory, for we are asked to trust not only the writer, but every word of every person whom he trusts. The suggestion of conscious fraud on the part of his "psychics" he declines to entertain, and thus far we may well go with him; but when we consider the frequency of self-sophistication, and the constant occurrence of illusions of memory, of which the author takes little or no account, we find it impossible to persuade ourselves that we can trust his own critical judgment. Even in the record of cases we thus see the influence of the full acceptance of the spiritistic hypothesis—an influence that pervades the book, and makes it read like a volume of special pleading, rather than of scientific investigation. It is true that Dr Hyslop emphasizes almost ostentatiously the importance of assuming a scientific attitude toward the investigations referred to; but on the whole the impression left with the reader is that the "assertatory method" is indulged in too frequently, while the explanatory hypotheses presented are too far-fetched to be easily accepted. The words of scorn heaped upon the telepathic theory (p. 305) may with little change be applied to the author's spiritistic hypothesis as well.

It is, of course, to be granted that certain people experience mental states which suggest that they are affected by influences of a "discarnate" nature; and it is true that these occurrences are at present inexplicable in terms of our normal experience. But, when we search for explanation of these peculiar phenomena, we seem scarcely called upon to hark back to the animistic theories of early man. Many experiences, which only a generation ago were ascribed to spirit influence, are now explained, even by such ardent believers in spiritism as our author, in terms which

bring them into relation with our everyday psychology—such phenomena, for instance, as automatic writing, the voices and visions of hallucination, and the evidences of dissociated personalities with which men like Pierre Janet and Morton Prince have made us familiar. Naturally, then, the devotees of science assume that the kindred experiences recorded in this work will probably also some day find their adequate explanation without the adoption of any such highly complicated hypothesis as that presented by our author, who in this direction has developed the conception of the late Richard Hodgson. In the old days the "messages" which were supposed to come from the spirit world had as a whole fairly clear meanings for the enquirer. But modern investigation has shown, to the satisfaction of our author at least, that most of these so-called messages are really expressions of mental states of either the medium or the enquirer; and, if we eliminate these, we find that we have at the same time eliminated almost all those that are intelligible, or indicative of intelligence in the "spirit." The "spiritist" is therefore confronted with the fact that the "messages" upon which he relies for proof of the spirit world are exceedingly confused and trivial. It would surely seem rational to assume that these confused and trivial messages will some day be explained, as the more intelligible ones have been, as expressions of the mental states of medium or enquirer. Our "spiritist," however, will listen to no such cautious suggestion. He meets the problem by making the assumption that the true "messages" get through to us from the other world with much difficulty, and can come only from a spirit which in its own realm has entered into a state comparable with our own hypnotic state. This, in his opinion, accounts for the confusion in the messages. That they should deal with trivialities is held to be natural, inasmuch as the spirit plunges into the "suffocating atmosphere" where communication is possible, for the sole purpose of convincing us of his identity with some person who has died. Now it is interesting to note that this longing to prove identity, which is attributed to the "spirit," is the strong desire of the enquirer. Naturally, therefore, the more clearly men have come to think upon these subjects, the closer has appeared the relation of the messages to the medium and to the enquirer, rather than to the supposed spirit. This would naturally lead us to look for the explanation of these mysterious phenomena in a more careful study of the living human minds of the medium and of the enquirer; for it seems much more probable that light will be thrown in this way upon the problems set by mediumistic phenomena than by the adoption of any spiritistic hypothesis that is likely to be presented.

A full treatise on "The Fresh-Water Aquarium and Its Inhabitants," by Otto Eggeling and Frederick Ehrenberg, is to come from Henry Holt & Co. It will contain one hundred illustrations, chiefly from photographs.

The Bobbs-Merrill Company announces a book on the "Animal Life of Malaysia," by J. Frank Daniels of Johns Hopkins University. This is a complete descriptive zoölogy for the Philippines, Java, Sumatra, and the other islands of that part of the world.

One can find hardly any excuse for George F. Burba's "Our Bird Friends" (Outing Publishing Company), which professes to contain "many things young folks ought to know—and likewise grown-ups," but which is here noticed solely because it is a type of the poorest and most colorless nature books that could well be imagined. The illustrations so offend the artistic sense, the diction is so flippant and uninteresting, and the facts are thrown together in such a purposeless, haphazard way as to repel the reader of any age. A score of unconnected chapters treating of our common birds, have been bound up together with ten colored illustrations of stuffed birds, so out of proportion to the book that only one-quarter of an inch margin is visible. Last and not least, many of the author's "things" are not known to any one, ornithologist or amateur. For instance, on page 56 we are told that chimney swifts are swallows, that they fasten together their nests with peach-tree "gum," and that their eggs have reddish-brown spots—all of which is untrue.

"Gold Producing Soil: French Gardening, or Intensive Cultivation on the French System" is the title of an interesting little volume just prepared by T. Newsome, A. R. C. Sc., of Dudbridge, Stroud. Mr. Newsome believes that much of the salvation of society depends on a movement "back to the land," and he has tried to prepare a handy guide, equipped with diagrams and working drawings made to a scale. He tells in simple English what a French garden is, and how it is made, giving also a history of French gardens in England, and he points out when, where, and how to begin in the making and arranging of frames, etc. The spirit of the book is admirable—to encourage everybody, even those with little capital, to make a trial of the ground. There are good half-tone engravings of specimen gardens.

The death is announced of Dr. Frank Kraft, a well-known physician of Cleveland, professor of materia medica in the Cleveland Homœopathic Hospital, and editor of the *American Physician*.

The death is announced of James Liddердale Scott, at the age of sixty. During the last fifteen years he had lived at Shanghai, and had there made observations of some value on southern double stars.

From Paris comes the news of the death of Louis Cruls, director of the observatory established by Pedro II. at Rio de Janeiro in 1845. Dr. Cruls was born at Diest, in South Brabant, in 1848. His career included services in the Engineering Corps of the Belgian army, and a good deal of travelling.

Prof. Oskar Liebreich, director of the Pharmacological Institute of Berlin, has died in that city at the age of sixty-nine. Fame came to him in 1869, with the discovery of the value of hydrate of chloral as a narcotic. He was the author of numerous works and editor of the *Therapeutische Monatshefte*.

Drama.

Charles Crawford is said to have finished his "Concordance to Marlowe" and to be well along with his "Concordance to Ben Jonson's Works." His "Concordance to Kyd," which has already been five years in the hands of his Belgian printers, will not be completed for another year.

The *Mask*, the new "monthly journal of the art of the theatre"—of which a double number for May and June has now reached this city from the publication office in Florence—differs widely from the mass of contemporary theatrical periodicals, inasmuch as it is honestly and independently artistic in aim and is the advocate of original and interesting if not always practicable or, to the uninitiated, wholly intelligible ideas. It commends itself to the fastidious reader by the attractiveness of its form, but unhappily the editing and proofreading are not always of high quality. Misprints are frequent and the essays might have been much improved by the judicious use of a corrective pencil. The most important of them are devoted to the well-known views of Gordon Craig, the son of Ellen Terry, concerning the possibilities of theatrical art, both scenic and histrionic, in the future. Many of these views are too visionary, or, in their present state too rudimentary to be of immediate importance, but they are artistic in aim and principle, suggest remedies for many conventional stage absurdities, and, with all their vague and rhapsodical idealism, evince a mastery of technical details, a definiteness of purpose and sturdiness of conviction which encourage the hope that they may result some day in substantial achievement. Mr. Craig has already given proof of his ability in the creation of impressive and eloquent stage pictures by his skilful use of the modern facilities for lighting, boldness and simplicity of scenic design, artistic employment of drapery, and appropriate color schemes, and, it is in this direction that his labors are likely to prove most productive. But his opinions on the drama itself and on acting are apt to be erratic. He seems to think that the spoken word, the play itself, is an affair of the smallest consequence, almost negligible in fact, in comparison with the symbolism of the background before which it is enacted and the gestures and movements of the actors, which are to be in exact and orderly harmony with their surroundings.

Those who believe there is a golden mean between a modernized version and a facsimile reproduction will be pleased with the recent addition to the "Old Spelling Shakespeare" (New York: Duffield & Co.), edited by F. J. Furnivall and the late W. G. Boswell Stone. We have already commented upon the earlier issues; tho newly published plays are: "The Comedie of Errors," "A Mid-summer Night's Dream," "The Two Gentlemen of Verona," "The Taming of the Shrew," and "Twelfth Night." It is needless to say that the painstaking accuracy of the previous work is sustained in these later volumes. Possibly exception might be taken to the categorical assertion that the "metrical evidence" proves that "The Errors" follows "Love's Labor's Lost." Though there is no

good reason for disputing this order, when a conspiracy of evidence—of which plot-complication is not the least weighty element—points in the same direction, it is well not to bear too heavily on the metrical tests. The boldest feature of the editing is the printing in larger type of those portions of the "Taming of the Shrew," which the editors believed could be distinguished as Shakespeare's. To the problem of differentiating "author," "recaster," and "amender" there is an eternal zest for the student, but never any definitive solution.

Bayard Taylor's translation of "Faust" was, on the occasion of its appearance, nearly forty years ago, the subject of much debate. To restudy the merits of Taylor as a translator, his theory of translation, his qualifications, the numerous and discordant criticisms passed upon his work—in short, to restate the whole question in the light of present scholarship, is the purport of Mrs. Juliana Haskell's doctoral dissertation: "Bayard Taylor's Translation of Goethe's Faust" (Columbia University Press). The dissertation certainly evinces much industry and patience in getting together half-forgotten data, and fairness in applying general principles. The author's conclusion, page 89, is that Taylor's "Faust" is not an adequate translation, not a "standard" rendering, not worthy of the esteem in which it is held by many Germans. With this conclusion we are not going to quarrel; we will content ourselves with a few comments. To begin with, Mrs. Haskell's argumentation suggests too much the geometrician's Q. E. D. In the next place, she has not always escaped the error of gauging 1870 by the condition of 1907. Some of her criticisms would have been tempered, at least, had she been always mindful of the fact that Taylor worked before there was a Goethe cult, even in Germany, before there was a Goethe Society, a Jahrbuch, a Weimar edition. In the '60s there was only a *stille Gemeinde* and even that was probably unknown to him. Further, her testimonies are sometimes *numeranda* rather than *ponderanda*. Lastly, she herself works occasionally with inferior tools. Is not the use of the great "Oxford Dictionary" prescribed on the Morningside Heights? A glance at Craigie's treatment of the adjective "real" would have prevented the stricture (p. 46) upon Taylor's dissyllabic pronunciation. Taylor's "grows real and undying" is matched by Shakespeare's "Is't real that I see?" Milton's "real eclipse," Pope's "A real bull." The "Century Dictionary" seems to be our critic's standard (see pp. 70, 71), yet the "Century" does not reduce real to a monosyllable. We might add the caution not to take critics at their self-valuation. Thus, when the *Athenæum* (p. 69) called "repentance-sentence," "harden-pardon" Cockney rhymes, it uttered sheer pedantry; the *Athenæum* writer, like every Englishman, pronounced all four terminations with the same obscure vowel sound. Still, despite occasional shortcomings, Mrs. Haskell's monograph will be a valuable, we might say, an indispensable, guide to the "Faust" student.

The new play which Jerome K. Jerome has written for Forbes Robertson and Miss Gertrude Elliott, and which will be produced by them in the London St. James's Theatre on September 1, is said to be founded upon one of his short stories, "The Passing of the Third Floor Back," which was first published some years ago. It dealt with the arrival of a stranger in a Bloomsbury lodging house, and the effect which it had upon the character and fortunes of the other inmates of the establishment. Mr. Robertson will be the stranger, and for Miss Elliott there is said to be a striking and novel part, which, however, is not that of the heroine, for which Alice Crawford has been engaged.

In a speech before the curtain on the last night of his London season, George Alexander announced that A. W. Pinero is at work upon another new play for the St. James's Theatre. Mr. Alexander's first production in the autumn, however, will be a new piece by Alfred Sutro, which will be followed by revivals of "The Prisoner of Zenda" and "Old Heidelberg." Later there will be new plays by Hubert Henry Davies and Haddon Chambers.

The future of the London Court Theatre seems to have been settled for some time to come. A lease of it has been acquired by Miss Mouillot, whose ambition is to produce plays with some more artistic recommendation than their mere commercial quality. She has entered into an engagement with Herbert Swears, of the Pioneers, who will undertake to give six performances—three afternoon and three evening—every week for forty weeks in each year. At other times the theatre will be devoted to musical, miscellaneous, and amateur performances. The work of the Pioneers, hitherto, has exhibited rather more zeal than discretion, but their announced intention to follow and improve upon the example set by Messrs. Vedrenne and Barker will awaken the sympathetic interest of intelligent playgoers. There ought to be an audience in London for one literary and artistic theatre and doubtless there is, but unfortunately the promoters of such enterprises in the past have often been unable to discriminate between that which is really significant, imaginative, or dramatic, and that which is merely sensational, eccentric, or unclean.

The Irish Stage Society, an amateur association—which must not be confounded with the company of the Abbey Theatre in Dublin identified with W. B. Yeats and others—has been giving some performances at the Court Theatre in London with only moderate success.

Music.

Grove's Dictionary of Music and Musicians. Edited by J. A. Fuller Maitland. Vol. IV. New York: The Macmillan Co. $5 net.

The appearance of a new volume of the revised version of Grove's "Dictionary" is an event in the musical world, for no similar work is so elaborate and so much up-to-date. The fourth volume begins with Quadrille and ends with Marie Szymanowska, the Polish pianist whom Goethe praised so highly, while Mendelssohn suspected that he did so less because of her playing than because of her pretty face. A large proportion of this volume is taken up by four articles: Grove's "Schubert," Spitta's "Schumann," Mrs. Wodehouse's "Song" and Hubert Parry's "Symphony," each of which is long enough to constitute a volume by itself—and admirable volumes they would make. Grove's "Schubert" is still the best biography of that master in any language—the work of a scholarly enthusiast. Some additions to it have been made by W. H. Hadow, particularly in the bibliography, which, however, is still incomplete. That the writings of John Fiske, Elson, and other Americans are ignored is not strange, for "Grove" is not partial to Americans; but mention should certainly have been made of the books of Niggli and Heuberger, which contain much that is new. It is also to be regretted that Grove's catalogue of Schubert's compositions, which in the first edition took up several pages, has been omitted. To be sure, in the matter of completeness it has been superseded by the table of contents of the definitive edition of Schubert's works, issued by Breitkopf & Härtel, but Grove's list might have easily been corrected and supplemented by this German list. The omission of the Schubert catalogue, including over 1,100 works, most of which are alive, is the more surprising in view of the fact that nearly three columns are devoted to a catalogue of Raff's works, nearly all of which have, as the editor correctly remarks, passed "into an oblivion which cannot excite surprise in those who realize the inherent weaknesses of the composer."

A lack of balance has always been the chief defect of Grove. It is really preposterous to assign thirty-three columns to Spontini, a noisy and obsolete eclectic, who played no vital part in the history of music, while disposing of Saint-Saëns in less than four columns. Besides being too short, this latter article is unjust. The remark that his "creative faculty does not keep pace with the technical skill of the workman," may apply to the works of his old age, but all in all, there are only two Frenchmen, Bizet and Gounod, who are as fertile as he in new ideas; and in musical scholarship and command of form he approaches the greatest German masters nearer than any other Frenchmen. No mention is made, except in the list of his works, of the four picturesque and fascinating orchestral works which introduced into France the new form created by Liszt, the symphonic poem. What is more surprising still is the manner in which "Symphonic Poem" is treated. The symphonic poem—or tone poem, as some prefer to call it—has practically superseded the symphony in the musical workshops of all countries. It is the most important of the musical forms of our time, as the symphony was of the greater part of the nineteenth century, and the fugue in the day of Bach and Handel. Yet this fact the editor does not state, and the whole subject, which clamors for discussion from several points of view, is disposed of in less than half a column, while three columns are devoted to a long-forgotten English colorature singer, Ann Storace, and her brother, Stephen, a minor composer, concerning whose gout and stomach troubles full and authentic details are supplied.

In the article on Song, the bibliography is again incomplete, especially on the

American side. Ignorance of America, said Charles Dudley Warner, is one of the branches taught in English schools; but why display this ignorance so conspicuously in a lexicon intended for the American market quite as much as for the English? This ignorance extends to all sorts of details; in the article on Sembrich, for instance, it is stated that "of late her career, both in opera and concerts, has been divided between Austria and the United States." As a matter of fact, she has sung hardly anywhere except in this country. A picture of Sembrich is included in this volume, and three other singers, Sontag, Schröder-Devrient, and Rubini, are similarly honored.

The composers represented by pictures as well as articles are Schubert, Raff, Rameau (who, though he died in 1764, is the hero of the hour in Paris), Reinecke, Reyer, Rimsky-Korsakoff (recently deceased), Rossini, Rubinstein, Saint-Saëns, Salieri, Scarlatti, Schumann, Smetana, Spohr, Spontini, and Richard Strauss. The article on Strauss is by the editor himself, who is by no means an admirer of that composer. We fully endorse his diagnosis of that composer's attitude, summed up in these words:

For the present it would seem as if the composer's wish to startle the frequenters of concerts were in abeyance, and he has turned his attention to the possibly harder work of shocking Continental operagoers. As his forthcoming opera, "Elektra," has been stated, on good authority, to contain points that will offend, or at least surprise, the most hardened admirers of "Salome," there is no injustice in mentioning this, as the primary object of the compositions.

Yet we cannot but think that it would have been better if Mr. Maitland had followed Grove's example of putting the articles on prominent composers in the hands of an admirer in each case. However, Strauss—and his rival, Max Reger—are setting such a bad example in making audacity—dissonantal and other—their principal object, that they deserve all the chastisement that comes their way.

The fact that conductors have become quite as important as composers and singers is not recognized in the new "Grove." Four of the most prominent musicians of our epoch—Hans Richter, Seidl, Schuch, and Sucher—are included in Vol. IV., but of these only the first named is treated in anything like an adequate manner. Seidl, who did for America in the cause of Wagner what Richter did for Austria and Germany, deserves more than a scant twenty-nine lines, without even reference to the magnificent and valuable volume on him written by prominent artists and authors. Since it is merely an American book, one could of course hardly expect mention of it; but the writer of this article, Carl Armbruster, is a lecturer on Wagner, who cannot be excused for remarking regarding the splendidly successful performances of the Nibelung dramas given under Seidl when they were new, in many European cities, that "the great music-drama was reproduced in a sadly mutilated condition." It was reproduced, as a matter of fact, exactly as Wagner wanted it to be done, as is shown in a letter, in which he said:

I myself, guided by common sense, was the first to indicate cuts for the regular theatrical performances; quite recently I did so for the "Götterdämmerung." Seidl knows them and I believe Richter does, too. . . . It is absurd to demand of the operagoers in a city who want to be entertained, exertions such as I endeavored to alleviate by the arrangements I specially devised for my Bayreuth festivals.

Poldoni, who has been known chiefly through some charming short pieces for the piano, has written an opera. After its first production at Breslau recently it was at once accepted for Vienna and Leipzig, and other cities are negotiating with the composer. The title is "The Vagabond and the Princess"; it is based on an Andersen tale, and the librettist is A. F. Seligman.

Busoni has completed an opera—his first—based on one of Poe's poems. He wrote the libretto himself.

The statement made a few months ago that Paderewski had accepted the post of director of the Warsaw Conservatory is now said to be incorrect. He has not yet accepted the offer; but if a subvention be granted, and a suitable edifice erected in place of the present one, he may take charge of the Warsaw institution.

William Mason, pianist and teacher of music, died last week in New York at the age of eighty. He was the third son of Dr. Lowell Mason, one of the first Americans to gain a reputation in the musical world, and showed early a bent toward his father's career. After studying in Boston and making his first public appearance there in a symphony concert in 1846, he went to Europe, where he studied under Moscheles, Moritz, Hauptmann, E. F. Richter, Alexander Dreyschock, and finally under Liszt. He made a concert trip through Europe in 1853, later returning to this country, and in 1885, in connection with Theodore Thomas, Carl Bergmann, Joseph Mosenthal, and George Matzka, organized the Mason and Thomas performances of chamber music. Subsequently he devoted himself more particularly to teaching, and wrote a number of works along those lines, including "Touch and Technics: Memories of a Musical Life." He also wrote numerous compositions for the piano. In 1872 he was awarded the degree of doctor of music by Yale University.

Art.

The Loeb Collection of Arretine Pottery. Catalogued with introduction and descriptive notes by George H. Chase. New York: Privately printed.

Considering the importance of Arretine vases, not only from an archæological point of view, as being the best products of the Roman potters, but also from a purely artistic point of view, it is astonishing how little of the material at our command has as yet been published. The large number of Arretine vases found during the last century at Arezzo, and now for the greater part placed in the Museo Pubblico there, are unknown except by the few who have visited that museum. The smaller collections of Arretine ware in other museums are also almost wholly undescribed. The present publication, therefore, of a fairly representative collection of moulds and fragments will be welcomed by all archæologists. And the artistic appearance of the book, with its good paper, beautiful print, and twenty-three plates, makes the work attractive to others than students.

Most of the Loeb collection, which is placed in the Fogg Museum of Art at Harvard, was bought in Rome in 1904. There are in all 589 numbers. The catalogue proper, in which each piece is described in detail, is preceded by an introductory chapter on Arretine pottery. The history of the town of Arretium is briefly given. Passages from ancient writers are enumerated which show that Arretine ware enjoyed considerable popularity—a fact confirmed by excavations, since this pottery was found not only throughout Italy, but also in Gaul, Spain, and Africa, and was moreover extensively imitated throughout the Roman empire. The author also gives us records of the first discoveries, a useful discussion of the technique of the vases, a description of their decorations, and a list of the names and inscriptions occurring on them. In short, all the many and varied points of interest called forth by a study of Arretine ware are touched upon. But there are no original expositions; our present knowledge of the subject is simply compiled and represented in a clear and matter-of-fact manner.

The author divides his material into five classes. The first includes mould-made vases, in which the principal decoration consists of a frieze of single figures or groups of figures; the second, mould-made vases decorated chiefly with floral and vegetable patterns; the third, unmoulded vases, either plain, or decorated with separately modelled reliefs; the fourth, handles and single separately-modelled reliefs from moulded or unmoulded vases; the fifth, miscellaneous fragments. This division of the material into five distinct classes, of which one consists chiefly of handles, and another of miscellaneous fragments, cannot be called fortunate. It is rather confusing to the reader, who from this five-fold division naturally looks for five separate classes of vases, each with distinguishing characteristics. It would have been better to make classes four and five sub-divisions. The descriptions of the individual pieces are full and clear.

In the early autumn Moffat, Yard & Co. will publish a book on "How to Appreciate Prints," by Frank Weitenkampf, curator of the Print Department of the New York Library; and an elaborately illustrated volume by Elizabeth Luther Cary called "Artists Past and Present."

Bernhard Sickert's "Whistler," in The Popular Library of Art (E. P. Dutton & Co.), is well worthy of the excellent series to which it belongs. Mr. Sickert writes of the art of Whistler with great enthusiasm, but also with much discrimination. With Whistler the writer he disagrees entirely, and his reasons for this disagreement are convincingly put. Particularly illuminating is his analysis of the radical difference, in aim and method, between Whistler and the impressionists, properly so called, such as Monet. The conclusion is:

It is not sufficient to say that Whistler is the greater artist, we must say that Monet is not an artist at all. Science is the goddess that claims him and not art.

Taken by itself, this is, of course, an over-

statement; but it embodies an essential truth. The book ends with a tentative catalogue of oil pictures, which should prove a useful beginning. A great difficulty in its compilation has been Whistler's carelessness in changing the title of a work from time to time, and in repeating the same title for different works, so that his Nocturnes and Arrangements become almost inextricably confused. It is interesting to learn that Whistler himself could not always distinguish, any better than can we, between black and gold and blue and gold, or between blue and gold and blue and silver.

The latest issue to reach us of the Knackfuss Monographs (imported by Lemcke & Beuchner) is "Joshua Reynolds," by Max Osborn. It contains the wealth of indifferently executed illustrations common to the series and is worth having as a kind of memorandum of Reynolds's works. More of Reynolds's drawings are here given than are usually reproduced, serving to make plainer the weakness as a draftsman, which is partly hidden by qualities of color and handling in his paintiugs. It is uot only iu the drawing of the figure that he is weak —even his heads are ill constructed and formless when he handles the point rather than the brush.

Diligent research and an excellent method of analyzing the material accumulated give "La Scultura del Trecento in Roma" (Società Tipografico. Editrice Naziouale, Turin), by Laura Filippini, an honorable place among recent works on the history of Italian art. This monograph covers the years when the younger Cosmati family and their followers were working uuder the Tuscan influences introduced by Arnolfo di Cambio. Then, it traces the conditions during a long period of apparent inactivity after the papal court had abandoned the city for Avignou, when churches like St. John Lateran and St. Peter's fell a prey to the flames or to neglect. Finally, it describes the awakeniug of ecclesiastical art during the last part of the century, after the reëstablishment of the papacy at Rome and the return of sculptors who must have studied the work of contemporary Pisan and Floreutine masters in Tuscany or elsewhere, and who are represented by the Salvati family and their coworkers. Less interesting than periods of more brilliant achievement, this field had been almost wholly neglected. The forms of art treated are statues of saints, ciboria, portals, and monumental tombs found in the older churches of the city. The works of a dozen Roman artists are identified, and once or twice these workers are followed outside the city to Terarmo in the Abruzzi, to Orvieto, Venice, or Genoa. The literature of the subject has been critically scanned and tested by a careful examination of originals, and even of fragments which had been neglected by previous students. The conclusions adopted are often supported by records found among the unpublished archives of churches and monasteries. There are forty-four process reproductions of photographs, a full bibliography, and indexes to the monuments studied and to the contents of chapters.

At Christie's, July 3, the following pictures were sold from the collection of "a gentleman in Scotland," and other unnamed sources: Constable, The Valley Farm, £651. Millais, Cuckoo, £861; Portrait of a Lady in brown dress, £525. Sir W. Q. Orchardson, The Queen of the Swords, £714. J. Phillip, The Gypsy's Toilet, £546. Wilkie, The Bride at Her Toilet, £945. J. S. Cotman, Homeward Bound, £819. Gainsborough, Gen. James Wolfe, £1,890; Watering Horses at a Trough, £420; Mrs. Dorothea Scrivener, £210. Lawrence, Catherine Pakenham, £252; Miss Storr of Blackheath, £210. Morland, A Group of Peasants before the Door of an Inn, £1,837; A Farmyard, £315. Raeburn, Mrs. Mackenzie of Drumtochty, £4,725; Mrs. Hay, £3,360; Capt. Robert Hay, £682; Mrs. Balfour, £273; Alan Grant, £210; Portrait of Young Boy, £630; Mrs. Adams, £210; Col. Jaussens, Frauces, Duchess of Richmond aud Lennox, £210.

Finance.

THE CONDITION OF THE RAILWAYS.

The advance figures of the forthcoming report of the Interstate Commerce Commission have been summarized for publication. They offer a comparison of railway finances for the fiscal years 1905-6 aud 1906-7, interesting enough as history, but affording little light for guidauce at the present juncture. The compilation of statistics devolving on the statistician of the Commission is an elaborate task. It would perhaps be impossible for him to give an approximate comparison of earnings and operating expeuses for the fiscal year just closed and 1906-7. But it is precisely the latter comparison which is of moment The Commission's report, always twelve months and more behind the present, reminds one of Mark Twain's characterization of Louis XVI.—good at chasing national maladies, but very poor at overtaking them.

It would seem, however, that June 30, 1907, marked the high tide of prosperity for railway transportation in this country. The single-track mileage on that date was 229,951 miles, of which 5,588 miles had been added during the preceding twelve months. The passenger revenue had exceeded that of the previous fiscal year by over $54,000,000; and the freight earnings had overtopped the similar item of the previous twelve months by over $183,000,000. Expenses of operation had grown by $211,000,000, but gross receipts had increased their lead over operating expenses by more than $51,000,000. Net earnings per mile had grown from $3,548 to $3,696, and variations per ton mile and per passenger mile had both shown trifling gains.

Fortunately for our information, the *Wall Street Journal* has made an unofficial comparison of railway earnings for the fiscal year just closed, with the bumper year 1906-7. It is based on incomplete reports, but the totals will doubtless be close to those of the Commission's report a year hence. This comparison shows a decline in gross earnings of $106,000,000, or approximately 4.12 per cent. The slight concomitant increase in operating expenses—less than one per cent.—results in a loss of net earnings estimated at 14.47 per cent. It is of course, notorious that many roads have reduced their dividends, and that some have suspended them entirely. It is also true that they have lessened their outlay on new equipment and on extensions and improvements. The New York Central alone is said to have cut down these items of cost by about $60,000,000, as compared with the year preceding.

But grantiug all these dismal facts, one must be somewhat skeptical about the conclusion drawn by many transportation experts that there is no way to an industrial revival unless the railways can again begin to spend more freely on rolling stock, extensions, and improvements. And that the funds for such increased outlay can and ought to be obtained by a general increase in freight rates is another very disputable proposition. To galvanize industrial prosperity into renewed vigor by so simple and so mechanical a process is more than trained economists will expect. Unless it can be shown that merchants' and manufacturers' profits have declined on the average less than the earnings of the carriers, why should they be singled out as the proper persons on whom to unload in the first instance the burden of a higher price? The belief seems to have become general since the famous settlement of the anthracite miners' strike that the consumer can be made to pay all advances necessary for securing the prosperity of dissatisfied producers. This comfortable belief will be dissipated some fine morning. At present the country is wearing its old clothes. Railway men themselves comment on the shrinkage in pleasure excursions and ordinary summer travel. The dwindling of luxurious imports is another indication that even the well-conditioned classes are practising economy. Ultimately it is the disposition of the individual consumer that will hasten or delay industrial revival. And the advances in price, which retailers must ask to offset higher freight hills, will hardly lure the ordinary buyer into making more purchases.

The conference of railway presidents in this city last week gave strong confirmation of the double-edged character of the proposed remedy. The president of the Reading is reported to have said that local manufacturing interests served by his line could not stand the proposed advance. This determined position served to abate the zeal which other roads in the same territory had formerly felt for the policy of an increase. The Pennsylvania, the Baltimore and Ohio, and the Lackawanna cannot pursue a radically different policy, when serving the same region.

The precise effect of an increase in any freight schedule can be determined only by experience, and can be approximately predicted only by a far-seeing transportation expert. But one thing can be laid down *à priori*—that higher rates will not tempt any shipper to make heavier shipments, and that certain consignments now yielding only a small margin of profit will cease altogether under the pressure of higher rates. It may be possible that the higher rates on a smaller volume of traffic will, in special instances, augment the carrier's net earnings. But even in this extreme case the carrier's vicarious interest in a general industrial revival seems somewhat hypocritical when the policy of cure must curtail the volume of freight moved, and must tend to lessen the output of mill and factory. With some thousands of empty freight cars still on the sidings, and the country waiting for an industrial readjustment, the raising of freight rates would seem to be an obviously stupid remedy. If it should chill energy and defer the revival of trade, the railroads will have made a bad bargain.

In his "Railway Enterprise in China," Percy Horace Kent has brought together the essential facts about the origin and present status of the Chinese railways (New York: Longmans, Green & Co.). An appendix, of some hundred pages, presents copies of the more important contracts and other documents, such as the statutes of the Chinese Eastern Railway. Railway enterprise in China is shown to be still in its infancy, the entire empire having but one mile of road for every 77,100 inhabitants. The net result to date is the development of what is theoretically a system of state railways. This the author regards as not only "the best conceivable for China," but even "the only possible system for the country," since private Chinese enterprise is inadequate for the work in hand, and grants of concessions to foreign capitalists involve serious political dangers. In the future development of the railways the primary problem before the government is a financial one, and in solving it reliance must be placed upon foreign money markets. The obvious course for the government, under these circumstances, is to administer the roads in such a manner as will foster confidence; and in the imperial railways of North China, Mr. Kent thinks, there is already an example of such administration. For the best results, also, a considerable extension of imperial control over railways will be desirable. Such a policy implies necessarily a strong central government, and it remains to be seen whether China will face the situation and introduce the needed reforms. Mr. Kent has been painstaking in his work, and has produced a book that commands the confidence of the reader.

BOOKS OF THE WEEK.

Adams, Samuel, The Writings of. Collected and edited by Harry A. Cushing. Vol. IV. Putnams. $5.

READY THIS WEEK

Locy's Biology and Its Makers

By Professor W A. LOCY of Northwestern University. 123 illustrations. 460 pp. 8vo. $2.75 net.

Tells of the rise of biology from the renaissance of learning to the present. It shows the shift in human opinion in reference to living beings and uncovers the sources of the dominant ideas of biology. It is written around the lives of the founders, giving an account of their aims, methods, achievements, and personalities.

Primary sources have been examined and well digested and this first-hand knowledge is adapted to the ready comprehension of the average reader, who is also made acquainted with the original sources, by quotations and engravings.

The 123 engravings embrace portraits of the founders of biology and pictures from their works of epoch-making importance.

Kellogg's Insect Stories

By V. L. KELLOGG of Stanford University, author of "American Insects," "Darwinism To-day," etc. (*American Nature Series, Diversions from Nature.*) Illustrated. 302 pp. Large 12mo. $1.50 net.

Professor Kellogg has, in this volume of strange, true stories, succeeded in describing the habits of certain insects in so fascinating a way that there are few people, either old or young, who will not be held by its charm. Simplicity is the keynote to the studies and observations of the old scientist and the little girl who figure in the book, and their ingenuousness and the subtle humor hold one's interest as much as the marvellous doings of the little ground folk themselves.

It is a splendid illustration of how interesting a book of natural history stories may be, while yet purified of all "nature faking" and of all the exaltation of animal hero-composites so popular in recent years.

HENRY HOLT AND COMPANY 34 W. 33d St., NEW YORK.

"A literary masterpiece"
—The Observer

MAROTZ

By JOHN AYSCOUGH

A story of the present day, containing vivid word pictures of Southern Italian and Sicilian life.

"One of the most striking novels of the year." *—British Weekly*

$1.50. At All Booksellers

G. P. PUTNAM'S SONS NEW YORK and LONDON

"The King Over the Water"

By A. SHIELD and ANDREW LANG. With 6 portraits and 3 other illustrations. 8vo. $4.20 *net.*

This is a life of the Prince known as the "Old Pretender," written entirely without party spirit; a plain setting forward of the facts of his life as revealed in the written testimony of his own letters, and in the authentic accounts of those who knew him.

The Nation.

NEW YORK, THURSDAY, JULY 30, 1908.

The Week.

The decision of Gov. Hughes to accept a renomination in case it is offered him is an event of great importance, both in State and national politics. His attitude is precisely that of a loyal party man and a good citizen. To serve again will mean a pecuniary sacrifice that he, not a rich man, can scarcely afford, but he will respond to the call of duty. To such a call he yielded two years ago, abandoned the successful practice of his profession, devoted himself to incessant and exhausting labor, and exposed himself to the bitterest attacks from the machine politicians of both parties. He has given an invaluable lesson as to the proper attitude of an executive. He has never compromised with the politicians; he has not allied himself with a faction; he has made his appointments to office for merit solely; he has steadily maintained the highest ideals. The common verdict on his career has been, "The best Governor since Cleveland." We need not dwell on the reforms which he has secured from a reluctant Legislature by his appeal to the moral sense of the whole State. He has attacked the bosses of his own party, large and small, with much vigor and success. The policy nearest his heart is to make still more complete the divorce between public service corporations and the politicians, and by a reform of the election laws and a system of direct primary nominations to restore to the people the powers that have been wrested from them. It is a cause to kindle the enthusiasm of every citizen and to make the pulse of every patriotic American beat quicker. The Republican machinists will probably be against him unless they come to see that this man, who has refused to dicker with them and to play the game of politics according to their rules, stands a better chance of election than any other man in this State. There is no one else so fully trusted by the people, no one so likely to attract the indispensable independent vote. Professional politicians are usually short-sighted; but Barnes and his kind can hardly fail to perceive that to refuse a renomination to Gov. Hughes will be suicidal.

Of Norman E. Mack as chairman of the Democratic National Committee, the best that can be said is that he is not Thomas Taggart. Mr. Taggart as a national chairman is one of the most melancholy failures on record. Compared with Mr. Hitchcock, now generalissimo of the Republican campaign, Mr. Mack is nowhere; he is far inferior in general intelligence, energy, and directive skill. Moreover, the selection of Mr. Mack is a pretty plain notification that Mr. Bryan does not care for the support of the independents and the remnant of the Cleveland Democracy in New York State. Mr. Mack's character and antecedents will repel rather than attract voters of this type. Many independents are inclined under almost any circumstances to support Mr. Taft as against Mr. Bryan. A number of others who are wavering will surely accept the Republican ticket if Mr. Hughes runs again for Governor. But in order to make sure of alienating the last thousand of respectable and intelligent men who might still cling to Bryan, it has seemed necessary to get Mr. Mack to manage his campaign.

In opening the first national convention of the Independence Party at Chicago on Monday, W. R. Hearst characterized Mr. Bryan as a "knight arrayed in a motley of modified professions and compromised principles, of altered opinions and retracted statements"; and the Republican organization as "the open and avowed handmaiden of the Trusts." These phrases contain only too much truth. The defect of the Independence Party, however, is its leadership. Many thoughtful voters are disgusted with both of the old organizations—with the control of the Republican machine by the protected interests, and the control of the Democratic machine by Mr. Bryan and his Falstaff's army. These dissatisfied voters would welcome a third party with the weight and character of the Gold Democrats of 1896; but they cannot stomach Hearst. The conviction that the Independence Party is the tail to Mr. Hearst's kite is so widespread and well founded that his candidates and his platform excite profound distrust among serious men. It is possible that the Independence Party may poll a considerable vote among the wage-earners in those States in which Mr. Hearst publishes newspapers, notably New York and Illinois; and the influence of his Chicago paper may be felt in doubtful Indiana. If New York and Indiana are close, the defection of the Independents—chiefly, of course, from the Democratic ranks—may actually determine the result.

The President's cry of anger over the Standard Oil decision is proof that he has been hard hit. But the President's statement to the press will not stand analysis. He asserts:

> The reversal of the decision of the lower court does not in any way, shape, or form touch the merits of the case, excepting so far as the size of the fine is concerned. There is absolutely no question of the guilt of the defendant, or of the exceptionally grave character of the offence.

But the fact is that judges on appeal pointed out one class of errors of the lower court which had nothing whatever to do with the size of the fine, but related:

> To the view adopted by the trial court, carried out in its rulings on the admission and exclusion of evidence and embodied in its charge to the jury, that a shipper can be convicted of accepting a concession from the lawful published rate, even though it is not shown as bearing on the matter of intent, that the shipper at the time of accepting such concession knew what the lawful published rate actually was.

The gist of the long discussion of these rulings was that the Standard Oil Company had not really been proved guilty; that the evidence was ambiguous or incomplete. The matter is summed up by Judge Grosscup in the following terms:

> The error of the trial court in making away from the plaintiff in error its right to submit to the jury the whole question of whether it had knowledge of the tariff sheet from which it is said to have accepted a concession, and therefore with intent to violate the law—whether the rate paid was not paid in the honest belief that it was the lawful rate—is an error that rises into one of solid substance.

Thus Judge Grosscup and his two colleagues on the bench declare explicitly that the error was one of "solid substance," relating directly to guilt or innocence. We grant that the President has fallen into a mistake by hastily

glancing at headlines, instead of studying the text of the decision; but a man in his position should weigh his words, and should not even carelessly mislead the millions who will read his crisp phrases rather than the legal argument.

But this is not, perhaps, the worst result of the President's recklessness. He goes on:

> The President would regard it as a gross miscarriage of justice if, through any technicalities of any kind, the defendant escaped the punishment which would have unquestionably been meted out to any weaker defendant who had been guilty of such offence. The President will do everything in his power to avert or prevent such miscarriage of justice.

Here in effect the President roundly declares that the reversal of the lower court is a "miscarriage of justice," and that "the punishment would have unquestionably been meted out to any weaker defendant who had been guilty of such offence." Now, the President either has evidence to prove the judges guilty of favoritism or he is talking with almost unexampled wildness. If he has the evidence, it should be forthcoming at once, and the judges should be impeached and driven from the bench in disgrace. We agree with the President that—as he said some months ago—justice should be "meted out with an even hand to great and small, rich and poor, weak and strong." It should be meted out with all swiftness to those on the bench who are guilty of oppression or partiality. But if there is no shred of testimony against the three judges, what shall we say of the President's attack upon them? What is their fault? That their decision displeases him and disarranges his plans for the campaign? Is it for this that members of the Federal judiciary shall be exposed to the fury of the Executive, and shall be accused of conduct baser than that of the average felon?

In his address at Newport last week President Roosevelt beat the tom-tom to summon the supporters of a big navy. The powerful navy that is the best guarantee of peace, the shame of evading imperial responsibilities, the danger of being rich and unarmed, the Philippines, Hawaii, Cuba, the Panama Canal, the Monroe Doctrine—these were the familiar arguments. The weakling and mollycoddle, easily identified under his new disguise as the man who hits "soft," was appropriately mauled. At the present moment, when the anti-Japanese craze gives signs of dying out in spite of Hobson and his tribe, when a new Japanese Ministry has extended assurances of good will, there was no reason why the President should stir up wrath anew by his tirade on undesirable immigration: "It is absolutely necessary that if we claim for ourselves the right to choose who shall come here, we shall be in trim to uphold that right if any Power challenges it." No names are mentioned. Of course, Russia's fleet may attack us if we shut out the Jews, Rumania's fleet may destroy our Panama Canal! The President poured scorn upon the heads of those who venture to believe that our national defence rests in something else besides the biggest navy on the earth. They are ignorant or blind who still cling to the old belief that our geographical situation forms part of our defence. Mr. Roosevelt laid it down that "to be rich, aggressive, and unarmed, is to invite certain disaster." But why should we be guilty of aggression? Mr. Roosevelt has not seen fit to take up the housecleaning in the Navy Department which real efficiency calls for. He has done nothing to modernize the antiquated bureau system. Ships not off the stocks go out of date because valid criticism of the naval construction hierarchy is not listened to. In other words, what can be done quietly and inexpensively to make a fit navy, the President has not done. But when it comes to sounding trumpets of alarm and defiance, Mr. Roosevelt can be counted on.

The detailed statement of imports and exports for the last fiscal year was issued last week by the Bureau of Statistics. The panic of October rudely interrupted the expansion of our foreign trade. It caused at first an acceleration of merchandise exports, but the shrinkage in domestic demand for manufactured articles was soon reflected in a curtailing of these imports. Our total imports for the fiscal year ending June 30, 1908, were valued at about $250,000,000 less than for the year preceding. The decline was greatest in raw materials, and in partly manufactured articles intended for further elaboration in this country. In exports the net loss was only $20,000,000, as compared with the previous year. Our outgoing foodstuffs showed an actual increase, but this was more than offset by the decline in crude material intended for further use in manufacturing. It is noteworthy that the falling off in exports was greatest in the case of Great Britain, Canada, and Mexico; the export trade to Continental countries and the Orient was not very seriously impaired. The foreign trade figures for the recent month of June show a serious loss as compared with June of last year. Whatever may be the signs of industrial improvement in other fields, such indications are not found to any extent in the current statistics of our foreign trade.

Pity the downtrodden railway! Is there no one to say a good word for it in its present dilemma? Here is the President, or the Interstate Commerce Commission, serving notice that if freight rates are raised, there will be a rigid investigation of the increase to see whether or not it is justified. Last winter a similar threat prevented the cutting of wages, except in isolated cases—wages must not be decreased on the eve of a Presidential campaign. But, says the railway manager, there are only three ways in which a road can aid itself when times are bad: by lopping off all expenses that are not absolutely necessary, by lowering wages, or by raising rates. The first was resorted to last fall; no improvements or developments are under way, and no large purchases of rolling-stock or materials are reported. The salaries of clerks and operating officers (who are not unionized) have long since been reduced. What else can the railways do, they ask. Well, the *Nation* has steadily advised against raising rates as a tactical mistake; but we confess that the dilemma is perplexing.

In the general province of sociology, politics, history, economics, civics, psychology, ethics, and probably education, there are in this country too many technical periodicals. Their contents are too often thin and arid. Their influence on public opinion is generally *nil*. These journals are not usually exposed to the bracing struggle for existence. They are subsidized only too frequently, either directly or indirectly, by individuals, or scientific associations, or institutions of learning. Often they pay

their contributors the barest pittance, but more frequently nothing at all. Instead of rejecting from 95 to 98 per cent. of all contributions offered, as the large magazines do, they are eager for manuscript. The first infirmity of young instructors' minds—to see themselves in print—is played upon to the limit. In short, while one must acquit some of the better journals of this procedure, and while one must allow something for the scholar's altruism, which often gives a first-rate paper to a third-rate scientific journal, the indictment must stand as a whole, that the genus is a forcing-bed for sciolism—pseudo science. The reasons for the origin and spread of these so-called scientific publications are manifold. In the domain of physical and chemical sciences reputable periodicals were a necessity, and still are. They are simply clearing houses advertising the results of experiment and discovery. In finance and in administrative science in Europe something similar may be urged. But in the disputed domain of politics, economics, ethics, and sociology, the journal becomes too often merely a disguised advertisement for the advocates of some particular brand of thought, opinion, or method. But it is supposed that particular *éclat* attaches to the editor or editors, a glory which they in turn reflect upon the scientific society or the institution of learning to which they are attached. Nevertheless, absurd individual and university jealousies centre about them. They duplicate each other's book-reviews, steal each other's thunder freely, beg or extort contributions according as the would-be contributor is comfortably placed or looking for academic advancement; and become a needless tax upon the slender purses of graduate students and upon the budgets of public libraries.

For many years the evils of the undue multiplication of these journals have been conceded in the saner academic centres, and some unavailing efforts have been made in the direction of consolidation. The governing bodies of colleges and universities have sometimes persisted in keeping these journals alive, when the editors from their own faculties have admitted their futility. Indeed, the superstition attaching to printer's ink is nowhere stronger than in many academic circles. Said a friendly adviser some years ago to a newly appointed instructor in a small New England college: "They will do anything for you here, if you will only *publish*." Some universities seem to fear that Satanic mischief can be kept out of the staff of instruction if the annual professorial output, measured by the yard, is only extensive enough. More than one university publishes an annual record of the books and articles emanating from its faculty. If this list is intended to extort printed matter—well called *matter*, for spirit it generally lacks—it is the crassest Philistinism. Amongst the severest trials which Jowett recounts at Balliol was keeping in hand his young tutors, some of whom wanted to marry on inadequate incomes, while others wanted to rush into print without having anything to say. Something may be urged for a temporary suspensive veto to be wisely exercised by academic heads upon indiscriminate printing. The weariness resulting from making many books is proverbial, and if any reform is ever to come, it should emanate from those who are presumably able to assess literary and scientific values.

The revolutionary Old-Age Pension Bill passed the House of Commons by almost unanimous vote. But even had the Conservatives in greater number opposed the measure, they could not have avoided a large part of the responsibility for it. They dallied with the idea when in power; they have criticised the bill rather in details than in principle; and they generally supported it, because, as the London *Times* put it, they felt that "a great hope has been raised in the hearts of thousands of persons, and that it would be a serious step to retard the fulfilment of that hope, however much they question the wisdom of the Government's methods." This result was to be expected. When the Campbell-Bannerman Ministry took office the party turned, in the absence of any harassing foreign problems, to the great humanitarian movements of the day; the old-age pension offered an opportunity to please the masses and pay the new Labor Party for its support. And so it has come about that the party of Mill, Bright, and Cobden is sponsor for a bill which might well be called a Bill to Destroy Thrift and Industry. The party of the Manchester school of individualists has enacted a law which bestows a pension upon every person reaching the age of seventy, man or woman, who can produce a birth certificate, can prove a limited income, or none at all, and a fair character. The recipient is not compelled to save in order to provide for his old age. He may have drunk up his savings in moderate tippling, and may have been an inefficient worker all his life. But at seventy the lazy and incompetent, as well as the industrious and skilful, are alike informed that the world owes them a living. The results in the discouragement of thrift may not become manifest at once—indeed, it may take several generations before they are apparent. But there are other consequences which will appear sooner. The vast sums required to carry out the plan will put a weapon into the hands of the protectionists with which they may reach the vitals of the free traders within a surprisingly short time. The financial danger will vex every Chancellor of the Exchequer, and will always give a Chamberlain or a Balfour a reason for urging a "reform" of the tariff which will produce more revenue.

Forty hours under water during a cruise of 390 miles under war conditions—this is the extraordinary record of the British submarine manœuvre flotilla. It comprised seventeen vessels of the B and C types of the Holland boat as developed by the British naval experts. They are of 313 tons, using gasolene engines when on the surface or awash, and electrical power when wholly submerged; and they are reported to have living quarters that are decently habitable. Nothing like this record has been achieved anywhere else. But the English, slow to take up submarines, have been going about their development with true British thoroughness, and what was once characterized as Yankee energy. True, our own navy has done some experimenting at Newport, and Congress authorized eight new submarines at its last session. But our naval officers are wholly absorbed by the battleship controversy and the craze for Dreadnoughts. They have quite abandoned the American monitor, and have paid scant attention to torpedoes and torpedo-boat work, in which the Confederate naval officers were so conspicuous in days of the blockade.

MR. TAFT'S POLICIES.

Mr. Taft, in his long speech of acceptance, is, of course, enthusiastic over the policies and methods of Mr. Roosevelt and the Republican party. Candidates seem bound to say the conventional things; and therefore we attach little weight to Mr. Taft's sweeping denunciation of the opposition and his distinction between the Republican platform as "progressive and regulative," and the Democratic as "radical and destructive." Mr. Bryan will pay his respects to Mr. Taft in much the same terms and will mean as little by them. Of the document as a whole we may say that it exhibits frankness and common sense and confirms former impressions of Mr. Taft's sanity and courage. We shall confine our comment to three of the main issues, in discussing which Mr. Taft amplifies the resolutions of the Republican Convention, and shows something of his personal qualities—the difference between his point of view and that of President Roosevelt and the party hacks. On corporation control he is rather non-committal; on the tariff disappointingly cool; on the demands of labor refreshingly firm and vigorous.

As to corporations, Mr. Taft declares that the task of the next Administration "is distinct from and a progressive development of that which has been performed by President Roosevelt":

> The chief function of the next Administration is to complete and perfect the machinery by which these standards may be maintained, by which the law-breakers may be promptly restrained and punished, but which shall operate with sufficient accuracy and dispatch to interfere with legitimate business as little as possible.

Since Mr. Taft differs from Mr. Roosevelt in having been severely trained in the law, since he grasps broad principles, whereas Mr. Roosevelt sees only detached concrete instances, he will, we are confident, move toward reform with a step that is far more cautious and certain. Mr. Taft points out, for instance, that it does no good "to prescribe new duties for the Interstate Commerce Commission," the performance of which is "practically impossible," or "to denounce new offences with drastic punishment unless subordinate and auxiliary legislation shall be passed," providing for the enforcement of penalties. On the question of physical valuation of railways Mr. Taft speaks with moderation. He argues that valuation is but one of many factors in determining rates; but he concludes that a valuation of the tangible property of a railway may from time to time be desirable or even necessary; and that in view of the legislation proposed in the Republican platform, forbidding the issue of interstate railway stocks or bonds without Federal authority, "there should be the right and machinery to make a valuation." He is also moderate on the subject of a Federal license for companies engaged in interstate trade. To ask a license of all such corporations would impose an "intolerable" burden, and he would therefore suggest some means for classifying and insuring Federal supervision of such corporations—"a very small percentage"—as "have the power and temptation to effect restraints of interstate trade." This may be vague, but at least it is much less revolutionary than some of Mr. Roosevelt's recommendations and the demands of the Republican extremists at Chicago.

On the tariff, Mr. Taft's apparent indifference must dash the hopes of all ardent revisionists. He objects to the Democratic plan of putting Trust-made articles on the free list because that "would not only destroy the Trusts, but all of their smaller competitors." This tenderness for the small competitor is an excuse which is worn so threadbare that Mr. Taft should be ashamed to produce it. Furthermore, he believes there are some "schedules in which the tariff is not sufficiently high to give the measure of protection which they should receive upon Republican principles." This staggering assertion must be a sop to the bourbon protectionists. But he admits the necessity of revision and confirms the platform promise to begin "promptly upon the incoming of the new Administration." From the point of view of reformers, however, the main thing is to get the tariff once fairly open for discussion. That is what the "standpatters" chiefly dread; for they know that the schedules reek with scandal, and that once the press and public have a chance to let in the light, Congress will be forced to abolish the worst of the inequalities and iniquities.

The paragraphs dealing with labor and law are by far the strongest part of Mr. Taft's speech. In tone his language is conciliatory, but he shows a far stiffer back than President Roosevelt and the weak-kneed gentlemen who wanted Gompers and the American Federation of Labor to have everything at Chicago. Of non-union workers Mr. Taft asserts squarely:

> Their rights before the law are exactly the same as those of the union men, and are to be protected with the same care and watchfulness.

On the boycott he is equally emphatic:

> What they have not the right to do is to injure their employer's property, to injure their employer's business by use of threats or methods of physical duress against those who would work for him, or deal with him, or by carrying on what is sometimes known as a secondary boycott against his customers or those with whom he deals in business; . . . they may not through the instrumentality of a threatened or actual boycott compel third persons against their will and having no interest in the controversy to come to their assistance. These principles have for a great many years been settled by the courts of this country.

This is a blow between the eyes for Mr. Gompers. Directly opposed to the position of "labor" also is Mr. Taft's clear analysis of the use of the injunctions in industrial disputes. He flatly contradicts Mr. Roosevelt by saying that "the number of instances in which restraining orders without notice in industrial disputes have issued in Federal courts is small"; and that this small number "shows the careful manner in which most Federal judges have exercised their jurisdiction.' He riddles the Democratic plank (a bid for the labor vote) demanding a jury trial in prosecutions for contempt, and condemns it as "an insidious attack upon the judicial system"; but he adds that "more definite specification in procedure . . . can be effected without injury to the administration of the law." His conclusion of the whole matter is sound and forcible: "The maintenance of the authority of the courts is essential unless we are prepared to embrace anarchy." In this position, in what promises to be one of the leading issues of the campaign, Mr. Taft deserves the cordial support of every good citizen.

In fine, Mr. Taft's speech seems likely to alienate still further the labor element and the hot radicals of his own party, especially those of the West. They already look upon the Chicago platform as too reactionary; Mr. Taft is even less inclined to cut loose and run amuck. By this attitude he will be strengthened among the conservatives of the East and the large business centres of the West;

and among those who, while anxious for reform, dread Mr. Bryan's propensity for flighty and ill-considered innovations.

THE STANDARD OIL AND THE COURTS.

The decision of the Circuit Court of Appeals, reversing Judge Landis's sentence fining the Standard Oil Company $29,240,000, lays down pretty clearly the principle that this is a government of law, not of caprice, whether executive or judicial. For the Standard Oil we have no tenderness. We believe that the vast monopoly has been built up by men both shrewd and unscrupulous, and that the methods employed to crush rivals have been tricky, even treacherous. Moreover, we are convinced that long after public opinion was educated and clarified in the matter of railway rebates, long after every fair-minded man could see that a common carrier, enjoying special privileges—such as the power to condemn private property—should treat all shippers equally, the Standard Oil continued to secure secret favors; and that the official denials on this point were deliberate falsehoods. To say this, however, is not to say that the Standard Oil shall not have exact justice. Were it all compact of malignity, it is still entitled to its day in court, a verdict in accord with the evidence, and a sentence in accord with law and common sense. The fact that the three judges of appeal were unanimous raises a strong presumption that the rulings of the lower court were due in part to heat and prejudice. This presumption is fortified by the further fact that the opinion on appeal was delivered by Judge Grosscup, a man whose hostility to the lawlessness of corporations has been publicly proclaimed in terms of almost unjudicial bitterness. His natural inclination would be to let the offender feel the full rigor of the statute. If he maintains that the Standard Oil has been unjustly dealt with, most sober men will acquiesce.

The lower court is reversed on two main grounds: First, the evidence against the Standard Oil was not complete and unequivocal, partly because the rulings of Judge Landis excluded certain testimony favorable to the defendant; second, even had the evidence been satisfactory, the judge, in imposing the enormous fine, "abused the discretion vested in the court." The evidence is complex and often highly technical. When sentence was pronounced last August, we noted the difficulties and ambiguities and expressed doubt on this very matter. Judge Grosscup's analysis of the evidence makes its weakness even more apparent than in the press reports of a year ago. His reasoning further persuades us that the data from which Judge Landis reckoned the number of offences were not wholly trustworthy, and that the fine, even had guilt been certain, was excessive. We question, however, whether Judge Landis fully deserves the severe rebuke administered to him. He may have been swayed both by the popular passion against the Standard Oil and by a desire to help the Republican Administration in its campaign against the Trusts; but it is conceivable that he was wholly unconscious in yielding to such unworthy motives, and there is no proof that he deliberately prostituted his position to personal or political ends. If we are not to damn the Standard Oil on mere general principles, neither must we damn Judge Landis.

If he had an eye to political effects, either for himself or for his party, he has been sharply punished. The cry of Mr. Bryan and his followers that President Roosevelt has made a terrible ado about putting wealthy malefactors in prison, but has actually accomplished very little in this line, will now ring through the country with redoubled force. The Standard Oil is the most hated of all the Trusts; it was singled out for special attack; it was the big game which the mighty Nimrods at Washington were chiefly desirous of bagging; the fine of $29,240,000 has been dangling at Mr. Roosevelt's belt as the most conspicuous scalp he has taken. But the court has snatched that trophy from him; and the opponents of the Administration can declare with much effect on the stump that Mr. Roosevelt's loud professions are unsustained by performance. In the West, where the tide of radicalism is still running high, this argument cannot fail to be a telling one. Bryan, who has been complaining that Mr. Roosevelt has stolen his policies, can now assert that the thief does not know how to apply them, and that the Democrats still remain the only real enemies of the wicked corporations, the only real friends of the people.

In the East, however, where many people are tired of "muck-raking," and where the harrying of corporations has produced no small apprehension in commercial centres, the decision of last week will bring a sense of relief that may even help to reconcile some of the stoutest critics of the Administration to Mr. Taft and "my policies." It is plain that the courts will still defend property; that they will not accept reckless denunciations, whether in President's messages or public speeches, as a substitute for legal evidence; and that capitalists who obey the law have nothing to fear. The gloomy forebodings as to what may happen if radicals and revolutionaries come into power are groundless. We still have a Constitution to guard our ancient liberties.

It is plain, also, that if we are to curb the lawless corporations and bring them to the bar, the proper methods are not those of crude sensationalism and wild oratory, in which Mr. Bryan and Mr. Roosevelt have been competing. That sort of thing does very well for a little while. It may even carry a man into office on a wave of popular enthusiasm. But in this world results are achieved, not by noise, but by action. The quiet, steady, hard work and hard thinking for which Mr. Roosevelt and Mr. Bryan have so little liking; the careful framing of legislation; the thorough gathering and skilful presentation of evidence—this is the only process by which the people can successfully prosecute a case against the "criminal rich." If we elect Bryan, he will inevitably disappoint us as Mr. Roosevelt has disappointed us—and for precisely the same reason. In the light of last week's event Mr. Taft's rôle is obviously that of the cool, cautious, firm, and persistent man who will labor without clamor and be sure of each step forward.

CANADA AND THE EMPIRE.

The festival at Quebec has been as much a tribute by Britain to France as by the British Canada of the present to the French Canada of the past. We have already referred to this broader significance of the Champlain celebration. It comes as a fitting culmination of four years of growing friendship between the two mother countries across the Atlantic, and naturally carries with it the weight that can scarcely attach to

mere Franco-British expositions and fraternal visits between French and British Mayors, Parliamentarians, authors, scientists, and school children. In France and in England, it is true, the thought of Canada can scarcely evoke the same sense of unalloyed rejoicing. Great Britain may regard the present with satisfaction, if with a sigh at the difficulties that have been surmounted on the way; France cannot help looking back with a pang to what was and reflecting sadly on what might have been. But the old wound has healed; and Gallic pride may console itself with the thought that the French genius has ever been more successful in the field of spiritual than of political conquest. Napoleon's empire lasted only a little while, but the ideas of the great Revolution transformed Europe, are still at work on the Continent, and are re-echoing in distant Asia. And so, though the crown and the power of Canada are Britain's, nevertheless Quebec's prominent rôle in the national life, her poets and her statesmen, have shown the high capacities of the French blood.

It is a commonplace to insist that French and English in Canada are now a united people; but, while it is true that the old racial animosities have been dying out, it is a question whether even in the troubled days before the Federation Act of 1867, England's rule was ever more gravely jeopardized by her French subjects in Quebec than by her English-speaking subjects in the other provinces. It is an interesting speculation as to how far the presence of a large French element in Canada has contributed, and will continue to contribute, to the perpetuation of British rule. One of England's greatest difficulties is in ruling Englishmen. With foreign races she seems to get on well enough. The thirteen English-speaking colonies were constantly quarrelling with the mother country until the final break came. All-English Australia is the most unruly, the most impudent and cock-sure young cub of a dependency that ever told a mother-empire to mind her own business. On the other hand, South Africa, with a predominantly Dutch population, is speedily accommodating herself to the rôle of being British and united. And Canada has, on the whole, preserved the duty and dignity of the young matron who has known how to combine the parts of daughter in her mother's house and mistress in her own. How far is the presence of a non-English population effective in keeping English fellow-subjects loyal to the British crown? Without stooping to the brutal method of fomenting dissension, Great Britain has found it still true that divisions among her subjects, pacific though they may be, help her to rule.

Nevertheless, it is quite apparent that with time the French influence in Canada must show a decline. The national celebration at Quebec is commemorative of a spirit of pioneer enterprise among the French which seems now to have left them. When Champlain, after founding Quebec, turned south towards New York, he began the opening up of a continent which the Frontenacs, Joliets, Marquettes, Tontys, and La Salles were so gloriously to continue. But in building up the Canadian West, the French race is taking very little part. So that, even though Quebec escapes retrogression, even if it move forward in economic development with a caution characteristic of the French race in that field, it must come to count continually less and less as English-speaking colonists from across the seas, and from south of the border, form new centres of economic, and consequently political, power in Alberta and Saskatchewan. Add to these the older but no less progressive West of Manitoba and British Columbia, and the ultimate balance against the French-Canadian appears correspondingly weighted.

What must be the effect on Canada's relation to the mother country? According to our thesis, the more English she becomes, the thinner should grow the bonds that tie Canada to the Empire. Yet at first sight just the opposite would seem to have been the case. Canada now is more loyal than it was ten years ago, more intent on preserving the connection with England. But it is apparent, on the other hand, that Canadian loyalty is directed less toward Great Britain than toward Canada itself. So liberal have been England's concessions to the demands of her eldest daughter, that Canada's failure to reciprocate would have been inconceivable. The attitude of the Canadians toward Asiatic immigration, for instance, has been allowed seriously, though not officially, to modify Great Britain's relations of intimacy with Japan. Only a few months ago the British government, in treaty with our own, conceded to its colonies the practical right of veto on any treaty affecting their interests; naturally, this concerns Canada most. In other ways Canadian self-rule and pride have been flattered, so that, counting her enormous annual British immigration, it would be strange if Canada, situated a scant two thousand miles away from the mother country, and in easy and quick communication with it, should show the same tendency to independence that is so often seen in distant and isolated Australasia.

A CONSTITUTION FOR TURKEY.

A generation which lives through great changes seldom recognizes their full moment. Japanese victories over Russia may be dramatic, may even be vaguely portentous while we read of them, but the insistent cares of every-day business dwarf them to the stature of the ordinary event. Generally it is reserved for the future to contemplate with awe the working of large forces in the world's history. But the years since 1904 have constituted an exceptional period. It calls for no perfervid historical imagination to realize that we have been witnessing during these four years a tremendous social and political evolution in open and rapid play. Japan triumphant, Russia constitutionalized, Persia constitutionalized, China preparing for a Constitution, India and Egypt stirred by great dreams of self-rule—it has been like a picture from a gigantic, swiftly-moving film projected upon a canvas covering nearly half the earth. And now comes Turkey. Abdul Hamid, aghast at the spirit of mutiny which has blazed up among his Macedonian and Albanian regiments, has called a Liberal Grand Vizier to power, announced the grant of a Constitution, and summoned a Parliament to meet in Constantinople. To the world at large the news comes like a bolt from the blue. In Russia, the Constitution of August, 1905, was preceded by six months of revolutionary activity. In Persia there was a long preceding period of agitation. But it is only a day or two ago that we learned how active the leaders of Young Turkey have been among the troops. In that day or two the Sultan has taken fright and submitted.

Not that the Young Turks are a new factor in Ottoman affairs. They go back far into the nineteenth century. Their ideas were already current when Sultan Abdul Medjid, in imminent danger of losing his throne to Mehemed Ali of Egypt, issued, in November, 1839, the Hatti Sherif of Gulhane, which laid down liberal principles of government for the Porte, reformed the bureaucracy, and placed Christians and Mohammedans on an equal basis. A succession of Liberal Ministers kept the principles of the act of Gulhane alive till foreign complications, culminating in the Crimean war, led the Palace to reassert its old power. Again, in December, 1876, when the Balkans were in revolt and war with Russia was certain, Abdul Hamid, who had succeeded his brother Murad V. in the same year, promulgated a Constitution for the Empire. The first Turkish Parliament met in March, 1877, and its career was exactly like that of all new-born Parliaments. It put forward demands which the throne would not grant, entered into conflict with the Ministers, asserted its own supremacy in the state, and got itself dissolved after a session of eleven months. Since then the government of Turkey has been what we have known it. The Young Turkish leaders have been persecuted and compelled to carry on their propaganda from Paris, where a nephew of the Sultan has been the head of the party. Their work among the Turkish troops is now said to date from 1904. But the Turkish army for a long time has presented the anomalous character of an efficient and loyal force given to chronic mutiny. In times of crisis, the Sultan could count on his Albanian and Anatolian troops. He has found to his cost that he can no longer rely on them.

The ultimate outcome of the Sultan's sudden surrender is, of course, in doubt; in view of the course of constitutionalism in Russia and Persia, it would be rash to indulge in definite prophecy. In Turkey the problem is all the more complicated because of the historical relations of the Empire to the rest of Europe. One thing only can be said: that, unless the constitutional revolution was foreseen in the European chancelleries, the change must work an entire rearrangement in the diplomacies of each of the great Powers. If we recall how Europe was all in a flutter a few months ago over the comparatively trivial matter of a railway concession granted to Austria-Hungary, if we recollect how vital a problem in European politics Macedonia has been, it will be apparent what effect on European diplomacy will be produced by an event that dwarfs even the Macedonian trouble. It was, very likely, the preparations making by the Powers to loosen still further Turkey's hold on the Macedonian provinces, that stirred Turkish patriotism to action against the régime of Hamid and precipitated the present crisis. For in this latest manifestation of the Young Turkish movement there is more involved than a struggle for constitutional reform. Added to that is a new national pride and self-confidence which sees no reason why Turkey should continue to be dependent solely on the mutual jealousies of the European Powers. The Young Turkish leaders feel that in Turkey, as in Japan, there is the strength of self-subsistence.

The effects which the new Constitution will produce in Turkey itself are too complicated for summary treatment. But the new Constitution has an importance and bearing outside of the Ottoman Empire. It comes as a timely reinforcement to the cause of constitutionalism in those places where the forces of political progress have still to contend with formidable difficulties. Only the other day liberal institutions in Persia were in the most serious danger. To-day it cannot be doubted that the example of the leading Mohammedan nation will make it impossible for Persia to go back. Even in Russia autocracy, disguised as constitutionalism, must feel the effect. For very shame, the Czar cannot return to methods and institutions that Abdul Hamid has discarded. To civilization at large the event at Constantinople brings notable grounds for rejoicing. It brings another refutation of that gospel of inferior and superior races which has been made the basis of the brutal ethics of Imperial conquest and exploitation. Islam may rule itself. Liberty and democracy are not the special gifts of the divinely endowed white European races.

JAPAN'S INDUSTRIAL FUTURE.

Since Japan's triumph over Russia, public utterances about the character of the island empire have run the entire rhetorical gamut, from magniloquent eulogy to unfounded denunciation. At first the Japanese were the Anglo-Saxons of the East, but speedily they were metamorphosed into the Yellow Peril. The tumult and shouting have nearly subsided, however, and the sane and discriminating observations recently made in several newspaper interviews by that experienced traveller, George Kennan, only illustrate anew that, "when half-gods go, the gods arrive." Mr. Kennan is quoted as saying in part:

> The Japanese navy, army, and civil services are exceptionally clean. Some of the disappearing shady methods in business are due to a great extent to the fact that formerly only the lowest classes went into trade. Now that the Samurai are entering trade, business will soon be on an entirely honest standard.

There is a view of the Orient which postulates a peculiar psychology of the brown and yellow races. The convolutions of their brains are supposed to differ from the white man's. Even so sagacious an observer as Lord Cromer has descanted on the unpredictable workings of the mind of the East. But separated as East and West are by centuries of culture, the motives now seen to actuate Japan's policy are very plain, common-sense ones. Japan is averse to a hostile attitude towards the United States, because of Japan's heavy commitments in Korea, because Formosa's natural resources are so ample as to preclude any envy of our Philippine possessions, and because Japan is bent on maritime and commercial growth. Very plain and homely objects these, and such as require no metaphysical subtlety in race psychology to fathom

The importance to Japan of Formosa and Korea lies in the stores of mineral deposits, especially of coal and iron, which they contain. These raw products are, of course, native to Japan, which has even exported coal. But in Japan they are not found in the abundance requisite for preëminence in iron and steel production. There seems, however, good ground for the belief that Japan's maritime future is assured. The long, indented coast line has created a hardy, skilful, and adventurous sea-faring population, comparable perhaps to the Greeks of old or the English of more recent times. The modern art of shipbuilding with iron and steel has been pursued with zeal, and has expanded with great rapidity. The Japanese craftsman of former times has made a skilled and capable artisan. The

result has been a very rapid growth in tonnage, and so sharp a competition for freight that the English freighter often loses a cargo to the Japanese. The immediate carrying trade in the waters of the Pacific bordering on the Mikado's kingdom is practically in the hands of the Japanese. Whether the deposits of coal, iron, and petroleum from its outlying dominions will ever give Japan a position in iron and steel comparable with that of the United States or Germany is very doubtful. But Japan is not likely to be outdone in the ocean carrying trade of the Pacific, The manufacturing and industrial future of Japan will doubtless lie in the textile industry. Silk is, of course, the most important manufactured export, but cotton yarns and various products of split bamboo, such as mats, are important. Nor has the earlier mastery of the plastic arts, nor indeed any trade where digital dexterity is important, left Japan without important subsidiary export industries. Porcelain and earthenware, lamps, and matches still contribute heavily to the consignments that seek foreign shores.

Perhaps the most interesting feature of Japan's industrial growth is the improving *morale* of trade upon which Mr. Kennan and other Japanese authorities are laying such stress. The contrast between the Japanese and Chinese merchant's honesty has often been pointed out—to the disadvantage of the Japanese hitherto. The explanation lies in the past social history and structure of Japan. For centuries precedence and dignity in that land have been accorded to the Samurai, the warrior class. Next below, but *longo intervallo*, stood the farmer, whose sedulously tilled rice garden was the principal support of a people almost entirely addicted to a cereal diet. Third, came the artisan class —the smith in iron, and the wood-worker, who often formed a part of the entourage of the warrior gentry. But below them all was the merchant, the trader, the retailer, whose gains were supposed to be at the expense of the other classes and of his own self-respect or honesty. To "a nation of shopkeepers," this may seem an undue disparagement of a necessary and useful function. But it is characteristic not alone of feudal Japan, but of many a Western nation in the same stage of economic immaturity. Aristotle's strictures on the trader or huckster but reflect the dominant view held a generation ago in Japan of the merchant.

Whenever the history of Japanese morals is studied, the fact always comes to the top that, while personal loyalty to one's superior was nowhere so splendidly developed as in Japan, the homely, every-day virtue of honesty was left to vegetate. But the old order changes in Japan, as elsewhere, and the Samurai families are increasingly betaking themselves to trade and commerce, to banking and manufactures. This has the double effect of relieving commercial pursuits of the stigma that has so long rested on them, and of enlisting in trade the flower of the Japanese people. The questionable practices of Japanese merchants in the past have been sometimes condoned by their compatriots, who discovered how various nations of the West, in early treaties and conventions, had outwitted the unsuspecting Japanese. It will not do, therefore, for the West to adopt a smug complacency, and to congratulate the Japanese on their improving standard of commercial honesty. If the descendants of the Samurai can erect a standard of commercial integrity at all comparable to their fine past record for courage and loyalty, we shall be their debtors, and not they ours.

THE TRAGIC SENSE.

The strange return of Eberhard, the New Jersey murderer, to the scene of his crime and his distracted confession, and the mystery surrounding the death of Hazel Drew of Troy, prove anew that the newspapers are dealing constantly in the raw stuff of tragedy. It is dangerous material to handle—this daily chronicle of passion and violence. For tragedy is one thing, and the raw material of tragedy is another. The spectacle of the one is a deterrent, of the other an incentive to crime. The process of transforming an unwholesome passage from the records of the police courts into something akin to tragic drama demands a deeply reflective mind. It must be admitted that the average newspaper reporter is wholly inadequate to the task, even were it not quite aside from the purpose of his calling. It is unnecessary to say that the mind of the ordinary newspaper reader is as unequal to the transformation as that of the reporter.

The truly tragic, according to the Greek critic, stirs the soul with pity for the offender and cleanses it with terror for the offence. The perilous fascination exercised by the newspaper record of crime is due to its entire lack of the tragic "purgation." By the newspaper men the divine terror of the "Agamemnon" would be reduced to the story of a brutal woman who trapped her husband in his bath and brained him with a hatchet. In that form the material is unedifying and unprofitable; but, unfortunately, in that form it is also the most generally palatable. The public, if we may judge by the circulation of the sensational papers, is most pleased when the major crimes are treated with apparent nonchalance or even with flippancy and gloating detail. What is desired is crude sensation, as in the voluminous accounts of the Thaw trial, without troublesome afterthought.

The moral purgation effected by tragedy is to be attributed in large measure to its constant relating of cause to effect—a thing which no reporter can do and which no self-indulgent sinner likes to do. Macbeth indulges in this weak or vicious thought to-day which will cause him to do that bad thing to-morrow which will lead to a bloody deed the day after—and so all our yesterdays have lighted fools the way to dusty death. The tragic sense divines every link in the chain till the first is forged to the last. The newspaper man's aim is clean contrary. His object is to thrill and startle. Last night this man was worth millions; this morning he has not a cent. Interesting. Yesterday this man was a pillar of his church; to-day he has two wives. Amusing. Last night he was a respected bank cashier; this morning he is in Canada. Alarming. This morning she was selling lace in a big dry goods store; to-night she is in the East River. Shocking. He quietly entered the house and put a knife into his wife and three children. Horrible. Horrible, shocking, alarming, amusing, interesting—sensations of the moment gradually accumulating into an abiding sense that this is a pretty nasty world; that is the limit of instruction in the newspaper account of crime. How different from the reflection of the villain Edmund in "Lear," when deep-dyed in evil he meets his end: "The wheel is come full circle; I am here."

Even when the sense of tragedy falls

on the criminal, and he comprehends that he has done what humanity cannot tolerate, no Shakespeare is at hand to record the fact. There is not ordinarily even a reporter. The retribution takes place in horrid silence, and the Eumenides tear dumbly in the inarticulate spirit. If the offender is young and has friends, the sensational newspapers may create for him a wave of ungovernable pity, but the terror to which they appeal is not the moral terror which purges, but the physical terror of pain and death which is felt by every coward. Not every criminal, however, has the intellectual vigor to discern, like Edmund, on his death-bed, that the gods are just. Commonly, they step into eternity with the hard bravado that they wear in life, or are shuffled off struggling, like dogs that have been caught killing sheep. The sordid hero of this sordid drama is the executioner. The only comment is that society has put away from the light something vile. In the old days it was regarded as wholesome to let the world see men dangling in chains. The comparatively recent exclusion of the public from executions is evidence of our perception that there is no tragic cleansing wrought in the emotions of the spectators by the punishment of an unrepentant criminal. On the contrary, the effect is a sense of degradation, and a feeling that the great stage of life has contracted into a den where animals fight and reptiles strike.

The newspaper records of crime weaken the will by reminding men of their moral insignificance; tragedy strengthens it by reminding them of their moral greatness. For, as the wisdom of the Greeks and of the Elizabethans divined, tragedy can befall only a great man in whom good and evil elements are mingled. In his destiny more than mortal powers participate. When Œdipus died, the sky lightened and strange voices were heard. When the devils contended for the soul of Faustus, Christ's blood streamed in the firmament. We no longer believe that tragedy is concerned only with the fates of lords and ladies. Since Wordsworth found it in the shepherd, and Thomas Hardy in the dairymaid, we have come to recognize the tragic possibilities in the common man who every day does as mad things as a king. But the common man towers to tragic proportions only when the contention of good and evil in him is related to superhuman powers—to the "something not ourselves which makes for righteousness," and to the something not ourselves which opposes it. Into the pity and terror of that struggle the crime-monger never penetrates; and it is not the least of our grievances against him that his public revelling in horrors blunts the keenness of our own tragic sense.

RECENT FRENCH FICTION.

PARIS, July 10.

"Aloyse Valérien," by Edouard Rod, marks the highest point yet reached by a novelist who has had a long and honorable career, but who has not carried off the first prizes. This new novel has made the occasion of a brief preface to explain the meaning of his works. There were four tentative beginnings between 1881 and 1885. Then came three "psychological studies"—these were the fashion then in novels—and one of them, "Le Sens de la vie," won high honor from the public and the French Academy. In 1892 he began the "études passionnelles," ten in all, of which the present novel is the latest; the preface announces another. In 1897 appeared the first of seven "social studies" so far published, also in the shape of very concrete story-telling novels. For twenty-seven years in the life of a writer who is not yet fifty-two, these twenty-four novels, all respectably, if not sensationally, successful, represent a serious literary product; and even this does not include the book which, in 1891, made him known as a penetrating critic, "Les Idées morales du temps présent." The new novel has the strength—and the limitations—of the others. The characters are no longer ostensibly Calvinists; Paris and the French province furnish the living background for which the author's native Canton de Vaud has so often served. The writing, the manner of looking at life, is not unlike that of the younger and more rapidly rising novelist, Henry Bordeaux, who is of the opposite—the French Catholic—side of the lake of Geneva. Nothing could be more instructive than the contrast of the latter's characters, on the one hand, in their spontaneous utterance—a naturalness softening even the tragedies of lawless passion and leading to some solution of them—and, on the other, the self-consciousness that insulates and the need of self-righteous respectability that fetters all the characters of M. Rod. Long ago it was noted that Catholics and Calvinists are as widely separated when unbelievers as before. Even in sin and crime M. Rod's characters make the reader feel that they do not belong to populations having the intellectual and emotional habits of confession to man as well as to God alone. Perhaps it is this chill reserve of their souls, their intense property in self and lack of human self-surrender, which prevent Edouard Rod becoming a great French novelist, although he stands at the head of the Swiss line.

Michel Corday's "Mariage de demain" directly attacks, with this author's usual boldness, a social problem less commonly solved in France, where social classes are hereditary castes, than in the United States, where the possession of money opens practically all doors. A young doctor, nephew of a rich manufacturer—that is, a *bourgeois*—has resolution enough to marry the factory girl whom he has learned to esteem as well as to love. His mother, daughter of a man of science, approves and tries that difficult task which has failed with more than one daughter of American *bourgeois* married into European nobility—the social education of the transplanted one. The uncle of the husband, the brother who is a man of the world, and even the sister, who plays at humanitarian reforms of comfortably future realization, take a steady, utterly unsympathetic stand against him. Perhaps the heroine would not have been so adaptable in French real life as she is in the pages of the novel, where she even contrives to rouse the energies of the worn-out caste which has been obliged to receive her. The whole tendency of the book runs counter to Paul Bourget's "Etape," which has popularized in France the reactionary doctrine that there is no quick bursting of birth's invidious bonds. In France it is this seemingly irrepressible conflict between wage-earners as a class and property-holders as a caste which has made possible the discomfiture of the Church, the invasion of the state by Socialism, and all the consequent threatening social revolution. In America, on the contrary, salvation has so far been found in the free and constant circulation of classes—three generations from shirt-sleeves to shirt-sleeves. But in French middle-class atmosphere Michel Corday's story is revolutionary.

"L'Idylle de Marie Biré," by Gustave Geffroy, is the pathetic story of a naïve country girl whom convent education in her native village has not prepared to face the wickedness of Paris, where she takes service. Not without injury, she escapes back to the village, where she finds at last a worthy husband in a working boy, ignorant as herself, who condones because he humanly understands. M. Geffroy shows no particular bitterness against the unpractical otherworldliness of his convent school for the poor; but he has also nothing to say about making marriage legally easier in France, which might help to stay the flowing of people fit only for country life into the great city. Two other novels handle common life with less earnestness, to which fact, perhaps, they owe their

heavier sales. "La Femme bourgeoise," by Marcel Prévost, is in the vein which has won him popularity. Three feminine types are studied "in full amorous crisis," with the natural conclusion that "Every woman's soul is a world." Yet surely types no more exist in real life than do the faces of composite photographs. "Camille Frison," by André Vernières, a new writer, is the romance of a Paris sewing girl—one of the thousands whose youth and grace attract from the whole world those clothed in purple and fine linen. Bound to poverty beside countless riches, their lives cannot pass without the trials and temptations which are the tragedy on which fashion builds its comic opera. Apart from the pathos of the story, this novel gives a well-studied picture of an entire social class; it ranks worthily with those novels, honorably French, which portray the history of an epoch from the lives of its working girls—"Florise Bonheur" of Adolphe Brisson, and "L'Apprentie" of Gustave Geffroy. There could be no higher praise; and Lucien Descaves of the Goncourt Academy, friend of the lowly, writes a preface accordingly. "Les Affranchis," by Abel Hermant, who is also in training for the Academy, is another of this author's chronicles of contemporary life among the few that make up the fast set. Needless to say, the tale is told from that superior vantage point which sees foibles in relief, and smiles disinterestedly at all absence of moral sense.

"La Belle au bois dormait," by François de Nion, shows how undying is literary artifice once discovered. The story reverses Rip Van Winkle, and makes us live over a gallant and touching adventure of the time of Louis XVI. This author has been writing fairly successful novels for twenty years, with a certain air corresponding to the fact that he is a count and former attaché of an embassy. "L'Affaire Nell," by Louis Estang, also makes use of an old artifice, as good as ever for giving the reader his fill of incident, and, by the way, of insight into a special world. An attempt is made to dispossess the lawful heir of a great inheritance, with off-color judges and lawyers, but also with their honest and honorable compeers. This does not prevent the heroine winding up, after breathless trials, with only one-tenth of her original fortune; but she has a husband to make up for what she has lost.

With "L'Espoir," by Georges Lecomte, we come to a novel of some importance as a contemporary document; and yet, like most of the writings of this lawyer and art critic, who for nearly twenty years has had his say in fiction, it is likely to be little read outside of France, and there only by a party. It is centred in the life of *intellectuels* just after the war and Commune; and it is curiously alive with such art passions as found expression in Zola's "Mes Haines." How the nascent Republic gathered up all these intelligences and passions in revolt against the influences of their childhood appears in these pages—a strange mixture of fermenting ideas and independent thinking, with hatred of Philistines and, to foreigners, a quite unnecessary obsession of sex. The author himself does not seem to realize that the success of Manet and Claude Monet, and the others, which his characters predict at a time when the Philistine raged, has not only come—but is rapidly going in the sure waves of reaction. Perhaps, as a slight token of the turn of the tide, the first appearance of Alphonse Daudet's younger son as a novelist may be significant. Lucien Daudet's "Le Chemin mort" is a story of latest contemporary life; and, while the author is not evidently filled with the anti-Semitic and anti-radical passions of his agitating brother Léon, yet there is the same ever-present undertone of dissatisfaction with things as they are. S. D.

Correspondence.

TREVISA'S "GOD ME SPEED."

TO THE EDITOR OF THE NATION:

SIR: The Cambridge "History of English Literature" (Vol. II.), in the course of an excellent article on John Trevisa, and others, speaks of his "childlikè naïveté," without, however, affording us any example of this peculiarly mediæval trait. To my mind no better instance of the child spirit could he found than the few verses given below, which, so far as I know, have never heen printed, or noticed, in any account of this interesting man.

Trevisa, in 1398, set them as "fore-word," to use Dr. Furnivall's expression, to his translation of the great encyclopædia "De Proprietatibus Rerum," written by Bartholomæus Anglicus.

Picture the scene. This learned and advanced scholar, recently expelled from Oxford for his Wycliffite leanings, and now under the protection of a powerful noble, sits at a desk in the little cell assigned him in Lord Berkeley's house, and gazes reflectively from the huge tome of Bartholomæus, to his own vellum leaves, still white and bare. For many a day he is to be as fast chained to his ink-pot, as ever was the vast volume to its place. No more pleasant walks with my lord and his daughter, through sunny fields and under greenwood shows. He picks up his freshly sharpened quill, heaves a great sigh, and—pensively hut firmly—makes a cross.

\+

. . . . .

In nomine patris et filii et spiritus sancti, Amen!

. . . . .

A Croys was maked al of reed
In the bigynnyng of my book
That is clepid god me speed,
In the first lessoun that I took.

Thanne I lernede A and B,
And other lettris by her names;
But alwey god spede me
Thoughte me needful in alle games.

If I pleyede in feeld or medis
In stilnesse either with noys,
I praiede help in alle my deedis
Of him that dyede on the croys.

Now dyuerse pleyes in his name
I schal lete passe forth, and fare,
And auenture to pleye o. long game;
But yit also I schal spare.

Bothe wodis, medis, and feeldis,
Placis that I have pleyed inne;
And in his name, that al thing weldis,
This game I schal bigynne.

And praye help, counseil and reed,
To me that he now wil sende,
And this game wel rule and leed,
And bringe it to a good ende.

A——M——E——N——.

With the exception of the substitution of "maked" for "maad," and the transliteration of the Old English characters that do not appear in our modern alphabet (my copy is taken from MS. B. M. Harley, 614, fol. 4h), I have collated the reading with Harley 4789, and a copy in University Library, Camhridge. Neither improves on this. The other two copies, in private hands, are inaccessihle.

Most people know the old rhyme beginning "Christ his cross shall be my speed." Less known parallels are the "Alphahetum" (unpuhlished) in MS. Caius College (Camhridge), 176, p. 482—

Cryste crosse me spede and seynt nycolas
A b c A doth syngnifye,
etc.;

and the rhymes in the "Bahees Book," II., 303, from Sloane, 1986—

If that thou be a yong enfaunt
And thénke the scoles for to haunt
This lessoun schalle thy maistres the merke
Croscrist the spede in alle thi werke.

HENRY NOBLE MACCRACKEN.

Oxford, England, July 9.

A LIBRARY IMPOSTOR.

TO THE EDITOR OF THE NATION:

SIR: A man giving two different names is visiting lihraries remote from Boston, claiming former connection with the manuscript department of the Boston Puhlic Library, and, on the strength of this claim, horrowing money which he fails to repay. He has heen reported from lihraries in Ohio, New York, and Pennsylvania. He is an impostor, and, so far as I know, has had no connection with any department of this library, although he wins confidence by showing familiarity with lihrary matters. He cannot he identified by us from the description given, nor hy either name.

HORACE G. WADLIN,
Librarian.

Boston Public Library, July 21.

Notes.

It is now announced more definitely that Swinburne's study of "The Age of Shakespeare" is in the press and will be published hy Harper & Bros. ahout the first of Octoher.

Among the new books on John Murray's list are "The Life of Major-General Sir

John Ardagh," by his wife; "From Ploughshare to Parliament: a Short History of the Potters of Tadcaster," by Georgina Meinertzhagen; "The Life of Lord Norton," by W. S. Childe-Pemberton; "The Letters of a 'Remittance Man' to his Mother," by W. H. P. Jarvis; and "The Reminiscences of a Stonemason."

The Cambridge University Press (G. P. Putnam's Sons) will print 500 separate copies of Prof. J. M. Manly's article on "Piers the Plowman and its Sequence" from the second volume of the "Cambridge History of English Literature." In its review of that book last week the *Nation* commented on Professor Manly's thesis of the dual authorship of the poem.

The Codex Vossianus of Lucretius has been elaborately reproduced by phototype at Leyden.

A selection from the letters of the late Thomas Bailey Aldrich, edited by Ferris Greenslet, appears in the *Century Magazine* for August.

After a lapse of ten years W. E Griffis brings out a new edition of his abridgment of Motley's "Dutch Republic," carrying the record down to include the second Peace Conference at The Hague. The book is fully illustrated with portraits and views of buildings, but contains only a single map, and that inadequate. Such an omission is unpardonable.

We have on our table the first volume of "The Complete Works of George Gascoigne," edited for the Cambridge English Classics (Putnams), by Prof. John W. Cunliffe of the University of Wisconsin. We shall have more to say of the work when the second, and concluding, volume has appeared.

The fourth volume of the Humanists' Library (The Merrymount Press), containing Sir Philip Sidney's "Defence of Poesie," is based on Dr. Ewald Flügel's edition of the text and has had the advantage also of being read in proof by him. To the "Defence" are added the "Letter to Q. Elizabeth" and the "Defence of Leicester." Prof. G. E. Woodberry furnishes an appropriate introduction; the glow of Sidney's style and the exaltation of his mood finding fit response in the editor's vein of enthusiasm. And Prof. Woodberry does not fail to point out the genuine devoutness of the author's mind and the ethical end of his discourse which preserved his work as an English classic, whereas the Italian critics and philosophers from whom he drew so heavily have passed from men's memories. But it is the beauty of the type and the honest excellence of the paper that make the books of this series so desirable, and the present volume is in this respect of the same character as its predecessors.

In a tiny volume John Lane Co. has published a paper on "The Training of the Imagination," written by James Rhoades twenty-three years ago for an essay-society of public schoolmasters and printed afterwards in the *Journal of Education*. Despite its title it is really a practical little treatise, with hints for bringing a touch of solid inspiration into the schoolroom.

The advantages of a trip by automobile in foreign lands over every other mode of travelling have rarely, if ever, been so clearly shown as in Frank Presbrey's entertaining book, "Motoring Abroad" (The Outing Publishing Co.). We are convinced that the most prejudiced opponent of the motor will be converted by it. The independence of the tourist, the rapidity and ease with which, like a bird, he flies from place to place, the opportunities for viewing natural scenery under the most favorable conditions, the intimate touch everywhere with human nature, impossible to the railway traveller, but of keenest interest and enjoyment, are all strikingly portrayed. There is much, it should be added, that is not intended for the casual reader, for the book is practically a guide for automobilists; but the detailed information about machines, custom houses, roads, and inns is mostly in separate chapters. The trip lasted two months, and embraced Normandy, Brittany, and the British Isles. The narrative is not taken up with accounts of visits to museums, picture galleries, palaces, and cathedrals, but is simply an amplification of notes made in the auto as it sped through the country and stopped at farmhouses and villages. To most readers the part relating to France will have the greatest interest, but there is much that will be new to many readers in the scenery and incidents of the Scottish and Irish parts. One thing is made very evident in Mr. Presbrey's story, that everywhere he went, but especially in France, the roads are cared for infinitely better than in this country. The chapter on this subject is full of valuable and useful suggestions to town officers. The numerous reproductions of photographs add much to the charm of the book, which we can confidently recommend to the stay-at-home who is afflicted with the somewhat prevalent desire to see Europe from an automobile.

Ireland is a country peculiarly well suited to the automobiling tourist. The rain, which, when not continuous, falls almost hourly, and the great distances that lie between good inns are serious drawbacks to one who walks or bicycles. In his amusing book, "Wanderings in Ireland" (G. P. Putnam's Sons), M. M. Shoemaker shows how, in a motor-car, one may defy the soft rain and fly past the worst hotels. He opens a fascinating prospect to those who dread the heat of summer. "We wear fur coats and we use fur robes all the time," he writes, in mid-June, "and would be most uncomfortable without them." In the course of his tour through the north, south, and west, he was entertained at several country houses, and he gives lively accounts of Irish home life. Well read in Irish history, he imparts a good deal of information, without becoming tedious. Perhaps tedium is not likely to characterize a book whose style, like Mr. Shoemaker's, takes on the swift pace of his mode of travel. Unlike many passing tourists, he shows a keen appreciation of the misery of those who cling to the barren lands in the west. Most travellers see only the picturesque in Achill, but Mr. Shoemaker found it "sad and stern and strange," and marvelled at the blind passion of its wretched inhabitants for that thin soil and bleak coast. The effect of the blessing of St. Patrick on Ireland seems to be on the wane in one respect, for Mr. Shoemaker records the discovery last year of a snake three feet long. His book is well illustrated by full-page photographs, and can be read with entertainment even by those who have no interest in motoring.

Dr. W. A. Craigie, joint-editor of the "Oxford English Dictionary," presents a double section of Volume VIII., Reserve to Ribaldously. There are 2,763 words recorded as against the "Century's" 1,658, and Johnson's 317, and 15,983 quotations as against the "Century's" 1,835 and Johnson's 948. Johnson was, comparatively speaking, a copious quoter, but his erudition would surely have been aghast at the magnificent verbosity of the modern English. In all this list there are only two or three native words of importance. There is a considerable number of Greek derivatives beginning with Rh, prepared by C. T. Onions; but in perusing these teeming pages, one is struck by the fact that English from Reserve to Ribaldously would be an open book to any one commanding a Latin language. The great majority of the words have made their pilgrimage through the Romance tongues. Many of them are resistlessly resounding polysyllables. A few have been revoked or are retreatant. Others are revolant and reviviscent. The great bulk of them is constituted of words in good and regular standing compounded with Re-. It is interesting to note how much Johnsonese there was before Johnson. In 1664 H. Power wrote, "The most full evidence against this pretended vacuity is from the returgescency of the empty bladder suspended in this vacuity." You may explain Garnett's description of the Oxford cardinal, "the retrospicient Newman," as a relic of the classical invasion of the eighteenth century; but away back in 1611 the register of the Privy Council of Scotland records the words of some one who "callit the Eril ane retrospitiane, whome God has spewit furth of his mouth"—scornful quadrasyllable amid the curt Scots. "Riant," which sounds like a modern fad-word, and was oddly enough petted by Carlyle, occurs as early as 1567 in Thomas Paynell's English version of the "Amadis" "What an evill is it to be depryved of all the goodnesse that I receyved of hir riant and laughing eye." In 1690 Locke wrote: "When Ideas float in our mind without any Reflection or regard of the Understanding, it is that which the French call *Resvery:* our language has scarce a name for it." If he had turned to the "New English Dictionary" he would have found that Henry More used the same form in 1688, John Davies in 1657, Dorothy Osborne in 1653, and that the form "revery" was in use as far back as Chaucer. These historical illustrations should make us think twice before apologizing for an innovation.

"The Reminiscences of Albert Pell, Sometime M. P. for South Leicestershire," have been edited with an introduction by Thomas Mackay, and published by E. P. Dutton & Co. Pell was a member of the House of Commons from 1868 to 1885; and during his busy life also he served his country locally as churchwarden, overseer of the poor, and surveyor of the highways, and was so frequently summoned to special juries that at last he successfully appealed against any further such calls on his time. He held strong views concerning the evil done to the country and especially to the laboring classes by too lax an administration

of poor law relief; and while always in favor of a living wage, he was thoroughout his life a strenuous advocate of poor law reform. It is not, however, either his opinions or his political services that gives his reminiscences their special value. Mr. Pell was a practical farmer and land owner. He knew intimately the rural life of the English Midlands during the greater part of the nineteenth century; and in his racy unaffected language he offers a series of pictures of English life in hall, farmhouse, and cottage, which are a real addition to the literature of social England. He describes the tasks of the laborers, the share taken in outdoor work by the women and children, the village church and its parson, and the quickened life of the church which followed the ritualistic movement. Incidentally he tells of the various currents of opinion that passed over England in his day. He notes the hostile feeling of the upper classes towards the North during the civil war—a feeling which he did not share, and which excited his surprise. He himself, entertained a hearty admiration for President Lincoln, an admiration which he expresses in a characteristic tribute:

> I have often thought how effectively, if Moses had been out of the way, Lincoln could have taken his people through the long trail in the wilderness to the Promised Land. No other character in history, that I can recall, would have been equal to the business."

In his later years Mr. Pell made several visits to the United States, but except for an interview with General Sherman, he gives no account either of his doings here or of his impressions of this country.

Gaillard Hunt's "The Journal of the Debates in the Convention which framed the Constitution of the United States, May-September, 1787, as recorded by James Madison," in two volumes (Putnams), contains more than Madison's notes. He has drawn upon the memoranda of other members of the Convention, and on the correspondence of Madison during the Convention, and has added the personal characterizations of the members by Pierce. The text is certainly an improvement on earlier issues, and is more free from errors due to faulty reading of the manuscript. Yet the result does not give a definitive edition of the debates, and much remains yet to be done in the study of available material. Neither the Patterson nor the Hamilton notes are referred to, nor is the study of the Pinckney draft by Professor McLaughlin. The contemporary letters could have been increased in number, and critical notes on sources are needed to assist in determining the relative value of records. Capable as Madison was as a reporter, his rough notes are far from complete, and they require every test the contemporary records will afford. The discussions were carried into the State conventions, and not a little could be gained from that source, as well as the later writings of those who took part in them. The convenient form of this reprint is hardly sufficient to justify its existence, and there are not a few misprints which could have been avoided.

The H. R. Huntting Company of Springfield, Mass., has issued a second volume in its series of "Indian Captivities," begun with the Captivity of Mrs. Johnson. It contains "The Indian Captive, or a Narrative of the Captivity and Sufferings of Zadock Steele, related by himself, to which is prefixed an account of tbe Burning of Royalton," a work first published in 1818. The events recorded took place in the years 1780-1782, and though not very important in themselves, furnished the occasion for a narrative full of incident and adventure. The burning of Royalton, Vermont, in 1780, was a brutal act of vandalism committed by the British and Indians, and deserves to stand beside the more famous burning of Deerfield. Zadock Steele was a Connecticut man, a recent emigrant to Vermont, and was carried off by the enemy to Montreal and there eventually lodged with others in a British prison pen. But fifteen pages of his story concern his experiences with the Indians, the remaining ninety dealing with his captivity on Prison Island in the St. Lawrence and his escape back to Vermont. If Steele wrote the narrative as it was printed, he possessed a remarkably vigorous style, showing little evidence of his want of education and many traces of his familiarity with the Bible and with contemporary poetry. The narrative well deserved reprinting, and our only regret is that so little pains was taken with the editing. The new matter—publisher's statement and introduction—should have preceded the facsimiled title page and the reprinted portions on pages v. and vii; some attempt should bave been made to annotate the text at points where brief footnotes would have aided in clarifying the narrative; and, most important of all, a better map should have been provided. The rough draft at the end of the volume contains only the route of the captives northward and ignores entirely the return route of Steele and his companions from Prison Island to Bennington. The text makes it quite possible to follow this route with considerable accuracy, the only uncertainty of importance being the exact spot where the refugees first reached Lake Champlain after their struggles through the forest from Lake St. Francis. This point probably lay somewhere between the Little Chazy and Plattsburg, as Steele does not mention crossing either of the Chazy rivers. From the Saranac River to Pittsford Fort, the route is fairly clear in all essential particulars. An interesting evidence of local usage is the name "Gilliland's Creek," applied by Steele to the river that certainly as early as 1766 was known on official maps as the Boquet River, a name familiar to everybody in Essex County to-day.

"The Process of Government," by Arthur F. Bentley (The University of Chicago Press), is described by its author as "a study of social pressures." Stated in summary form, Mr. Bentley finds the true basis for an interpretation of society in the activities of multifarious social groups, whose characteristics should be analyzed and stated wholly apart from any theory of psychic causation. His method is critical rather than constructive, however, and he expressly disclaims any intention of elaborating a complete theory of politics or society. What he does, or at least vigorously tries to do, is to show the inadequacy and futility of theories which seek to explain social phenomena in terms of group "consciousness," social "purpose" or "will," or other metaphysical categories, and to insist upon the need of a minute study of actual social processes before philosophizing about them. Can it be that sociology is at last to betake itself to the study of history? Mr. Bentley's volume is bulky and diffuse, and its style often flippant, but its acute and outspoken criticism—a criticism which, from the author's point of view, leaves few of his co-workers much ground to stand upon—should cause it to be welcomed by speculative sociologists as at least a rod of chastening.

The eight lectures that make up President Woodrow Wilson's "Constitutional Government in the United States" (Columbia University Press), are a suggestive, but not very profound, examination of certain aspects of the American system, viewed primarily as an attempt at self-government in a country of diverse local circumstance. President Wilson naturally finds our greatest and most permanent contribution to be the States, since in them we have at once the greatest variety of interests and the most striking success in political adaptation. In the Federal field, the President alone represents the whole people, while the House represents its population masses, and the Senate its local spirit and diversity. The author's defence of the personal and poltical attitude of the Senate, however, is singularly insufficient, while the implication that the House, in sacrificing discussion and leadership to efficient organization, has really become an efficient legislative body, will hardly bear the test of thorough examination. There are strong words on behalf of the courts, and a pretty obvious rapping of President Roosevelt for his treatment of them. As for the boss and the machine, no cleaner bill of health for their essential activities has lately come under our eye. It is certainly matter of regret that, with such keen insight and so much literary skill, the distinguished author should here have held his plough with so light a hand.

A child of many countries is Prof. A. C. Coolidge's series of lectures on the United States as a world power, first delivered in Paris and now offered to us in a German translation. The English original is not to appear for some months. Dr. Walter Lichtenstein, in charge of the European historical collections in the Harvard Library, has produced a very readable translation, the simplicity of which will be no defect in the eyes of non-German readers. The publishers of "Die Vereinigten Staaten als Weltmacht" are E. S. Mittler & Sohn, Berlin.

A. R. Gordon, in his "Early Tradition of Genesis" (imported by Scribner) aspires to no startling originality. He is content to walk mainly in trodden paths; but he has seen things for himself by the way. The historical questions in Genesis i.-x. are discussed—the analysis, age, and relation of the documents, sources of the traditions, the cosmogonies, myth, and legend, historical tradition of the Hebrews, social and religious instruction; and tbere are chapters on Israel's conception of God, the nature and destiny of man, revelation, and inspiration. Translations of the separated and reconstructed "documents," with critical and exegetical notes, are appended. These notes contain little that will be new

to scholars, but they will doubtless be serviceable to the students whom the author seems to have had primarily in mind. A second appendix gives for comparison translations of the Babylonian cosmologies, chiefly Englished from Jensen. It may be remarked that the "Babylonische Weltanschauung" has not darkened the author's heavens, but that in the interpretation of Semitic sacrifice he is too much under the spell of Robertson Smith's brilliant speculations. In details he is confident about some very doubtful things, *e. g tehōm* is "no doubt" a foreign word, derived from the Babylonian Tiāmat. Some proof of the possibility of this assumption (taking in, of course, the Arabic Tihāmah) would be more profitable to the rest of us dull mortals than confessions of unshaken faith.

Every one knows that the devil can quote Scripture for his purpose, but there has been a notable need of a clear and painstaking monograph setting forth how the devil, saints, and ordinary people have in times past made use of the sacred writings of Jews and Christians. Such an essay is now supplied in Dr. George Holley Gilbert's "Interpretation of the Bible: A Short History" (The Macmillan Co.). In ten brief chapters the exegesis of the various ages is described, including the Jewish interpretation in the Talmud and Targums, Philo of Alexandria, the New Testament interpretation of the Old, Biblical Interpretation in the Middle Ages, and that of the reformers and of the seventeenth and eighteenth centuries. The final chapter is devoted to modern criticism, or, as Professor Gilbert entitles it, "The Scientific Era of Biblical Interpretation." The difficulty in producing such a manual is the over-abundance of material, but this treatise keeps the salient and noteworthy to the front, and allows one to follow interestingly a remarkable and instructive history.

In the series of works on Biblical and theological research issued in recent years by French scholars, under the general title, Études bibliques (Paris: Victor Lecoffre), the latest addition is a commentary on the twelve minor prophets, by A. van Hoonacker, professor in Louvain, entitled, "Les Douze petits prophètes." The volume contains a new translation, commentary, and critical discussions.

The Catholic publication house of Ferdinand Schöningh, in Paderborn, has begun a new series, Studien zur Philosophie und Religion, under the editorial management of Dr. R. Stölzle, of the theological faculty in Würzburg. The first number is "Martin Deutinger als Ethiker: Ein Beitrag zur Geschichte der christlichen Ethik im 19 Jahrhundert," by Dr. Georg Sattel.

A modern religious encyclopædia will soon be published by J. C. B. Mohr of Tübingen, entitled "Die Religion in Geschichte und Gegenwart: Handwörterbuch in gemeinverständlicher Darstellung," edited by F. M. Schiele, with the coöperation of Hermann Gunkel and Otto Scheel. The work is to appear in four or five volumes, of about one thousand pages each, and to be finished in 1911. The first *Heft* will be issued in September. Illustrations and charts will accompany the text.

In his new work on Acts, entitled "Die Apostelgeschichte," constituting Part iii. of his "Beiträge zur Einleitung in das Neue Testament" (Leipzig: Hinrichs), Prof. Adolf Harnack of Berlin returns to his defence of the Lukan authorship and substantially historical character of the Acts. He undertakes a literary analysis of Acts, finding in the First Part evidences of three sources. A prompt reply to Harnack has been published by Prof. W. Bousset of Göttingen, in the *Theologische Rundschau*, No. 6.

"Der einzige Reine unter den Unreinen" is the title of the latest issue of the series known as Für Gottes Wort und Luthers Lehr (Gütersloh: C. Bertelsmann). The author is Prof. K. F. Nösgen of the University of Rostock, a recognized conservative scholar. The purpose of the book is clearly indicated by the sub-title, "Eine Darlegung von der Sündlosigkeit Jesu Christi."

In Gustav Pfannmüller's "Jesus im Urteil der Jahrhunderte" (Leipzig: Teubner), the different conceptions of the personality of Jesus prevailing in theology, philosophy, literature, and art, from the earliest times to the present day, are fully described and critically discussed. Especially interesting and instructive is the retrospect of the conceptions of Jesus embodied not only in ethics and philosophy, but also in mediæval and modern poetry and in works of art, from the oldest pictures in the Roman catacombs to the latest delineations of scenes from the life of Christ by modern painters, such as Gebhardt, Klinger, and Fritz von Uhde.

As a sort of argument for the union of the four dozen Protestant churches of Germany Dr. F. M. Schiele of the University of Tübingen, has published, through J. C. B. Mohr of that city, a new work, chiefly historical, entitled, "Die kirchliche Einigung des evangelischen Deutschland im 19. Jahrhundert." The book furnishes clear insight into a difficult and involved problem.

A collection of sermons, from the point of view of advanced theology, "Von Gott und Gotteswort," by Pastor Julius Bode of Bremen, has just been published by Friedrich Schaumburg, Stade.

"Die alttestamentliche Religion im Rahmen der anderen altorientalischen," by Prof. Ernst Sellin of Vienna, is a summary of a non-technical character, by an archæologist experienced in Oriental research, showing on the one hand the close connection between the Old Testament religious teachings and those of other ancient Oriental and not merely Semitic religions, and on the other hand, the marked differences.

In the series of scholarly histories known as Allgemeine Staatengeschichten, edited by Prof. K. Lamprecht, of Leipzig, and published by F. A. Perthes, Gotha, N. Jorga has just issued the first volume of a "Geschichte des osmanischen Reiches," covering the subject to the year 1451. Its character is well indicated by the sub-title, "Nach den Quellen dargestellt." The author, whose work on the history of the Rumanian people is well known, has a thorough command of the occidental, Byzantine, and Slavic sources in the original, but has had access to the Turkish authorities only through translations.

To Meyers Volksbücher, published in Leipzig and Vienna by the Bibliographisches Institut, and offering at a normal price the best of literature in fiction, science, history, biography, etc., has recently been added the 1,500th volume. The latest issues contain works of Ottilie Wildermuth, Fritz Reuter, Erich Schmidt, Alfred Kirchhoff, and Max Dietrich.

The "Genealogischer Hand- und Schulatlas" appears now in its third edition with a new title, new editor, and new material. It is now called "Genealogisches Handbuch der europäischen Staatengeschichte" (Stuttgart: Cotta); the deceased editor, Dr. Ottokar Lorenz, is succeeded by Dr. Ernst Devrient; and the new features include tables of various minor ruling families of Europe, past and present. The work contains in all eighty-two genealogical tables.

B. Kahle's "Henrik Ibsen, Björnstjerne Björnson und ihre Zeitgenossen" (Leipzig: Teubner) gives an interesting account of the development and character of the two most distinguished Norwegian poets, and of the influence exerted by them upon the literature and culture of Scandinavia and other European countries, especially Germany. The author, a professor in the University of Heidelberg, presents the subject in an attractive and instructive form.

The Gutenberg-Gesellschaft, after a silence of three years, has issued a triple volume (V., VI., VII.) of its Veröffentlichungen, and annual reports for the two fiscal years, 1905-6 and 1906-7. The fifth report contains in abstract Dr. Gottfried Zedler's address at the annual meeting of 1906, dealing with Gutenberg's earliest type fonts; the sixth, in extenso, the address of Dr. Alfred Hagelstange at the meeting of 1907, on "Our Inheritance from Gutenberg, and the Duties of the Present Day towards Him." These duties, the author held to be a greater regard for printing as an art; and he pointed out the grievous sins committed by modern printers, especially of magazines and newspapers. The new volume of the Veröffentlichungen contains four papers: Dr. E. Schröder shows that the "Weltgericht" fragment, printed by Gutenberg, which was described in an earlier volume of the publications, is really part of the old German Book of the Sibylla; Dr. Zedler investigates the occurrence of the type of the forty-two-line Bible in Peter Schöffer's Missal of 1492; Dr. W. Velke discusses Peter Schöffer's advertisements; and Dr. Adolf Tronnier of the City Library of Mainz deals with the missals printed by Peter Schöffer and his son Johann. Dr. Tronnier throws some interesting side lights on the civilization of the Middle Ages. The typographical part of Dr. Tronnier's investigations have extended to a comparison of the several copies of each missal, so far as such copies were sent to Mainz for the purpose. In an appendix the author has brought together the results of his investigations in a formal bibliography.

The Mecklenburg Ministerium has made an appropriation for the establishment of a Low German collection, to be deposited in the University Library at Rostock. A fair collection is already on hand, and this is first of all to be satisfactorily catalogued.

William Lewis Montague, for many years instructor in Latin, and then professor of modern languages at Amherst College, until his resignation in 1895, died at his home on Monday. He was born in Belchertown, Mass., in 1831, and was graduated from Amherst in 1855. Besides his work as teacher

he served as librarian in Amherst College from 1864 to 1878, and registrar from 1860 to 1880. His publications include "History and Genealogy of the Montague Family in America" (with George W. Montague), "Modern Italian Readings," "Bornier's La Fille de Roland," "Half-Century Record of the Class of Fifty-five, Amherst College."

Mrs. Cashel Hoey, a novelist of some note and a general literary worker, has died at Beccles at the age of seventy-eight. Among her better-known books are "A House of Cards," "Falsely True," "Griffith's Double," and "A Stern Chase."

The death is announced of Charles J. Dunphie, a journalist who for more than fifty years was connected with the London *Morning Post*, more particularly with the departments of drama and art. His memory went back to the days of Dickens, Thackeray, and Disraeli. His volumes of essays, "Sweet Sleep," "The Chameleon," and "Many-Colored Essays," won him a considerable reputation.

Dr. Eberhard Schrader, the distinguished professor of Semitic Languages in the University of Berlin, has died at the age of seventy-two. He had earlier in life held chairs at Zurich, Giessen, and Jena, and was called to Berlin in 1875. Among his works are: "Studien zur Kritik und Erklärung der biblischen Urgeschichte," "Die assyrisch-babylonischen Keilinschriften," "Die Keilinschriften und das Alte Testament," "Höllenfahrt der Istar."

From Berlin comes the announcement of the death of Dr. Otto Pfleiderer, professor of systematic theology in the university of that city. He was born at Stetten bei Kannstatt, in 1839, and studied chiefly at Tübingen. Among his works are "Wesen der Religion," "Moral und Religion," "Paulinismus," "Fichte," "Geschichte der Religionsphilosophie von Spinoza bis zur Gegenwart," etc.

EDWARD VI. AS HERO.

King Edward VI.: An Appreciation, attempted by Sir Clements R. Markham; with sixteen portraits. New York: E. P. Dutton & Co. $3 net.

Sir Clements R. Markham, president of the Royal Geographical Society, has been more successful as a supporter of Arctic exploration than as a discoverer of new lands in the field of history. For twenty years he has been endeavoring to convince the world that Richard III. was an upright, philanthropic, and merciful man, who sought only the good of his people; and during all these years Sir Clements has stood like Athanasius *contra mundum*, prepared to maintain his cause against all comers. The present work is but a mask to cover old and new prejudices. Behind the appreciation of Edward VI. lurks a host of partialities, bitter personal likes and dislikes, hates expressed with all the fervor of a man who is not open to conviction and who endeavors to convince others, not by proofs, but by the mere force of his utterances. Sir Clements never admits any ground for difference of opinion.

Briefly stated, his views are as follows: The children of Edward IV. were illegitimate, therefore Richard III. was no usurper, but rightful King. Henry VII., on the other hand, was not a legitimate sovereign, only an adventurer who maintained his position by murdering his rivals and neglecting his people in order to amass money. Henry VIII. was a monster. Protector Somerset was a man of fair abilities, naturally disposed to moderation, but vacillating and easily influenced by a wife who was a vindictive virago of strong will and violent passions. Warwick, whom historians have generally condemned, was a remarkable and very able man who always did what appeared best for his country, and was finally condemned to death by treacherous and dishonored politicians. His apologist has to admit, however, very reluctantly, that there were stains upon Warwick's character, and that he "abandoned all dignity when he begged for life" on the scaffold. Mary was an insatiable despot; Lady Jane Grey a paragon of virtue and a rightful Queen of England; Elizabeth a noble, saintly, and temperate woman. Some of these judgments, we suspect, are due to much the same peculiarity of temperament that led Froude to conceive Henry VIII. in terms of warm approbation; others seem to have come, by some process of inexorable logic, from Sir Clements's one supreme conviction, here thrice repeated, that "the Anglican Church is nearest, among all the modern forms of Christianity, to the divine original."

The appreciation of Edward VI. which Sir Clements has "attempted" to give is attractively worked out and contains much that deserves to be restated. But in this case, also, the picture is too highly colored, every line contributing to an excess of flattery, until the whole becomes unnatural. Although in sympathy with any attempt to create a real personality out of this pathetic historical figure, we decline to believe that a boy whose life was, much of it, sickly and whose years numbered but sixteen, could have been as abnormally precocious as Sir Clements makes him out to be. The Edward of this book was a statesman who understood the self-seeking, unprincipled character of the politicians about him; a princely boy "who had more sense in his little finger than both his uncles put together had in their whole bodies." He was a profound student with "a constitutional power of concentrating his thoughts on the work in hand and a constitutional habit of husbanding and dividing his time." He was a thinker who understood the political and economic difficulties that surrounded him, was familiar with the true principles of national defence, had studied with care the problem of the currency, was possessed of extensive geographical and topographical knowledge, and in what he accomplished "fostered commerce, lent his own ship to encourage the Levant trade, dispatched the first Arctic expedition, and enriched his country by opening the first trade route to Russia." In other words, Edward laid the foundations of England's commercial greatness. Furthermore, he was learned in divinity, was an engaging diplomat, and "never was there a better or more genial Captain of Games." Sir Clements does not appear to be able to distinguish between the work of Edward and that of his advisors, and in no part of his book does he bring forward any evidence to show that the boy himself initiated any one of the numerous undertakings that were started in his name. The book contains many excellent portraits and much useful biographical and genealogical information, but its conclusions will hardly find acceptance at the hands of fair-minded historians.

CURRENT FICTION.

Together. By Robert Herrick. New York: The Macmillan Co.

Professor Herrick has done nothing so good as this, nothing so full of energy and truth. His tendency to prolixity does not, however, decrease, or his tendency to scatter the interest by the multiplicity of minor actions. His theme is complex, and he evidently aims to give his treatment exhaustiveness. Any one of the half-dozen human pairs here presented would have sufficed the ordinary novel. But Mr. Herrick has wished to make a thorough study of marriage as it now exists in America, and each of his human pairs, whether united by marriage or not, offers its own peculiar testimony. His view of the usual American marriage is not rosy, and he does not hesitate to describe exactly what he sees. Only one of his couples have from the beginning the normal relation, are really married in the sacred and human sense of the word. Stephen and Alice Johnston are, it must be admitted, not persons about whom a novel would be written. They do not wander from each other, they do not lose their faith or follow false gods. They have many children, and are glad of them, though they are poor because they will not sell themselves. After a slow and silent man's long struggle towards a competency, Stephen refuses the chance which comes at last, because he will not be the tool of a corporation. He dies as the result of an act of unselfish courage, leaving the wife and children unprovided for. But the two have had their happy and successful life together.

Better material for fiction is furnished by the other pairs involved; their experiences, indeed, stated baldly, would sound like material for fiction of a

rather sensational sort. But Mr. Herrick has written with enthusiasm, and "Together" is an absorbing story. For many reasons (not all of them desirable) it is likely to "make a sensation." It is a great advance upon "The Winged Victory." If it has not the absolute character, the heroic saliency of great fiction, it may be welcomed as a vivid and sincere chronicle of contemporary life.

Into the Primitive. By Robert Ames Bennett. Chicago: A. C. McClurg & Co.

One of the shipwrecked mariners of this tale declares: "We've got old Bobbie Crusoe beat, hands down, on the start-off, and he with his shipful of stuff for handicap." All that the presence of the "bounder" and the cad can do to spoil the ancient topic has been done. And yet we are tempted to say that the theme is shown to be unspoilable. For in spite of what the English fraud and the American rough and the pampered heiress have achieved in language and in threat of worse, a satisfying remnant survives of cyclone, tropical reef and jungle, cocoanut palms, jerked leopard meat, poisoned arrow tips, and a real lion. Is there a heart so withered that it does not leap up to read of living in a hollow tree, of using a burning glass for fire, of welding keys into a knife blade, of making hyena skins into garments, and of climbing for the daily birds' eggs over a tree ladder? That the story is not hopelessly damaged by the coarse characterization is tribute to the immortal freshness of the primitive, and, to be sure, to a great and marvellous ingenuity in combining possibilities of desert coast flora and fauna.

Sir Richard Escombe: A Romance. By Max Pemberton. New York: Harper & Bros.

The situation in this story has the double advantage of being highly dramatic and wholly unhackneyed. The setting is the time of George the Second, and of the notorious Society of St. Francis as founded at Medmenham Abbey. The tale is of Kitty Dulcimore and Sir Richard Escombe; the cause of the anguish, a certain rule of the infamous club which "decreed that any brother who draws sword upon another in the name of woman shall by his own hand pay the forfeit of his life before twenty-four hours have passed." The author's idea is that, though the club is "entitled to perpetual obloquy," it has probably been unduly credited with elaborate blasphemies and that the members were mere clever jesters. He declares that "a close analysis of such records as exist—and they are few enough—these and a just appreciation of the spirit of the age" fail to establish proof that there was "an open mockery of established religious faith." Precisely how he squares with this theory the scene in the Abbey where the cowled revellers in solemn procession sing an ode to Bacchus set to a Gregorian tune, is not explained. Considering, however, the stench that might well have attended such an unearthing of history, the author has kept his story relatively fragrant. Dealing with offences, he has fairly avoided being offensive. There is an ingenious story, there are court portraits, social caricatures, wild Irish extravaganza, even idyllic patches.

The fact remains, however, that the trail of an immense affectation is over it all. To take us back to the day of German Soldier George, the writer has used a language that fairly wallows in artificiality. It is not the "foregads" we complain of. They are desolating, but they are local color. It is the forced and clumsy indirection, the "as by lots" and "if God wots," the "oh! be sure's" and "we shall say's" in which in his own character of narrator the author flounders, with evident intention and relish. The epithets of Meredith and the labyrinths of Hewlett are for them alone.

Side-Stepping with Shorty. By Sewell Ford. New York: Mitchell Kennerly.

If it were not so much upon the Chimmie Fadden order as to have the ring of an echo, this would doubtless be more amusing, as, if it were not by the author of "Horses Nine," it would be less disappointing.

> And for a straight front Venus, she was the real maraschino. Course, even if the complexion was true, you wouldn't put her down as one of this spring's hatch; but for a broad, heavyweight girl, she was the fancy goods. And when she cuts loose with that eighteen-carat voice of hers . . .

There are something over three hundred pages of this kind of dialect; and the substance has that essential vulgarity of which a sound realism, however unflinching, is never really in danger. But Mr. Ford's benevolent and omnipotent slugger is a fancy picture, not a portrait; and his absurd performances as *deus ex machina* of lower Broadway doubtless give the effect desired by their contriver; the question is whether they were worth his contriving, in view of the better sort of thing of which he has shown himself capable.

The Girl in Question. By L. C. Violett Houk. New York: John Lane Co.

She is the American-descended queen of a tropical realm, and she comes to Washington "with a request to the President to recognize her sovereignty, and a petition for money and help from Congress to aid her in freeing and reconstructing her country—which is only an island—on a modern, civilized plan." The islanders are enslaved by voodoo superstition, and in her passionate patriotism Donna Carima stands ready to sacrifice her dearest feelings if she may free her people. The reformed priest who accompanies her to America still lives in an atmosphere of magic, and thus we are treated to the spectacle of a general of the United States army reading in a crystal dial the history of the island and of the lady. This scene, however, is scarcely less remarkable than the rest of the book. Social and political intrigues, long-lost relatives, high officials in shady dealings, negro politics in humble circles, masked balls, with Congressional committees in attendance, strive for combination in a whole quite as amazing as the occult atmosphere in which the all-subduing girl-queen moves. To a girl friend she says: "Come, dear, dry the bright jewels that burden your lashes"—and the response is a smile, "creating a volcanic eruption in dimple-land."

If this book were not actual, it might fairly be called impossible. The central idea of the woman and the voodoo has its original side, indeed, suggesting the thought that, out of the vast tangle a real story might be extracted and reconstructed. Imagination is not lacking; even an occasional flash of wit lights the lush jungle.

The Letters of Martin Luther. Selected and translated by Margaret A. Currie. New York: The Macmillan Co. $3.75 net.

An English translation of Luther's letters is an especially welcome addition to our sources of information about the great Reformer. It is, indeed, a singular fact that no such venture should hitherto have been made. Luther was an admirable correspondent. His style, always, even in Latin, singularly effective, is nowhere more vigorous than when he lets himself go in intimate discourse with his friends or in stormy reproach to those who differed from him. The material is abundant to embarrassment; the great collections of De Wette, 1826, and of Enders, 1884-1903, leave little to be desired as to completeness. The real task is one of selection, and here the difficulty is, as always, to find a principle that will work to the satisfaction of all readers. It is a pity that we could not have a complete translation, but, pending this, we are glad to have as judicious a selection as the present one. The translator has been guided in her choice by the references in leading biographies of Luther; and, in default of a really personal command of the whole material, a wiser method could hardly have been employed.

Thus far in commendation of the plan of the work. As to the execution there is not much to be said in praise. To select certain letters for translation is

altogether permissible, but, having selected them, the translator is bound to give them to us as nearly in the form of the original as possible. He has no right to mangle them in pursuance of some notion of his own as to what the reader may wish to hear. Least of all has he the right to omit obscure or difficult passages. If he cannot understand them, he is at least bound to state his difficulty and let the reader make his own attempt. This dressing up—or undressing—of foreign material for English consumption is an inveterate habit in England, and it cannot be too strongly condemned. There is hardly a page of these translations where one can be sure of finding what Luther wrote. It is sometimes abbreviated, sometimes distorted, and sometimes even added to, at the discretion of the translator. Nor is it possible to discern any consistent principle, except that of condensation, by which such liberties are to be explained. For example, the very first letter is addressed to "Sancto et venerabili Christi Mariaeque Sacerdoti." The translator leaves out Mariae altogether, though it is certainly an interesting fact that Luther in 1507 does not hesitate to include the word in describing the title of a friend. In the same letter, "patrum meorum" is rendered "my father." In the following letter, Luther addresses the same correspondent as "Pater amande, magis quam venerande," showing the peculiarly tender relation in which he stood, but "honored father" is enough for this translator. "Salutem in Domino et paraclito ejus" becomes "Salvation in the Lord." In the famous letter of 1521 to Albert of Mansfeld, describing Luther's experience at the Diet of Worms, "der Doctor, Canzler des Markgraufen zu Baden" becomes "the Elector of Baden"! Not infrequently these distortions of the original throw the translator off the track in her English, and she has obviously given her work very little revision. "So I beg your Grace to take care . . . but if you are not, then, etc."—this is in the splendid letter in which Luther defies the Archbishop of Mainz; and no better illustration can be found of the utter inadequacy of the translator than her attempts to give the spirit of this tremendous denunciation. The most striking passages are left out altogether, and the sledgehammer blows of what is retained are softened into the taps of a lady's finger.

Errors in spelling are numerous: Lübeck is Lubeck, Bucer is Bücer, Eoban Hesse is Coban Hesse. The use of "would" for "should" occurs with a frequency surprising in an English writer. In short, we have here an amiable attempt to do a really worthy piece of work with an altogether insufficient equipment. The translator's own statement that she has used "the simplest English as more in accordance with the original and with Luther's ideas in general," cannot bar us from asking in what sense she would wish the word "simple" to be understood.

Abraham Lincoln. By Henry Bryan Binns. [The Temple Biographies.] Pp. xiii.+379. New York: E. P. Dutton & Co. $1.50 net.

Mr. Binns has stated pretty well in his preface the merit and the weakness of his book:

> This is, as far as I am aware, the first serious attempt made by an Englishman to portray on any full canvas the greatest of the popular statesmen of the last century, the most notable figure among the leaders of the English-speaking democracy. I have not attempted to do more than to suggest, by way of background, the events among which he lived.

It is doubtful if, to any mind not already somewhat informed concerning American history, Mr. Binns's scant outline will even serve to suggest the vast background against which Lincoln's figure ought to be viewed. Of the environment of his earlier years more is given—and most sympathetically—than one might expect of an Englishman. Mr. Binns seems to have made a good effort to understand American frontier life seventy-five years ago. But the greater and more momentous the events about Lincoln become, the less we are told of them. Of the Civil War we do not get even an outline; and what little Mr. Binns tells about it leads one to suspect that he could not have told much more—for that little is not always correct. He makes Gen. Hooker, instead of Burnside, responsible for the Union disaster at Fredericksburg (p. 273), and makes amends by calling Chancellorsville a mere "repulse" and crediting Hooker with more than his share of the Union victory at Chattanooga. While we are of opinion that Nicolay and Hay erred in overweighting their life of Lincoln with a detailed history of the entire war, we think Mr. Binns has erred more egregiously in attempting a complete life with the war practically omitted. Else Lincoln himself missed the true quality of his own genius when he said: "I claim not to have controlled events, but confess plainly that events have controlled me." No other man ever owed his achievement so distinctly to the ability to make his words and deeds the right response to the everchanging demands of circumstance.

Mr. Binns's book must therefore take its place among the essays rather than the lives. As such, and as the work of an Englishman, it is not uninteresting, although we do not think that many educated Englishmen need to have the American Lincoln books interpreted to them. Indeed, Mr. Binns is not very English. Now and then, as in the hyphenating of Congressman (Congress-man), and in the unfortunate quotation of Edward Carpenter's reference to the turkey-buzzard as game (Mr. Binns himself has heard of the wild turkey, for he mentions it elsewhere) we find the kind of insularity which hardly any Briton but Mr. Bryce entirely escapes in writing of America. But there is no good reason why the book should not simply take its chances with all the other accounts of Lincoln written in the English tongue.

That is not too hard a fate; for, while there are a good many of the American Lincoln books which we prefer to this by Mr. Binns, we cannot yet say that there is any one of them which succeeds indisputably in the task he has set himself. He does not contrive to phrase convincingly his many attempts at a sympathetic interpretation of the most human of all great men. But the attempts are earnest; the sympathy is real; there is much comprehension. Yet the book fades quickly—as, indeed, they all do—and only Lincoln abides. It is, in fact, hard to judge any book about him, since anything really about him is readable. Did any man ever live who offered biographers such an opportunity? And shall we ever find a biographer with whom we shall be content?

The Story of the Guides. By Col. G. J. Younghusband, C.B. New York: The Macmillan Co. $2.25 net.

Col. Younghusband does not attempt to give a connected history of the famous corps of native Indians, but he simply narrates some of the adventures in which they have showed an unsurpassed bravery and devotion to duty. The corps was organized in 1846 to furnish trustworthy men who could not only fight, but were specially adapted to act as guides to troops in the field and to collect information. The men were recruited mainly from the frontier tribes, and so popular was the service that at times the applicants for enrolment have been far more numerous than the vacancies. Princes and chiefs enlisted to learn the art of war. As the corps was to be for service and not for show, the time-honored scarlet of the British army was laid aside for the dust-colored uniform now known as khaki. The man who raised the corps and was its first commander was Sir Harry Lumsden, and among its officers was he "whose name still lives as the intrepid and dashing leader of Hodson's Horse." At present it numbers 1,400 men and 27 British officers.

Among its noteworthy exploits was the historic march to Delhi at the outbreak of the Mutiny. When the summons reached the corps, consisting of cavalry and infantry, it was in camp 580 miles distant. At six hours' notice it

started, and, though the season was summer, marched on an average over twenty-seven miles a day. As it drew near the city, a staff officer "gallops up, and, after giving friendly greeting with the general's compliments, asks, 'How soon will you be ready to go into action?' 'In half an hour,' is the gallant Daly's cheery reply." After a short rest, the trumpet sounded, and the battle began in which the Guides "showed great and glorious valor," but at grievous cost, for of the little band of British officers "in that one first fight, all were killed or wounded." In one of their latest campaigns, in 1897, the probably unique historic record was established of three officers in one regiment earning the Victoria Cross on the same day, while many of the men who had shown conspicuous gallantry were decorated with the Order of Merit. One of the illustrations shows thirty-four of the corps wearing the star "For valor," the highest distinction open to an Indian soldier for gallantry in action.

From this "story" one gains a new and higher appreciation of the Indian's character, not only as regards his bravery, but more especially his absolute devotion to duty. Here is an incident among many showing this quality, a quality which to those who are interested in the Indian and are watching his development is most encouraging. On one of their frontier expeditions a young Afridi near whose village the Guides were camped deserted, carrying two rifles with him. On learning of this, the commander, Col. Jenkins, asked, "How many men of that man's tribe are there in the regiment?" It was found that there were seventeen of them, all told. "Parade them all here," said the Colonel; and they were summoned and paraded in line. "Now take off every scrap of uniform or equipment that belongs to the Sirkar." Each man did as he was bid, and placed the little pile in front of him on the ground. "You can now go, and don't let me see your faces again till you bring back those two rifles." He hoped that they might overtake the deserter, overpower, and secure him before he had gone far.

But if so he was disappointed, for as day followed day, and week succeeded week, no news came of pursued or pursuers. The matter had been forgotten; the vacancies had long since been filled; indeed, two whole years had passed, when one day there walked into Mardan Cantonment a ragged, rough-bearded, hard-bitten gang of seventeen men, carrying two rifles. It was the lost legion! Of those two years' toil and struggle, wounds received and given, a stark unburied corpse here and there on the mountainside, days in ambush and bitter nights of silent anxious watch they spoke but little. But their faces beamed with honest pride as their spokesman simply said: "The Sahib told us never to show our faces again until we found the rifles, and here they are. Now, by your Honor's kindness, we will again enlist and serve the Queen."

The illustrations are well chosen, and add much to the interest and attractiveness of the book, many of them showing the different types of men in the corps.

Passing Protestantism and Coming Catholicism. By Newman Smyth. New York: Charles Scribner's Sons. $1 net.

Careful reading of Dr. Smyth's tractate confirms the first impressions of it as one of the most vigorous, conscientious, and truly catholic endeavors for Church unity that has been made in many a day. Seldom has the lofty ideal of one organic Church, one world-conquering force in behalf of righteousness and the life of the spirit, taken deeper possession of a noble mind. The inspiring vision has filled its advocate with an enthusiasm and eloquence which must move the dullest and most skeptical. One feels almost ashamed to remain an unbeliever, and yet, since the truth must be told, there can be little question that the outlook is not so bright in fact as it is on Dr. Smyth's pages. Enthusiasm consistently overlooks difficulties, sees victories where there is only the excitement of preparation for battle, and finds problems solved which are merely coming on the horizon. As an example of the ambition which leaps too quickly to a desired conclusion may be mentioned the thesis with which Dr. Smyth opens his essay, that Protestantism has accomplished its mission. He announces the dissolution of Protestantism, not because it has failed or is weak, but because it has done its work and achieved its victory:

Protestantism has its triumphal arch, and upon it are depicted the victories of hard-fought fields, and the procession of the mighty oppressors of the nations, led captive by it. But it is a completed arch. Its crowning achievement is the victory which it has won forever for the spiritual liberty of the individual man. Henceforth the right of private judgment for every man can never be abolished or destroyed.

This is glorious, if true; and if one could believe it, we should have little difficulty in following Dr. Smyth the remainder of his journey, up to the prospect of a unified Christendom just ahead of us. But in reality how far is the vision true? In how much of Protestantism even is the freedom of a Christian man thoroughly realized? Does not the principle of external authority, either of book or of organization, dominate still in the large circles of Protestant adherents? Was not Harnack telling us only a short time since that we had not yet mastered the lesson of Luther? Dr. Smyth would be the first to declare that if unity is to come, it must be with fullest recognition of individual liberty. One who knows the Protestant masses, clerical and lay, not as they are in the more favored centres of New England, but by and large in America and in the state churches abroad, would be more inclined to herald the need of a new Protestantism within the free churches themselves, and to fear that if union were now to come, it would be on the Catholic basis, as that has existed historically, with some sort of fixed and legal authority to cramp men's minds and stifle their souls. While infallible Bibles and authoritative churches still bear their harmful sway, Protestantism cannot consent to pass away, but must seek strength still more vigorously to protest.

One would like to think also that Dr. Smyth in his fond optimism has not over-estimated the power and possibilities of the modern liberal agitation in the Catholic Church. As yet, however, it is but a comparatively recent stir, to which every generous mind must offer full encouragement, but in which one cannot yet discern the rallying-point of a world-movement. It remains to be seen what the iron heel may do. Strong men, and great numbers of them, have been crushed before now. Father Tyrrell, the Abbé Loisy, and Senator Fogazzaro have scarcely won the permanent success which entitles them to be hailed as heralds of the coming Catholicism.

Despite these doubts, however, Dr. Smyth's appeal to his brothers of all faiths is a notable attempt to face one of the most pressing questions of the time.

The Itinerary in England of John Leland, in or about the years 1535-1543. Edited by Lucy Toulmin Smith. Vol. I., parts i.-iii.; Vol. II., parts iv., v. New York: The Macmillan Co.

John Leland, the antiquary, was a kind of sixteenth century Karl Baedeker, in that he loved rambling for its own sake, was careful to give accurate information of the regions through which he wandered, avoided elaborate and flowery descriptions of local legends and scenery, and within certain limits was systematic in making his survey complete. He travelled on horseback, and of course had no eye for the needs of tourists, a tribe of wanderers unknown in his day. But he noted the essential facts regarding the objects that interested him and produced the first guide book to the English counties. His immediate successors are Stow, Harrison, Holinshed, Camden, and other antiquaries, but his more remote descendants are Murray, Klein, Baedeker, and their hosts of followers. His "Itinerary" will always stand as a work indispensable to the student of English topography and life of the sixteenth century. Unlike the Elizabethan and Jacobean writers, Leland did not succeed in casting

his notes into a readable literary form, else his work might have become a classic in English prose. Its value is chiefly for the scholar and the local antiquarian, but to them it marks the awakening pride of Englishmen in their own country, the precursor of that national enthusiasm of the Elizabethan period which led men to extend their zeal for knowledge and adventure beyond the shores of Albion into the seas of an unknown world.

Starting from Cambridge, somewhere about the year 1538, Leland journeyed by a devious route northward to the River Tyne and back to London. During the six years that followed he went from London to Land's End and back by the coast to Winchester, from Oxford to Bristol and northward into Gloucester and southward into Dorset, through the old Mercian counties to Shrewsbury and Litchfield, and again northward by the west coast into Northumberland, and back by a new route to London. He entered nearly every county in England, passed through every large town and city, rode along the country ways by pasture, meadow, and fen, and penetrated forests, even to the heart of Sherwood. In the towns he made notes of the churches, schools, monastic foundations, and markets, observing tombs, brasses, inscriptions, and architectural peculiarities, and supplemented his own knowledge with information obtained from individuals, libraries, and private records. Outside the urban centres, he noted the nature of the country; recorded the existence of coal pits, quarries, mines, and salt works; and was at great pains to specify the bridges he crossed. The reader is impressed with the great extent of woodland and with the slight percentage of arable land that he speaks of as turned from open fields into enclosures. In all his wanderings he scarcely mentions a hedge, and his entries of enclosed fields and pastures concern less than a dozen counties, and those only occasionally. Essentially an antiquarian and not, like his contemporaries, More, Hales, and Latimer, a student of the social problems of his day, he was not interested primarily in social and economic questions. He does, however, record the meanness of the villages, the ruinous state of walls, castles, and manor houses, and the decay and poverty of many a town. He leaves one with the distinct feeling that the old mediæval economy was passing away and that the new Elizabethan prosperity had not yet come. There is need of more work based upon Leland, like that of Dr. Gilbert Slater, whose study of Leland's text has added a new chapter to the history of the enclosure movement. The material is not wanting, for Leland makes frequent entries of markets and fairs, and often speaks of the industry by which a town was supported. All these items are, however, more or less incidental to his main theme, for his eye was open chiefly to topographical features, and his inquisitive mind led him to search out antiquarian and historical informaton rather than the causes of prosperity and decay.

Leland was a careful observer who generally got his facts correctly, though he made errors at times in judging distances. He had a critical sense, expressing occasional doubts as to the accuracy of the answers given him, and declaring certain stories to be nothing but fables. His work is often incomplete, blanks are left unfilled, and many of his notes were never worked up into narrative form. For this reason the "Itinerary" is often confusing and contains a number of repetitions.

Miss Toulmin Smith, the editor of the present version, has had before her an exceedingly difficult task in putting the material in order, and in endeavoring "to give as close a representation as possible of Leland's original where this is continuous, and where it is fragmentary to restore it as nearly as may be." The original manuscript is in bad condition, and has had to be pieced out from the transcripts by Stow and Burton and from the edition of Hearne. The editor thinks that "his malady [insanity] overtook him before he had finished his work," and that it is almost impossible to determine the order in which the material ought to be arranged. That she has succeeded in giving coherency to the whole is in itself enough to justify the publication of her edition. When we add further that she has taken infinite pains to identify all the place names, has drawn maps for the first time illustrating each journey, and has prepared excellent and exhaustive indexes to persons, places, and subjects in each volume, we can judge of the indebtedness of the scholarly world to her efforts. Her annotations, though brief, are always helpful, and her accuracy is above suspicion. On one or two points there is occasion for a legitimate difference of opinion, as, for example, whether Leland actually journeyed from Patrington to Ravenspur and thence to the River Tees, as Map i. conjectures; but whenever doubt arises, it will be found that there is always good argument on the other side. As far as can be judged from the two volumes before us, Miss Toulmin Smith has given us a definitive edition of this useful work.

The Truth About Port Arthur. By E. K. Nojine. Translated from the Russian by Capt. A. B. Lindsay, and edited by Major E. D. Swinton. New York: E. P. Dutton & Co. $5 net.

As a rule, distrust attaches to the book that professes to tell the whole truth about a controverted matter. When the book is from the beginning as frankly partisan as this indictment against Gen. Stoessel, presented by a Russian journalist who was in Port Arthur before war broke out, and went through the entire siege, distrust strengthens into doubt. But this impression does not last, and M. Nojine's book has this important point in its favor, that its charges have been substantiated by a Russian court-martial. His argument is a simple one. In Port Arthur, almost from the outbreak of the war, Gen. Stoessel, who was commander of the military district of Kwan-tung, usurped the authority of Gen. Smirnoff, who was commander of the fortress proper. The only justification for such a breach of military authority would have been success against the enemy; but Stoessel, our author maintains, only hastened the fall of the fortress by general incompetence, indifference, inactivity, and a disposition to look out primarily for his own interests. The court-martial of last February seemed to hold the same opinion when it sentenced Stoessel to death, though with a recommendation to the Emperor for mercy. Gen. Smirnoff does not come off unscathed in our present account. Able, energetic, determined to fight to the end, and probably strong enough, if he had been left alone, to prolong the defence of the fortress for a few weeks or months, he is censured for acquiescing in Stoessel's seizure of power, and thus placing himself under a fatal disadvantage. Our author insists that Gen. Smirnoff could easily have placed Stoessel under arrest and assumed entire charge of the defence—such was his own popularity and the general contempt for his opponent. But Smirnoff was afraid to take the chance of precipitating civil strife in the face of the enemy, even when it became apparent that Stoessel's conduct was inspired by the very unmilitary consideration of his own personal safety. In Smirnoff's conduct we find exemplified the soft streak in the Russian character which foreign critics have so often pointed out. Altruism is an amiable virtue; in the soldier it may even be magnificent; but it isn't war.

To the unprofessional reader the story of the defence of Port Arthur, as he has commonly read it, is no simple tale. There were so many ridges, redoubts, bastions, lunettes, and counterscarps, each having its Russian, its Chinese, and its Japanese name, and sometimes its English name and its number, that only devotion to the map will save one from utter confusion. M. Nojine's book is the first to marshal details into broad lines easily followed; and this without apparent effort at being vivid or picturesque. The straightforward, logical, absolutely lucid account has very few purple patches. When these come they have their correspondingly intense effect. There are only one or two pas-

sages like the following in a volume of nearly four hundred pages:

Rafalovitch appeared at the staff headquarters. He was dirty; his clothes were torn and covered with blood and spotted with whity-red bits of something. This handsome, healthy young fellow was quite unstrung by what he had been through. He was trembling as if in a fever; his eyes were bloodshot and wandering, and he could scarcely speak.

"What's happened? Your face is covered with blood. Are you wounded?"

"No, sir, I am—I am not wounded. It's not my blood; it's Capt. Veselovsky's brains," was the stammering reply.

"What! Veselovsky killed?"

"Yes, sir. His head was carried away—only not quite. The lower jaw and beard were left—and I was covered with his brains, right in my face."

Science.

Systematic Anatomy of the Dicotyledons. By Hans Solereder; translated by L. A. Boodle and F. E. Fritch. Vol. I. New York: Henry Frowde. $8.75 net.

Our flowering plants are divided, by a sharp plane of cleavage, into two great groups, depending on the number of seed-leaves, or cotyledons, in each seed. Taking species as they are commonly reckoned, and leaving out of account the myriads of newer species which have resulted from the splitting up of the older, we find on one side of this cutting plane about eighty thousand, and on the other not far from twenty thousand. It is with the eighty thousand species, which possess two cotyledons in each seed, that the present work has to deal, and in all it considers not far from two-thirds of them. By anatomy, as here used, is meant the minute structure as revealed under the compound microscope; and it is called systematic because it brings into view the classificatory relations of the different features thus shown.

The work is encyclopædic, gathering to itself every reference which was accessible to the author, and it thus possesses high bibliographical importance. It is, as the title declares, a handbook for laboratories of pure and applied botany. By pure botany, nowadays, one designates the study of relationships, in the broadest sense; its aim is to answer a very hard question: "How did our plants come to be what they are?" It is closely allied to another speculative study, œcology, which asks how our plants came to be where they are. The first of these questions is usually investigated in the light which is thrown upon the history of the plant by an examination of the gross anatomy of its organs, or members; but every serious student feels the necessity for an inspection of the minute structure of these members. Many investigators deserve credit for emphasizing this branch of study, but Radlkofer first indicated sound methods for pursuing it systematically. Professor Solereder was trained in Radlkofer's laboratory: it is, therefore, eminently proper that he should try to coördinate the vast amount of material which has been accumulating.

The task of arrangement was enormous, for it involved translating into a uniform terminology a host of descriptions written in the most diverse and even contradictory terms. Thanks to De Bary, much of this discordant terminology was long ago swept aside into the rubbish heap, and we now have a grammar of microscopic anatomy which serves most purposes. This consistent grammar, used throughout by Professor Solereder, enables the student to find his way through the different families with little embarrassment. But, unfortunately, although he has done his work admirably, and no fault is to be found with his methods of investigation or of presentation, disappointment follows disappointment. The reason is that, while the broad lines of separation are seldom obscured by anomalous forms, there are innumerable minor adaptations which make the study of the histological relationship of closely allied species an almost hopeless task. Two species very near of kin may be far apart in their minute structure, since they may have developed under wholly different conditions. In Solereder's work, which has been of great service in its German edition, the student of pure botany finds all needed material for his search for affinities. But, of course, the main office of a treatise like this is to supplement personal investigation and serve as a guide to the literature of the subject.

Considered from the side of applied botany, the work may be regarded as indispensable to the economic botanist and the pure-food expert. It is not designed to take the place of special works on microscopy, such as Mœller's, but it fills an important place as a supplement. In the excellent volumes which have come from some of the pure-food authorities in our own country, one can find practically all needed information regarding specific matters, such as the structure of the coffee seed or the character of our spices, but the facts given by Solereder are of importance in completing these pictures. Perhaps the addition to this work of much that is to be found in Mœller and others would have made it a handier book of reference, but as it stands it is very useful.

Dr. D. H. Scott, one of the most eminent students of the subject, has given this volume careful supervision. He has done much towards increasing interest in histological morphology, and he now places the botanical world under fresh obligations by his labors on this book.

The most noteworthy article in the July number of the *Geographical Journal* is Prof. J. W. Gregory's résumé of the principal scientific results of the English, Scottish, German, and Swedish Antarctic expeditions of 1901-1904, so far as the published reports permit. The natural history collections are so great and the observations so numerous that it will take three or four years more to complete the reports, which will then form an Antarctic library of about thirty volumes.

Compared with poultry, which have been bred for more than 2,000 years, canaries, which have been caged for 250 years, are a recent addition to the list of creatures semi-domesticated by man. Prof. C. B. Davenport has chosen canaries as links between domesticated and wild birds, and has summed up his investigations in publication No. 95 of the Carnegie Institution, "Inheritance in Canaries." He finds that the yellow canary is derived from the original "green" canary by the loss of the black pigment. The former, however, carries a mottling factor, so that when a yellow canary is crossed with a pigmented bird or with a finch the hybrids are mottled. The plumage of a yellow canary may be compared with a letter that has been written with invisible ink. Whenever the developer acts (*i. e.*, when the black pigment of the green canary is added) that which is written appears with all its idiosyncrasies—striping on shoulders, black on the wings, and olive on the breast.

"Magic Squares and Cubes," by W. S. Andrews, with chapters by Paul Carus, L. S. Frierson, and C. A. Browne, jr., is issued by the Open Court Publishing Company, Chicago. Although magic squares have lost their influence as one of the arbiters of fate, still they have a peculiar fascination. And it is difficult, at times, for the soberest minded not to believe that some secret power rules our numbers, so unexpected and curious are the properties of their grouping. Nor is it only over the lover of the mysterious that these *lusus numerorum* exercise a hold, for probably as difficult and complicated squares as were ever made, are those of Benjamin Franklin, who was not given to wasting time. To those who are interested in the subject, Mr. Andrews's book will be very acceptable. The examples are numerous; the laws and rules, some of them original, for making squares are well worked out. The volume is attractive in appearance, and, what is of the greatest importance in such a work, the proof-reading has been careful.

In reply to the lectures delivered by Prof. Ernst Haeckel, in the Singakademie in Berlin, and published under the title "Kampf um den Entwicklungsgedanken," the Jesuit father, E. Wasmann, a Catholic specialist in biology, has delivered a series of discourses, also in Berlin, to which were added public discussions after each lecture. The full material of the lectures and discussions has now appeared in a volume, "Der Kampf um das Entwicklungsproblem in Berlin" (Freiburg-im-B.: Herder Verlagshandlung).

Three volumes of the "Dictionnaires techniques illustrés en six langues" (French, German, English, Russian, Italian,

Spanish), by K. Deinhardt and A. Schlomann, engineers, have now appeared. The first (6.50 francs) takes up the elements of machines and usual tools; the second (31 francs) is devoted to electrotechnics; the third, just out (19 francs), deals with steam boilers, engines, and turbines.

Adrien de Mortillet, continuing his father's work, publishes "La Classification palethnologique," a handy octavo album, with 12 plates and 116 figures. It forms a short, easily understood summary of the prehistoric races of man, with clear, exact designs of the chief types in each division The 747 pages and 249 pictures of Joseph Déchelette's "Manuel d'archéologie préhistorique, celtique et gallo-romaine" are also exclusively prehistorical.

Sir Thomas Stevenson, M.D., senior scientific analyst to the Home Office, author and editor of various memoirs on forensic medicine, and past president of the Society of Medical Officers of Health, of the Society of Public Analysts and of the Institute of Chemistry, died July 28. He was born in Yorkshire in 1838, and was knighted in 1904.

Drama and Music.

Mathilde. By Adolphus Alfred Jack. London: Archibald Constable & Co.

Mr. Jack, who has given an uninteresting and misleading title to this blank verse play, has already attracted favorable critical attention by a previous piece called "The Prince" and an essay on Shelley. "Mathilde" is a story of sixteenth-century Italy, and is written with notable literary ability, uncommon skill in the denotement and development of character, and a good sense of dramatic motive and theatrical situation, but is deficient in one of the most important requisites for successful stage representation, rapid and progressive action. The author evidently has been a close student of the Elizabethan dramatists, and his verse, while showing few traces of poetic inspiration, is of excellent quality, smooth, vigorous, imaginative, and, in places, eloquent. His vocabulary is full, dignified, and expressive, having its sources in the wells of English undefiled. Nearly all his sentences are pregnant, none frivolous. In literary style, indeed, his play is well worthy of the rank of poetic tragedy, but in its story—which is founded upon conventional ideas, though fairly original in its use of them—it scarcely rises above the level of melodrama. The chamberlain of the Court of Ferrara, a child of the people, is spurned by the princess, who is presumptive heiress of the reigning duke, a crazy old tyrant. Impelled by passion and ambition, he procures the poisoning of the Duke, and contrives that popular suspicion shall rest upon the princess. Thus he becomes regent, and, being in power, proclaims his conviction of the lady's innocence, and so works upon her gratitude that she will not even listen to the evidence of his guilt offered by his discarded accomplice, but joyfully hails him as her preserver and willingly becomes his bride. After nine years of happy joint rule, knowing himself to be at the point of death, he remorsefully confesses to her the crimes by which he had won her, is forgiven, and dies, leaving the throne to her in trust for their infant son. The proud princess, the chancellor, the cardinal, the profligate gamester, and minor personages are all cleverly drawn and clearly differentiated, but are variations upon familiar models. But the central figure of the Machiavellian usurper, crafty, bold, sophistical, and remorseless in pursuing the ends of his ambition and passion, but just, capable, and beneficent in the exercise of secured power is a character study remarkable for its strength, consistency, and subtlety, which would furnish rare opportunities to an intellectual actor.

In its present shape the play is more suitable for the library than the stage, as its chief virtues are literary and analytical rather than dramatic. But with judicious rearrangement and condensation it might prove very valuable to such a player as H. B. Irving.

By arrangement with the English publishers, the H. M. Caldwell Co. will issue in September the "Century Shakespeare," complete in forty volumes. Dr. F. J. Furnivall contributes the introductions, and the life of Shakespeare is by Dr. Furnivall and John Munro.

By bringing together Johnson's "Proposals," of 1756, the celebrated "Preface" of 1765, and a selection of illustrative notes, Prof. Walter Raleigh has made a capital little book, which he calls "Johnson on Shakespeare" (Henry Frowde). And Professor Raleigh's own introduction is almost a model in its kind. With a few touches he shows how much of Johnson's character went into the editing and especially the promises to edit the plays. Only one may think that in defending to the letter Johnson's famous saying: "No man but a blockhead ever wrote except for money," he has fallen into the fallacy of extremes. There may be virtues in the world of manufacture and finance, just as there are in that of literature, but it is also true that there is no direct relation between ability and pecuniary reward in letters, such as there is in commerce, and that consequently Johnson's hasty generalization cannot be supported by such a comparison. But that is a small point. The important matter is Professor Raleigh's comprehension and sturdy defence of Johnson against the slights and sneers of the ultra-romantics—which has authority as coming from one who is himself so excellent a Shakespearean scholar, and particular interest as the opinion of one who himself sometimes inclines to an ultra-romantic view of literature. "The head and front of Johnson's offending," says Professor Raleigh, "was that he wrote and spoke of Shakespeare as one man may fitly speak of another. He claimed for himself the citizenship of that republic in which Shakespeare is admittedly preëminent; and dared to enumerate Shakespeare's faults."

In "Das neue Shakespeare-Evangelium" (Hanover: Sponholtz), Peter Alvor endeavors to prove that all the tragedies were written by the Earl of Southampton, and all the comedies by the Earl of Rutland, but, in order to escape political persecution, these noblemen induced a mediocre actor, William Shakespeare, to assume the authorship, a responsibility for which he was well paid. This idea of two authors is ridiculed by Karl Bleibtreu in his pamphlet: "Die Lösung der Shakespeare-Frage" (Leipzig: Thomas), in which all the dramas, both tragedies and comedies, are ascribed to the Earl of Rutland. Bleibtreu sets forth the same view in a tragi-comedy: "Der wahre Shakespeare." In a volume entitled "Misachtete Shakespeare-Dramen" (Berlin: Eisner), Alfred Neubner not only asserts the genuineness of Shakespeare's dramas, but also ascribes to him twelve dramas not included in his published works, of which four are lost and eight still preserved, namely, "Locrine," "A Yorkshire Tragedy," "Lord Cromwell," "London Prodigal," "King John" in two parts, "Merlin's Birth," and "Two Noble Kinsmen." We may add that one of the best of these productions is "A Yorkshire Tragedy," which, in the opinion of A. W. von Schlegel, was undoubtedly written by Shakespeare, and Lessing took the same view of a "London Prodigal." Quite commendable, from a biographical and analytical standpoint is Dr. Max J. Wolff's "Shakespeare der Dichter und sein Werk" (Munich: Beck), the second and concluding volume of which has just appeared. Marie Joachimi-Dege's "Deutsche Shakespeare-Probleme im 18. Jahrhundert und im Zeitalter der Romantik" (Leipzig: Haessel) shows the important influence exerted by the British poet on the development of German literature, especially during the period immediately before the rise of the romantic school.

The first volume of the collected plays—"Théâtre"—of Tristan Bernard has appeared in Paris. This writer is as nearly a humorist as a Frenchman can be, a good story-teller, and without too much literature. He has been manager of an aluminium factory, and was once ready for final admission to the grave Paris bar, having all his university degrees and having served the required "stage," but he broke away in 1894 and took charge of the Parisian Velodrome Buffalo (reminiscent of Col. Cody), and since then has been writing books and plays endlessly. He is more like Dickens than Mark Twain—and very good French.

The New Theatre in this city, which is to be devoted to the higher forms of drama, is to have an executive staff, consisting of Winthrop Ames, director; Lee Shubert, business manager; and John Corbin, literary manager. Mr. Ames, the director, is a native of Boston, and was graduated from Harvard in 1895, where he spent a post-graduate year specializing in dramatic literature. For four years, in partnership with Lorin F. Deland, he successfully conducted the Castle Square Theatre in Boston. Mr. Shubert is a well-known theatrical manager; and Mr. Corbin, who is also a Harvard graduate, has been a dramatic critic. The announcement is made that though the New Theatre will attempt the best works of modern English and Continental dramatists, the primary object will

be to foster American playwriting. Each season the management will produce as many good American plays as can be obtained. The theatre will have several plays in production at the same time, and they will be offered in alternation, for long or short periods, according to the popular demand. By this system the theatre will be able to present from ten to fifteen plays each season without cutting short the runs of those that prove to be notable successes. One evening a week, and perhaps one matinée, will be devoted to performances of the higher class of light opera. These operas will be performed by the singers and orchestra of the Metropolitan Opera Company, but will be productions unsuited to the larger auditorium of the Metropolitan Opera House. The financial plan adopted by the founders is as follows: A low annual rental is set on the land and the building, and the theatre will be required to earn this in addition to its running expenses. It will, however, pay no profit, and if funds accrue they are to be used for the further development of the enterprise. By this plan the founders hope to shield the theatre from any temptation to sacrifice quality to financial profit, and, at the same time, to insure it against ignoring public opinion, and falling into the apathy which is the danger of subsidized theatres abroad. It is expected that the building will be finished a year from this autumn.

In a conference between Charles L. Hutchinson, president of the board of directors of the Chicago Art Institute, and Donald Robertson, director of the Robertson Company of Players, an arrangement has been made for a theatrical season of thirty weeks in Fullerton Hall, in the Institute building. Beginning in September, performances will be given on Tuesday night of each week, of plays by German, Spanish, Scandinavian, French, Italian, and American playwrights. The directors and members of the Art Institute have arranged to pay the expenses of the experiment, and no admission fee will be charged. Attendance will be limited to the members.

Sir Charles Wyndham and Miss Mary Moore, are to act apart for a time. The new comedy of H. H. Davies has a character said to be exactly suitable to Miss Moore, but none that appeals to the fancy of Sir Charles. Therefore, the lady will play in the Criterion Theatre, London, while Sir Charles will be seen in the New Theatre. He has just bought a new play from Walter Ellis, which is called "The Duke and the Demigod."

The new version of "The Duke's Motto," which has been made by Justin Huntly McCarthy, will be produced in the London Lyric Theatre in the autumn by Lewis Waller. The original piece, taken from "Le Bossu," was a wonderfully effective romantic melodrama, and the performance of Lagardère by Charles Fechter, when in his prime, was nothing short of a masterpiece. It was the theatrical sensation of more than one season in London. Mr. McCarthy is said to have simplified the action. If Mr. Waller can reproduce one-half of the effect created by Fechter he may be sure of a brilliant success. Later Mr. Waller will produce the first part of "King Henry IV." and "King Henry V."

A committee, composed of Alfredo Frassati of Turin, Benedetto Croce of Naples, Marco Praga of Milan, Domenico Oliva of Rome, and three other prominent dramatic and literary critics, have awarded the Giacosa prize of 4,000 lire to the "Viandante," by Tomaso Monicelli of Mantua, a young writer, twenty-four years old. This prize was offered for the "best dramatic work written during the past year by an author at the beginning of his career, and played with marked success in Turin and at least one other large city of Italy." The "Viandante" has met with general praise from Italian critics and has been translated into French.

Some valuable manuscripts have been presented to the Royal Library in Berlin by Ernst von Mendelssohn-Bartholdl, the composer's nephew, who inherited them from his father. Among them are the complete score of Mozart's opera "Die Entführung," of Mendelssohn's violin concerto, and of Beethoven's third, fifth, and seventh symphonies.

Mischa Elman, the young Russian violinist, who has been among the most successful concert-givers in European cities for five years, is to make his first American appearance at Carnegie Hall in this city on December 19, with the Russian Symphony Orchestra as a background.

Art.

THE LONDON SALON.

LONDON, July 13.

At this season of the year in London most people would say that the crying need was to diminish, not to increase, the number of art exhibitions. But the large majority of artists, who are without a chance at the Royal Academy and other established institutions, are evidently of another way of thinking; and, on July 11, the first London Salon was opened by the Allied Artists' Association at the Albert Hall, Kensington. The object of the society is, first and foremost, to allow artists "to submit their work freely and without restriction to the judgment of the public." Members pay one guinea, and, in return, can show five works without any question of merit or of selection by a jury. In theory, of course, nothing could be more liberal and just. But the practical result is unhappy. A jury may be stupid, incompetent, corrupt, but, at its worst, it would not countenance the license, not only possible but inevitable, when no other qualification is demanded from an exhibitor save the ability to pay five dollars.

Perhaps the wonder now should be that not more than eight hundred subscribers have been found, and that the number of exhibits does not rise above four thousand. It stands to reason that such a collection must degenerate into a hopeless hodge-podge—an array of good, bad, and indifferent. The Salon des Indépendants and the Salon d'Automne in Paris, are, it is said, taken as models, but few would deny that both these exhibitions are superfluous, and that the clear duty of the art reformer is to restrict the limits of the two summer salons, not to enlarge them.

Worse than this, the Allied Artists have made the mistake of introducing themselves under the most unfavorable circumstances. The Albert Hall is no place for an exhibition. The sculpture and black-and-white fill the arena, surrounded by rows of faded, unsightly stalls, above which and just below the boxes pictures hang in a melancholy line—a more brutal test than would have to be faced at the much-abused Academy, or the overcrowded Salon. The rest of the pictures hang upstairs in the circular gallery under the roof, while the water-colors are packed together on screens, tier above tier, close together, in the orchestra. The public, satiated with the annual Academic debauch, will not have the energy, or the patience, to make its way through the maze; the most conscientious critic would be exhausted before the task had fairly begun.

Good work is to be found, of course; it would be tragic if there was none among four thousand pictures and prints, drawings, and sculptures. But as much of it as I discovered, with the best will in the world, came from men who have no complaint to make of the opportunity offered to them elsewhere—artists like Mancini, Mark Fisher, Morrice, Lavery, Wilson Steer, Theodore Roussel, George Thomson; or else from younger men whose names are already beginning to be heard of in Piccadilly and Bond Street—Albert Maurer, whom the International has long since made known to London; J. D. Fergusson, Gerald Kelly, Gerard Chowne. But there are really too many to mention, and they themselves probably already realize that their work shows to better advantage at the International or the New English Art Club, or any one of the numerous little Bond Street galleries. It was a daring experiment to make, and experiment is better than stagation.

BROWN BROTHERS & CO.
No. 59 Wall Street, New York

BOSTON PUBLIC LIBRARY

But it was a mistaken experiment.

N. N.

The G. C. Hesselgren Publishing Company is bringing out what promises to be an important architectural book, called "Apartment Houses of the Metropolis." The work will contain the elevations and floor plans of the most important buildings of this kind in New York.

Paul Kristeller will publish through Bruno Cassirer of Berlin a collection, "Zeichnungen alter und neuer Meister," which is to reproduce from public and private collections in Europe, as far as possible in colors, the characteristic works of the greatest artists. Even the size of the originals is to be retained if possible. Monthly sections of ten sheets each, costing 4.50 marks, will be issued, twelve of them to constitute a volume, with explanatory notes and index.

The picture gallery of the Vatican has been enlarged to four hundred numbers, by incorporating the pictures from the library and the Lateran museum. This has involved a complete rearrangement. One side of the Belvidere has been devoted to this purpose and the pictures are grouped in seven galleries historically by schools. Through this consolidation of the Papal collections, the gallery gains notably in examples of the fourteenth and fifteenth centuries. The architectural and decorative features are highly praised by the few who have enjoyed an advance view. The public opening, which will be solemnly celebrated, will take place in October or November next.

A loan exhibition of Italian portraits will be held at Florence in connection with the national celebration of Italian freedom in 1911. The best examples of all periods, it is expected, will be gathered from private and public collections throughout Italy, but special attention will be paid the work of the sixteenth, seventeenth, and eighteenth centuries, when portraiture was notably vigorous.

The following pictures were sold at Christie's July 10: Sir E. Burne-Jones, The Tree of Forgiveness, £609; Sir Luke Fildes, Devotion, £220; Corot, Woody River Scene, with two figures decorating a statue, £399; N. Diaz, Glade in a Forest, with a fagot-gatherer, £325; Ch. Jacque, Landscape, with a flock of sheep, peasant-woman, and dog, £1,102. July 14 the same firm sold these engravings of the early English school: After Romney, Mrs. Musters, by J. Walker, £325; after Hoppner, Lady Anne Lambton and Family, by J. Young, £204; after W. Hamilton, The Months, by Bartolozzi and Gardiner (the set of twelve), £204.

JUST ISSUED

BOOKS THAT SHOULD ADD TO THE TRAVELER'S PLEASURE

16mo, limp covers, full gilt, in the general style of Lucas's "Friendly Town" and "Open Road." Each $1.56 postpaid (leather, $2.56).

Poems for Travelers

Compiled by MARY R. J. DUBOIS.

Covers France, Germany, Austria, Switzerland, Italy, and Greece in some three hundred poems (nearly one-third of them by Americans) from about one hundred and thirty poets. All but some forty of these poems were originally written in English.

The Poetic Old World

Compiled by Miss LUCY H. HUMPHREY.

Covers Europe, including Spain, Belgium, Greece, and the British Isles, in some two hundred poems from about ninety poets. Some thirty, not originally written in English, are given in both the original and the best available translation.

HENRY HOLT & CO. 34W 33d St. New York

Rock-Climbing in Skye

By ASHLEY P. ABRAHAM. Author of "Rock-Climbing in North Wales." With 30 Collotype Plates, 9 Line Diagrams, and a Map. 8vo. pp. xxiv-330. $7.00, *net*.

Skye is preferred to Switzerland by many climbers who are intimate with both districts. The mountains of Skye, the Coolin, are generally conceded to be the finest in the British Isles. The views from their flanks and summits are such as cannot be seen elsewhere.

The Nation.

NEW YORK, THURSDAY, AUGUST 6, 1908.

The Week.

Plans to break up the solid South are usually announced at about this stage of the Presidential campaign. In August matters are pretty dull, and there is little else to talk about. McKinley was going to capture a Southern State or two, and Roosevelt was going to; and now, of course, Mr. Taft is having his turn. Mr. Roosevelt did actually carry Missouri, but that is a border State. This week we learn directly from Hot Springs that there is a better chance to carry away part of the South than at any time in the last quarter of a century. Letters from Georgia, North Carolina, Virginia, and Tennessee are urging Mr. Taft and the National Committee to seize this exceptional opportunity. We cannot, however, believe that Mr. Taft will become much excited over the outlook. He knows what the Republican machine is in the South. He has publicly declared in effect that it is made up of men who hold Federal offices, or are looking for them; and he has denounced this shadow of a party for failing to win the respect of the substantial citizens of the South. So long as the race question remains in the foreground, so long the South is likely to remain Democratic. Unless the face of affairs greatly changes before November 3, we shall hear, as usual, that Georgia, North Carolina, Virginia, and Tennessee—to say nothing of South Carolina, Mississippi, Louisiana, Florida, Texas, and the rest—have gone for Bryan.

The Independence Party at Chicago has nominated for President Thomas L. Hisgen of Massachusetts; for Vice-President, John Temple Graves of Georgia. Mr. Hisgen, who has been the leader of the Hearst forces in New England, ran for Governor last year, as the candidate of the Independence League, when the League ticket received more votes than the regular Democratic. Beyond this, Mr. Hisgen is but little known to fame. John Temple Graves is a fire-eater of the fiercest type. As a journalist in Florida and Georgia—particularly as editor of the Atlanta *Daily Georgian*—he has been extremely bitter in his denunciation of the negro and his defence of lynching; and last year he came to New York to edit Hearst's *American*. It is not too much to say that Mr. Graves is a demagogue of the cheapest type. The Independence platform fits the candidates. It advocates radicalism of every kind: it would exempt the farmer and wage-earner from the operation of the Sherman Anti-Trust law; it voices the other extreme demands of labor and appeals to the worst passions of the mob. Hisgen and Graves stand no chance of election. It remains to be seen how far their presence in the field may damage Bryan. One thing is sure: they will help to keep Hearst in the public eye and increase the sale of his newspapers.

As a rejoinder to troublesome questions, Mr. Bryan's glib "not in the platform" will soon wear out. Not more than one man in the United States has expressed himself more freely, on an almost countless number of problems, during the last few years, than Mr. Bryan. If he imagines that by barring various indiscretions of his past loquacity from the platform he has effectually eliminated them from the campaign, he will soon find out his mistake. Does he think, for instance, that people are no longer interested in his deliberate condemnation of railway regulation as a necessary failure, and his espousal of government ownership as the only alternative? His abstention from putting his conviction on this matter into his platform doubtless proves his belief that public opinion is not ready for it just now, but it gives us no assurance whatever that he will not use his position, if he is elected, to bring public opinion over to his own declared views. We all know the skill and persistence of President Roosevelt in turning his office into an agency for the promotion of opinions not found in the platform on which he was elected. Bryan's assertion that public opinion is not ripe for ownership now is the veriest makeshift. The people are entitled to an unambiguous display of Mr. Bryan's present state of mind on this vital question. If it has not changed since his speech on returning from Europe, then the man who votes for him should do so with a full knowledge that he is voting for an early resumption of the highly disturbing agitation for government ownership.

That a man's foes shall be those of his own household has been the bitter experience of many a labor leader before Samuel Gompers. It now appears that it was a rueful bargain which was made at Lincoln between Mr. Gompers and Mr. Bryan. It may be true, technically, that the head of the Federation of Labor never promised or undertook to deliver the labor vote to the Democratic ticket. But after the emphatic rebuff at the hands of the Republicans at Chicago and the hand of welcome extended by the Democrats at Denver, Mr. Gompers went straight to Lincoln. Here he gave assurances of his own support, and summoned the faithful to vote for the friend of labor. He may never have said that he could commit his organization to one party or the other. But he certainly has injected politics into labor circles. Such, at least, would seem to be the view which recalcitrant heads of local unions take. Even Mr. Gompers is palpably alarmed at the prospect of losing his job. He admits, in his irritation, that "the enemies of organized labor" [*i. e.*, his enemies] may, by lies and misrepresentation, "even be successful in accomplishing my removal as president of the American Federation of Labor." Those who object to the dragging of the organization into politics are dubbed by him "political renegades and discredited outcasts of labor." He should apply for a writ of injunction to stop their utterances.

Chairman Hitchcock of the Republican National Committee spent last Friday in this city in sweet converse with Woodruff, Parsons, and other prominent Republicans. The result is half a dozen more or less conflicting reports in the newspapers as to the attitude of Mr. Hitchcock, Mr. Taft, and President Roosevelt toward the renomination of Gov. Hughes. Mr. Hitchcock says frankly: "The National Committee will use its influence in behalf of the man who is palpably strongest with the voters." Hence most of the reporters who inter-

viewed Mr. Hitchcock jump to the conclusion that the committee influence will be thrown for Hughes, and, on the other hand, the people who do not believe in Hughes infer that the committee is against him. It is clear, however, that the committee and the State bosses are likely to be at odds. The committee wants the strongest vote-getter; but crawling politicians like Woodruff, Barnes, and Hendricks want a man whom they can use. Some of them would much prefer a Democrat to another term of Hughes. But Mr. Hitchcock declares emphatically that he regards it as of the "first importance to carry this State." If he maintains this position there can be no reasonable doubt that in the course of a few weeks the national organization will be openly for Hughes. For it is more and more evident that Hughes is the one Republican who is reasonably sure of carrying New York. He is popular precisely because Barnes and Hendricks and Woodruff hate him. These creatures of the machine are despised and detested by the mass of the voters, and a candidate needs no better certificate of merit than their disapproval.

If anything can give President Roosevelt concern over the effect of his hasty public utterances, it should be the way his example heartens his fellow citizens to quote his rashness as their excuse. The Central Labor Union of Indianapolis has passed resolutions whose preamble declares:

> President Roosevelt, the highest executive in the land, has recently shown a greater contempt for the courts than has ever been shown by any officer of the American Federation of Labor or any member of organized labor.

The sting of the declaration lies in the very considerable amount of truth it contains. One cannot effectively preach good citizenship one day, and the next day use his high position to castigate openly a trio of judges, merely because their decision is a personal disappointment to the critic.

The transcontinental railway lines will, according to a published report, discontinue their import and export trade with Australia and the Orient, and will lay off their Pacific steamships. The decision is said to have been reached by the railways in consequence of Rule 86 promulgated by the Interstate Commerce Commission. The rule in question requires carriers doing an import or export trade to publish the proportions of the through rates which are respectively charged for inland railway transportation and for sea-carriage. Many of the through land-and-sea rates are exceedingly low. Competition often induces steamship managers to accept a cargo practically as ballast, and cases have repeatedly been made public where a through rate, as, for example, from Antwerp to Chicago, was less than the all-rail rate from the seaboard to Chicago. Originally, the Interstate Commerce Commission ordered carriers to desist from making such low through rates, and rejected the carriers' contention that competition in foreign countries created a dissimilarity in conditions and circumstances which exempted the carriers from any legal taint of discrimination. The Supreme Court, however, sustained the view of the railways, declaring:

> As a matter of law, it is not any violation of the [Interstate Commerce] Act for the carrier to make a lower rate to the point of export . . . upon the traffic which is exported or imported than upon that which is locally consumed

The Commission may, however, require the railways to publish the inland part of the joint rate. This the railways fear to do, by reason of the disparity between such rates and the ordinary rates on inland traffic. The Japanese freighters, subsidized by the government, offer sharp competition for freight in the Pacific; and if the transcontinental lines carry out their threat, the monopoly of our Pacific trade seems likely to pass into Japanese hands.

The pending difficulty between the Lackawanna Railway and the switchmen's union illustrates anew the evils of dragging the railways into politics. The immediate cause of the trouble is the dismissal of two union employees for disobedience to orders. The management of the road declined, very properly so far as can be learned, to reinstate the two discharged men. Thereupon appeal was made to the union by referendum, and, much to the surprise of the grand master of the organization, the union voted to tie up the entire Lackawanna system unless the two complainants were reinstated. There can be little doubt that this attitude of the union is due to its reliance on political influence, never so easily secured as during a Presidential campaign. The retort which the railway makes to the union—that it can fill the strikers' places three times over in a single day—while doubtless true enough, is not the highest ground the Lackawanna could take. The railways, as well as their employees, are in the first instance under a common obligation to the public, both shippers and passengers. Rigid discipline is the only guarantee of safety of life or prompt and efficient service. The union, in insisting upon the company's condoning lax discipline, and in relying on political influence to secure immuity for its members' offences, is taking a short-sighted position, against its own interests, against the carrier's interests, and against the interests of the general public.

Governor Magoon is delighted with the good order of Saturday's elections in Cuba, and everyone must rejoice with him. It will be easy, however, to be misled in the matter, for it is much too early to say, as the Governor does, that the success of the new and complicated election law is assured. To demonstrate that will take more than one election, and even if the elections were quiet, it remains to be seen whether the results will be accepted by those defeated for office. By all odds the best outcome of the voting is the reported Conservative successes. Cuba is to be congratulated if these have been great enough to induce that party to enter the Presidential campaign. Gen. Mario Menocal, who is spoken of as the candidate, is the first man mentioned for the Presidency really worthy of that office. Zayas and Gomez are quite the wrong kind, and their candidacies are waning because they are already quarrelling among themselves, much as they would were they to obtain control of the Republic. Gen. Menocal represents the educated and well-to-do classes—genuinely conservative, who have heretofore shrunk from taking part in politics with the rabble of successful gamblers, horse thieves, and revolutionists whom the fortunes of war brought to the front after the fall of the Palma government. Should Menocal be chosen President, there would be hope of the stability of the reconstituted Republic—a hope that would be wholly lacking should any one else now in the field be elected.

Mr. Asquith may fairly be said to have emerged with credit from the session of Parliament just closed. It is true that a number of important subjects foreshadowed in the King's speech in January were scarcely touched. But the measure of chief popular interest, the Old-Age Pension Bill, was passed in the House with scarcely any effective opposition. The Conservatives attacked it, but finally voted for it. The amendments adopted by the Lords were promptly rejected by the House, and the Lords acquiesced—for the simple reason that the radical and labor vote in England is now so formidable that neither party dares to thwart it. The general belief is that in succeeding sessions the scheme of pensions will be made still more inclusive, and the burden still heavier. The Irish Universities Bill, engineered by Mr. Birrell, also encountered comparatively little hostility. Whether it will permanently settle the grievances of the Irish Catholics in regard to higher education remains to be seen; but it is, at any rate, a long step toward conciliation. This concession to the Catholics was viewed coldly by a large number of the narrower non-conformists, yet it was strongly urged by many of the more liberal elements in that group. The most important matter left for the autumn sitting is the Licensing Bill. This is a complicated and extremely contentious piece of legislation. As at present drawn, the measure is opposed by the whole brewing and public-house interest; and various competent observers predict that, unless the bill is considerably modified, the government may be defeated on it.

Premier Clemenceau has had to deal before this with labor crises as tense as that which now confronts Paris. For nearly two years the Confederation of Labor has been pursuing a policy directed towards ultimate armed insurrection against the present economic régime. Strikes, lockouts, "demonstrations," and actual conflict with the troops and police have been attempted as a means for organizing and "training" the proletariat in preparation for the struggle. Such an affray as that at Vigneux must seem to the bystander a mere wanton provocation of bloodshed on the part of the labor leaders. When they urged the Parisian workmen to proceed to Vigneux and "demonstrate" against the slaying of two of their comrades by the troops a number of weeks ago, the heads of the Confederation must have foreseen the inevitable outcome. But they did not hesitate to pay the toll of human life for the resultant gain in class exasperation and hatred. That, we presume, is good tactics, if you want to have a fight; but the leaders of the Parisian organized workingmen will find their Machiavellianism just a bit out of date. The French workingmen, more prosperous than any others in Europe, would seem as a whole to be unprepared as yet for the promised revolution.

The recent promulgation of the North Sea treaty by the French government ought to end the attempts to portray Germany as bent upon swallowing Holland. When sensational journalists in this country and abroad were hard up for a new charge against the German Emperor it was easy enough to get some anti-German professor to prove conclusively that the Kaiser was only awaiting his opportunity to seize Queen Wilhelmina's little kingdom. Her marriage to a German prince was part of the scheme; her childlessness the aid of Providence. The Kaiser might deny all he pleased. Did not Holland have better harbors than Germany, much more convenient to the latter's great iron and steel and coal districts than Hamburg or Bremen? What would you? The Kaiser's guilt was proved. Unfortunately for those who reason thus—and they are the worst mischief-makers the world possesses to-day—in this North Sea treaty which France has just accepted and proclaimed, Germany has ended this game once and for all by guaranteeing the territorial *status quo* and the sovereign rights of those countries which border on the North Sea. Moreover, it is worth recording before this treaty takes its place among the host of international agreements of long standing, it was Germany that first suggested it, and, above all, her ancient rival accepts it in good faith.

Austria has just made a material enlargement of the railways under state ownership and control. Three important lines, the Oesterreichisch-Ungarische Staatsbahngesellschaft, the Nordwestbahn, and the Südnorddeutsche Verbindungsbahn, together with their minor connections, have been purchased by the government. The yearly obligations assumed towards the security-holders amount to 29,600,000 kronen, or about $6,000,000. The length of line previously administered by the state was 15,000 kilometres. This recent acquisition adds 3,000 more. The Austrian railway budget resulted in a deficit last year of about 70,000,000 kronen. In order to secure a more effective control, and thus raise rates, the three lines above noted were purchased. The government will now be in a position to dominate traffic to the Elbe and between the Adriatic and various German markets. Tho movement is a long step towards replacing the mixed system of state and private railroads with a system entirely under state control. Austria's experience demonstrates anew the futi ity of the idea that if the government can but control a certain number of lines, it can dominate rates. The private roads have rather set the pace, and the state roads have been compelled to follow suit. A certain mild compulsion was put on the companies to induce them to sell out, but they are reported as having made a good bargain.

The Englishwoman is making great headway in the medical profession. The College of Physicians already admits her to all its examinations. The Royal College of Surgeons has just taken up the question. At a recent poll of the fellows and members a majority of the fellows were in favor of admitting women, but the majority of the members were opposed. The London *Hospital*, commenting on the result of this poll, declares that the opposition of the members depends on their ignorance of the excellence of women practitioners and on fear of their competition. These two objections cut each other's throats. Skilled men surgeons are not troubled by the competition of unskilled women surgeons. On the other hand, there is no tenable ground for barring the skilled woman from any of the honors or privileges of the profession. Antique prejudice cannot long hold out against the assault of the expert, no matter how unwise she may have been in her choice of sex. It is better to give cordially what she demands, than to wait till she takes what she deserves and thus renders the withholder ridiculous.

STATESMANSHIP AND NAVAL RIVALRY.

Dr. Macnamara, the new Secretary of the British Admiralty, dwelt the other day upon his impression of the international race for supremacy in battleships. He told the House of Commons that he had been "filled with despair at the dreadful rivalry which civilized peoples were inflicting upon themselves." Everything was growing bigger, everything more expensive and more rapidly obsolete. The Victory, he pointed out, was forty years old when she fought at Trafalgar, and was regarded as a useful ship for some years after that. Last year, he said, England sold for only $132,500 a battleship built in 1891 for $3,955,600, and in her sixteen years of service repaired at a cost of $500,000 more. In the last five years England has sold for $1,000,000 battleships costing $12,500,000. Ten years ago the British naval estimates were $132,500,000; now they are nearly $162,000,000. In the same time Germany's naval expenditures have risen from $33,000,000 to $83,000,000. "I don't see," exclaimed Dr. Macnamara, "where it will all end."

Something of this despair is evidently Mr. Lloyd-George's as Chancellor of the Exchequer, for in his address to the Peace Conference in London last week he said:

> We are spending each year $300,000,000 preparing for war, which is a stupendous waste. Let us cast aside European mistrust, quarrels, and feuds, and unite in redeeming humanity from the quagmire where millions are sunk in misery through intemperance, ignorance, and crime.

These are the words of humanity and also of sound common sense. Indeed, the end of the naval rivalry that appalls Dr. Macnamara is bankruptcy. That outcome is plain enough to students of finance and economics; and the Socialists the world over are basing their arguments on the suffering of the poorer classes under the terrible burdens entailed by this mad struggle for superiority in battleships. Yet the statesmanship of the world is helpless before it. Letting "I dare not wait upon I would," each Prime Minister offers the same old excuses that a nation's strength is measured only by its floating cannon, the "surest means of preserving peace."

Even Dr. Macnamara, for all his frankly-expressed disapproval of conditions, has no remedy to suggest. All he can do is to come back to the trite conclusion:

> But after all, heavy as these charges are, rapidly as they increase, battles cost more than battleships. The people of this country have to recognize that war indemnities may very well be naval estimates multiplied many times. It is upon the strength of the British navy, its unimpaired strength, that depend not only our trade and commerce and happiness and safety and the honor of our people, but the very foundations of the peace of the world.

It is true that Sir Henry Campbell-Bannerman, who was known to feel about this subject as Mr. Lloyd-George does, declared his willingness to reduce British naval estimates, if other nations would join the movement. But the Kaiser and the Hague Conference giving no encouragement for the limitation of armaments, the matter ended. There is more warlike talk than before, and more appeals to keep up the navy and increase the army and its reserves. Lord Cromer announces that a European war is imminent.

Where is the statesman anywhere who will aspire to immortality by taking the first step that will really count in the direction of disarmament? He is not to-day to be found in the United States. That Mr. Bryan's platform abandons the former Democratic attitude of opposition to a large navy, Mr. Taft clearly points out. But his own utterance on the subject of the fleet is only a feeble imitation of Mr. Roosevelt's assurances that the United States wishes no war, and will provoke none, but that nevertheless we must be prepared to resist aggression, to insist upon peace with honor, etc. These are the same familiar catch-words so dear to the politician, and particularly to the makers of armor-plate, of guns, and of ships. This confession of the limitation of statesmanship, this appeal to the jingoes, ought to be humiliating to any one who aspires to the title of national leader. It is an admission that we are unable to change a policy involving a gigantic waste of national resources.

And the wonder at our impotence grows when one studies the vacillations, the bickerings, the blunders of navy-maniacs the world over. For masterful Imperialists, moulders of the world's fate, they are strangely uncertain in their counsels, and amazingly timid. If there is a rumor that one nation is to buy or build a few more ships, the whole crowd, German, English, or French, trembles and begins to calculate anew. The possibility that Japan may buy the ships that Brazil is said to be building sets every chancellery to figuring with pad and pencil just how the balance of power may be restored. Ever a prey to wild alarms, those who put their whole hope for earthly salvation in fleets, wrangle incessantly over the size of their battleships, and their number. One writer like Park Benjamin may insist that a fleet of twelve battleships on either coast is an adequate navy for the United States, but forthwith he is dubbed a traitor for not saying sixteen or twenty. And when a conscientious official like Dr. Macnamara sees the folly of it all, he, nevertheless, feels compelled to concede in the same breath that for all this folly there is no cure but more folly.

THE TIDE OF MIGRATION.

The statistics of migration for the past year are significant. They take most of the wind out of the sails of those who argue that our American ideals are likely to be blotted out by an alien invasion. The steamship authorities assert that the departures for the fiscal year ending June 30, 1908, exceeded the arrivals; and this, too, despite the roaring trade we were driving until the crisis of October last. For the first six months of the present calendar year the net loss caused by the excess of aliens leaving for home was almost 200,000. The immigration restriction leagues will breathe easier now, and our native virtues may get a chance to grow between whiles.

Reference to immigration is made by only one of the old political parties, and that is to Asiatic exclusion. The Republican platform is discreetly silent. Mr. Bryan, knowing of the disaffection that was formerly rife on the Pacific, played the small politician by inserting in the Denver platform a declaration opposing "the admission of Asiatic immigrants who cannot be amalgamated with our population, or whose presence amongst us raises a race issue and involves us in diplomatic controversies with Oriental Powers." The Hearst platform reëchoes this declaration with the added humbug of demanding "an exclusion act which shall protect American workingmen from competition with Asiatic cheap labor, and which shall protect American civilization from the contamination of Asiatic conditions." Mr. Taft, in his encyclopedic review of

the Democratic platform, drops a tear over his own party's silence in the matter, but assures us that a Republican Administration can "by diplomatic negotiations" minimize "the evils suggested."

The most significant fact in the rapid ebb of immigration is that economic considerations are not only paramount —they have been that for many a year —but that they act with unexpected rapidity. The mobility of international labor was never as great as to-day. Trained observers of the movement never suspected that the supply of labor would ever become so readily fluid. Adam Smith commented on the anomaly that a difference in the prices of commodities would occasion their transport from one end of the world to the other, while a similar difference in wage-scales would not induce a workman to remove to a neighboring parish. No modern economist, however, would dare to apply to modern conditions the great Scotchman's dictum:

> After all that has been said of the levity and inconstancy of human labor, it appears evident from experience, that man is of all sorts of luggage the most difficult to be transported.

Like many another phase of modern life, the choice of habitat has come under the sway of conscious industrial motives. "A faith's pure shrine" was doubtless the lure of the New World to the Pilgrim Fathers, but the modern Hungarian does not despise "bright jewels of the mine," albeit the jewels are of anthracite.

Despite our better knowledge of the impulses to migration and the rapidity of their operation, many of the older fallacies persist with reference to the effect upon our industrial welfare. Commissioner Watchorn's statistics note that the 585,970 immigrants who entered at this port for the fiscal year last ended brought with them in money only $11,812,000, as compared with $25,559,893 brought by the 1,116,295 immigrants of the year before. Now it is legitimate —in some ways useful—to calculate the additions made to our currency by these new recruits in the industrial army. But there is danger of hastily accepting the cash in their pockets as an index of their addition to our national wealth. What we gain from the immigrant is measured by his contribution to the national income, by the value of the produce he adds, by the necessities, conveniences, and luxuries he enables us to enjoy. It would hardly seem necessary to enunciate this truth, were it not for the persistent lament over the supposed loss the nation suffers when the departing worker takes some cash home with him. Thus the commissioner's statistics console us for the decrease in cash brought in by saying it "was balanced partly by a reduced amount in money orders sent abroad by immigrants." The perturbations which short-sighted people experience over money "taken out of the country" by returning emigrants would be quieted if they only asked the question, "How was the money earned?" If a returning Sicilian has laid bricks or dug ditches, the wealth he has created stays on this side. It could not be transported to his old home.

Persistent, too, is the other cry of the way low-wage laborers depress the scale of native wages. This much truth does contain: if the native worker persists in staying in an occupation entered by the low-wage worker of equal efficiency, the native worker must expect to accept the lower wage. But instances out of number show that when the native worker is forced to the alternative of rising to a higher employment or sinking in the old one, he commonly rises. Besides, as every employer will testify, the immigrant has no inherent predilection for the low wage. He generally asks for the American wage before his employer thinks the new employee is worth it.

With the decreasing birth-rate of the native-born population in the older parts of the country, we may yet find in these strong stocks of the Old World a very real element in our national strength. Our prejudices are strong enough to render us for some time to come immune to the contagion of alien ideas, and the harmonious coöperation of many a polyglot household to-day is a cheerful sign that social assimilation on a larger scale may at least be hoped for.

CONCERNING ORATORS.

Sir Charles Wyndham declared the other day in a pardonable outburst of British pride that, though the Americans are always talking, there is nothing like the same proportion of really good public speakers in America as in England. As Dickens's friend Major Chollop would have said, "the sentiment is quite Europian," and does not surprise us. The whole question hangs on the meaning assigned to "really good." When Sir Charles Wyndham uses the phrase, he is evidently thinking of a speaker fit to stand up in Parliament and address the English nation with distinction. He is thinking of the effect of the speech upon an audience having in common certain standards of stylistic and oratorical excellence. He is thinking of the fine traditions of English orators, of Gladstone, Bright, Macaulay, Fox, the Pitts, and Burke—of a style of oratory, to adapt Burke's own words, which every well-formed mind would be disposed to relish. The well-formed English mind relishes what Arnold called "prose of the centre," prose free from barbarism, provincialism, and idiosyncrasy, prose used by the most cultivated people of the capital and understood by all intelligent men. The really good public speakers in England use such prose habitually, and it must be admitted that even the best public speakers in America frequently do not.

The explanation is not far to seek; Washington is the capital of the United States in no such sense as London is the capital of England. It is not the great intellectual and social centre of the country, but only a little out-of-the-way political resort in which gentlemen from the several States spend a few months of each year trying to come to some agreement over the conflicting interests of their constituencies. The Constitution has provided that they shall not be very young or impressionable when they go there. Congress is in no sense a training school for them; it has no established standards to which they are constrained to conform. They are ordinarily too old to learn. They bring with them, one and all, their own ideas of the methods and manners of the public speaker—the methods and manners that they learned and employed in their own home States. The gentleman from Massachusetts brings the polished, incisive style that pleased in Massachusetts. The gentleman from Mississippi brings the grandfatherly "plain planter" style that pleased in Mississippi. The gentleman from Idaho brings the copious and ardent style that pleased in Idaho. Many of them bring the neologisms, metaphors, and even the solecisms of their own particular provinces—sometimes coupled with an unruly temper and a love of abusive epi-

thet better adapted to "spellbind" an Iberian village than to carry conviction in the capitol. But the fact remains that most of them have been effective speakers somewhere—which is not always true of the gentlemen who get to Parliament—or they never would have got to Washington. They have all prophesied with honor in their own countries.

If these gentlemen tried to follow any common ideal of oratorical excellence they would probably be less effective than they are. For, if the truth be told, Americans are almost always a little suspicious of any speaker who seems to be at all concerned for the form of his speech. They like a man who has grown up in their "section," and who is not above their manners and mannerisms. They trust a man not for his elocution, but for his power to feel precisely as they do and to express precisely their feelings, and, as nearly as possible, in their own words. The simplest type of the successful American speaker is Squire Higgins of Higginsville, who gets up in town-meeting with an air of unpremeditated candor, and says, "Naow, my friends." That is the prevailing American tradition of which Lincoln, and not Webster, was the father. "You will find people," said the Illinois lawyer in his debate with Douglas, "who will try to persuade you that a horse-chestnut is a chestnut horse." That was the kind of speech—and not the almost lyrical passion of the Gettysburg address—that earned him the title of Honest Abe, and made him President. He, too, was a man of sectional idiosyncrasies; he had formed his style while he was hewing out ox-yokes. But he had the greatness to recognize the "I'm-from-Missouri" element in all his fellow-countrymen. The country is too large and diverse, however, to find its voice very often in any one man. Our most effective speaker to-day, the only one who pretends to address the nation as a whole, speaks in words as hard as twelve-inch projectiles, swinging his terrible right like a sledge-hammer on an anvil; but he does not speak in any tradition, and his appeal is only to a constituency. His power as a speaker resides largely in his ability to make pebbly phrases which fit in the slings of the sons of Jesse.

The unacademic qualities of our public speakers rise out of incorrigible necessity—out of the unacademic qualities of the people whose representatives they are. The eccentricity of public speech is one with the eccentricity of our literature and our common talk. But that does not settle the whole question against us. We have the virtues of our defects. The "prose of the centre" has its characteristic defects as well as its characteristic virtues. It sometimes preserves its academic purity at the cost of popular effectiveness. A writer in the London *Nation* complains of the absence in contemporary English of a "certain racy smack of the joy of living which comes from life in the open air. The language of the present-day pulpit is wearisome in the extreme. Our English at present is suffering from a certain anæmic refinement." That complaint, at least, hardly holds of English as it is written and spoken in America. We have an occasional *précieuse*, to be sure, like Mrs. Wharton, who says "the tacit conspiracy of inanimate objects had focussed the light on the picture," when she means merely that the picture happened to be in the light; but that is contrary to our traditions, which are nothing if not racy. How much more traditional is the ring of this from O. Henry: "Far-reaching from somewhere comes the smell of ham and red cabbage, and the crash of dishes on the American plan." Or this from Jack London—the man's hands are freezing: "The wires were pretty well down between him and his finger-ends." Or this from the classic pages of the *Atlantic Monthly:*

> Behold, for instance, the necromantic spitball, how it drops from the batter's hips to his knees in two feet of forward motion, or "floats up like a chunk of lead till it gets close to the swatting station, and then ducks around the corner like a subpœna-dodger!" The mere expectation of a spitball unnerves the doughtiest "sons of swat."

Sometimes, it is true, our speakers do stoop too much to conquer. The lawyer stoops too much when he concludes that it will damage him with his clients if he speaks grammatically. The college president can scarcely afford to inspire the undergraduates and "jolly things along" in their own picturesque jargon. Certainly, the evangelist who translates the Beatitudes into the language of Chimmie Fadden has mistaken his calling. There should be some public speakers to resist the levelling and vulgarizing will of the people. At the same time, the fresh and racy vigor of the Elizabethan speech for which the English writer sighs is possible only when the people in the quick smithy of their thought forge the word or phrase that fits the need of the minute. In his healthy disdain for dictionaries and grammars the American speaker has many advantages over the English—when the English language stands in his way, it hasn't a chance.

STRAINING THE THEORY OF DEMOCRACY.

Two men were bracketed for Senior Wrangler at Cambridge University this year. One of them is a Russian Jew, Selig Brodetsky, whose father landed in England practically penniless. The young man himself, as the English papers explain, "has been educated at schools mainly attended by the poor." To Englishmen, who are less familiar than we with the achievements of the Russian Jews in any field which they choose to enter, the incident has seemed very remarkable; and there has been much comment on the "educational ladder" which has enabled one without money or family to mount so high. The London *Spectator*, for example, urges that there should be larger opportunities for capable but less brilliant students:

> It is satisfactory, indeed, to think that, if a boy of this high capacity is born, it will be his own fault if he does not make full use of his natural faculties. But it would be more satisfactory still if we could assure ourselves that the ladder was equally open to those who are not fitted to mount so high, and that at every round boys or girls would find the means of taking another step upward, and of turning to account such modest talent as they possess, though it will never make them famous beyond their own narrow circle. . . . . A system of scholarships may do very useful work and yet stop far short of the university.

If England fails to encourage talent that is not the highest, we err in the other direction. It may almost be said that our educational system sets a premium on mediocrity.

The pace of classes in our public grammar schools is determined by the average pupils, or perhaps pupils a little below the average. In view of the task thrown upon our grammar schools, of taking all sorts of raw material—children of foreign birth, children in whose homes study is impossible—we can hardly complain that the work often drags. Our chief criticism is that in so many

cases no provision is made for promoting the bright children more rapidly. They are held back in a lock-step with the rest. The boy who can easily complete the programme for three years in two or two and a half, and who would profit largely by moving ahead quickly, is not allowed to break the ranks. He is under no stimulus to exert himself and do his best. As a result, he dawdles and forms thoroughly bad habits of application, habits which may cling to him and clog him through life. We do not say that a high-strung girl or boy should be put under pressure, but many grammar-school children, as both parents and teachers admit, are allowed to drift along too easily.

In high school the problem is somewhat different. The attendance is comparatively small, and yet it includes a considerable number who are intellectually unfit to profit by high-school instruction. We are enthusiastic supporters of the public high school, but we maintain that that costly education should be bestowed only on those who are capable of benefiting from it and of making some adequate return to the community for the outlay. Our high schools are apparently conducted on the principle that the stupid son or daughter of any honest taxpayer is entitled to pass the successive grades. The standard is far too low. We should say, at a rough guess, that in most of our high schools in this country the lowest quarter or even third of each class should be dropped out, as not fairly entitled to the money and pains expended on them. Were these dullards dismissed, the remnant of competent pupils would get much more out of their course. They would go farther, would go more thoroughly, and would graduate as better-trained and more useful citizens. Not only should the standard be raised, but, as in the grammar school, more liberal provision should be made for promotion. We have seen a boy take a four years' high school course in two years and do better work than nine-tenths of his fellows; but under existing circumstances such exceptional pupils are generally discouraged; indeed, they are deliberately sacrificed to the machinery of the school, and to the mediocre children to whom it is adjusted. At present bright boys and girls who cannot spend four years in high school hesitate about entering because it takes so long to get anywhere. But were the standard high and the grades less rigid, the ambitious would be tempted to enter, because in a year or two they might really accomplish something, whereas now they mark time.

In college the difficulties as to promotion are less perplexing. The extension of the elective system and the arrangements for the three-year degree have made for a flexibility that is a distinct stimulus to ambition. But in most courses in all our colleges the standard for passing is low. The authorities in the Western State universities maintain much the same attitude as the authorities of our public high schools—that any sober and industrious child of a taxpayer is entitled to a degree. The result is that these institutions are flooded with mediocrity. It would be rash, however, to assert that Eastern endowed colleges maintain a distinctly higher standard. There is hardly a college in this country whose bachelor's degree is a genuine certificate of intellectual discipline. That precious sheepskin may and often does mean four years devoted to athletics and everything else but study. More serious, however, is the fact that our colleges, in carrying along this mass of dead wood, really neglect the man of extraordinary capacity, the cultivation of whose talent might produce striking results. Scholarships are spread out thin among dozens of relatively unpromising boys, instead of being concentrated on the highly deserving. Harvard has some large scholarships, and the scholarships of the Harrison Foundation in the University of Pennsylvania range from $500 to $800. These will enable a scholar to do the proper work of a scholar. But in most colleges your poor boy, no matter how eminent his gifts, is forced to devote his energies to tending furnaces, shovelling snow, and other tasks that eat up his time and strength without carrying him toward his proper goal.

This fault may be characteristic of a democracy. We try to apply the democratic principle in a field in which it is not applicable. Like Matthew Arnold's friend in Ohio, we assume that excellence is common and abundant, whereas by definition it is rare and seldom met with. We are victims of the fallacy that everybody can profit by a college education, after the manner of that enthusiast who wanted to solve the race problem by sending every negro in the South to a good university. Thus we tempt through college and into a professional life people who would be much more useful and happy in less ambitious callings; we spoil good carpenters and plumbers in order to make poor ministers and lawyers. We forget the aim of education as defined by Ruskin, "to raise the fittest into positions of influence, and to give to every scale of intellect its natural sphere." You cannot make a silk purse out of a sow's ear, black or white, and if you want silk purses, you must cultivate silkworms. To that undertaking, we should like to see more of our colleges dedicate themselves more exclusively.

LITERARY PROPERTY: AN ITALIAN VIEW.

In recent copyright congresses there has been a strong and growing party which holds literary property to be like any other. The doctrine, though widely held, is made in France, and its motto is Alphonse Karr's dictum, *la propriété littéraire est une propriété.* Hence its partisans look to copyright in perpetuity, and meanwhile demand great extensions of the customary periods. A notable expression of this sentiment has been the somewhat fantastic suggestion that artists and their heirs should have the right to a percentage on every resale of their works.

With this view the veteran Italian publisher, Pietro Barbèra, takes issue in that excellent Florentine weekly, the *Marzocco* (July 5). Literary property, he maintains, is properly restricted. A book is in a peculiar sense indebted to the civilization out of which it springs. It is fitting, then, that, after the author and his heirs have enjoyed the usufruct, the debt should be paid by returning the book to its source. We have no space to argue this opinion, but may say, in brief, that it seems that of a follower of Taine. Would a follower of Emerson or Carlyle, if any such belated hero-worshippers there be, acknowledge any such debt? We think not. Yet the principle that literary property is on a special footing seems perfectly sound. Let us recall that even copyright is comparatively a recent invention. For the most part of written history authors have had practically no rights in their own works, living by state or private

patronage. Without commending the days of this blindness, we need not suppose that the sense of the race has, until the formation of copyright leagues, been wholly wrong in this matter. Finally, perpetual copyright or even its exaggerated extension seems forbidden by the general principle of law which discourages mortmain. It is a pragmatic age, and to realize the inexpediency of indefinite copyright one has only to imagine the practical inconvenience to publishers and readers were it necessary to-day to verify the copyrights of, say, Montaigne. The only way to meet the difficulty of the ever-ramifying claims of heirs and assigns would be to convey the right in perpetuity somewhere near the author's lifetime, and this would have all the disadvantages of other perpetual trusts.

The real question of copyright continues to be, in Signor Barbèra's opinion, how and how long? A consensus of legislation in many lands has answered the second inquiry: For the author's lifetime and that of his immediate heirs. This is the common intention of numerous laws which otherwise differ considerably. Signor Barbèra calls attention to the advantages of the Italian law by which the right of publication is devolved from the author to the public through a sort of middle stage. For forty years, or life, should he outlive the term, the author retains full control of his works. When through his death or expiry of this term of forty years the copyright lapses, all publishers are free to print without authorization, but on condition of paying a royalty of 5 per cent. on the gross price to the author's heirs or assigns. Take the concrete case of the highly important copyright which Manzoni obtained in 1827 for "I Promessi Sposi." He died in 1873, outliving the usual term by six years. At his death that famous novel became public property subject to the payment of 5 per cent. to his heirs. This they received until 1903 on the many editions of this classic that come from the Italian presses.

This provision is certainly, as Signor Barbèra contends, in the humane and flexible tradition of Latin legislation. Such a reversionary right, which cannot be appraised or assigned in advance, may often make up for an original bad bargain on the author's part. Furthermore, it provides a decent devolution of literary property to the public. The requirement of a royalty warns off the less responsible class of publishers during the second period. We do not see in Italy, as we do in England and America, base reprints of early and perhaps disowned volumes appearing in an author's lifetime, nor do we often find the rather undignified expedients, perfunctory revision, and the like, by which an expiring copyright is here kept alive. On the whole, too, this period of freedom to print by paying seems to make for greater enterprise among publishers (who are too prone to sleep upon their copyrights), and thus to further incidentally the interests of the heirs of authors. In short, this scheme of devolution has so many obvious advantages that it is surprising it has not attracted greater attention among copyright reformers.

A natural application of the principle, Signor Barbèra points out, would be the right to print within an established time after an author's death, and on payment of a fee, selections of his works in anthologies and of his correspondence in memoirs, etc. It would seem, also, as if all posthumous papers neither strictly literary nor copyrighted, might properly be treated like works that have passed into the middle category. It is hard to see why a publisher should secure all the privileges of authorship for works never intended for the public eye, but luckily found or thriftily bought. If the law made such literary flotsam and jetsam free to all upon payment of a percentage to the respective heirs, we should have fewer swollen official biographies and less questionable trafficking in the small change of authorship.

THE STATE OF CANCER RESEARCH.

The second volume of Reports of the Collis P. Huntington Fund for Cancer Research, just issued, contains seventeen papers which collectively give a fair summary of present knowledge. Scarcely a month passes without the announcement in the press of a new remedy for cancer, and quacks are constantly advertising "sure cures for cancer," and "cancer cured without the knife." But we may as well face the facts, however depressing. The truth is that no one knows exactly the cause of cancer, and there is no sure cure. An early and radical operation is recommended by the most competent diagnosticians, though X-rays have proved effective with some kinds of superficial cancer, and what is known as "Coley's fluid" has been used with success in certain cases of inoperable sarcoma.

The cause of cancer is discussed at length in the article "Cancer Problems," by Prof. James Ewing of the medical department of Cornell. After a survey of all the evidence, he discards the theory as to a parasite. This conclusion, as some of our readers may recall, agrees with that of the Harvard report of several years ago. Dr. Ewing does not "deny all relation between parasites and malignant tumors":

> In one sense, certain well-known micro-organisms seem to act as indirect exciting agents of tumors. One of the most important facts in the etiology of tumors is that many malignant neoplasms develop after long-continued inflammation, which is caused by external irritants or parasitic micro-organisms.

Cancer of the stomach, for example, is sometimes the sequel of an ulcer; epithelioma, of lupus, or tuberculosis of the skin. But in the latter case "the tubercle bacillus gradually or suddenly disappears from the field and the tumor process continues from its own intrinsic forces." Hence Dr. Ewing infers that "external irritants and parasites are concerned only with the inception of tumors, and then indirectly"; and that there is little or no basis for "the theory of a special cancer parasite and of the necessity of a continuous irritant propagated by a micro-organism throughout the course of a malignant tumor."

The theory of "cell autonomy" is in his opinion the most tenable, as "founded on the sum total of clinical observations and supported by assured principles drawn from many collateral sciences." This theory is difficult to explain in non-technical language; but it is, in brief, that certain cells of the human body, under certain conditions, seem to have an autonomous power of growth and reproduction, like the cells of the lowest organisms. Some pathologists ascribe this morbid activity of cells, this reversion to primitive types—resulting in tumors—to the removal of the cells "from the influence of tissue tension by which their growth is normally restrained." Some inflammation which changes the mechanical pressure of cells on each other or the distribution of nutriment

may disturb the balance and set a group of cells free on a course of abnormal development and multiplication. This incomplete statement of the theory we may supplement by a single paragraph from Dr. Ewing's paper:

> We see, therefore, that the growth of tissue cells is normally controlled by the organization, that these cells possess regenerative powers greatly in excess of ordinary needs in order to meet extraordinary and accidental requirements [as from mechanical injuries], and that cells exhibit, in response to certain external conditions which some call stimuli, enormous grades of proliferative capacity. Why limitless growth should be such a striking characteristic of anaplastic cells, which have lost the control of the organization, we may not fully understand, but we can observe it as a fact.

It follows that one of the most fruitful fields of investigation is, in the language of Dr. Ewing, "the very minute observation and analysis of the general and local conditions surrounding the early stages of cancer." "The chief hope, for the present generation, of a reduction in the mortality from cancer" lies in "the earlier recognition of the precancerous stage of the disease and the elimination of some of its accessible factors." This study is now being carried on by experts in many parts of the world. Numerous experiments are being made in the transplantation of cancer of various types in mice, rats, and dogs, the conditions under which such transplantation or inoculation, is possible, and the conditions under which it fails. This volume contains a number of reports of such experiments. One paper by Dr. George W. Crile and Dr. S. P. Beebe shows how the blood of a dog which "has spontaneously recovered from sarcoma, when transferred into an animal with a rapidly growing sarcoma, has the power of producing immediate retrogression of the tumor," and this tumor has in most cases disappeared entirely. This observation, as Dr. William B. Coley, secretary of the fund, notes, may ultimately prove "of great value in the treatment of malignant tumors in man." There are also two papers by Dr. Coley on the treatment of inoperable sarcoma with the mixed toxins of erysipelas and bacillus prodigiosus. He details some striking results—the more remarkable because his cases were inoperable and therefore regarded as hopeless. Under date of November, 1907, he writes:

> Altogether, I have personally treated about 430 cases of sarcoma with the mixed toxins. In 47 of these cases . . . the tumor has completely disappeared; and in 28 cases a period of from three to fifteen years has passed since the disappearance. . . . During that period [of fifteen years] important improvements have been made, from experience, in both the preparation of the toxins and the method of administration. The proportion of successes is, therefore, higher now than in the whole past period.

Dr. Coley, however, urges the early use of the knife, when possible, and the administration of the mixed toxins, after the operation, as a prophylactic against recurrence.

To sum up, then, the various secret remedies that are so widely heralded both in the news and the advertising columns of the press, here and abroad, are, like all such nostrums, a fraud. The deception is peculiarly cruel because no disease is more dreaded than cancer, the victims of which eagerly grasp at any straw of hope. And we may add that the improvements in methods of diagnosis by the most skilled pathologists, of surgery by our best surgeons, and of post-operative treatment—all these things increase the chance of recovery after an early and thorough operation.

NEW GERMAN FICTION.

A book which is likely to attract considerable attention in Germany, and perhaps elsewhere, is Jacob Wassermann's "Caspar Hauser," which has for its hero that mysterious person. (Stuttgart: Deutsche Verlagsanstalt.) The voluminous literature which has grown up about this victim of the *raison d'état* is more concerned with the secret of his birth, his exposure, and subsequent persecution than with the man himself. But Wassermann is no Sherlock Holmes deftly unravelling the threads of circumstances: he is more given to the task of threading the labyrinth of human souls. The reader who would seek a key to the Hauser mystery will be disappointed in the tale. Its merit lies in its artistic treatment of a subject which lends itself as easily to melodrama as to moralizing. With the exception of a play by Kurt Martens, "Kaspar Hauser" (Berlin: Egon Fleischel & Co.), it is the only work about the man of undeniable literary quality. Wassermann's book is a faithful and sympathetic record of the few years which Hauser was allowed to live in comparative freedom in Nuremberg, where he was the object of conscientious study and solicitous care on the part of two eminent men: Georg Friedrich Daumer and Anselm Ritter von Feuerbach. The author has based his portrait of Hauser on their reports, and succeeds in presenting a touching picture of the gradual unfolding of a mind that had been reduced by solitary confinement to a state of helplessness and ignorance. The novel is a tragedy of guilelessness. The introduction of the love element for the sake of the story seems somewhat forced. Yet the innocent affection springing up between the two comrades in misfortune—the strange youth and a highly sensitive woman barely more than a child—furnishes some of the most delightful pages of the book. Clara von Kennekampf becomes a hardly less interesting character than Hauser himself. Wassermann treats the subject with a spirituality rare among the writers of Young Germany.

Georg Hermann scored a success some time ago with "Jettchen Gebert" (Egon Fleischel & Co.), a story of *bourgeois* Berlin in the first quarter of the last century, in which he limned cultivated middle-class characters with the delicacy of old miniatures, and contrasted them with a more robust type, the rising conquerors of the commercial world, the men with few scruples and unlimited enterprise. Jettchen Gebert, the charming girl heroine, grew up between the two different classes, and by her marriage to Julius Jacoby was destined to become the link between them. The new story, "Henriette Jacoby," begins with the wedding feast, when the sensitive, refined girl suddenly becomes aware of the gulf between her and her bridegroom, and seeks refuge in the house of her uncle Jason. The story is unusual. The meagre plot is concerned with the attempts of the two families to settle the difficulty without publicity; but below the ripple of surface events is a deep undercurrent interrupted by spiritual crises. The slow and quiet tone of the narrative lends itself admirably to the old-fashioned setting. Few novelists of modern Germany have succeeded in creating such a remarkable group of characters as Jason, Solomon, and Jettchen Gebert, Doctor Kössling, and Julius Jacoby, and none has caught the spirit of that period and reflected it with equal subtlety. The story is an admirable achievement.

Heinrich Mann made his appearance a few years ago with stories so exotic in subject and manner, as to be but feebly convincing and hardly enjoyable. But he has proved the innate strength of his gift by a steady development towards that mastery which does not require the abnormal and the extravagant to support its claim to originality. Out of the storm and stress of his generation, with its quest for the unusual, he has grown up to an appreciation of characters and conditions more within the range of common understanding. Yet his novel, "Zwischen den Rassen" (Munich: Albert Langen), treats a problem of exceptional interest: the life of

a child born in Brazil to a Teuton father and a Latin mother, and brought up in Germany. For in the sensitive nature of the girl, one of Heinrich Mann's most interesting heroines, the antagonism between the two races is incarnated. She becomes conscious of the homelessness of her soul, and, when the mother joins her after the father's death, drifts along the changing and treacherous currents of an international society which verges dangerously on the *demi monde*. Once she has grown into a woman, the struggles between her German soul and her Gallic senses are the source of painful experiences. She marries an Italian superman, but, becoming aware of his perfidy, finds refuge and final rest in the more ideal affection of a man of her father's race. The story is well-constructed and well-told. Among the many interesting and graphically portrayed types, the heroine stands out as an unusually complex individuality, that engages and holds the sympathy of the reader. That the author should have chosen to give the mother a touch of the conventional adventuress of Latin extraction is regrettable. His book would have gained in dignity had he resisted the temptation to have his fling at her race.

Ludwig Thoma's "Kleinstadtgeschichten" (Albert Langen) is another highly enjoyable volume. Thoma is Germany's greatest humorist since the death of Wilhelm Busch. He is, however, a distinct product of southern Germany, like his brother Hans, the painter, and is particularly happy in the portrayal of provincial types of Bavaria. In this book he presents the atmosphere of a little town so vividly that its life becomes a reality, and its quaint characters living men and women. The innocent adventures of the brewer's son, the carefully planned revolution, and the curate's assault upon the monument erected to the memory of the victims of the war—all this is delightfully amusing, yet not without an undernote of satire.

A. von Ende.

NEWS FOR BIBLIOPHILES.

The first edition of Milton's "Comus," 1637, offered at Sotheby's on July 13, brought £317. It was bound in a volume of seven plays of later date, and, except for writing on the title, was a fine copy, with good margins. This was almost double the preceding record at auction (£162 at the Van Antwerp sale last year), but that copy was in poor condition. A more remarkable price was £405 paid for a copy of the first edition of Smith's "Generall Historie of Virginia, New-England, and the Summer Isles," 1624. The copy was in contemporary English calf, with the arms of King James I. on the covers, though, according to the catalogue, two of the maps were torn, one being defective. It contained the portrait of the Duchess of Richmond, but not that of Matoaka; nor did it contain the printed slip of errata found in some copies. This price is far in excess of any heretofore paid for a small-paper copy. If the copy was on large paper, the price was low. Brinley's large-paper copy (now in the Lenox Library) brought $1,800 in March, 1879; the Beckford copy (now Richard Hoe's) brought £605 in July, 1883; and the Barlow copy (now J. P. Morgan's) brought $1,900 in February, 1890. The collection of ninety-five autograph letters of Sir Walter Scott, mostly written to the Marchioness of Ahercorn, brought £610. Other lots at the sale realized the following prices:

"Tales of the Islanders," an unpublished manuscript, by Charlotte Brontë, in four thin volumes, £22; Shakespeare's "Richard the Second," 1615, lacking two leaves, with several other plays bound in, £106; Homer, the first edition, 1488, a fine large copy, but as usual without the Latin Epistle of Nerli, £165; Samuel Purchas's "Pilgrimage," 1617, and his "Pilgrimes," Vols. I. to IV., 1624-25, both presentation copies to Lord Chief Justice Robert Heath, £250; Washington's Letter Book, kept during the campaigns of 1775 and 1776, 151 leaves, in the handwriting of an unknown secretary, £41.

Daniel B. Fearing of Newport has just made a valuable gift to the library of the Grolier Club of this city. Included in the collection are many volumes of rarity and value, among them a Second Folio of Shakespeare's Works, 1632; the first edition of Milton's "Paradise Lost," the fourth title-page, 1668; Swift's "Gulliver's Travels," 1726, the second volume being the first edition; Cicero's "Cato Major," printed by Benjamin Franklin in 1744, the most famous book from his press; Birch's "Heads of Illustrious Persons of Great Britain," 1756; Chippendale's "Gentleman and Cabinet Maker's Directory," 1754; Barham's "Ingoldsby Legends," 3 vols., first editions; Locker's "London Lyrics," a presentation copy to George Cruikshank with inscription by Locker and Cruikshank's signature; a nearly complete set of the publications of the Bibliophile Society, including André's Journal and the Lamb Letters; Voltaire's "Dictionaire Philosophique," Paris, 1809, 14 vols., one of the only two sets printed by Didot on vellum; a fifteenth-century manuscript on vellum with numerous miniatures, done probably by a Belgian artist. An important and valuable set included in Mr. Fearing's gift is Lord Kingsborough's "Antiquities of Mexico," 9 vols., folio, one of the colored copies, with the first volume dated 1830. Lowndes, Sabin, and Allibone give the date as 1831. The last volume ends abruptly with a topic unfinished. The author spent his entire fortune upon the work; he was sued by a paper dealer in Dublin, and died in prison there. The subscription price of the colored copies was £210.

The Bibliographical Society will begin printing in a few weeks a new "Census of Caxtons" by Seymour de Ricci of 22 Avenue Henri Martin, Paris, a foreign member of the society. The volume will contain a full account of every known copy of every book from Caxton's press, including fragments. The copies will be traced from sale to sale, with descriptions of bindings, imperfections, and size (in millimetres). Mr. Ricci has been able to discover between two and three hundred copies not mentioned in Blades's work. But he says that although he has had the assistance of such expert bibliographers as E. Gordon Duff and B. Quaritch, he cannot hope to have registered every Caxton lurking in small libraries or private collections. He therefore asks information in regard to stray copies, or present owners of any Caxtons or fragments which have appeared in recent sales.

Correspondence.

A MONUMENT TO FRANÇOIS LAURENT.

To the Editor of The Nation:

Sir: May I not call the attention of your readers to the project now on foot among scholars to erect a monument in the city of Ghent, which was the scene of his life-long activity, to the eminent historian, jurist, and philanthropist, François Laurent? For such a memorial of one whose eloquent freedom of thought was all his life an annoyance to mediævalists and reactionaries, political, social, and religious, no help, of course, can be expected from the present clerical government of Belgium; but he holds a proud place in the hearts of the more liberal-minded of his countrymen, who have already raised some three-fourths of the ten thousand dollars needed for the monument, and they appeal with confidence to the aid of those who honor his memory throughout the world.

To Americans Laurent is known doubtless much less by his noble labors for popular education and for the elevation of the working classes or by his great works on the history and theory of law than by the remarkable volumes to which he gave the collective name of "Studies on the History of Humanity." This learned and profound survey of human history, which from the appearance of its first volume, in 1850, raised its author to a foremost place among historical philosophers, is still perhaps the ablest demonstration of the reality and the permanence of historical progress and the most eloquent argument for the divinity of its origin and end. Despite the deeply religious temper and tone of the work and the reverent warmth of its treatment of Christianity, its refusal to recognize in those who in his country represent that faith the perfect and final realization of religion, brought down upon Laurent the lasting enmity of the dominant clergy. He narrowly escaped being driven from his professorship, and no pains have been spared to darken and to blur his memory. His writings, however, have found readers in all lands, and their liberalizing influence has perhaps been even greater in France, in Italy, and in the Spanish-speaking countries (notably in Spanish America) than in his Belgian fatherland.

It is proposed to place the monument in one of the public squares of Ghent. The noble design submitted by the sculptor Van Bieshroeck—a relief of bronze on a pedestal of stone—represents the historian sitting lost in meditation, with Jurisprudence and Philanthropy standing at either shoulder, while Philanthropy and Education ply their helpful tasks beside him. The committee in charge of the enterprise embraces a large number of the most eminent and justly respected jurists, professors, and publicists of Belgium, the Netherlands, and other countries, among them Mr. Asser, a member of the Council of State of the Nether-

lands, president of the Institut de Droit International; M. Frédéric de Martens, professor at the University of St. Petersburg, and formerly president of the Venezuela Tribunal at Paris; M. Rolin-Jaequemyns, formerly Belgian Minister of the Interior and now a member of the Hague Tribunal; Professor Westlake of the University of Cambridge in England; Professor Pasquale Fiore of the University of Naples; and several distinguished members of the Peace Conference of the Hague. A few contributions have already been made from America. If there are others who would gladly help, their remittances may be addressed to the treasurer of the enterprise, M. Henri Boddaert, Counsellor in the Court of Appeals, 46, Coupure, Ghent, Belgium.

ANDREW D. WHITE.

Ithaca, N. Y., July 26.

THE WRITING OF HISTORY.

TO THE EDITOR OF THE NATION:

SIR: In a letter to the *Nation*, from Prof. George B. Adams of Yale, published May 28, occurred a passage that might be construed as a defence of the dry-as-dust style of writing history. The plea for this somewhat musty savor was based on the ground that historians are now collecting merely the raw material for a history, that for a long time to come no final word can be spoken, that not until that word is said will there be much occasion for literary form, and that the ultimate literary history is the far-off divine event toward which the whole (historical) creation moves. Now it is not probable that many historians will be influenced in practice by this view, either for better or worse; for it is extremely doubtful if historical writers who are equipped with Macaulayan vividness or Carlylean force deliberately lay aside those qualities, and assume a colorless medium of expression. A styleless style is usually the result not of choice but of necessity; and since necessity in this case is the mother of the lack of invention, arguments pro and con will not seriously affect the matter.

Yet I could not but reflect how much labor might have been saved to the overworked race of authors, to say nothing of teachers of English, if the same simple principle had been applied to other literary forms. For all literature—if to save discussion we except Shakespeare—is surely but a fragmentary, half-true, half-false groping after the final philosophy of life. Why, then, this premature struggle for literary form? Why did not Dickens leave us his newspaper sketches, and Thackeray his note books, and George Eliot a description of rural life supplemented by "Theophrastus Such," and Hawthorne a few aphorisms on the sin-haunted Puritan soul? Then, some distant day, when these matters are really understood, it might be worth while to put them in literary form. But unfortunately—or fortunately, the mere reader might say—novelists and poets and dramatists and a few historians have been impressed by the idea that there are two ways of treating a fact of life: as a tangible block of knowledge to be put to practical uses, or as a vivid picture of life itself. It takes more literary skill to present it in the latter form. "Samuel Budget, the successful grocer," tells you that the sun rose. As a fact this is strictly accurate. A painter puts his soul into the new day on canvas: it is the same fact, though recorded in a different style.

For my own part I am no student of history; I am merely one of the Reading Public; and I shudder to think how dense would be the night of my historical ignorance, which even now is a dim gray twilight, were it not that Motley, and Gibbon, and Macaulay, and Prescott persisted in writing works that were literary as well as historical. The Serious Student of History will tell me that some of these authors present erroneous ideas; but at least they do present them, and they are probably more accurate than historical novels, on which I should otherwise be forced to depend. And the ordinary Reading Public, of which I again confess to being a part, ought to get its history somewhere; but it will not unless it is readable. If it does not get its history—that is, if it does not read history—and so fails to profit by the wisdom and folly of former days, it must still go on making history that will ultimately seriously affect the story told in that final artistic product of minute research, which, it may be feared, will come too late by several generations.

For it is a difficult thing to know even a passage of history, and a more difficult thing to relate it. The only bit of history I feel that I know is a fragment of the civil war. I know the thrill that ran through a little New England town at the fall of Sumter; I know the enthusiasm of the rally in the town hall; I feel the oppression of the white-lipped silence in an old farm house when the newly-enlisted soldiers came home; the wild heat of the unreflecting charge on the slopes of Round Top, the horror of hospital service, the bitterness mellowing slowly like the gold of succeeding autumns—these things form a scrap of authentic history, that I know as no history that I have read has told them. I do not care to wait until the aim of all historical study is attained to see them adequately treated. I am not convinced that the only field for the historian is the collection of raw material.

W. E. AIKEN.

Mount Hermon, Mass., July 21.

"HOT WILL FOR TEMPERATE LAW."

TO THE EDITOR OF THE NATION:

SIR: The recent outpouring of Executive wrath recalls the following from Chapman's translation of Homer, Book i., lines 285-7:

"But this man breaks all such bonds; he affects,
past all men, height;
All would in his power hold, all make his subjects, give to all
His hot will for a temperate law."

AUSTEN G. FOX.

Wickford, R. I., July 27.

"THE MYSTERY OF CRUELTY."

TO THE EDITOR OF THE NATION:

SIR: May I offer a concrete instance to illustrate your editorial, "The Mystery of Cruelty," May 28? A day or two ago I heard a man talking substantially as follows:

"Yes, there are a good many snakes around the quarry. In spring, before the snow is melted, the workmen will sometimes find a lot of them in a crevice of rock, rolled up into a frozen ball. The fun is to put this ball of snakes on a level place, build a circular fire round them, and see them thaw out and try to get away."

I grant that it may be desirable to kill the snakes about the quarry. But why torture them? N. J.

New York, July 29.

Notes.

T. Fisher Unwin has in the press a volume called "The Birth of Modern Italy: The Posthumous Papers of Jessie White Mario," edited, with introduction, notes, and epilogue, by the Duke Litta-Visconti-Arese. Jessie White Mario, the English wife of an Italian patriot, played a prominent part with her husband in the struggle for Italian independence. Her memoirs contain a good deal of new material relating to Garibaldi, Mazzini, and others, and to the stirring events in which they took part. In his "Confessioni e Battaglie" Carducci describes Jessie White Mario as "a great woman, to whom we Italians owe a great debt." For a number of years preceding her death in 1906, she was a valued correspondent of the *Nation*.

Revells will issue immediately a 690-page "English Esperanto Dictionary" prepared by Joseph Rhodes.

The Grafton Magazine of History and Genealogy is a new quarterly periodical, the first issue of which has just been brought out by The Grafton Press of New York and Boston.

Enciclopedia Filipina is the title of the first Philippine review in the lines of social and political science, history, and administration. It is a monthly, which began in February, with Felipe G. Calderón, Manila, as editor and publisher. The text is in Spanish, but a special effort is made to bring the Filipinos into touch with American publications on the subjects named above; and the co-operation of American scholars is invited.

Volumes XI. and XII. of the New York edition of "The Novels and Tales" of Henry James contain "What Maisie Knew," "In the Cage," "The Pupil," "The Aspern Papers," "The Turn of the Screw," "The Liar," and "The Two Faces." The prefaces are, as usual, devoted to Mr. James's suggestive criticisms of his own writings. "What Maisie Knew," he tells us, is "a tree that spread beyond any provision its small germ might on a first handling have appeared likely to make for it." In one of his sentences he throws an interesting light on the kind of material that particularly appeals to him:

No themes are so human as those that reflect for us, out of the confusion of life, the close connection of bliss and bale, of the things that help with the things that hurt, so dangling before us for ever that bright hard medal, of so strange an alloy, one face of which is somebody's right and ease, and the other somebody's pain and wrong.

In discussing this story, he returns to a point already made in regard to "The Awkward Age"—the way a topic will run

away from the author: "Once 'out,' like a house dog of a temper above confinement, it defies the mere whistle, it roams, it hunts, it seeks out and 'sees' life." The idea of "The Pupil" came to Mr. James one day in a hot Italian railway carriage, when a friend chanced to tell him of "a wonderful American family, an odd, adventurous, extravagant hand, of high but rather unauthenticated pretensions, the most interesting member of which was a small boy, acute and precocious, afflicted with a heart of weak action, but beautifully intelligent, who saw their prowling, precarious life exactly as it was, and measured and judged it, and measured and judged *them*, all round, ever so quaintly; presenting himself, in short, as an extraordinary little person." This Mr. James regarded as "a thumping windfall." "In the Cage" recalls the author's "irrepressible and insatiable, his extravagant and immoral, interest in personal character, and in the 'nature' of a mind, of almost any mind the heaving little sea of his subject may cast up. And this also, we may add, must be the interest which a reader finds in Henry James's stories. "The Aspern Papers" was suggested to him by certain aspects of the affair of Byron and Jane Clairmont; but he covered his tracks by "postulating a comparative American Byron to match an American Miss Clairmont." "The Turn of the Screw" was written as a "Christmas-tide toy," based on "the vividest little note for sinister romance" that Mr. James had ever jotted down. "The Two Faces" he looks upon as a neat "example of the turn of the *whole* coach and pair in the contracted court, without the 'spill' of a single passenger or the derangement of a single parcel." These stories and Mr. James's comment raise a number of points which we shall reserve for discussion till the series is completed.

The Oxford edition of "The Poetical Works" of Keats has just been issued (Henry Frowde), with an introduction and textual notes by H. Buxton Forman. The text and the critical apparatus are the same as those of the handsome edition of 1906, from the same press (see the *Nation* of January 10, 1907, p. 32), but the paper is thinner, the margins are narrower, and the type is less generously leaded.

The series of Original Narratives of Early American History (Scribners) would be incomplete without Bradford's "History of Plymouth Plantation," and yet the admirable reprint of this famous text by the State of Massachusetts in 1898 renders a new edition almost unnecessary. The accessory matter accompanying the present reprint is, however, welcome, and sufficiently justifies its appearance. The introduction and notes by the late Hon. William T. Davis, president of the Pilgrim Society, and historian of Plymouth, are excellent, and the text, freed from the uncouth and incorrect forms, ye, yt, yey, wth, wch, which have so long disfigured reprints of seventeenth century manuscripts, is an improvement on that of 1898. The facsimiles represent the first page of the manuscript, the beginning of Book ii., on which occurs the text of the Mayflower compact, and the title-page of "Mourt's Relation." The map is a reproduction, somewhat reduced, of Smith's map of New England in its fifth state, representing the map as it would stand in the freshest copies procurable in 1620. An index covering seventeen pages is a welcome novelty. Mr. Davis has performed his editorial functions with good judgment and without prejudice, and has kept his comments refreshingly free from the incense of ancestor worship. His recognition of the undue significance hitherto attached to the Mayflower compact and his classification of it as merely a "plantation covenant," though he does not employ the phrase, is deserving of special commendation. He has utilized Marsden's researches into the history of the Mayflower and its captain, though he is inclined to regard the English scholar's identification of the vessel as "not proven," and he has incorporated in his footnotes references to the Bradford letter which Marsden discovered among the unarranged miscellania of the High Court of Admiralty in England. He has not, however, deemed it necessary to secure copies of the accompanying letters of Altham and Bridge, which were sent over as exhibits in the suit of Stevens and Fell against the Plymouth Colony in 1624, and throw light on the Kennebec venture. Mr. Davis's critical discussion of the contents of "Mourt's Relation" and his belief that Richard Gardiner, not Robert Cushman, wrote the John Pierce letter contained in that work, seem to us reasonable and convincing. Bradford's accuracy in the copying of quoted texts has often been commented upon, and now a new bit of evidence can be presented to strengthen the proof of his scrupulous painstaking. The order in council on p. 289 is the only copy of this document known to exist, but when compared with the minute in the Privy Council Register, it is found to reproduce the text almost *litteratim*. A few slight differences in spelling are the only points on which the formal order differs in any way from the informal minute.

James H. Moore, in his "Defence of the Mecklenburg Declaration of Independence" (Raleigh, N. C.), replies to the recent volume of William H. Hoyt in no half-hearted manner. Unfortunately, he possesses neither the historical sense nor the critical acumen of Mr. Hoyt, and is obliged to rest his case upon the tradition of the Declaration and the good character of those who have directly or indirectly given their evidence in favor of the document. How little of contemporary record exists on the subject is well known; how capable of a double interpretation that record is, the two writers show. But in the strength of argument the balance is on the side of Hoyt. It is a curious psychological problem involved, for a good North Carolinian finds it difficult to rob his State of the credit of so early a declaration of independence expressed in the very phrases of the Jefferson paper. But it is impossible to conceive that the North Carolina delegates in Congress suppressed the Mecklenburg defiance, that Stevenson, our minister to England, was little short of a thief, or that there existed a conspiracy among Jefferson's friends to do away with all the records relating to the declaration. Mr. Moore writes with sentiment, with little historical method, and is daunted by no aspect of the question as presented by those on the other side. As a complete expression of what can be said in favor of the declaration his book has value.

To writers who have not published any considerable work the American Historical Association offers the Justin Winsor prize of $200 for the best unpublished monograph on some subject in American history. Manuscripts offered in competition must be submitted before October 1, 1908, to the committee of award. Details may be ascertained from Charles H. Hull, Ithaca, N. Y.

The grasp of general ideas, the sound and penetrating criticism, the orderly marshalling of material, and the literary virtues of "Studies in New England Transcendentalism," by Harold Clarke Goddard (The Columbia University Press), lift this thesis above the mass of ephemeral doctoral dissertations, and give it permanent and substantial value. The main purposes of the investigation here undertaken are two: To discover first what were the sources of New England transcendentalism, immediate and remote; and, second, how far justified, as applied to the leaders of the movement, is the popular definition of transcendental, "transcending commonsense." The union of humor and sympathy displayed in the discussion of the second question interests the reader and illumines the subject. The answer, however, that the transcendentalist curiously fused in himself much practical sense with much theoretical nonsense is less contributory than that given to the first question. In dealing with this complex problem of the sources of the intellectual movement of a whole generation, Dr. Goddard shrewdly avoids the snare of superficial parallelisms, and commits himself with distinct success to pregnant generalizations. The main line of his argument is that transcendentalism was neither a wholly indigenous product, nor, as is commonly asserted, an importation from Germany, but rather the logical culmination of general tendencies of European thought in a union of the two separate eightcenth century currents, skepticism on the intellectual side, sentimentalism on the emotional side. It is a mistake, he points out, to speak of the new era as a mere revolt from the old. The French Revolution demonstrated the impossibility of any wholesale repudiation of the past. The new era cannot descend from heaven; it must spring from the marriage of existent elements: "Locke plus Richardson gives us Rousseau." "If Wordsworth came to bury theism from the dead." The age of pure reason was discredited by a growing conviction that "the practical and moral sides of a man's nature play a part in his apprehension of the truth." The metaphysical stimulus of transcendentalism came from Germany. But the transcendentalists were no great metaphysicians; and they were emotionally ripe for transcendentalism before Germany touched them. Their spiritual ancestry runs, broadly speaking, thus: Calvinism branches into Unitarianism and Orthodoxy, with Unitarianism on the left; Unitarianism branches into Transcendentalism and intellectual Conservatism, with Transcendentalism on the left. The whole movement thus appears as a "French Revolution of American religion," proceeding logically out of the typically eighteenth century phenomenon, early American Unitarianism. From the practical extravagances and moral anarchy of the analogous European movement, the Concord revolutionists were preserved by the solid in-

crement of New England Puritanism—also, it should be added, by certain social and political differences of which Dr. Goddard does not take much account, and which, having largely disappeared, no longer suffice to keep the anarchy of the successors of the transcendentalists wholly in the theoretical sphere.

It is a pleasure to record two additions to the cleanly-printed York Library of George Bell & Sons. One of these is Goethe's "Poetry and Truth from My Own Life" in a revised translation (2 vols.), by Minna Steele Smith, with an introduction and bibliography by Dr. Karl Breul. The earlier versions needed revision, and these corrections together with Dr. Breul's essay render the present volumes by no means superfluous. The other addition is also a volume of translations—Calverley's "Idylls of Theocritus and Eclogues of Virgil." This serious work of the famous humorist, exquisite both in taste and in faithfulness to the original, ought to be better known than it is; here, if anywhere, the Strephon and Amaryllis of ancient Arcadia sigh in the right British tongue. Prof. R. Y. Tyrrell furnishes a clever and appropriate introduction to the book.

Those who care to have in permanent form Sir Oliver Lodge's pseudo-scientific argument on "The Immortality of the Soul" will be pleased to know that his papers on that topic in the *Hibbert Journal* for January and April of 1908 have been reprinted as a book by the Ball Publishing Company of Boston.

No philosopher, packing his valise for a summer holiday, should fail to put in "The Grammar of Philosophy," by David Graham (imported by Charles Scribner's Sons). He may find other lay contributions to philosophy that are as anachronistic and as absurd; but he will not in many summers find another so breezily refreshing in its anachronism and so consistently amusing in its absurdity. It is a robustious apology, by a Scotch barrister, for the philosophy of the Scottish school; and it admirably conforms to the definition of that philosophy once given by an unsympathetic expositor, who said that it consisted in regarding everything as an intuitive and necessary truth which the Scottish philosopher had been taught before he was twelve years old. In the blessed and reverently capitalized name of Common Sense, all the great non-Caledonian thinkers and even the heterodox Scots—Berkeley, Hume, Kant, Mill, Darwin, Leslie Stephen—are quite simply shown to be intellectually akin to the inmates of Bedlam, though less consistent than the latter in the matter of practice. Intuitive ethical truths like those of mathematics; the argument from design; the foundation of the legal institution of the dock in the eternal nature of things—these and many similar archaisms are triumphantly demonstrated. The prevailing mode of argument is like this (p. 252):

> None of these theories [hedonism, utilitarianism, determinism, somewhat oddly grouped together] are worthy of much attention, inasmuch as they all stand in point-blank opposition to Daylight and Common Sense. If there be a person in the whole world who *really* believes in such theories, he "neither kens the hert o' a Hielandman, nor the honour o' a gentleman." That noble person, Evan Maccombich, will look upon him with utter scorn.

In showing the paramount authority of Common Sense, we sweep all such systems into the kennel.

Of itself the Scottish philosophy is usually as little enlivening as it is convincing; but it becomes a real addition to the pleasures of life, when so much else that is magnificently Scotch (of a certain type) goes to the defending of it—such a grimly humorous contempt for all alien creeds; such solemn and elaborate jocosity; so thorough a belief in the subtly ironic effect of the unaided exclamation-point; so splendid a command of the English dictionary (imperfectly supported by grammar and idiom), especially in its more damnatory and more sesquipedalian portions; so perfect an imperviosity to any other man's points; and so hearty and unconcealed a gusto in one's own infallibility. Nothing so excellent in this vein has appeared since the lamented death of Professor Blackie.

Charles Johnston (Flushing, N. Y.) has written and printed what, all things considered, can be recommended as the most satisfactory version of the "Bhagavad Gita" in the English language. It would be possible to point to a good many passages in which, in the opinion of the present reviewer, he has not used the best equivalent for the technical terms of the Sanskrit or has failed to reproduce the force of the original. Thus it seems a doubtful, if not misleading, departure from custom to write "Soul" instead of "Self." The word Self has become pretty well naturalized as the equivalent for the Sanskrit Atman, which is both the ordinary reflexive pronoun "self" and the infinite inner nature of man. "Soul," by which we commonly mean a persisting *personal* individuality, introduces an utterly wrong connotation. Again, such a phrase as *nirmama* is rendered flatly by Mr. Johnston "without the sense of possessing"; it might be put more literally and more vividly, "who says not This is mine." But withal these are matters where opinion may differ; Mr. Johnston's work never fails from ignorance; it is as a whole forcible and true. His introductions to the various books show a wide knowledge of the thorny ways of Hindu philosophy, and, if anything, too complete a confidence that the "Bhagavad Gita" has fused the various beliefs of India into a homogeneous and universally adaptable creed. Perhaps the most striking section of the introduction is that in which he deals with the Hindu people at large, and shows the part played by the various races, or castes, in creating the national religion. Mr. Johnston is firmly convinced that the "wisdom of India" was the property of the Rajput race, or Kshatriyans, whom he relates to the ancient Egyptians and Chaldeans, and that it was by them imparted to the Brahmans. All scholars are not so certain of this matter; but whether Kshatriyans or Brahmans discovered the secret, those who wish now to get at the heart of that mystifying people cannot do better than go to the "Bhagavad Gita," and they cannot find a better translation than Mr. Johnston's.

In "The Philosophical Basis of Religion" (The Macmillan Co.), Prof. John Watson has brought together two series of lectures one given before the Brooklyn Institute, the other before the Theological Alumni Association of Queen's University, Kingston. Convinced that the theology of the future must take the form of a philosophy of religion, the author begins by showing that all attempts to base religion on authority fail to satisfy the modern mind, and that we must either abandon all systematic thought in this field or rebuild our theological beliefs on the basis of reason. Starting from Kant, he outlines a speculative idealism which affords such a basis, criticising with much acuteness the theory of personal idealism and the new realism. The lectures on the Interpretation of Religious Experience—devoted chiefly to Professor James and Pragmatism—and on Christianity and History—against Harnack—are among the most interesting in the volume. The following lectures deal with epochs in the history of philosophical theology (Philo, Gnosticism, Augustine, Mediæval Theology, Leibnitz, and Protestant Theology), concluding with a discussion of the relations of God and the World, and God and Man, from the point of view of speculative idealism. The author describes his work as "mainly essays in the reconstruction and history of religious belief." To this great and urgent task he has made a noteworthy contribution.

Prof. Paul Haupt's "Book of Nahum" (Johns Hopkins Press) contains a "restoration" of the Hebrew text, with a corresponding metrical translation, and with explanatory and critical notes, which string together much curious and not always strictly pertinent learning. Professor Haupt has discovered that the book is a liturgical compilation for the celebration of the victory of Judas Maccabaeus over Nicanor in 161 B. C. The first two of the four poems of which the reconstructed book consists were inspired by the Maccabaean struggle; the last two were written by Nahum, an Israelitish poet in Assyria. Of the latter, one was composed shortly before the fall of Nineveh in 606 B. C.; the other, after that event. The second poem is made up of Nahum iii., 1-7; i., 11, 14; ii., 1; i., 12, 15; ii., 2. The city addressed is Antioch; ii., 1 is a play on the name Maccabaeus ("The Hammer"). The positiveness of these divinatory pronouncements is equalled only by the arbitrariness of the critical procedure.

In the Sammlung illustrierter Einzeldarstellungen, edited by Cornelius Gurlitt (Berlin: Marquardt & Co.), Volumes XXIV. and XXX., just out, are entitled "Moderne Theologie und Kultur," by Th. Kappstein. The leading purpose is to show the relation of theology to modern thought, chiefly through studies of the views of representatives of the various theological tendencies, especially Adolf Harnack, Otto Pfleiderer, Adolf Schlatter, Reinhold Seeberg, and Ludwig Lemme.

Of the standard work of Catholic scholarship, the "Geschichte der Päpste seit dem Ausgang des Mittelalters," by Ludwig Pastor, the fourth volume has been issued by Herder of Freiburg-im-B. Its individual title is "Geschichte der Päpste im Zeitalter der Renaissance und der Glaubensspaltung von der Wahl Leos X. bis zum Tode Klemens VII. (1513-1534)." This section, however, deals only with Adrian VI. and Clement VII. The characteristic feature of this work is the use of new sources; the title page correctly says that the author has had the use of Papal secret archives in Rome; and the list of archives and

libraries, added as an appendix, mentions ninety-three collections of manuscripts in forty-four different cities. Catholic scholarship can be proud of this work, which adds so much to our knowledge of certain Popes. Thus, Pope Clement VII. had up to this day not yet found a biographer; yet Pastor has discovered such an abundance of unused data on this pontiff that he can devote nearly five hundred pages of a total of eight hundred to him alone. The pathetic story of the brief reign of Adrian VI., the last German and at the same time the last non-Italian Pope, is especially interesting on account of the special literature in the Netherlands on this period here used completely and virtually for the first time.

The former Jesuit and convert to Protestantism, Count Paul von Hoensbroech, has added two new publications to his anti-Catholic works (Leipzig: Breitkopf & Härtel). In his "Rom und das Zentrum," he discusses the political policies of the present Pope and his two predecessors. The purpose is to show that the Centre, or Catholic, party in the German Parliament is virtually under the direct dictation of the Vatican. The second work, "Die katholisch-theologischen Fakultäten im Organismus der preussischen Staatsuniversitäten," aims to prove that in their dependence on the creed of the church, the Catholic faculties cannot be regarded as bodies of independent scholars and accordingly should not constitute a part of the universities.

A work of interest in view of Luther's faith in the devil is "Dr. Martin Luthers Krankheiten und deren Einfluss auf seinen körperlichen und geistigen Zustand" (Stuttgart: Ferdinand Enke) by Prof. W. Ebstein.

The Verband evangelischer Buchhändler, an influential national organization of German book publishers, has just brought out the issue for 1907 of its "Verzeichnis der evangelischen Presse." It reports in full name, editor, publisher, circulation, etc., of the entire nine hundred and more periodicals of Germany with pronounced Christian tendencies, the total circulation of which is more than nine million.

The Buchgewerbe-Verein of Leipzig arranged for six lectures by prominent scholars on the relation of the publishing business to modern culture, and these have now been issued by B. G. Teubner, Leipzig, under the title "Das Buchgewerbe und die Kultur," as a volume of the series Aus Natur und Geisteswelt. Prof. R. Focke, Posen, discusses "Das Buchgewerbe und die Wissenschaft"; Prof. G. Wittkowsky, Leipzig, "Das Buchgewerbe und die Literatur"; Prof. R. Kautzsch, Darmstadt, "Das Buchgewerbe und die Kunst"; Dr. H. Hermelink, Leipzig, "Das Buchgewerbe und die Religion"; Prof. R. Wuttke, Dresden, "Buchgewerbe und Staat," and Dr. H. Waentig, Halle, "Buchgewerbe und Volkswirtschaft."

The three hundred and fiftieth anniversary of the founding of the University of Jena, celebrated this year, has been the occasion for the publication (Jena: Diederichs) of an interesting picture of German academic life in the seventeenth century, entitled "Ein Jenaer Student um 1630," edited by Edmund Keiter. The story is reproduced from manuscripts in the Hamburg City Library, written by Eberhard von Todenwert, a Darmstadt nobleman, who studied at Jena.

"Märchengold für grosse und kleine Leute," by Gustav Adolf Müller (Leipzig: Eduard Moerter), is an interesting collection of fables, old and new, in attractive poetical form. The work is more adapted to the needs of the average reader, especially the young, than to the student of folklore.

The Gyldendal Publishing Company (Copenhagen and Chicago) has just issued the first volume of a serial entitled "Mindesmærker af Danmarks Nationallitteratur" (Monuments of Denmark's National Literature), which purposes to give a selection of the earlier, as well as the modern (but not contemporaneous), Danish literature in cheap and handy, well printed, and decently bound (cloth) volumes. It is the intention that the collection, which is to be increased by at least two volumes a year, under the editorial supervision of Prof. Vilh. Andersen of the University of Copenhagen, shall comprise: (1) individual masterpieces with comprehensive introduction, and copious notes (*e. g.*, some of Holberg's comedies, Oehlenschläger's heroic poems, Paludan-Müller's "Adam Homo," Drachmann's "Forskrevet," etc.); (2) selections from prominent authors (like the present first volume containing selections from Sören Kierkegard, with introduction and notes by Carl Koch); (3) selections of the products of a period (the pre-Christian age, the Middle age, etc.); and (4) selections of prominent products of a specific poetic genre or a special science (*e. g.*, fiction, lyrics, historical writing, etc.). Students of Danish literature will here have an opportunity of obtaining easily and cheaply the most important and characteristic productions of Danish genius, judiciously chosen.

The announcement is made that all the German universities, except perhaps that of Rostock, will be open next semester to women on exactly the same terms as to men. On the other hand, however, the Prussian Cultus Minister has announced that as a matter of principle women will not be permitted to enter the university teaching corps as privatdocents.

William Potts, who died in Philadelphia July 29, at the age of seventy, was much interested in civil service reform and in all charitable and philanthropic work. He had been secretary of the Brooklyn Civil Service Reform Association, of the New York Civil Service Reform Association, and of the National Civil Service Reform League. Of this last organization, as well as of the Outdoor Recreation League, he had also been vice-president. He was author of "Noblesse Oblige" (1880), "Evolution of Vegetable Life" (1889), "Evolution of Social Reform" (1890), "Form and Color in Nature" (1891), "The Monetary Problem" (1892), "From a New England Hillside" (1895), "More Notes from Underledge" (1904).

Samuel Cheetham, archdeacon and canon of Rochester, England, died July 19 at the age of eighty-one. He was a graduate of Cambridge, and he had been professor of pastoral theology in King's College, London. He contributed many articles to Smith's "Dictionary of Christian Antiquities," and he was author of "A History of the Christian Church during the First Six Centuries" (1894), "The Mysteries, Pagan and Christian" (1897), and "Mediæval Church History, a Sketch" (1899).

Canon Charles Bigg, who had been Regius professor of ecclesiastical history at Oxford since 1901, has died at the age of sixty-eight. Among his publications are some small editions of Greek classical authors and "The Christian Platonists of Alexandria" (1886), "Neoplatonism" (1895), and "Wayside Sketches in Ecclesiastical History." He had also edited St. Augustine's Confessions, the "De Imitatione," and Law's "Serious Call."

The death is announced of the German author, Leo Berg, who was born in 1862 and educated at the University of Berlin. He was a frequent contributor to German periodical literature. Among his writings are "Der Naturalismus" (1892), "Der Uebermensch in der modernen Literatur" (1897), "Gefesselte Kunst" (1901), "Henrik Ibsen" (1901), and "Geschlecter" (1906).

POVERTY IN EIGHTEENTH-CENTURY FRANCE.

L'Assistance et l'état en France à la veille de la révolution. (Généralités de Paris, Rouen, Alençon, Orléans, Châlons, Soissons, Amiens.) Par Camille Bloch. Paris: Picard.

After all that has been written upon the French Revolution, it seems incredible that at present a group of scholars should be engaged upon what promises to become a complete reconstruction of the whole story. Here, as elsewhere in history, the "old masters" are going. Michelet's brilliant intuitions, Carlyle's inadequate equipment, or Taine's hasty examination of such sources as suited his preconception of how things happened, are no longer to be tolerated as history. Even the collections of sources, which gave the student of a generation ago his closest touch with reality, are being replaced by more accurate and scholarly editions—and the errors which have been pointed out are not infrequently appalling. The men whom Professor Aulard of the Sorbonne has inspired with his mixture of *civisme*, enthusiasm for the Revolution, and zeal in research, are at work in the provincial as well as the national archives of France, upon that minute examination of the records of the obscure and commonplace, which an earlier generation did not deem worth its attention. In their work one sees the spirit of the new Sorbonne—keenly skeptical, laborious, and scientific upon its critical side, not seldom warm with sympathy, limited, or even blinded by prejudice upon its constructive side. Canons of textual criticism are seldom violated in the study of sources. There are few who know so well the relative value of the different kinds of material out of which history is made as these

Sorbonnese. But all the warnings of all the Langlois or Seignobos cannot repress the subjective element in the narrative based upon this carefully assorted material. This, however, is true more or less of all history. In investigation, it is a science; in presentation, an art. In any case, it is not too much to say that through the work of Aulard and his men and the too little appreciated labors of Jean Jaurès we are bound some day to know the real forces of the Revolution more accurately than we are ever likely to know the reality behind any movement in European history preceding it.

The book before us is a notable contribution, not merely to the history of France, but also to that of charity and the question of poverty in general. Dr. Bloch, an Aulard man, has attempted to gather up the results of the previous study which his subject has received from investigators of the *généralités*, or administrative divisions, of north central France in the Old Régime, and has added to this a search in archives for everything essential to the accuracy or completeness of his survey. The result is a fine piece of scholarship and an important addition to the literature upon the Old Régime. Every device familiar to the research worker is invoked to make the book indispensable—exhaustive, classified bibliographies, careful references, illustrative and explanatory foot-notes, index, and analyzed table of contents. The text is simple and to the point, based for the most part directly upon the original sources. A general historical introduction traces hurriedly the treatment of the poor in France from the sixteenth century, but the body of the book is concerned with the problem from 1764 to 1788. The descriptions which follow, forming the opening section, are hardly more than an arrangement of facts, with a little comment wedged in. The arrangement is a good one: first the poverty of the country, then that of the city, then following the pauper out into his career of mendicity and crime. After this come the institutions that look after him, the rôle of the Church, the laicized hospitals of the sixteenth century, the treatment of the sick, and other offices of charity. These first four chapters form a book in themselves, one that cannot easily be surpassed for concentrated human tragedy. The second section, "Reforms," covers the efforts made by the government, by such men as Turgot and Necker, during the years from 1764 to 1788, to better the lot of the poor. The third section takes up the formation of the Revolutionary doctrine of state aid, and the volume closes with the programme of the committee on mendicity of the National Assembly in 1790.

The subject is in every way an interesting one. It forms a part of the prolegomena to that war against poverty which is beginning to absorb the attention of European governments—and our own—and is invading literature and art. Here we already have the "poverty line," made familiar by recent sociology. In Versailles itself, the city of luxury, there were some 5,000 who were dependent upon that meagre wage below which lie beggary and starvation. Versailles, however, was well off compared with Rheims, with its 10,000 workmen reduced to pauperism whenever work was slack; or Vendome, with its 1,200 beggars out of 6,500 inhabitants. Statistics from the Old Régime are, of course, untrustworthy; but the probability is that Dr. Bloch's estimate of the proportion of indigent to self-supporting will stand. In Paris it was about 10 per cent.

It is impossible to follow our author into the crowded detail of any of these divisions of his work. But we wish to commend especially that part in which is traced the awakening conscience of France. One realizes now a little better the religious intensity of the gospel of Rousseau. But the awakening of social conscience does not necessarily mean achievement. If any one thing stands out clearly from this volume, it is that the elevation of the submerged class can never be accomplished by benevolent despotisms. Even wise Turgot saw but a little way into the tangled problem, and how futile were his efforts! There is no larger chapter in the history of human futility than that of the benevolent despots of the eighteenth century. Charity is merely part of this benevolent futility. In the next place, and as a corollary, the class that suffers must emancipate itself. Self-interest, that most potent of all historic forces, must be instructed and educated. It, not benevolence, wins the revolutions. This fact is understood by Socialists to-day. It is the root of much of their strength with the masses. A careful study of the second and third sections of this book will cast light upon the force of some present-day movements.

While heartily commending Dr. Bloch's book, we are tempted to add a word of warning as to its use. The feeling of the reader, as he lays it down, will be one of absolute depression. It would seem from its tragic story of suffering and abortive attempts at alleviation, attempts sometimes too cruel for words, that Taine did not paint too darkly, after all. That sombre chapter upon "Le Peuple" will stand. People did eat grass and die like flies. They did find themselves reduced by whole villages to beggary. It is this first impression which one must not let grow into an over-emphasis. To be sure, there was poverty, awful poverty; but one must not deduce a whole philosophy of history from that. It would be absolutely false to view the whole of the Old Régime through the dark glass of this intensive study of but one of its many phases. Against this volume one must set a similar analysis of the middle class; there were capitalists then as now, so many of them and so strong in their new wealth that they, not these suffering masses, made the Revolution. Indeed, as Dr. Bloch expressly states, the outward appearance of pre-revolutionary France was prosperous. The new industrial and commercial activities were enriching the country. We know that the Church was enormously wealthy, and the nobility, with its sinecures and privileges, was a rather large fraction of the population—perhaps one noble family to a town. They had thousands of dependents, not seldom getting rich from the folly of their masters. We must be careful not to lose our perspective when we are beginning to know more about one phase of society than we knew before. We need only glance at our daily press to see how the historian must guard himself against exaggerating the importance of known over that of unknown phenomena. On the same evening on which a ball in a Fifth Avenue house cost $50,000, men on the Bowery were fighting for the chance to earn a few cents shovelling snow. One can imagine what material the historian of a future century may find in the congestion exhibit last winter in the American Museum of Natural History. But the great mass of New Yorkers live apart from these things—in fact, hardly know of them. So, as we look back at the Old Régime in France, let us not forget its infinite variety, even while we face the tragic depth of its misery and suffering.

CURRENT FICTION.

Villa Rubein. By John Galsworthy. New York: G. P. Putnam's Sons.

The Island Pharisees. By John Galsworthy. New York: G. P. Putnam's Sons.

The "Villa Rubein," which appeared in England in 1900, is now rewritten and brought out for the first time in America; and "The Island Pharisees" is also advertised as rewritten throughout. Both, we may add, have been improved by revision. They are not great works, but they are earnest, and are carefully finished. The style shows the results of artistic solicitude. It has the precision and compact force that come from pruning. It has also, what is rare in the fiction of to-day, a distinct prose rhythm. In fact, the rhythm in the later book seems occasionally a little overmeditated, so that here and there considerable runs of pure iambics occur. But in the main the diction has a crispness, terseness, and vitality that war-

rant former readers in turning to these novels again.

The author announces that the "Villa Rubein" is a "plain story." If one had not read "The Island Pharisees," one might take him at his word. On the face of it, "Villa Rubein" is an almost old-fashioned story of family life, with a good deal of interest in two or three strongly marked types. The head of the household, situated in Botzen, Austria, is a widower, Paul von Morawitz, a drinking, pleasure-loving roué, who has pulled himself together for the sake of his maidenly daughter Christian and her little sister Greta. Mrs. Decie, an insignificant person, his wife's sister, and Nicholas Treffry, her brother, a bluff but soft-hearted old gentleman of seventy, are also members of the household. The action arises through the appearance upon the scene of Alois Harz, a man of peasant birth, anarchistic past, and a passion for art. Christian and Harz fall in love, but the family is up in arms at the suggestion of marriage. Even old Treffry, exceedingly fond of his niece, cannot swallow the young man's past. But after a much protracted illness this uncle dies, and leaves his property to Christian. Whereupon, in the most quiet and ordinary way, the young couple are married and go to England, where the artist devotes himself to his calling. One wonders what is the motive of the book. It is so much like life as to be meaningless. The absolutely tame ending obscures its drift.

Light breaks in "The Island Pharisees." Shelton, an eminently respectable idle young man of the upper middle class, is engaged to marry Antonia Dennant, an equally respectable and very normal healthy English girl. They have rather foolishly agreed to see nothing of each other for some weeks prior to the marriage. In that fatal interim Shelton has a number of adventures which rouse his disgust for the conventional ways of the world. He meets with a young French vagabond who sponges on him, and at the same time attracts him by his indifference to the customary modes of life. A woman of the town is arrested for accosting him. He drops in at a wedding, and it seems very formal. He visits Oxford and the old dons appear very dull. He is present at a dog fight and the standers-by refuse to pull off the bigger dog. He is worked up into the state where he can write to his lady-love: "There is something about human nature that is awfully repulsive, and the healthier people are, the more repulsive they seem to be." When Antonia discovers his theoretical difference from other people, she loses her love for him, but still feels bound to marry him. That is to Shelton the last proof of rottenness in the state, and he breaks the engagement. There the story ends.

In his preface Mr. Galsworthy says that all authors love to be abused, and he begs "criticism welling out of the instinctive likings or aversions, out of the very fibre of the human being who delivers it." Well, then, the present critic feels an instinctive liking for human nature, including healthy people, and an instinctive aversion for love-sick puppies like Shelton. Saying this, he stamps himself in Mr. Galsworthy's eyes a Pharisee. At the same time he wishes to believe that he understands what Mr. Galsworthy is driving at. Shelton, says his creator, is not a Pharisee; he is the one virile soul in a hundred who knows that "whatever is, is wrong." He is intended as an apostle of discontent to accomplish among the upper classes what Gorky has done among the Russian peasants, and what Tolstoy has done for all classes. Like the hero of the "Resurrection," he is meant to be the symbol of the awakened spirit shaking off its old fetters and reaching forth to new and better forms. But Shelton falls immeasurably short of his purpose; he is too weak a vessel for his message, emotionally and intellectually. Wishing to strike at the fundamental evils of society, he succeeds only in impeaching order and respectability. He is not virile, but puerile. He has not one constructive thought. He has merely been touched by a low fever of socialistic unrest, and vague and watery humanitarian sympathy.

The Princess Dehra. By John Reed Scott. Philadelphia: J. B. Lippincott Co.

Yes, she is one of the clan. Her name betrays it. Her provinces confirm it. They are Valeria, Lotzenia, Porgia. She has an aristocratic bearing and a beautiful face, and a smile that would be called by a playwright a practicable smile, for it flashes and dazzles and achieves. But, most of all, she has a Cause and a wildly enthusiastic following, her only foes being a rejected lover and his makeshift lass. And there is more: while the populace clamors to make Dehra the Queen, she is all for the claims of her true love, the Colonel of the Red Huzzars, who has been heard of before. He is an American, and at the same time a scion of the royal stock. "I likely shall," he says in an American moment, but when the blood of old Hugo and the great ancestral Henry is up he can cry, like the Archduke he is, "Oh, woman! Oh, faith, and intuition, and loyalty beyond the stars!" And since language is nothing if not contagious, we find the "Woman in Black," her of the "sinuous indolence," with "raven hair and dead-white cheek," bidding her Ferdinand "get busy"; while he, a Dalberg, who addresses his enemy with, "How say you, cousin?" like any mediæval knight, replies to his charmer that the laugh is on him. The peerless Dehra, at whose name every woman curtsies, and every man uncovers, stoops graciously to the domestic level of the plain reader by her human habit of sitting on the corner of desk or table, "one foot on a chair, the other dangling," while she receives an official visit from her ducal foe. Thus may romance be sung in rag-time. Thus may royalty abate its dazzle that even cats may look.

The Lost Article is a Book of the Dalberg Laws and though it is a large object, it remains cunningly hidden through the story, from the true prince and princess, while the villain and the reader are in the secret. Not to be outdone by a villain, the reviewer discloses no mysteries, but promises the reader a lively chase from castle to council room, a clatter of swords, and a sharper clash of wits. Perhaps situation has never reached a greater altitude than in the scene where the two claimants are fighting with swords in one part of the library, their two lady friends doing the same in another, and receiving occasional coaching from the combatants of the sterner sex in such measure as their pressing preoccupation admits, while the Book slowly burns in the fireplace.

Gleam o' Dawn. By Arthur Goodrich. New York: D. Appleton & Co.

This story, set in a familiar French-Canadian and Indian atmosphere, is lifted out of the common by its grace, its portraiture, its situations. Of the last, indeed, there are perhaps too many. One is tempted to think that a masterly short story has been partly sacrificed to the mistaken call of length. The contest in the heart of the half-breed hero between the inborn clamorings and claims of two races, if not a new theme, is at least not treated in a common way. But it becomes mere repetition after it has dramatically said its say a certain number of times; and even the picturesque wording shares the same fate, to the point of wearisomeness. The personality of the young man is charmingly conveyed in scenes that recall a little the whirling breeziness of Owen Wister's "Virginian."

Russia's Message: The True World Import of the Revolution. By William English Walling. New York: Doubleday, Page & Co. $3 net.

A history, particularly of the things of yesterday and to-day, which sets out from a highly personal point of view and proceeds in a white heat of censure and advocacy would seem to be courting immediate damnation. Is not the document the sole foundation, and the massive footnote the only pillar of scientific history? They may be. Yet Mr. Walling, though he violates the law of historiography as it is handed down to us from Germany, has given us by far

the most noteworthy study of the late Russian upheaval that has appeared in this country, and one of the very few first-rate books on the subject that have been written anywhere. We have, of course, Mackenzie Wallace's classic volume on Russia and the translation of Leroy-Beaulieu's "L'Empire des Tsars"; but both of these are only old works revised to meet a new demand, and bound in consequence to make new conditions agree more or less with a thesis already laid down. Bernard Pares's "Russia and Reform" (see the *Nation* of October 10, 1907, p. 332) is the only recent work in English that adopts the thorough treatment of Wallace and Leroy-Beaulieu and carries something of their earlier authority. With Pares's book we may rank that of Mr. Walling. They differ strikingly enough in temperament, method, and conclusion; but both go beneath the surface of things. The Englishman has passed in review definite institutions, forms and figures, and gives only secondary attention to the working of inner causes. The Russian peasant is to him still the largely passive and unknown element in the life of the Russian nation. In Mr. Walling's account, however, the peasant holds the centre of the stage. It does not absolutely follow, as our author maintains, that because the *mujiks* constitute four-fifths of the Russian population, the fate of the Czar's empire must in the last result be worked out by them. Minorities may effect revolutions, just as they may maintain monarchies and guide republics. Yet *through* the Russian peasant the future of Russia must be worked out. We can imagine no solution that does not deal first of all with the peasantry. And it is in his comprehensive, intimate, and sympathetic narrative of what the Russian agricultural laborer has been in the past, and what changes have been coming over him during the last three or four years of revolutionary unrest, that the chief value of Mr. Walling's book consists.

The Russian peasant has been either not understood or misunderstood. He is not the sodden victim of centuries of ignorance and vodka that even professedly friendly accounts make him. Mr. Walling is quite justified in pillorying such summary estimates as those he quotes from Howard P. Kennard's "The Russian Peasants." To say:

> The peasant emerges from the ordeal today but the semblance of a man—a thing with half a mind, a mortal without attributes, a morbid being blessed with life alone and cursed with ignorance and imbecility until, in the twentieth century, his melancholy has become innate—

to say this is to say what is not true. For the facts are that the Russian peasant, under the very weight of the grinding régime of autocracy, has carried on the communal life of his *mir*, or village society, with a degree of intelligence which has led conservative Slavophils and revolutionaries alike to look upon that institution as the suitable basis for a regenerated Russia. When peasants assemble in village meeting to choose their local officials, to distribute and redistribute the common land and regulate its cultivation, to apportion Imperial assessments, and to mete out justice on their own members, they give indubitable signs of being at least as far removed from a state of besotted imbecility as the Italian or Prussian agricultural laborer or the Yorkshire farm-hand. The peasant drinks to excess; but the blame for the habit is still to be apportioned between the *mujik* himself and an Imperial government which draws an enormous revenue from the sale of liquor. The Russian peasant is notoriously gentle and pacific; only under direct government incitement does he lend himself to Jew-baiting and massacre. He is free from religious prejudices, and his superstitions are mitigated by shrewd recognition of the fact that his village priest is much like himself. If the peasant is primitive, our author is right in describing him also as unspoiled. He is virgin material for the rebuilding not only of Russia, but, indirectly, so Mr. Walling thinks, of the world. Here our author is at one with the patriot Slavophils, the proud contemners of Occidental civilization. The West, in their view, is corrupt. It has lost, or is fast losing, the capacity for high faith, the sense of human brotherhood, and the simplicity of heart that can work miracles. The Russian peasant has all of these.

That, then, is Russia's message to the world. Why it should speak so strongly to our author is made apparent by Mr. Walling's general economic doctrine. He is an outspoken Socialist, and he finds in the present condition of the Russian people the Socialist problem stated in its most difficult form, but offering at the same time a comprehensive solution. It has been the weakness of Marxian Socialism that its theories find little place for the agriculturist. It is industrial development that, as the Marxians see it, will bring about the economic revolution and the Socialist state. The farmer is on the whole a drag on the wheel of progress. But political Socialism has been unable to overlook the fact that the farmer has a vote, and it has come to recognize the need of modifying the original Marxian teaching so as to take into account what is, after all, the great bulk of the world's working population. In Italy and to a lesser extent in Germany the Socialist propaganda has been carried on among the rural classes. The question is a vital one in American Socialism, and remains everywhere in the West exceedingly perplexing. But how is it in Russia? There Mr. Walling finds an enormous agricultural population living under a Socialistic régime; for that is what the *mir* in essence is. The superimposed despotism of Czar and bureaucracy keeps the communal system from developing its full capacities for making man happy. Remove this burden, and Russia stands before the world, a great empire made up of Socialistic communes which know a spirit of fraternity and democracy that the West does not posses. Thus, to Mr. Walling, a free Russia rounds out the Socialist scheme admirably.

The Catholic Encyclopedia: An International Work of Reference on the Constitution, Doctrine, Discipline, and History of the Catholic Church. Edited by Charles G. Herbermann and others; in 15 volumes. Vol. II.: Assize to Brownr; Vol. III.: Brow to Clancy. New York: Robert Appleton Co.

The first volume of this great work was reviewed at length in the *Nation* for June 20, 1907, p. 566. The second and third volumes are marked by the same general characteristics, and maintain on the whole the same high level of excellence. Among the more notable articles are those on Augustine, an admirably fair and judicious treatment of the great father; Bishop, which gives in detail the various theories of Protestant scholars touching the origin of the monarchical episcopate; Benedictine Order; Bernard of Clairvaux; Bonaventure, in which the traditional Catholic belief in the miraculous finds expression, as in some of the biographical articles of the first volume; Byzantine Architecture, Empire, etc.; Canon of the Mass, of the Scriptures, etc.; Catacombs; Capuchin Friars; Cistercian Order; Celibacy of the Clergy, apologetic as well as historical; and Charity, in which Christian history is not unnaturally somewhat idealized. The elaborate articles on Christianity and the Church are written, of course, from the Catholic point of view. In the former the treatment is greatly simplified by considering only the Christianity which is found "realized in the Catholic Church," and excluding "those forms which are embodied in the various non-Catholic Christian sects, whether schismatical or heretical." As a sample of the characteristic lack of historical discrimination in which, however, the Catholics sin no worse than many Protestants, the following sentence may be quoted:

> We may take the apostolic messages as one self-consistent whole, any apparent discrepancies, or want of coherence, being amply accounted for by the different circumstances of their deliverance.

Australia, Austro-Hungarian Monarchy, Baltimore, Bavaria, Belgium, California, Canada, China, and other similar articles are instructive, both historically and statistically. As in the first

volume, there are some, as for instance Avesta, Aztecs, and Buddhism, the reason for whose insertion in a Catholic Encyclopedia does not clearly appear. For a discussion of Civil Authority there might be sufficient ground, but unfortunately the article on this subject is very defective, consisting almost exclusively of a polemic against the theories of Hobbes and Rousseau, while the more germane and promising topic of Ecclesiastical Authority is deferred to a later volume. In the article on Bull Fights, written by a Spaniard, the sport is defended, and we are told that "moralists as a rule are of the opinion that bull-fighting as practised in Spain is not forbidden by the natural law." And yet the author is careful to assure us that "it is false to say that the Spanish clergy encourage these spectacles."

Giordano Bruno is treated with less sympathy and fairness than might be wished, and in the article on Bible Societies the Roman Catholic antipathy to certain features of Protestantism finds rather strong expression. On the other hand the authorized version of the Bible and the English Book of Common Prayer are spoken of with genuine appreciation. The articles on Calvin and Calvinism are on the whole surprisingly good, though there is a tendency in the latter to minimize the agreements of the reformers with Augustine, and a very inaccurate comparison of Augustine and Luther is quoted from Cardinal Newman, whose historic sense was exceedingly defective. The discussion is marred by the following sentence: "Its essence [that is the essence of the disposition characteristic of the Reformed Churches] is a concentrated pride, a love of disputation, a scorn of opponents." And the article on Cajetan is equally marred by a reference to Luther as "the proud and obstinate monk," and by the declaration that he "finally showed the insincerity of his earlier protestations by spurning the Pope and his representative alike." But in the main there is a marked absence of anti-Protestant polemic, and the general fairness and breadth of view of the work as a whole, so far as it has appeared, are highly commendable.

Millard Fillmore Papers. Edited by Frank H. Severance. 2 vols. [Publications of the Buffalo Historical Society, Vols. X. and XI.]. Buffalo: Published by the Society.

Mr. Severance is to be praised for the diligence and devotion with which he has carried through a difficult task. Not only are the Fillmore papers widely scattered, but one important collection was destroyed by direction of its owner, and another, presumably business papers, is still inaccessible. Such as are now presented have been gathered from newspapers and printed records, the files of the departments at Washington—except the War Department, which, as usual, turns a deaf ear to inquiring students—from the Library of Congress, the collections of historical societies and of individuals, and the published writings of contemporaries. Much of the material, moreover, consists of brief and often fragmentary contributions to debates in the New York Assembly or the House of Representatives, where Fillmore, though speaking frequently and to the point, rarely spoke at length, and where the value of his remarks can be weighed only by a study of the whole debate. Still another portion comprises press reports, sometimes in the third person, of remarks on public or semi-public occasions. Fillmore's public career, covering as it did the exciting years of the later slavery controversy, brought him into relations with a great number of important questions, but with the result that his utterances are, taken as a whole, somewhat heterogeneous, and make the problem of editorial selection difficult.

While Mr. Severance has evidently spared no pains, and has collected in his introduction and notes a mass of data for which some future biographer will be grateful, his editorial work cannot be unqualifiedly praised. To begin with, the documents are presented, not under a chronological arrangement, but in the confines of an arbitrary topical classification. Thus, the first volume contains, in order, Fillmore's autobiography of his earlier years, his remarks as a member of the New York Assembly, a pamphlet on religious tests for witnesses, speeches, letters, and reports as Comptroller of New York, and two addresses as Vice-President. Then follow official letters to heads of departments, and four groups of addresses, political and official, between 1840 and 1856. The second volume opens with Fillmore's speeches in the campaign of 1856, followed by a hundred pages of miscellaneous addresses, two collections of letters, and some miscellaneous documents. Obviously, such an arrangement, despite a good index, makes the volumes hard to consult.

In the matter of selection, too, Mr. Severance has not always been well advised. He omits altogether, for example, Fillmore's Presidential messages and proclamations, on the ground that they are already available in the Richardson collection! Official letters to the Secretary of the Treasury, Thomas Corwin, though calendared like the messages and proclamations, are not reprinted, because they relate to routine business or to appointments. Yet space is found for such trivial notes as that expressing the writer's inability to attend "your daughter Kate's Fancy Ball" (Vol. II., p. 321).

Of the documents here collected, the most interesting is undoubtedly the suppressed portion of the annual message of December 6, 1852, relating to slavery. Considered either as an apology for slavery, or as a rebuke to the friends of abolition, or merely as an expression of its author's views, it shows a singular lack of insight into the conditions which were rending the country, and a fatuous confidence in the one remedy of African colonization. For the rest, these two sumptuously printed volumes will not, we think, greatly alter the general estimate in which Millard Fillmore has come to be held. He was a good lawyer, a successful financier, a faithful public servant, and a courteous gentleman; but he was in no respect a great man. Raised by accident to the Presidency in a time of approaching crisis, he failed to grasp either the moral or the political significance of events. When war came he stood for the Union, but he could not approve of Lincoln's administration as a whole. Of warmth or emotion, as of the culture which comes from communion with literature, he was alike destitute. One has but to turn the pages of his collected writings to undertsand why it is his name, rather than his memory, that has survived.

Science.

American Insects. By Vernon L. Kellogg. Second edition. American Nature Series. New York: Henry Holt & Co.

That Professor Kellogg's work has reached a second edition is good proof that its high merit has been recognized, and that by a constituency not easy to please. It well deserves this patronage. It would hardly be called "summer reading," though our summer friends of the fields, the brooks, and the groves flutter their wings all through its pages. Nor would one venture to classify as "light literature" a volume whose cyclopedic bulk tips the scale at six pounds. Yet there are homes whose inmates could find within these covers that which might set them and theirs upon a rational recreation that would lighten the tedium of a long summer holiday. It is an admirable book, admirably illustrated.

Two marked changes are made in the new edition. First, is the substitution of a detailed table of contents for a simple list of chapters. The reason for this return to an old method cannot be the wish to pad a book already too heavy, and it is a questionable improvement. However, some students in "skimming" for specialties may find advantage in such a brief summary. But no such accessory can add much to a good index, and that Professor Kellogg has given. The second change is the addition of an entire chapter (xix.), on

the interesting, perplexing, and widely disputed subjects of insect behavior and psychology. It is this alone that gives special value to the edition. Herein Professor Kellogg clearly states the views upon the causes of insect behavior current among scientific writers, adopting substantially the definitions of C. L. Morgan. His own position seems to be between Loeb's belief, on the one side, that all animal habits may be resolved into rigorously mechanical reactions to physico-chemical stimuli, as light, humidity, etc.; and, on the other side, what he terms the "anthropomorphic naturalist's" theory of a mystic capacity incident to living matter, and the "churchman naturalist's" theory, whose distinction from the anthropomorphist's, it must be confessed, evades the ordinary reader's mind. To quote the author's words:

> Our point of view is that fairly safe one between the rigid mechanicalism of the trophism believers, and the mysticism of the believers in a divinely endowed creature of psyche as contrasted with a long series of unfortunate soulless brutes (p. 637).

Elsewhere, however, Professor Kellogg declares that "to distinguish sharply between reflexes and instincts on the one hand, and instincts and reason on the other, is impossible" (p. 636). Again, while he holds that it does seem impossible to recognize among insects "simply rigidly mechanical reflexes" of the nature of direct inevitable response to external stimuli, such as temperature, gravitation, contact, light—he affirms (p. 638), "yet, recent studies have shown that this can in certain cases be done. It has been done, in fact." One therefore, who is disposed to read between the lines, or rather among the lines, comparing text with text, must conclude that Professor Kellogg does not occupy a position quite so midway between *mechanical* and *mystical* as his quoted "point of view" would seem to indicate. It is, indeed, a difficult subject, and the most careful and conscientious explorers may well be excused for leaving somewhat zigzagging footsteps on such uncertain ground.

That insects and all living things are keenly responsive to the stimulus of their environment, every naturalist knows, none better than the entomologist. The cases cited by the author of Davenport's observations of the Poduridæ in the sand beaches of Long Island, and of the mating of silkworms observed by himself, seem to present nothing particularly remarkable or even new. That podurids leap and whirl at contact with water and with falling sand, every walker upon the sea beach has seen; and human beings leap and whirl under like contact with stimuli. But do these facts as stated cover all the case? What, and how much lie beyond these? It is quite a different matter when one comes to such complex actions as appear in the study of ants, bees, and wasps. And this the author shows in his liberal quotations from the classical experiments of the French naturalist, M. Fabre, and of our own countrymen, Professor and Mrs. Peckham, with the wasps.

The gist of the conclusions to which these writers have come, or incline, may be given in a few sentences. Fabre's inference is that instinct knows everything in the unchanging paths laid out for it, beyond which it is entirely ignorant. The habits which awaken "the sublime inspirations of science and the astonishing inconsistencies of stupidity, are both its portion, according as the creature acts under normal conditions or accidental ones." The Peckhams conclude that there are "not only instinctive acts, but acts of intelligence, as well; and a third variety, also, acts that are partly due to imitation," although, with an indeterminate amount of intelligence accompanying. Morgan, the English student of animal behavior, infers from the facts given by Fabre and the Peckhams, from which our author quotes, that among the solitary wasps and mason bees the behavior, though "founded on instinct, is in a large degree modified by intelligence."

This second edition does not contain Professor Kellogg's last valuable researches on "Inheritance in Silkworms," printed in the Stanford University publications; but there is an abstract of his studies on silkworm reflexes, from the Biological Bulletin of 1907.

Among the papers to be read at the Belfast meeting of the British Association, according to the provisional programme, is one by Prof. William M. Davis of Harvard, on the Physiographic Subdivisions of the Appalachian Mountain System. The president of the section, Major E. H. Hills, will advocate the remeasurement of the principal longitudinal and meridianal arcs in the United Kingdom, pointing out that, owing to the fact that the survey of Great Britain and Ireland was one of the first great national surveys, the accuracy of the work, though excellent for the date at which it was performed, does not come up to modern standards. Several American professors are also to deliver lectures in the vacation course, August 10 to 28, of the Oxford School of Geography.

The French Académie des Sciences has awarded for the first time the interest on the 100,000 francs placed at its disposal by Prince Roland Bonaparte for new scientific discoveries or researches. M. Gonessiat, director of the Observatory at Algiers, receives 5,000 francs for the purchase of new instruments; M. Collin, director of the Observatory at Tananarive, 3,000 francs for the publication of a map of "Imérina de Sud," in collaboration with M. Rollet; and other amounts are granted for scientific investigation.

Sir John Banks, honorary physician to the King in Ireland and first president of the Royal Academy of Medicine in Ireland, died July 17 in Dublin. He had been president of the Royal College of Physicians, Ireland, and professor of physic in the University of Dublin. Among his publications are "Clinical Reports of Medical Cases," "Loss of Language in Cerebral Disease," and the article on Typhus in Quain's "Dictionary of Medicine."

Drama.

Arthur Dougherty Rees, author of "Columbus," "The Double Love," etc., has written a blank verse play around the legend of "William Tell" (J. B. Lippincott Co.), and has dedicated it to the principles of human progress, which have raised the Swiss people from a state of slavish subjection to their present position. It has evidently been a labor of love, is inspired by a free and patriotic spirit, and is not wholly devoid of imagination or descriptive power, but is so undramatic in its action and so untheatrical in form as to be wholly unsuitable for stage representation. There are between thirty and forty speaking characters, and nearly all of them indulge in long-winded orations, of which many verge upon the ludicrous in their violence of rant. If Mr. Rees means to write for the theatre, he must acquire some notion, however faint, of the virtues of order, compression, and moderation.

None of Ibsen's dramas reveals so much of Ibsen himself as "Brand," written at Ariccia, Italy, in 1866. For those who would know Ibsen, therefore, it is necessary to know "Brand." But its linguistic and other difficulties are very great, and the English reader finds himself further handicapped by inadequate translations. The John Anderson Publishing Company of Chicago has therefore done a service to students of Ibsen in issuing a text, with introduction and notes by Julius E. Olson, professor of Scandinavian languages in the University of Wisconsin. In an introduction of fifty-five pages he traces the origin of the play; and, from the information gained from all available sources, and especially from Ibsen's "Letters," issued two years ago, he shows "how close this idealistic drama was to the reality of the poet's life." The notes offer an excellent commentary, with numerous references to and significant citations from the now vast body of Ibsen literature. The editor has made special effort to produce a text wholly free from typographical errors. The difficulty of this task we can appreciate when we know that Ibsen himself paid little attention to new editions of his works, and errors of all kinds have crept in.

Bronson Howard, often called "the dean of American dramatists," died at Avon-by-the-Sea, N. J., August 5. He was born in Detroit in 1842, and after some experience in journalism, including a residence in London, he took to play-writing. He was author of nearly twenty plays, including: "Saratoga" (1870), "Diamonds" (1872), "Moorcroft" (1874), "The Banker's Daughter" (1878), "Old Love Letters" (1878), "Hurricanes" (1878), "Wives," adapted from Molière (1879), "Young Mrs. Winthrop" (1882), "One of Our Girls" (1885),

"Met by Chance" (1887), "The Henrietta" (1887), "Shenandoah" (1889), "Aristocracy" (1892), "Peter Stuyvesant," in collaboration with Prof. Brander Matthews (1899). "The Banker's Daughter," "Aristocracy," "Shenandoah," "The Henrietta," and "Young Mrs. Winthrop" are still more or less popular. In London "Saratoga" has been played under the title "Brighton," "The Banker's Daughter" under "The Old Love and the New," and "Hurricanes" under "Truth"; in Berlin "Saratoga," adapted by Paul Lindau, was given the title "Eine Erste und Einzige Liebe." Mr. Howard was also the author of three books, "Kate—A Comedy" (see the *Nation* of November 15, 1906, p. 421), "Norroy, Diplomatic Agent" (1907), and "Sears on the Southern Seas" (1907).

Music.

Dr. Julius Kapp, 20 Eschersheimerlandstrasse, Frankfurt-on-the-Main, is preparing a book on Franz Liszt and would be glad to receive any hitherto unpublished letters, documents, or authentic reports relating to him.

Under the title "Bach's Mass in B Minor, in Cambridge, 1908," a little book has been issued in England containing three papers; one by Sedley Taylor, "On the Circumstances under Which Bach Composed His B Minor Mass"; one by Dr. Allan Gray, "On the Structure of That Work"; and another by Mr. Taylor, "On the Revival of Bach's Choral Works after Nearly a Century of Apparent Extinction." Another English publication of value to Bach lovers is a catalogue of his choral works, issued by Novello & Co. It includes short descriptions of the works and information likely to be useful to intending performers.

"The Evolution of Modern Orchestration" is the title of a book of Dr. Louis A. Coerne to be issued in the autumn by the Macmillan Co.

The season at Covent Garden, London, which has just closed, proved the most successful in the annals of the Grand Opera Syndicate. Eighty-one performances were given, Verdi leading with 21, Wagner coming next with 15, followed by Puccini with 14. The operas given, with the number of performances, were: "Aïda" 4, "Armida" 2, "Barbiere di Siviglia" 6, "Bohême" 5, "Carmen" 2, "Cavalleria" and "Pagliacci" 4, "Faust" 2, "Fedora" 1, "Fliegender Holländer" 2, "Huguenots" 3, "Lucia" 6, "Madama Butterfly" 4, "Manon Lescaut" 3, "Meistersinger" 3, "Otello" 5, "Pescatori di Perle" 3, "Rigoletto" 5, "Tannhäuser" 2, "Tosca" 2, "Traviata" 7, "Tristan und Isolde" 3, "Walküre" 3. It is encouraging to find Verdi's "Otello" so prominent in the list with five representations; but where is "Il Trovatore"? The trend of taste in England is also indicated by the repertory chosen for the Moody-Manners English opera company, which begins its season on the seventeenth of this month. It includes four Wagner operas, besides such favorites as "Faust," "Trovatore," "Aïda" "Madame Butterfly," La Bohême," "Pagliacci," and "Cavalleria." The four Wagner operas are "Lohengrin," "Tannhäuser," "Tristan," and "Die Meistersinger."

Art.

Screens and Galleries in English Churches. By Francis Bond. Pp. xii.+192. New York: Henry Frowde.

Mr. Bond is the author of a most valuable book on the Gothic art of England—a huge volume, which was duly noticed in these columns (August 9, 1906, p. 126). With great propriety, he treats now, in a separate work, the peculiarly English subject of those partitions which, under such names as chancel screen, choir screen, rood screen, rood loft, and gallery, were as essential as roof and wall to an English church. He deals with the subject "from an evolutionary point of view," and shows how the need of high and rather solid screens followed from the opening of the great window in the square east end, so common in English church architecture, and so peculiar to the island. He shows how much the old churches have lost in internal beauty and fitness from the destruction of those screens in recent times. For it is a matter of repeated regret and reproach—the freedom of nineteenth-century vicars in moving and destroying the screens of their churches; although, as our author says (p. 139), there has never been a legal order permitting the destruction of a screen:

> It is just as much rank contempt of the law to destroy a screen—one vicar in the last century had the destruction of three on his conscience—as it is to destroy the font or the altar, or anything else. A faculty* is necessary if a screen is to be destroyed.

The screen built across the chancel, or the choir, and separating it from the nave, may be traced to the low enclosure which was needed to fence off the reserved place for the choristers. But the rood screen also, as a strong foundation needed to support the rood beam and its cross and reliquaries, is of the earliest times; and these two wall-like members were easy to combine into one—into the choir screen. This is found to be now a screen of columns, now a piece of elaborate joinery in wrought and sculptured oak; here it was massive, there open and hardly more than a symbolical barrier; again, it became a solid stone construction, as, most notably, in Albi Cathedral, of late Gothic type, or in Notre Dame of Chartres, of rich neo-classic style. In the eighteenth century, high wrought-iron grilles take its place. Of English screens, at least 150 are figured in the excellent half-tone illustrations and measured drawings of this volume.

It is not easy to praise too highly the simple and effective presentation of the subject, and the interest of the book to all persons who care for ecclesiology or for decorative art. It is the work of an enthusiast whose zeal is informed with full knowledge. It may please some purists to know that, whereas the author prints the word "choir" in his earlier book, he has adopted the remoter form "quire" for the new volume—forgetting the change only once, so far as we have observed.

*"Faculty: A written dispensation granted by the bishop of a diocese, or his chancellor, to enable certain things to be done which, without such permission, the law would not authorize to be performed." From "A Glossary of Liturgical and Ecclesiastical Terms," by the Rev. Frederick George Lee.

E. P. Dutton & Co. bring out the first volume, dealing with ancient art, of an English translation of a "History of Art," by Dr. G. Carotti, professor in the Milan Academy of Fine Arts, and lecturer in the University of Rome. The translation is by Miss Alice Todd, who has had the help of Mrs. Arthur Strong "in some of the stiffer archæological passages, and in the rendering of names." This assistance would hardly seem to amount to the "revision" promised on the title page, Mrs. Strong especially disclaiming responsibility for any of the views expressed in the book. Professor Carotti has wished to do on a larger scale something like what Solomon Reinach has done in his admirable "Apollo," and the get-up of the two books is similar—a small and closely printed page, with a profusion of illustrations on too minute a scale to serve for much more than memoranda of the works spoken of. The ground covered in the present volume is that of Chapters iii. to x., inclusive, of "Apollo" (Professor Carotti does not concern himself with prehistoric art); and the 350 pages of text correspond to some 72 of Reinach's, the pages containing much the same amount of matter, while there are 540 illustrations, against 128 in the "Apollo." But if Professor Carotti is thus enabled to give us more detail, he has neither the grasp and lucidity nor the charm of Reinach. His book is dryer reading, and will hardly convey so definite a conception of the character of the art discussed in it. "Apollo" will still remain the best popular history of art in existence, but the present work will prove a valuable supplement, which may be recommended for reading in connection with the earlier one. Whether the fault be that of the author or the translator, the style is often difficult, and sometimes confused to the verge of unintelligibility. As might be expected, there are occasional differences of opinion between the two authors, particularly as to the age of art in Egypt and as to the date of the Venus of Milo, which statue Reinach places much earlier than any one else. Professor Carotti expressly agrees with Reinach, however, in calling the figure an Amphitrite.

A translation of Edm. Solmi's "Leonardo da Vinci" has been added to the biographical series Geisteshelden (Berlin: Ernst Hofmann & Co.). The merits of Solmi's work, which appeared last year in a second edition (Florence: Barbèra), are so well known, that we need recall only that in spite of its compactness it is the most complete and accurate collection of biographical data concerning Leonardo. It has the advantage of approaching him as a whole without especial prepossession, artistic or scientific. This authorized German version by Emmi Hirschberg is well done,

and should be useful to students who do not read Italian. The letter press is better than that of the Italian edition, and there are nine plates, of which, however, three are taken from originals of more than doubtful authenticity. Solmi's book was written as a sort of condensed epitome of a great work on Leonardo in his relation to his contemporaries, for the appearance of which all Leonardists still wait eagerly.

Signor Nathan, the Syndic of Rome, is desirous of avoiding all unnecessary destruction of the fortifications of the ancient city and is making common cause with the archæological authorities. One question under discussion is where openings may best be made in the long, unbroken tract of old walls between the Porta Sebastiano and the Porta San Giovanni. Signor Boni and his associates suggest the reopening of three old gates, which are now closed, the Porta Latina, Porta Metronia, and Porta Asinaria. These three arches would provide sufficient approaches to the new quarter beyond them for some time to come. Signor Boni also suggests the conversion of the Via Latina into a wide boulevard. This plan would give room for the excavation of the tombs which stood on each side of the Via Latina, and for their future preservation in gardens on both sides of the road. The tracts of old wall between the Porta San Lorenzo and the Porta Maggiore and the Porta Maggiore and Porta San Giovanni present a more difficult problem. In the first case the needs of the railway require a wide opening at one place which, if made at the acute angle now proposed, would destroy a considerable stretch of wall. Here the only alternative is that the railway should be curved so as to approach the walls more nearly at a right angle. As for the needed exits between the Porta Maggiore and the Porta San Giovanni—where the old walls carry the Claudian aqueduct—it is suggested by Signor Boni that openings be made through the arches of the aqueduct itself which in some places would furnish a sufficiently wide passage without further alterations.

An interesting discovery has again been made on the Roman Forum. Inside a small drain beneath the pavement of the Clivus Palatinus have been found eighty-six seals with various artistic devices, such as the wolf and the twins, Mars and Venus, Cupid, Mercury, Isis, Fortuna, Silenus with a boar's head, and many figures of animals; also extensive remains of lamps, one of which is ornamented with the figure of an Eastern god inscribed *mystikon*.

A new entrance to the Forum has been planned at the end of the Via Cavour, where the temporary office of the excavations used to stand, and where now about 3,000 cubic metres of earth have been removed. It is hoped that the old gateway of the Farnese gardens on the Palatine, which is now scattered in fragments, may be made to serve as the entrance.

A strong committee of French artists has now been formed with the object of securing for painters, sculptors, designers, and others the legal rights already granted to authors and dramatists. There will be a meeting in October, when many of the artists who are now absent from Paris will have returned to town. Thus far, the presidents of the two leading salons, as well as of the Association des Artistes, Peintres, Graveurs et Architectes, the Salon d'Automne, the Société des Artistes Indépendants, and the Syndicat de la Propriété Artistique, as also several prominent representatives of those associations, including no fewer than seven members of the Institute, have already declared themselves in sympathy with the objects of the association. Other supporters of the movement are Armand-Pierre-Marie Dayot, inspector-general of fine arts, and Paul-Arthur Cheramy, the well known collector. The latter, who is a retired lawyer, has submitted to the French minister of public instruction a draft bill providing for the payment to artists of a royalty or percentage upon the amount paid for their works every time they change hands. This idea originated with Frantz Jourdain, president of the Salon d'Automne and of the Syndicat de la Propriété Artistique.

The French Académie des Beaux-Arts has awarded the Premier Grand Prix de Rome to Paul Marcel Damman, a young engraver of twenty-three; the Premier Second Grand Prix to Henri Dropsy; and the Deuxième Second Grand Prix to Charles Fraisse.

At Christie's, London, July 17 and 20, the following pictures were sold: Reynolds, Mrs. Robinson as Perdita, £378; Raeburn, Mrs. Kerr, £336; J. Linnell, sr., Milking-Time, £304.

A cable dispatch from Berlin announces the death, last Wednesday, of Kuno von Uechtritz, the well-known sculptor of Berlin. Von Uechtritz was born in Breslau in 1856. His principal statues are the Moltke in Breslau, the Bismarck at Grimme, the Chinese war monument at Tientsin, and the Steuben memorial which received a gold medal at St. Louis.

Joseph Henderson, a Glasgow painter of portraits and sea pieces, has died at the age of seventy-six.

Finance.

THE STOCK MARKET "BAROMETER."

That the movement of prices in the stock market is an accurate forecast of coming changes in general trade has long been a commonplace. Ample demonstration of Wall Street's "barometric" capacities has been afforded in the case of the recent panic and present business depression—a fact which makes all the more interesting the present "readings" of the instrument.

It will be recalled that, so far as the records of carefully prepared averages may be relied upon, the stock market made "high tide" in January, 1906, more than two months before the San Francisco disaster. By that time, moreover, the bond market was in such condition that railways and other companies whose needs compelled provision of fresh capital, were obliged to resort to "short-term notes" or convertible bonds, finding it impossible to make issues of ordinary long-term bonds on satisfactory terms. The speculative debauch begun in August, 1906, by the "Harriman dividends" temporarily reversed the ebbing tide, but in December, 1906, the waters were rapidly receding. Thus the bond market gave fully two years' warning of the depression that is now with us; and, even reckoning from the "Harriman boom" of August, 1906, the stock market reflected coming events at least one year in advance.

The modern theory of business "depressions" recognizes that they are primarily the result of contraction in the volume of new capital available for enterprise. According to this theory, whatever checks the flow of capital into new undertakings brings about a general halt in production and reduces consumption materially, as people are thrown out of work. The conditions thus brought about are commonly described as "bad times"—like the present. When capital ceases to seek investment, the turn of the business tide is at hand. Now, the securities which are bought and sold in Wall Street—stocks and bonds—represent this kind of capital. The prices of these securities represent the valuation of this kind of invested capital; and this valuation is made by that keen and subtle business faculty—the speculative instinct. Consequently, the price list of representative securities in Wall Street represents the record of the most sensitive business nerve centres—seismographs, one might say, at times—presented in its simplest form. In 1906 the bond market showed the scarcity of capital for conservative investment, and showed it most clearly; in 1907 the stock market, which began to decline in January, and crashed in March, plainly evidenced a state of things that did not finally show itself in trade until twelve months later. In other words, Wall Street registered one to two years in advance the progressive scarcity of capital to which our present business depression must be ascribed, and it did so simply because it had to.

Now, it is important to note that, before the business contraction had had time to make itself fully visible to the naked eye (in bank clearings, railway returns, etc.), the Wall Street barometer had started to rise. The lowest "readings" were made in October, 1907, and at the end of July, 1908, the level was higher than in July, 1907. The business depression was at its greatest in June. Taking the average price of twenty active railway stocks as kept by a Wall Street publication for twenty years, the highest "reading" was about 138, in January, 1906, and the lowest 81, in October, 1907. At present the level is about 106, as against about 104 at the end of July, 1907. Thus at the climax of the business depression the "barometer" has risen almost half-way from the lowest to the highest. What does

this mean? Can we take it as evidence that the business depression is soon to pass away—as the "Sunshine" and "Prosperity" clubs tell us? Allowing for the existence of "manipulation" of prices, and of "speculation" of a concentrated type in high places, there is no disguising the fact that the sharp and sustained recovery of stock prices is a good sign as bearing upon the future of business. And yet the continued sluggishness of the bond market is a very curious portent, and one which suggests that possibly there may be necessary some correction of the "barometric readings" taken simply from the stock market. It is admitted by all experts that the bond market is most disappointing, in view of the low rates for money. It was hoped that the July disbursements of interest and dividends would stimulate investment in bonds, but they failed to do so, and we have had the strange spectacle of 1 per cent. call money, a "booming" stock market, and a bond market without animation. All those whose business it is to cater for the strict investment public agree in saying that the demand for investments is very small.

From these facts, it would seem that the new capital available for investment in enterprise has this time been willing to take speculative risks, rather than engage in the safer and more humdrum paths of employment. In the recovery that followed the 1893-1896 depression, the first sign of the better times coming was found in the extensive refunding operations on a 3½ per cent. basis, started by the Lake Shore, and followed by other railways, with good credit, such as Northwestern and New York Central. The accumulated capital sought first the most conservative type of investments, finally flowing down into the speculative classes. Ten years ago the public bought the first mortgage bonds of good or reorganized properties, and the bankers and syndicates had to carry the stocks. Now the public has taken away the stocks (in "odd-lot" purchases), and the bonds languish in bankers' hands and on the shelves of bond-jobbers. In the ten years of "boom"—1897-1907—stocks and bonds a-plenty were made to suit every one's taste, until last year neither stocks nor bonds could be sold, and only short loans could be effected. Now the public seems to prefer Union Pacific stock at 150 to Union Pacific 4 per cent. bonds at 95. The inference is that there has not been enough accumulation of new capital for new enterprise to affect both the stock and the bond market. If this inference is correct, then arguments from the stock market to business conditions must be qualified to some extent, so far as the near future is concerned—in other words, the "barometric readings" will have to be corrected for error in a degree measured by the sluggishness of the bond market.

JUST ISSUED

BOOKS THAT SHOULD ADD TO THE TRAVELER'S PLEASURE

16mo, limp covers, full gilt, in the general style of Lucas's "Friendly Town" and "Open Road." Each $1.56 postpaid (leather, $2.56).

Poems for Travelers

Compiled by MARY R. J. DUBOIS.

Covers France, Germany, Austria, Switzerland, Italy, and Greece in some three hundred poems (nearly one-third of them by Americans) from about one hundred and thirty poets. All but some forty of these poems were originally written in English.

The Poetic Old World

Compiled by Miss LUCY H. HUMPHREY.

Covers Europe, including Spain, Belgium, Greece, and the British Isles, in some two hundred poems from about ninety poets. Some thirty, not originally written in English, are given in both the original and the best available translation.

HENRY HOLT & CO. 34 W 33d St. New York

Ready Aug. 7th

The Naturalisation of the Supernatural

By FRANK PODMORE

Author of "Studies in Psychical Research," etc

Illustrated. 8vo. $2.00 *net*

A skilful and scholarly presentment of an able materialist, whose main conclusions are those of an intelligent scientist. After tracing in a lucid and vigorous style the history of the spiritualist movements, the author gives some rather surprising exposures together with explanations of some of the ghost stories which have hitherto been accepted by the followers of psychical research as incontrovertible.

The Week.

Mr. Bryan is much pained because President James W. Van Cleave of the National Association of Manufacturers does not approve the "labor plank" of the Democratic platform, and in the last issue of the *Commoner* Mr. Bryan has expressed his grief. The Democratic plank, he assures us, does not, as Mr. Van Cleave asserts, demand "class favors." "The laboring men," says Mr. Bryan with much unction, "resent an attempt to discriminate against them in favor of any other class." Apparently, however, they do not resent an attempt to discriminate against other classes in favor of the laboring men; for here is part of that plank in which Mr. Bryan takes such pride:

> The expanding organization of industry makes it essential that there should be no abridgment of the right of wage-earners and producers to organize for the protection of wages and the improvement of labor conditions, to the end that such labor organizations and their members should not be regarded as illegal combinations in restraint of trade.

This, if it means anything, means that labor organizations shall be exempt from the operation of the anti-Trust law. That law is general in its terms and relates to labor organizations only in so far as it relates to all other organizations in restraint of trade. If this plank is not intended to make an exception of labor, it is not intended for anything but buncombe.

That the Democratic National Committee is experiencing difficulty in raising money is evident from the fact that such unusual methods are mooted as inducing labor unions to impose an assessment for Mr. Bryan, or sending out solicitors to make direct appeals and to take up collections. It is impossible not to sympathize, not with Mr. Bryan's managers merely, but with any honest campaign committee which endeavors to raise money as it should be raised—by the voluntary gift of the many voters interested in the election. The truth is that our electorate has been pauperized. It has been led, with good ground, to believe that individuals seeking private gain or public office would "put up" the money. Thus only a day or so ago it was announced that the Republican officeholders in Philadelphia would be assessed. And for what? Not to carry Pennsylvania, but to amass a fund for other States. The voter needs to be enlightened as to his duty to contribute to a cause in which he is vitally interested. His present attitude reminds one of the anecdote told of a stingy church member who always declined to contribute to church expenses, because, as he said, he believed salvation was free. A wise old deacon who had labored with him retorted: "My friend, we must discriminate: salvation is free, but religion is expensive." Politics, like religion, is expensive. The trouble is that the wrong people have been eager to foot the bills.

Mr. Taft is evidently tired of being held responsible for the Brownsville affair. On no other theory can we explain Gen. Henry C. Corbin's publication of President Roosevelt's telegram from Porto Rico, insisting that the order of discharge be executed without regard to "the yelling either of the politicians or the sentimentalists." President Roosevelt, too, must be convinced that the publication will help Taft, for he cheerfully declares: "Gen. Corbin's statement is absolutely correct, and it was entirely proper that he should make it." The clear inference is that the President and the other managers of the Republican campaign are a bit nervous about the negro vote, and are unwilling to take any greater risks in regard to it. The telegram from Porto Rico is of further interest as showing how our government is run. Mr. Roosevelt had inflicted the punishment, as usual, "after due deliberation." Mr. Taft, the responsible head of the War Department, had doubts about the matter, and wished to look into it more fully; but his desire was coolly disregarded by a President who rode over him roughshod. If this be due deliberation, what would be indecent haste?

The cordial welcome extended to Admiral Sperry's fleet of battleships at Auckland, New Zealand, is best interpreted as a spontaneous outpouring of good wishes to our sailors upon their first long practice voyage of circumnavigation. Of course, there are those who see in this natural ebullition evidence of a relaxed tension of the Australasian mind. We are to suppose, according to this view, that New Zealand has feared a descent by the Japanese navy. It may be well, however, to remember that Great Britain keeps a far larger squadron of cruisers in Eastern waters than any other Power, so that, even without our ships, the British colonies in the Pacific are not quite defenceless. Without falling into the somewhat magniloquent tone of the London *Daily Telegraph*, which in consequence of the arrival of our fleet at Auckland acclaims us "no longer a Western, but a cosmic Power," we may heartily echo the wish that our navy's cruise may sensibly promote the principles of the Hague Peace Conference.

The shocking thing about the cold-blooded massacre of the non-union men by the strikers in Alabama is that it does not come as a surprise. It has become second nature for some Southerners to express their minds with gun and noose. On Sunday morning "several determined men" did so—by taking from the jail in Tifton, Ga., an eighteen-year-old negro boy and hanging him, because he made an "impertinent remark" to a white girl. This does not surprise us, either; it is an old story. Our record in the North is far from spotless; we have had our outbreaks of savage violence, too. Now the South is more than ever paying the penalty for its long indulgence in lawlessness, for its long tolerance of private revenge. The wild justice of lynch law is breaking down into mad injustice. Public opinion exercises little restraining force. Murder, as the horror-stricken Tolstoy cries, is the prolific breeder of murder. Hence peculiar interest attaches to the present lawlessness on a large scale. The Governor of Alabama is showing commendable vigor in sending troops to the mining country; the question is whether they will enforce the laws and whether public opinion will support them. "Guarding" a train without cartridges is a poor beginning.

The movement of railway employees to coöperate with the companies in the

campaign for higher freight rates has made rapid progress, and has extended from the East to the Central West. The reason is not hard to divine. The roads want to make money, hut they are unpopular. In the contest with the shippers, who are more numerous, the railways want an ally and seek it in their own employees. The employee is practically told by the companies: "Unless we can get higher rates, we must cut your pay; unite with us, and make the shipper and the consumer pay the bill." Naturally, the employee adopts the view that for the time being his interests run parallel to his employer's, but opposed to the general public's. He argues that it is better to parcel out the increased freight rates among the 80,000,000 consumers than cut the wages of a million and a half of railway men. But some facts he forgets. One big reason for the falling railway profit is the continuance of high wage scales origiually extorted by employees during boom times. Another fact is that many wage reductions have been made in other industries; another, that many dividends of carriers have been cut or suspended; and still another, that higher freights will in some instances lessen the traffic and decrease the demand for railway labor.

The answer which the Reading Railway Company makes in the suit brought by the government against the anthracite roads under the Hepburn act illustrates two things, from hoth of which the plain citizeu hegs an early deliverance. The first is the practice of large corporations of disclaiming responsibility for their acts by interposing an *alter ego* which is hy legal fiction distinct from the corporation accused. Thus the Reading Railway Company maintains that it has no interest direct or indirect in anthracite coal carried over its lines, because there is an underlying "Reading Company" which owns a controlling interest in both the railway and the mining company. If wickedness is suspected, the prosecution must unearth this monster, not the innocent transportation company under the presidency of George F. Baer. In law this may be a valid plea, but the individuals interested in the three concerns are not unacquainted with each other. The legal subterfuge moreover embitters the public, which may one day show its teeth. The other matter which the suit illustrates is the loose drafting of anti-Trust statutes. For it is possibly true, not only in law but in fact and reason, that what the Reading Railway Company avers as to the unconstitutionality of the commodity clause of the Hepburn act is true. Not that we are impressed by the contention that regulation of interstate commerce can never rise to the point of prohibiting certain forms of commerce. But the express exemption of lumber from the operation of the law, and the inclusion of coal, may taint the statute. The plea may be made that equal protection of the law is denied to similar corporations, and that thus the constitutional validity of the act is impaired.

Since the time that the prophets of Baal took a bullock and placed it on the altar and called upon the name of their god from morning until night, and "cried aloud and cut themselves, after their manner, with knives and lancets till the blood gushed out upon them," there has heen no exhibition of a belief in incantation comparahle to the approaching Interstate Prosperity Congress. This organized commercial faith cure is to he let loose upon us at the close of this week. The grotesqueness of the plan strikes foreign observers even more forcihly than it strikes our own unreflecting people. The Leipzig *Neueste Nachrichten* derides this flourish of trumpets to exorcise the evil spirits of commercial depression, and warns its readers against relying on an artificially induced prosperity, lest a still further recession in export trade follow. No one who knows the true psychological character of the gradual growth of mutual confidence, its liability to sudden chills, and its long periods of suspended animation, will ever take stock in its galvauic revival—even by the comhined attempts of two organized hodies of commercial travellers. Prosperity is a maiden hoth shy and coy, not to he caught hy the tom-tom and the sackbut and the hass drum. He does more to cajole her into reappearance who quietly saws wood and waits.

Gov. Magoon's jubilations upon the successful working of the new election law in Cuba seem to have been somewhat premature. That the contest passed off peacefully is solid ground for satisfaction, but the delay in the count because of the complications and technicalities of the law must be regarded as unfortunate. It was necessarily something of an experiment—this trying upon a politically inexperienced people like the Cubans an elaborate election scheme which was the outcome of years of trial and error by a sophisticated electorate like our own. The workings of the uew statute will not be smooth and rapid until and unless the Cuban voter swings into the familiar grooves which eliminate friction. But the tardiness to proclaim officially the successful Governors and Mayors, while it may have been unavoidable, is likely to create a suspicion of official tampering with the ballot. The elections of the Governor of Santiago and the Mayor of Havana have already been protested by some of the parties.

On August 5, 1858, fifty years ago, the end of the first Atlantic cable was brought ashore at Trinity Bay, Newfoundland. But not until August 16, with the arrival of the first message from Queen Victoria to President Buchanan, did the real celehration begin. The church hells rang, factories hlew their whistles, the river front was illuminated hy fireworks and bonfires, there was a great processiou. Mr. Field was well entitled to all the praise showered upon him. He had been dubbed a crazy man, had sacrificed his husiness, and had previously made two unsuccessful attempts to lay the cahle. Unfortunately for all the rejoicings, for some unknown reason the cahle stopped working just at the time of the great official celebration. For Mr. Field this meant doing the work over again. The old company had exhausted its means, a new one had to be formed, and fresh capital raised. The task was finally accomplished, by the aid of the Great Eastern, on Septemher 8, 1866, after another failure in 1865. It is hard for the newspaper reader of to-day or the merchant, to realize what he owes to the cable, or to gauge the thrill that went through the whole world a half-century ago. In our time great inventious have followed so closely on one another's heels that the discovery of wireless telegraphy is but a week's wonder, and evokes no muuicipal dinner or civic parade. Even the record-breaking flight of the Zeppelin airship, which may figure in history as the real beginning of man's conquest of the air, is accepted,

with the telephone and a hundred other conveniences, as merely another and well-discounted triumph of science.

The disaster to Count Zeppelin's airship makes it evident that one of the most serious problems is to care for such a craft when it is suddenly compelled to face a heavy storm and descend. Giant balloon houses cannot be erected at every crossroads, and hills to hide behind are not always convenient. Moreover, if the airship has successfully landed, the lifting and pounding when it is on the ground in a breeze may knock it to pieces. The collapsible type has this advantage over the rigid-frame Zeppelin airship, that a length of 450 feet is not exposed to every wind that blows. This view, however, is in part opposed by Dr. Hugo Eckner, an expert who has been at Friedrichshafen during the Zeppelin experiments. Writing in the *Frankfurter Zeitung*, he argues that the rigid airship should have less trouble in reaching the ground than any other, because it responds more readily to its rudders, and when on the ground is more easily controlled. He thinks Zeppelin's greatest discovery, if one may so term it, is in finding that we need pay less attention to stability than had been believed hitherto; that a certain amount of instability makes for greater mobility and easier steering. Dr. Eckner points out, too, that aerial pilots have not yet had time or opportunity to develop a science of landing by experimenting. He suggests that there is a marked parallel here between the airship and the steamship. A new hand could not, of course, dock the Lusitania without disaster; and the captain of any steamer has to learn all of her little eccentricities of steering and of manœuvring before he can feel absolutely in control of her actions. This problem of acquiring knowledge in handling the airship in restricted spaces and in rising and in falling Dr. Eckner thinks serious; the anchoring and fastening of the ship, once it has landed, he regards as "altogether secondary." Whether his opinion will change, after last week's disaster, remains to be seen. Then, too, warm advocate of Zeppelin's type of airship that Dr. Eckner is, he is compelled to admit that there is a definite limit to the possibility of landing in a strong wind—just how strong is yet to be determined.

What has become of that dreadful weapon of mediæval times, Sir Walter Scott, and childhood days—excommunication by the Church? The outsider, one, that is, who stands outside of France and the Roman Catholic Church, finds it hard to follow the line of subtle distinctions which made it possible for M. Fallières, with the brand of excommunication on his brow, to witness his daughter's marriage sacrament in church as though he were one of his pious Breton fellow-citizens. With M. Fallières every French official concerned in the enactment of the Separation Law of 1905 was condemned, yet among the wedding guests on Monday were members of the present cabinet of persecution. Was the circumstance that they came as individuals, and not as a delegation, sufficient to raise the ban? If so, the Church was evidently making use of an instrument of offence to which nothing formidable but the name attaches. The reason for the attitude of tolerance assumed by the Church is that neither its leaders nor those of the State are prepared to go to extremes when it comes to uprooting century-old social habits in the nation. Some time ago M. Jaurès, for whom, if for any one in France after M. Combes, the stake and the fagots could consistently be revived, came in for bitter censure at the hands of the violent anti-clericals, because he had allowed his daughter to come up for confirmation. His reply in part was one that most Frenchmen would accept as final—it was the mother's desire, and the claims of affection outweighed those of consistency. On the other hand, as far as the Church is concerned, actually to deprive the entire ruling class in France of ritual marriage and interment might bring on undesirable consequences. But the outsider, as we have said, will regret the passing of the ancient awe of bell, book, and candle.

The predicted general strike has not come upon Paris. With the abortive strike of the electrical workers last week, it is made apparent that the General Confederation of Labor will be reduced to a state of comparative quiescence. That the government will carry out its threat of suppressing the Confederation altogether seems scarcely probable. That would be an attack on the principle of wage-earners' organization which a powerful party in Parliament would find it necessary to oppose. The General Confederation of Labor, representing the extreme wing of organized labor in France, has attempted to make up in violence what it lacks in numerical strength. The French labor unions have nothing like the huge membership of the English or German, but have been as revolutionary as the others have been pacific. Even in France, however, in general the revolutionary feeling shows signs of decline. When Parisians can regard a strike of electricians with equanimity, a strike which turns their *Ville Lumière* into an abode of darkness in which candles sputter on café tables and the theatres use lamps, the tyranny of labor is being shattered. A few weeks ago the president of the electricians' union, Pataud, *le roi Pataud*, as Paris calls him, announced his determination to lay down office and step back into the ranks. It may be that he foresaw hard times.

A people which bases its prosperity on a feather would seem to be even more unwise than the man who built his house upon the sands; but Cape Colony's ostrich industry has recently experienced a revival which shows that even so light and inconstant a thing as that which women wear in their hats may be subject to the same economic laws that control iron output and grain production. Ostrich-farming in the seventies of the last century yielded such enormous profits as to give rise to a world-wide ostrich boom. California, Australia, South Africa, and Algeria, all went into the business, with the result that prices fell. And just when it was growing possible for the humblest lady in the land to sit under her own ostrich feather, the boom burst—ostrich feathers passed out of style. In 1886 the Cape Colony growers petitioned Queen Victoria to exert herself in their behalf. But in the matter of feathers Hercules is no stronger than a child and a queen than an ordinary woman. Only generals and other gorgeous persons wore ostrich feathers, until, a few years ago, the cycle closed and the plumes came in again. Since then Cape Colony has prospered. In 1907 it exported seven million dollars' worth. But to guard against future competition the government has laid an export tax of $500 on every ostrich and $25 on every egg.

WHY INDEPENDENTS FAVOR TAFT.

The Republican Congressional Campaign Committee has offered a prize for the best essay proving that Mr. Taft and the party whose candidate he is should be returned to power next November. In all the seven thousand manuscripts said to have been submitted not one, we fear, will set forth the predicament which confronts voters on whom party ties sit but lightly, or will explain the motives that will probably actuate them in casting their ballots.

To the matter-of-fact man of a practical turn, the matter resolves itself into a choice between Mr. Taft and his Democratic opponent. Such a person would tell us good-naturedly that of the two evils the lesser is to be chosen, unmindful of the fact that sometimes the best rule is: "Of two evils, choose neither." The alternative is not simply between Mr. Taft and Mr. Bryan, but between either of them and "firing into the air" as a protest against further toleration of either of the two old parties. To hardened politicians or even such "practical men" as Mr. Roosevelt, such refining savors of weakness. But it is to just such weakness that the Republican party owed its origin when the Whigs could not be brought to take a definite stand on the Free Soil issue. It hardly behooves them, therefore, to make light of the ancestry of their own party.

It is quite true that at the present juncture a *via media* seems hard to find. The minor parties command as little confidence as the two large organizations; and to disfranchise one's self in order to make a political protest is indeed a desperate remedy. Had the Democratic party showed any signs of quickening integrity, the situation would be different. But apparently it has a name to live but is dead, benumbed by the volatile persuasiveness of Mr. Bryan's tongue. He himself is as unstable as water. If under such conditions, the independent voter inclines to vote for Mr. Taft, he comforts himself with the following considerations:

First, Taft represents the less venal wing of the Republican party. No one who understands the complexion of that party fails to realize wherein the venality of many of its leaders consists. Such men as Aldrich, Cannon, Depew, and Platt are simply brokers in Legislation, the agents of corporate and partisan interests. To them politics is simply one kind of yellow finance. Places, jobs, and favors bound their political horizon. They "stand pat" because they have about reached the point where no change can give them and their friends a better chance at the public trough. Fortunately the earlier traditions of the party have lodged within its membership a few men of finer clay. Mr. Taft himself belongs to the unsmirched element. This fact qualifies the reluctance which independent voters feel in contemplating his election.

In the second place, the frankness of Mr. Taft's recent utterances in the matter of class legislation is decidedly in his favor. He does not preach obedience to law to the manual toiler with his tongue and suggest sedition by the shrug of his shoulder. He has not minced matters in reference to the boycott. He has come out boldly in defence of the equal rights of unorganized labor. He has scored the violence of strikers. He has stood up calmly and manfully for the integrity of the equity powers of the courts. He has refused to be stampeded by passionate assaults upon the judicial system. He has mercilessly exposed the double-faced insincerity of his opponent's platform in the matter of injunctions. He has declined to be caught by the seductive proposal of a State guarantee of bank deposits. All of these declarations are so distinctly in his favor, that as between Taft and Bryan the balance is well in favor of the Republican candidate.

It is unfortunately true that he accepts some of the impostures that are traditional in his party's camp. He knows that the Republican doctrine of protection—that duties should equal the difference in the money cost of production here and abroad—is fallacious; that a two-cent duty on raw sugar grown abroad to make up for the disability of the pampered beet-sugar producer in this country is a double tax on every consumer; that it takes more out of his pocket than ever finds its way into the public treasury. Mr. Taft knows well enough that the tariff is a hedge behind which the monopolist hides to rob the buyer. He knows also the public perfidy that secured control over the Panama region—and yet he palliates, if he does not condone, that act of Punic faith. These considerations which cannot be avoided make the independent voter at least fearful of what inroads adherence to his party and his late official chief may have wrought in Mr. Taft's native integrity of purpose.

One final consideration which weighs in his favor is his temperamental contrast to the present Chief Executive. He has a judicial training which Mr. Roosevelt has not. He has patient administrative capacity which Mr. Roosevelt has not. He measures his words as Mr. Roosevelt does not. Doubtless, Mr. Taft would disclaim these points of superiority. But on that score we may all rest easy. In the continuance of the Roosevelt policies where they are sane, serviceable, and just, no backward step will be expected of Mr. Taft, if elected. But we are ready for peace. We are ready for a resumption of the dignity of Washington and the urbanity of McKinley. If Mr. Taft will take the Presidency and not the world for his parish, our best wishes will go with him.

THE CAUSE OF FREE TRADE.

The meeting of the International Free-Trade Congress at London last week sets the mind travelling a long way back and a long way forward. The doctrine of free trade has been fairly before the world for discussion since Adam Smith published "The Wealth of Nations," in 1776. There for the first time the theory was stated in fairly complete and popular form. The thesis which he supported so skilfully is this:

> In every country it always is and must be the interest of the great body of the people to buy whatever they want of those who sell it cheapest. The proposition is so very manifest that it seems ridiculous to take any pains to prove it; nor could it ever have been called in question, had not the interested sophistry of merchants and manufacturers confounded the common sense of mankind.

In discussing further "Restraints upon Importation," he tells us that "the sneaking acts of underling tradesmen" have been "erected into political maxims for the conduct of a great empire." As to the effect of protection on the relations between nations, what Smith said more than one hundred and thirty years ago is as true as ever:

> Commerce, which ought naturally to be, among nations as among individuals, a bond of union and friendship, has become the most fertile source of discord and animosity. The rapacious ambition of kings and ministers has not, during the present and the preceding century, been more fatal to

the repose of Europe than the impertinent jealousy of merchants and manufacturers.

But in spite of the clearness with which Smith expounded the idea and the vigor with which his successors maintained it, antiquated notions of international commerce held their own in England until a combination of economic force and moral indignation overthrew them. It was the suffering in the "hungry forties" that lent power to the words of Richard Cobden, John Bright, and Ebenezer Elliott, the "corn-law rhymer." The economic argument against an impost on foodstuffs had been fully comprehended by statesmen for more than fifty years; but the entrenched protected interests, in England then as in America to-day, held the country by the throat. It was only when men were starving that the mass of voters could be brought to see that the bread tax had "its maw like the grave." Thus the free trade agitation developed into something far higher and more passionate than a discussion of abstract principles of commerce and finance; it became a part of that larger humanitarian movement which began in the eighteenth century and is still far from spent. It was the humanitarian aspect of the matter, the appeal to spiritual motives, that fired Cobden's zeal. He was disgusted by what Adam Smith had called "the mean rapacity, the monopolizing spirit, of merchants and manufacturers"; he was sickened by the animosities engendered between mighty nations that should dwell in amity; he was horrified by the living death of England's poor. "So convinced am I," he wrote, "that there is no other mode of raising the condition of the working classes in the scale of morality or religion, whilst they are denied by act of Parliament a sufficiency of food, that I have set apart as much of my income as I can spare from other claims for the purpose of effecting the abolition of the Corn Law and Provision Law." Thus England's impulse toward free trade may be fairly described as the setting up of an ideal of liberty and justice in place of monopoly and greed.

The reaction toward protection in England has been possible only because the generation that bred the champions of free trade has passed from the stage. Cobden, Bright, and Gladstone are gone, and with them much of the ardent temper of tbe old Liberalism. The victory seemed to be completely won, the soldiers were resting on their arms, and young England had forgotten or perhaps never knew the issues that once raised such hopes and fears. Taking advantage of this apathy or ignorance, the merchants and manufacturers who are afraid to compete on even terms with the world, and would tax a whole people for the sake of private profit, have made their compact with the Conservative leaders and captured the organization of the party. But in spite of the money that may be poured out to secure special privileges for the few, it is hardly credible that Great Britain will again revert to the half-civilized policy that she long since abandoned.

In this country we yet have a hard road to travel before we reach free trade, or even the nearer stage of a tariff for revenue only. We are and shall remain large producers of grain and meat; and it is therefore unlikely that we shall be driven to free trade, as England was, by the pangs of the millions. The economic argument is still irrefutable; but, while men are earning a fair wage, are fed, and comfortably clad and housed, they are indifferent to general principles. Too many of us hear only the cry of the belly. The evils most apparent here and most likely to touch the popular imagination are the growth of vast monopolies under the shelter of the tariff and the wholesale corruption of our political life. Here the Democrats have had a notable opportunity to press for reform; but in the last three campaigns they have thrown it away, partly because they were stupid, partly because their own hands have not been clean. No justification can be urged for a tariff which permits the Steel Trust to sell its product more cheaply abroad than at home—to mulct every user of steel in this country for the sake of paying dividends on its watered stock. Still more perilous to our institutions is the open traffic in legislation. The protected interests have bought and sold Representatives and Senators like cattle. They have dealt with both sides. When Cleveland was contending for tariff reform, Democrats like Gorman of Maryland deliberately betrayed the cause; and when Republicans have favored a reduction of the tariff they have been thwarted by an Aldrich or a Cannon. The poison of class legislation has run through all the veins of the commonwealth. Protection taints our State Legislatures and even our municipal governments, and debauches whole electorates. In every branch of politics it has tended to make sheer brute commercialism the motive of action and the test of success. And yet neither of our great parties dares to fight it in earnest.

THE PRIMARY NO CURE-ALL.

There is a mixture of ingenuousness and deceit in the complaints of the defects in the direct primary brought out in the recent elections in Kansas, Oregon, Missouri, and Illinois. There are those who really believed that the new institution would be a panacea for all our political ills; that it would, like a magnet, draw every recalcitrant voter to the polls, where he would promptly put the rascals to flight and inaugurate an era of political purity. These innocents are now voicing their disappointment that the primary does not prevent fraud, and that in many cases, the voter being as indifferent to his new opportunity as he was to his old, the noxious machines, party and personal, are not yet completely smashed. On the other hand, the politicians are only too happy to have their doubts about the new law; they can see a hundred objections to it, and are suddenly displaying an altogether amusing solicitude for the sanctity of the ballot and the free expression of the party's will.

From all accounts the primary was seen at its best in Kansas. There, as elsewhere, the candidates were compelled to go before the people. They met, as did Lincoln and Douglas fifty years ago, in joint debates of great length, answering questions freely and giving full accounts of themselves and their political principles. The result was a vindication of our democratic theory of government; the people chose as their servants the men whom they believed to be freest from the domination of corporations and politicians. Moreover, the interest taken was so keen that from Kansas come no such complaints of small attendance as are heard in Missouri and Illinois. Either Kansans are more patriotic, of a better type of citizenship, or their political grievances are more deeply felt. Be that as it may, they showed their intelligence precisely as did the Oregon voters who selected from a handbook of 125 pages the several dozen propositions that pleased

them most and gave the best exhibition of a discriminating electorate this triumphant democracy has seen in many a year. These Oregonians chose a Democrat to represent them in Washington because they knew him as Governor and preferred him as Senator to any of the candidates of the ruling Republican party. This is in itself an amazing achievement which the primary alone made possible.

If the vote was small in Illinois, it was not because of any lack of zeal on the part of the candidates. In that State, as in Tennessee and Kansas, there was not a passage of their records that was not published to the world. There was even an attempt to hold Gov. Deneen responsible for the accidental burning of a boy in a public institution. He was able to defend himself, however, by proving that it was against a radiator put in by his antagonist, ex-Gov. Yates, that the unfortunate child fell. Had it been a Deneen radiator it would have been properly safeguarded! Naturally, when the issues are so trivial, there were many stay-at-homes. In Missouri, the complaint of non-attendance and of other defects seems general. It is thus voiced by the St. Louis *Times*, an excellent independent newspaper:

> The people, as usual, were in the hands of the machine as to the cities. Later returns will be needed to show the relation of the country vote to the popular idea. Altogether, the new primary law is a disappointment and small credit to its framers. Its complications are the least of the objections that may be charged to it. There are no safeguards for the purpose of eliminating the bosses and no element to attract the activity of the people. It is not what it was meant to be—a party vote for nominees—but a scramble in which Republicans may become Democrats for a day if they have no business of their own on hand. In some places Democrats voted Republican tickets for local reasons, and in others. . . . Republicans stepped in and helped the Democrats. . . . In St. Louis thousands were disfranchised yesterday because of their inactivity. They failed to register; others who were registered failed to reach the polls.

The *Post-Dispatch* and *Republic* take a similar view. But the *Times* sees truly that, aside from certain obvious defects, capable of remedy, the responsibility for the outcome rests with the people:

> Under the new order the people cannot resort to the old trick of blaming the bosses. They will find the fault within their own household.

The primary is thus at its worst a means of fixing more clearly than ever upon the voter his responsibility for the welfare of his government. In St. Louis, not less than 63,000 voters, more than 50 per cent. of the city electorate, refused to go to the polls. In Illinois the vote is reported to be so small as to give no true indication of the real strength of the two great parties; only one-third of the Chicago voters turned out. The "advisory vote" for United States Senator aroused little interest, and, as in Oregon, the defeated candidates are now insisting that the Legislature is in no way bound by the outcome of the Senatorial referendum. When we look south, however, to Georgia and Tennessee, it is undeniable that there at least, in the defeat of Gov. Hoke Smith, and of ex-Senator Carmack, the popular will was expressed beyond any doubt.

Serious defects the primary law has, chief among them the ability of Democrats to vote in Republican primaries and *vice versa*. A Republican may assert that he has experienced a change of political faith and participate in a Democratic primary, and yet there is nothing whatever, except his conscience, to prevent his voting for Republicans when he takes his secret ballot on election day. The State cannot make a voter in a primary stick to that party in the election without restricting him in his right to bolt the ticket if his own primary chooses a man he thinks unfit. But granting all this and more besides, the primary remains, we believe, the best weapon against the boss yet invented, and the desire for it shows no signs of abatement. It must come in New York before long; the bosses' opposition to it is its best recommendation. They are well aware that if New York had this institution to-day, they could not for a moment stand in the way of the nomination of Gov. Hughes; that if they did so, they would be snowed under at the polls. Because Gov. Hughes favors direct nominations is one reason why he is hated by the bosses. The Governor knows, of course, that the primary is no cure-all; it is but another means of maintaining government by the people. The voter may neglect it, if he is as indifferent to his trust as heretofore; but if he is roused and in earnest, he can destroy the politicians who attempt to undo him.

SENATOR ALLISON.

When William B. Allison entered Congress, in March, 1863, at the age of thirty-four years, nobody would have predicted for the quiet, unpretentious young man from Iowa the astonishing record of forty-three years of Congressional service which lay before him. It was his fortune to make a Senatorial record surpassing in duration that of any of his contemporaries. He became the "father of the Senate" several years ago, and if his life had been spared to complete the term for which he had already been provisionally chosen, his period of continuous service would have exceeded that of any other Senator from the beginning of the Government till now.

It was not in a halcyon time that Senator Allison played his part. When he first entered the House the civil war was raging; the battle of Gettysburg had not yet been fought. When he entered the Senate the struggle over reconstruction was at its height. Then the currency question became paramount, and the proposal to "pay the bonds with greenbacks" was contested for several years. In this controversy even Senator Sherman turned up on the wrong side. Next in order was the silver problem, and here again Mr. Sherman (now Secretary of the Treasury) proved rather feeble. Then came the resumption of specie payments, as to which there was some hesitation on Sherman's part, although his Congressional record is unblemished. From that time to the present, financial questions have held a great place in legislation and in forensic discussion; and here Senator Allison found ample room for the exercise of his abilities, natural and acquired. It is not too much to say that on that range of debate he was the equal of Sherman while the latter lived, and was his superior on the two critical occasions named. After Sherman's death, he was the leader of the Senate in questions of this kind, although the chairmanship of the Committee on Finance was held by another; for Senator Allison preferred that of Appropriations, which is really the more important of the two.

The most conspicuous act of Mr. Allison's Senatorial career was that by which he caused the abortion of Bland's free silver bill. That measure passed the House by a majority of more than two-thirds. Its effect, if it had become

a law, would have been to make silver the sole standard of value, although its supporters disclaimed any such intention, and affirmed that it would merely restore the former double standard of gold and silver. In the prevailing ignorance and passion of the day, it was evident that Bland's bill would pass the Senate by as large a vote relatively as it received in the House, unless some way could be devised to substitute a less dangerous but more plausible measure. Senator Allison was the man who accomplished this feat, and thus saved the country from the tremendous catastrophe and turmoil that must have ensued from the sudden change of prices, the scaling of debts, and the partial repudiation of contracts, public and private. His substitute for the Bland bill provided that instead of the unlimited coinage of silver at the ratio of 16 to 1—which would have given an enormous profit to the holders and producers of silver bullion, in all parts of the world—the Government itself should purchase bullion at its market price and coin it into dollars and use these dollars for paying its own debts or purchasing more bullion. This argument for checkmating speculators and saving money for the Government was irresistible. Allison's amendment passed the Senate by a safe majority. Bland perceived at once that his measure was disembowelled, and he made a stout fight against the Senate amendment, but the House concurred, and he was compelled to eat his opponent's leek by voting for the bill with the Allison amendment. Coupled with the latter was a clause authorizing the President to invite the co-operation of other nations in an international monetary conference, the Paris conference of 1878. This also was Allison's conception, his aim being to gain time for the passing away of the silver craze, which, however, lasted acutely fifteen years longer, when President Cleveland caused the repeal of the silver purchasing act. For saving the country from its worst consequences at that time the honors may be fairly divided between Allison and Cleveland.

Senator Allison was a most useful party leader and public servant. His services were not of the kind that are writ large in the newspapers. They did not serve as material for stump speeches, but they made their due impression on his colleagues. It fell to his lot to hold the purse-strings of the national Government. Nobody reaches this distinction unless he has first earned the confidence of his fellow Senators. This confidence was slowly acquired, was fully deserved, and was never forfeited. It was the belief of both houses and of all departments of the Government that the chairman of the Committee on Appropriations was honest and economical, but not stingy; that he knew how to refuse as well as how to give, and that he knew when to postpone and when to hasten any desired expenditure. Such qualities of mind and character involve the accumulation of a vast amount of detail and of figures extending over the whole scope of Governmental affairs; and these were possessed by Senator Allison in a wonderful way, although few persons ever took him for a prodigy of statistics unless they had an amendment to a money bill pending in Congress. Then, if there was a vulnerable point in their claim, they would find that the chairman of the committee had discovered it.

Mr. Allison was a fairly good debater, though not a great orator. He was not a leader in the sense of taking position in advance of his party or of the average public opinion of his State. He was not a believer in protective tariffs, but since the public sentiment of his State was strongly in favor of that policy, he did not see why he should go out of public life by antagonizing it. A hundred instances could be found in his career where he veered with the winds that blew across Iowa, although not upon questions which in his opinion involved fundamental principles of morality. His sagacity in knowing the present and divining the future state of the public mind was unsurpassed. Not otherwise could he have held so long the confidence of the great State whose Senator he was. His personal qualities were attractive, his kindness of heart genuine and unaffected, and he was as free from ostentation as he was impervious to flattery.

THE HIGHER FOOLISHNESS.

"Can we have good government?" is the question raised by Attorney-General Bonaparte in *The World To-day* for August. In discussing this burning question, Mr. Bonaparte reminds us—by contrast—of Matthew Arnold. When that Oxford poet and social critic, whom certain of his own countrymen designated as a "high priest of the kid-glove persuasion," visited our shores some years ago and talked to us about the dangers of a democracy, and the necessity of listening to our higher selves, we listened to him with mild derision. We condescended to him as an emissary from the "home of lost causes" to the home of triumphant causes. We believed that all his fine talk about sweetness and light was the amiable moonshine of an unpractical dreamer. We chimed in with his English critics who kept exclaiming, "Why don't you *do* something?" If there is one thing, that, as a people, we abominate more than another, it is the man who refuses to put his shoulder to our wheel, but insists on standing by and talking about a better wheel of his own. Mr. Bonaparte is perfectly free from that unpopular and unpractical taint which characterized Matthew Arnold, and which is now known in university circles as the "higher foolishness."

To the question whether we can have good government Mr. Bonaparte answers only indirectly. But of one thing he is sure—we can never have it from the dreams of political Utopians. It is all very well to talk about your "favorite panacea," but the one thing needful is to act. "The beauties visible to the eye of faith in the more or less distant day of its practical acceptance in nowise help us to deal with the scoundrel, etc." Though Mr. Bonaparte seems to make an honest effort to do justice to the possible future usefulness of those who are in pursuit of perfection, it is obviously a difficult task for him:

> In no small measure the "d—n literary fellers" *have* "gone into politics," though not precisely as the politicians would understand the term, and the results of their doing so are good for them and good for the American people.

But—and this is the burden of his message—our salvation is not in their hands. We can have good government only from the hands of those who, "letting Utopia take care of itself," vigorously and unceasingly *act*. Though this message is rather strongly reminiscent of another practical reformer with whom Mr. Bonaparte has been associated, it does express pretty well the common feeling that there is not much place in our society for the Miltonic servant who only stands and waits.

There is one weak spot in Mr. Bonaparte's armor. The great obstacle to reform, he admits, is that the "nation, State, or city does not wish hard enough for good government to make bad government impossible." Why not? Simply because a democracy is made up of middling good people muddling along a middling good path which they have made for themselves, and from which they are extremely hard to divert. Simply because to the whole-souled democrat the pursuit of perfection is the higher foolishness. The practical reformer reckons with the self-satisfaction of the multitude. He attempts few radical changes, because he knows that the multitude is naturally averse to innovation. He is satisfied if he gains a little here and a little there. He justifies his means by his end. He does not hesitate to use bad men. He dares to do because he does *not* dare to dream. He compromises with every one till in the end he compromises with himself. The hand of the dyer is subdued to that wherein he works. Finally he passes, even among his former friends, for a half-Machiavelli. It is men like this that cast discredit on the whole cause of reform, and weaken in city, State, and nation the propelling wish for good government.

It is at this point in the career of the "practical reformer" that we begin to value the apostle of the higher foolishness who only waits and dreams. We begin to see that the vital wish proceeds out of his capacity for falling violently in love with what he never expects to possess. We cease to despise his Utopianism when we recognize that in it thrives the overmastering desire for perfection which is the mainspring of all practical reform. We may hate him because he wishes us to abandon the easy ways that we like for the difficult ways that we do not like; but at the same time we are flattered by his faith in our better selves. In these reforming days how many reforms have flagged and failed because the leaders have thought the people worse than they really are? Misled by a belief in the badness and tolerance of their fellowmen, the short-sighted leader thinks it unnecessary to keep his garments "unspotted from the world." Even the people have enough of the higher foolishness to refuse to be reformed by men who are as bad or worse than they are themselves. It is not that they think bad men incapable of good work; it is that their sheer pigheadedness or idealism kills the desire for good work if it must come from bad hands. It is not conceit of their own virtue, nor hypocrisy; it is the Falstaffian humor—if ever I am drunk again, it shall be with gentlemen and God-fearing men, and not with drunken knaves. It is more than that; it is a lurking conviction that a democracy can improve itself only by entrusting its destinies to those who represent its faith and not its practice, and will dare to hold it up to the level of its highest discontent.

To preserve this is the special function of the higher foolishness. It is a thankless task, but indispensable to the man who acts and to the people. We need the apostles of the higher foolishness to preserve us against the wisdom of parties and the lower foolishness of the average man. It is their business to commit political suicide to encourage the others—to go down with the ship rather than give it up. When they cannot have what they want, it is their business to take nothing at all. By repeatedly demonstrating how single-mindedly they desire what they cannot have, they gradually enhance its value in the eyes of others, and so through them the rest grow slowly wise.

TURKEY AND HER NATIONALITIES.

The Turkish revolutionary party, like most men and parties in the moment of high and unexpected triumph, shows signs of being carried off its feet. Already the people of Constantinople have forced the resignation of the first constitutional cabinet, because the ministers have in the past stood too close to the old order. An attack on the life of the Sultan is reported. Whether this account be true or not, it indicates that the more violent elements among the progressives are coming to the front. This is a misfortune from which the Turkish nation might invoke the Prophet to be spared. For nothing is more sure than that revolutionary excess, at a time when the foundations of liberty are as yet insecure, will lead to reaction. Discussion as to the Sultan's sincerity is at the present moment only wasted effort. Sincere or not, he has been driven into making certain popular concessions. To offer him no valid reason for repentance is for the moment the best policy. He has given something. He may give more. But if he be asked to give up all, he will be moved, like his brother the Czar, to take back all. The forces of reaction do not die at once. The Sultan could undoubtedly rally a powerful party to his support if the break should come. He would have the old officials, part of the army, his ancient spiritual authority, and his personal craft. And finally the diverse character of the opposition would count in his favor. At dividing and ruling he is an old hand.

The problem which must now be worked out in Abdul Hamid's Empire involves more than a mere transition from Oriental autocracy to modern parliamentary government. The factors of race and religion enter into the question to a degree unprecedented in the history of constitutional government. Austria-Hungary, it is true, can show a racial complexity of population equal to Turkey's. But in Austria-Hungary there is no additional severing line of religion; and as it is, the troubles of parliamentarism under the Hapsburgs have become notorious. During Russia's brief career under a constitutional form of government, the racial factor has been brought prominently to the front. In Poland the Czar may be said to have a larger Macedonia of his own. The Jewish question has been important; and there are Mohammedan deputies in the Duma. But in Russia, too, the religious element has remained one of minor importance, in spite of the government's attempt to represent Christianity as endangered by the liberal movement. If faiths other than the Christian are to be formed or tolerated in Russia, it can be only at the will of the vast Christian majority. In Turkey, on the other hand, Christian deputies will constitute the parliamentary minority under a constitution based on the Koran. That minority in turn will comprise the various nationalities, Greek, Bulgarian, and Serb, which have been carrying on civil war in Macedonia, as well as Armenian and Syrian Christians. Start with such original elements of strife, add the inevitable antagonism between Christian and Mussulman, add the struggle between Parliament and the inevitable reaction, and Turkey's course apparently lies in no smooth waters.

In Europe, Asia Minor, Syria, Meso-

potamia, Armenia, and Kurdistan, the only parts of the empire in which the authority of Constantinople is still effectively exerted, the Sultan's subjects number some twenty-two millions, of whom between six and seven millions are Christians. There may be a million Jews in the empire. The rest of the population is Mohammedan. In European Turkey the Christians and Mohammedans are about equal in number. In Asia over two-thirds of the population is Mohammedan. Besides being divided on racial lines, the Christian population shows within its ranks no less than eight recognized creeds—the Latins, or Roman Catholics; the Greeks; the Bulgarians, under the exarch at Constantinople; the Armenians; the Syrians; the Maronites of Mount Lebanon; the Nestorians; and the Protestant converts in Armenia. The Jews may come to exercise influence far beyond their numerical strength, because of the new aspect lent by the constitutional revolution to the problem of Zionism and Palestine, a question in which the world at large is bound to take deep interest. Already we have had a dispatch stating that the Young Turkish leaders are willing to turn over Palestine to the Jews. This, of course, is a manifest absurdity, since to avert the threatened dismemberment of the empire has been the aim and professed object of the Turkish patriotic party; and they would be the last to consent to the erection of an autonomous state in Asia Minor or Mesopotamia. Yet the report may have described correctly enough a heightened condition of hope among the Zionist leaders. That increased effort on their part will do their own cause, or the cause of Turkish constitutionalism, any good, is, however, exceedingly doubtful.

For here the example of Russia becomes highly instructive. It is primarily by representing the supporters of constitutional reform as enemies of the country that reaction in Russia has succeeded in winning the upper hand over the forces of progress. It was "foreigners"—Jews, Poles, Armenians, Letts, subsidized, of course, by English money—that were bent on overthrowing the Czar and dismembering the empire. Hence came the need of that famous organization of True Russian People to defend Czar and country against the pernicious plottings of the "foreigner." Hence followed the entire system of governing by massacre and civil war. The Czar's government has not hesitated to stir up Tartars against Armenians, Russian peasants against Jews, Lettish peasants against Germans. Racial hatred has been erected into an instrument of government which the Czar and his ministers are justified in regarding as superbly effective. Would the Sultan hesitate to use similar means? Driven to the wall, it is obvious that he would not. Is he not past master in the very art; may he not, in fact, claim the credit for first applying, in the case of the Armenians, the method which Russia has employed and developed to such a fine point of efficiency? The material, as we have pointed out, lies plenty and ready to hand. Mohammedan against Christian, Armenian against Kurd, Bulgarian, Greek, and Serb all against one another—let any one of these elements offer him an opening for invoking the old party hatreds, and reaction in Turkey may triumph as it has done in Russia. It is a situation which the not uninterested attitudes of the European Powers will help still more to complicate.

SOCIAL REVOLUTION AND SOCIOLOGY IN FRANCE.

PARIS, July 23.

The new book of Georges Sorel "Réflexions sur la violence" throws a strong light on the actual tendencies of younger French thought. Within a very few years this author has taken a unique place as philosopher of the proletariat; but his clear, ardent phrase finds eager listeners even among those who dream of an equally excessive counter-revolution. This writer, in middle age, left the *bourgeois* post for which his scientific education fitted him, to think out and proclaim his solution of the social problem. He begins with the recognition of a fact: Two classes are at war in civilized society, the *bourgeoisie*, or property-holders, and the proletariat, or those who live on the wages which they earn by working for the *bourgeois*. Georges Sorel stands with the second and philosophizes for their triumph. To use the labels of present doctrines, he belongs heart and soul to revolutionary "Syndicalism," which would restore all things by reorganizing society into professional groups (trade unions) of free producers. This is nearer to anarchy than to political Socialism. In fact, M. Sorel's first principle in practice is to repudiate all thought of the future collectivist society, of which Jaurès perorates so boyishly—"for there is no scientific process to foresee the future or even to discuss which hypothesis is better than the others." The only question here and now is to find weapons to make sure of the proletariat's victory in the present war.

Only the general strike can do this—or rather "the idea of the general strike, which is a motor point dragging after it in the revolutionary furrow whatever it touches." That there is no possibility of realizing a general strike is of not the slightest importance. The first Christians had strength from their idea of an impending catastrophe to come about before this generation shall pass away—the ruin of the pagan world by Christ's return and the establishment of the kingdom of the saints. The catastrophe never came, nor were the hopes of Luther and Calvin realized among the peoples swept by their central idea into the Reformation. Even "the true developments of the French Revolution in no wise resemble the enchanting pictures which stirred the enthusiasm of its first adepts—but without such pictures could the Revolution have conquered?" Such social myths are a means "for acting on the present, and any discussion as to how they are to be applied materially to the course of history is meaningless." The general strike is a social myth of the greatest power; it gathers into itself all the aspirations of Socialism. In all great movements of men strength dwells in the sublime, the superhuman; and the sublime is evolved completely only in times of violent struggle. So the Syndicalist movement, on the myth of the general strike, sweeps forward to violence—"the sublime and beneficent violence" which shall draw the masses in its train. For the people to be and to remain revolutionary, it is necessary that they should be thoroughly impregnated with the idea of the struggle of classes; and this idea can be maintained only among those who are touched by the idea of the general strike. Those who have given kindly attention to the career of Georges Sorel will see in all this the outcome of the successive stages of his thought as manifested in his earlier works on the ruin of the ancient world, Renan's system of history, and his own essay on Church and State; while his central thought flows straight from the "Evolution créatrice" of Prof. Henri-Louis Bergson. So does recondite philosophy, unknown and disdained of the crowd, suddenly make irruption into the arena of our world.

Two small volumes, which Sorel would flout as utopian, appear under the name of Anatole France. "Vers les temps meilleurs" has some of the old charm which had too long disappeared in the acrid Dreyfusism that drove the master into social utopias; the edition,

illustrated by artists of revolutionary power like Steinlen, appears consistently in the cheap popular Bibliothèque sociale et philosophique. With a preface by Anatole France, Edouard Héberlin-Darcy publishes a sociological study, "Esquisse d'une société collectiviste"—a brief picture of the good time coming. The book has had already a sale of more than ten thousand.

Among recent French works in the field of sociology may be mentioned "Œuvres sociales des femmes," in which Paul Acker, an experienced bookmaker treats popularly of organizations in aid of working women in Paris—for wives, children, young working girls, and families. Silvain Rondès, in "L'Homme qui réussit," explains the concretest thing in sociology—the man who succeeds. His previous book—"How a Man Makes His Way in the World"—had the immense sale for France of 60,000 copies, and was widely translated. "Sociologie de l'action," by Eugène de Roberty, is a quite opposite sort of book. It is supposedly scientific, and certainly abounds in broad and easy generalizations, which, however, have all the air of nicely balanced abstractions such as are never realized in this nature of things. The book treats of "the social genesis of reason, and the rational origins of action." "Syndicalisme et socialisme," a compact pamphlet by the authorities in the case, sums up the situation on the Continent of that revolutionary trade unionism which is already dictating terms to political Socialism. Italy is described by Arturo Labriola, Russia by Boris Kritchewsky, Germany by Robert Michels, and France by Hubert Lagardelle. The characters of French Syndicalism are discussed by Victor Grieffuelhes, leader of the General Labor Confederation, which is able to exercise compulsion over the French Republic. An appendix handles the burning question of the relations existing between anarchy and Syndicalism. A. Weber in "A Travers la mutualité," makes a critical study of those private mutual aid or "friendly" societies which have taken such deep root in France, but are now threatened by Socialist plans for a monopolizing state assistance and by old age pensions. This aggressive change in the fundamental idea of the uses of the "state"—the community as organized—is studied in its principles in "Le Droit social, le droit individuel, et la transformation de l'état" by Léon Duguit, professor of law in the University of Bordeaux.

Correspondence.

THE TEST OF RAILWAY MANAGEMENT.

To the Editor of The Nation:

Sir: I quote from a paragraph in the *Nation* of July 30, anent the proposition of certain railway administrations to advance the rates for the carriage of freight:

> But, says the railway manager, there are only three ways in which a road can aid itself when times are bad: hy lopping off all expenses that are not absolutely necessary, by lowering wages, or hy raising rates.

I must say that all this seems to me heside the real question, which is in my judgment, "Why should the railroads need to aid themselves?"

We have seen for a number of years on practically all the roads of the country large surplus earnings annually, which, but for lavish and in too many cases extravagant expenditures and too often increased dividends for stock-jobbing purposes, might have been still larger, which are now needed and should be available for regular dividends without "lowering wages." The prudent business man always anticipates seasons of depression and provides for them by accumulating during the seasons of prosperity. The trouble with the railways is that "lopping off all expenses that are not absolutely necessary" does not begin soon enough and ends too soon. The true test of any husiness is the result of operation over a period of years, not over one or two at any particular time; and the business that cannot show on this basis an adequate return on capital invested must stand condemned for poor management. Said a prominent hanker to me a few weeks ago, "When a man asking accommodation tells me how much money he made last year, I ask him to give me a statement for the past ten years."

While it may be that trade unions have forced up the rate of wages in many instances beyond the reasonable norm, I question if railway employees are, considering the character and the responsibility attending many of their duties, much if at all at the present time overpaid, and it is of course paramount that some rate be established upon the stability of which such employees can depend if we would avoid at all the annoyances and losses incident to strikes. I affirm that no railway administration can justify itself which cannot show for a given period of say twenty years, earnings sufficient to pay to its employees a stable rate of wages and to its stockholders a fair return upon their investment.

Charles C. Curtiss.

Chicago, August 1.

THE DIFFUSION OF LITERARY KNOWLEDGE.

To the Editor of The Nation:

Sir: Will you permit me to exclaim "Eureka!" in your columns. Ever since, years ago, a friend told me, with solemn disclaimers of all intention to hoax, that a young lady of Providence, R. I., had entered a bookshop in quest of Scott's "Emulsion" and had spent some time endeavoring with the clerk's aid to find a copy, I have been in hopes that I might secure a parallel story with its scene laid in the mother country. My opportunity came this afternoon. As I was walking up Southampton Row, I was overtaken by a respectable young British woman of about one and twenty and a boy, apparently her hrother, of about thirteen. The boy had evidently seen an advertisement bearing the name "Waverley" and had mentioned—I trust gratefully—the name of Sir Walter. The young woman, just as she passed me, corrected him with a fair amount of magisterial dignity: "No, Scott didn't write 'Waverley'—that was Shakespeare." After this, who can say that the Baconians have it all their own way, or that Swift—it was surely Swift—who gave the Wife of Bath to Shakespeare, perhaps married her to Falstaff—did not leave descendants? Your relieved reader, Con. Tridente.

London, July 27.

Notes.

Scribner's list of fiction for the autumn includes "The Trail of the Lonesome Pine," by John Fox, jr.; "Kincaid's Battery," hy George W. Cable; "Peter," by F. Hopkinson Smith; "Salthaven," W. W. Jacohs; "The Wind in the Reeds," Kenneth Grahame; and "The Coming Harvest" (Le Blé qui lève), René Bazin. The same firm will publish "Out-of-Doors in the Holy Land," by Henry van Dyke; "Chateau and Country Life in France," by Mary King Waddington; "A Motor Flight Through France," by Edith Wharton; "The Other Americans," especially the people of South America, Arthur Ruhl; "English Voyages of Adventure and Discovery," retold from Hakluyt, by Edwin M. Bacon; "Poem Outlines of Sidney Lanier," fragments and outlines of poems left by Lanier and never before published; "Privileged Classes," a volume of essays by Prof. Barrett Wendell; "In a New Century," essays by E. S. Martin; "Robert E. Lee: The Southerner," Thomas Nelson Page; "History of Contemporary Civization," by Charles Seignobos, translated by Prof. A. H. Wilde; "German Education: Past and Present," by Prof. Friedrich Paulsen, translated by T. Lorenz; "Footsteps in a Parish," an appreciation of Maltbie Davenport Babcock, by the Rev. John Timothy Stone; "Commentary on Esther," Prof. L. B. Paton; and "Telling Bible Stories," Louise Seymour Houghton.

Duffield & Co. will publish this autumn "Letters of Mrs. James G. Blaine," edited by Harriet S. Blaine Beale; "The Letters of Edward Lear," author of "The Book of Nonsense," edited by Lady Strachey; "Scottish Women of the Past," by Harry Graham; "Dream Blocks," by Aileen Cleveland, illustrated by Jessie Willcox Smith; "Childhood" and "Bumbletoes," by Millicent and Githa Sowerby; "Lisbon and Cintra, with Some Account of Other Cities and Historic Sites in Portugal," by A. C. Inchbold; and "From Foreland to Penzance," by Olive Holland. The firm will also issue a selection from the Tales of Edgar Allan Poe, illustrated by Ernest L. Blumenschein; an edition of Jane Austen in ten volumes, illustrated by reproductions of water colors by A. Wallis Mills, with summary bibliographical and biographical notes by R. Brimley Johnson; and "Alice in Wonderland," illustrated by Millicent Sowerby. The new volumes in the Rubric Series will be "Poor Richard's Almanac," and "The Sermon on the Mount." To the Art and Letters Library will be added "The Little Flowers" of St. Francis of Assisi, a revision of T. W. Arnold's translation, with an historical introduction by Dr. Guido

Biagi. The new Mediæval Library will contain "The Book of the Duke of True Lovers," translated from the unique manuscript in the British Museum, in middle French, by Christine de Pisan, with notes and introduction by Alice Kemp Welch; "Of the Tumbler of Our Lady and Other Miracles," translated from the Middle French manuscript at Soissons, with notes and introduction by Alice Kemp Welch; and "The Lady of Vergi," the original text and a translation by Alice Kemp Welch, with an introduction by L. Grandin. These three books will be illustrated with reproductions from illuminations in old manuscripts.

Paul Elder & Co. announce "The Call of the City," a volume of essays by Charles Mulford Robinson; "Quatrains of Christ," by George Creel; and "Animal Analogues," by Prof. Robert William Wood.

The American Journal of International Law for July (Baker, Voorhis & Co.) presents, as its first paper, what we may accept as the summing up of the discussion, referred to in our notice of the April number, between James Brown Scott, Solicitor of the State Department, and Prof. W. W. Willoughby of Johns Hopkins, on the Sanctions of International Law. This paper, by Secretary Root, presents cogently the view that public opinion is a more potent arbiter than theorists usually admit; that the difference between municipal law and international in respect of the forces compelling obedience thereto, is more apparent than real; that there are sanctions for the enforcement of international not less substantial than those which secure obedience to municipal law. Mr. Root's view serves to emphasize that which the late James C. Carter elaborately set forth in his posthumously issued law lectures. The judicial decisions printed are of unusual importance, internationally; so also are the editorial comments, especially those detailing the arbitration agreements recently entered into, including the one negotiated by Messrs. Root and Bryce in settling the Canadian question. The text of the treaties is given in the supplement.

To all who have visited or hope to visit Granada, as well as to those who are interested in Spanish art, we can confidently recommend "Granada: Present and Bygone" (E. P. Dutton & Co.), by Albert F. Calvert, as an illuminating and suggestive guide. Mr. Calvert, who has made Spanish cities his specialty, aptly characterizes Granada as "the noblest monument of a vanished civilization, the high-water mark of Moslem culture." The volume begins with an outline of the history of the city, the chief attention, of course, being paid to the period of the Mohammedan dominion which lasted for seven hundred and eighty years. Then comes a detailed description of the Alhambra, its three palaces, mosque, chapel, and halls. In the account of the modern city and its Moorish remains Mr. Calvert warns his readers that Granada retains little of its old Moslem character, differing in this respect from Seville. The Spaniard who conquered Granada "wished not only to subdue the Moor but to efface him. It is a matter for surprise that the peerless Alhambra escaped demolition." The crusade of Cardinal Ximenes began "by a wholesale destruction of books in the Arabic language. Thousands of rare and beautiful manuscripts perished in the flames." Chapters are devoted to descriptions of the cathedral and noted churches, old houses, and historic sites, and to the one famous artist to whom Granada gave birth, Alonso Cano. The book, it will be seen, is not intended for the casual reader, though the historic and artistic details are interspersed with interesting anecdotes of famous persons, as Ferdinand and Isabella, and Boabdil, and pleasant glimpses of scenery and life, particularly that of the gypsies. A strong desire to see the city will be inspired by the numerous illustrations, which adorn nearly every page. They give not only a vivid impression of the beauty of its situation and surroundings, but also of the wonderful variety and exquisite detail of the architectural ornamentation of the buildings.

William Amory Gardner's "In Greece with the Classics" (Boston: Little, Brown & Co.) is the kind of guide book for which the sentimental traveller, bored to extinction by archæology, has been yearning. On a slight thread of pleasant narrative of the author's own hasty spring tour in Greece are strung original translations of the chief passages from the Greek poets, which one would wish to recall, upon the Acropolis, at Colonos, Marathon, Ægina, Eleusis, Mycenæ, Delphi, Olympia, or Corfu. The original texts are given in a convenient appendix. There is no attempt at completeness, and the relevancy of some of the selections is questionable: *e. g.*, the long extract from the "Agamemnon" that nearly fills the chapter on Mycenæ, or the version of the story of Nausicaa that makes up the final chapter on Corfu. The translations, while lacking distinction, are readable. The blank verse does not halt, the English hexameters are no more footless or foot-loose than it is the nature of English hexameters to be, and lyrics are plausibly rendered in irregular English measures. Mr. Gardner is not quite sure of his quantities. Cronīdes (p. 41) and Œnomāus (p. 202) will never do.

"A Teacher of Dante and Other Studies in Italian Literature," by Nathan Haskell Dole (Moffatt, Yard & Co.), is a volume that, considered either as a contribution to knowledge, or as a summary of familiar facts, might be justly dismissed as of little value. For special reasons, however, this book invites attention: it typifies and epitomizes a negligence of study, a shallowness of thought, and a slovenliness of expression seldom to be found so inextricably united in the critical literature of other countries; it exemplifies, also, a dilettantism which should be smitten wherever it shows its head; for if the dull pedantry which misunderstands research is bad, impressionistic garrulity is worse. The topics dealt with demand not only *lungo studio*, and *grand amore*, but a good knowledge of Italian. Yet the eye, roving almost at random, falls upon so many uncouth forms that the author may almost be said to have started a new Italian dialect. *Mangione* (*magione*), p. 28; *brigen* (*brigan*), p. 39; *fangosi genti*, p 78; *Cuillo* (*Ciullo*), pp. 101 and 103, occurring thrice, and likewise *guisti* (*giusti*), p. 182—these are but a handful. The English of this book is like unto its Italian. On page 45, for example, souls are described as "grilling in vile boiling pitch." Again, "The fuse of one's liveliest epigram is nipped in the bud [like the parliamentary rat] before it has an opportunity to explode." More we must not say, except that this book clearly begins another epoch of reaction against a scholarship fast becoming too exacting, if not too exact.

Mrs. Ida Husted Harper's "Life and Work of Susan B. Anthony," the first two volumes of which appeared in 1898 (see the *Nation* of July 6, 1899, p. 14), is completed with the third volume (Indianapolis: The Hollenbeck Press), covering the years from 1898 to the death of Miss Anthony in 1906. As a collection of material for the life of an altogether remarkable woman, as well as for the history of the movement with which she was identified, the work has permanent value, but as an ordered biography it can claim little merit. Mrs. Harper's method is purely annalistic, a medley of details small and great being swept together without regard to proportion or value, and the mass further swollen by liberal quotations from newspapers and magazines. Fortunately there is a good index.

The American Antiquarian Society of Worcester, Mass., is giving many evidences of awakening activity. It proposes to have a new building in which its notable collections will be much safer than at present, and it is seeking to make more available its manuscript materials. In its latest published Proceedings the manuscripts of Col. John Bradstreet are calendared, comprising six volumes of diaries and orderly books, and one volume of letters, covering a period of more than twenty years. The collection can be little more than a fragment of the original Bradstreet papers, but such as it is, it is invaluable on the military matters of New York in 1755-1768. The campaigns against the French, the relations with the Indians, and the ever-present land question are the principal subjects of the correspondence. The calendar, which was prepared by Charles H. Lincoln, leaves little to be desired in thoroughness and accuracy. The Bradstreet argument on his land claim is printed in full, a lengthy document giving much information on the methods of making grants and manufacturing claims. The study of "Uncle Sam" by Albert Matthews should be noticed, as well as Col. Livermore's essay on "America's Place in History." The Society proposes to unite with the Massachusetts Historical Society in printing the Mather diaries, the manuscripts being divided between the two societies.

Prof. John Bassett Moore is editing "The Works of James Buchanan" (J. B. Lippincott Co.), and the first volume shows that the collection will be complete and dignified. The matter, it must be admitted, makes dry reading. Buchanan's earlier years were spent in Congress; and the set speeches, interjected remarks, and committee reports are monotonous in their formality, and, when thus torn from their context, are often scarcely intelligible. As illustrating the character of Buchanan, they are valuable, but the public utterances of a politician of his day were too studied and calculated to show him as he really was. Expediency governed what he said; and, as a Pennsylvanian he had only one idea, the industrial interests of his State and the

influence of a high tariff in advancing them. There are only fifteen letters of Buchanan in this volume, and seven of these are concerned with his agency in the alleged bargain between Adams and Clay, an agency of which Buchanan had little reason to be proud. Starting a Federalist, Buchanan could favor Jackson in 1824; believing at first in internal improvements by the Federal government, he ultimately became an ardent Democrat and a defender of Jeffersonian principles. When the tariff was before Congress, he was always pleading for more protection to the farms and iron works of Pennsylvania; and a critical examination of these speeches would show how far the grounds of protection have shifted since 1824. Buchanan would be satisfied in protecting such domestic manufactures as are necessary for the defence of the nation, or which use the raw materials produced in abundance in the country. But general as was this scheme, his rates of duty were absurdly low, if judged by present-day standards. He admitted that the duty increased the price to the consumer, but predicted such an advance in domestic manufacture as eventually to supply the home market at an even lower price than could the foreigner. He denied that any tariff law involved a pledge to the manufacturer against reduction of duty in the future, and asserted that if there should ever be a combination between the wool growers and the wool manufacturers, the community would suffer by their greed. There is a curious and rather favorable account of John Randolph and his oratory, but it is not possible from the few letters in this volume to judge of Buchanan's ability to observe and weigh his contemporaries, except where his immediate political interest was involved. Mr. Moore makes an admirable editor, and his few notes are restrained and pertinent. A remarkable bit of thorough compilation is the 113-page synopsis of Buchanan's Congressional career.

It is a matter of satisfaction that two of the most popular works of Father Francis Aidan Gasquet, "The Black Death" and "The Last Abbot of Glastonbury," which have been for some time out of print, have now been republished (London: George Bell & Sons). The first book has a new title, having formerly borne the name "The Great Pestilence"; but the work is not otherwise changed, except for the addition of a preface calling attention to the light thrown on the fourteenth century epidemic by the recent outbreak of the same disease in India and elsewhere. The information given by Father Gasquet on the facts of the great pestilence and the extracts from contemporary records are as interesting and valuable as ever. His account of its more remote effects and many of his accompanying statements are, however, still more unsatisfactory than when the book was originally published in 1893, since they are still further from current knowledge of the subject. His estimate of the economic results of the pestilence has not been revised, although it was mistaken in many particulars in the first place and in the interval much has been done to enable corrections to be made. The guesses as to the effect of the plague on language and on the universities, and the slight foundation for his inferences as to its influence on architecture, are equally unsatisfactory; and although the author demonstrates with a wealth of valuable detail the deleterious effects of the pestilence on the numbers and discipline of the monasteries and the ordained clergy, his "social and religious reëdification" is, at best, very vague and ill supported. Historians frequently find the interpretation of the causes and the results of the few cataclysms of history a pitfall. Father Gasquet is in the greater danger of slipping because of his preoccupation with the rehabilitation of the mediæval church. He is on firmer ground in the second work, although it is less a piece of original investigation. In it he gives an account of the shameful attack by the government of Henry VIII. and Cromwell on the three great Benedictine monasteries, Glastonbury, Reading, and Colchester. There are also some lesser articles on ecclesiastical antiquities and occurrences in the life of English churchmen. Much of this matter is interesting and suggestive but hardly sufficiently thorough or well-balanced to satisfy scholars. Gasquet just misses being a serious historian. He has undoubtedly done much to open up and call attention to historical material previously entirely neglected. He has corrected many of the minor Protestant misconceptions of the religious, intellectual, and social life of the Middle Ages, and of the conditions surrounding the English Reformation. But the value of all this is diminished by his constant attitude of an apologist for his church, and by his introduction of much that from the historian's point of view is mere religiosity, couched in terms peculiar to one ecclesiastical denomination. Many of the great Roman Catholic historical writers of the Continent, and some in England, have avoided this entirely, and their work is correspondingly more valuable.

Prof. Friedrich Hirth, in his brief summary, "The Ancient History of China to the end of the Chou Dynasty" (Columbia University Press), has attempted "to steer a middle course," giving for students references to authorities, but for other readers contenting himself with an outline of the long story. The book, composed of a series of lectures, is intended more for the general public than for scholars. It does not add largely to our information, but it is a convenient manual for those who desire to gain a knowledge of the uneventful story of China's existence as a nation.

Northcote W. Thomas has compiled for the Cambridge University press of England (New York: G. P. Putnam's Sons) a useful summary of our present knowledge of "Kinship Organizations and Group Marriage in Australia." The amount of knowledge we possess of the intricate kinship schemes of the Australian savages is remarkable. As they are, taken as a whole, the lowest organized groups of men now existing, their kinship relations promise to throw much light upon the original social organization of primitive man. Hence the importance of such a compilation as Mr. Thomas's. But Mr. Thomas has done something more than compile. He has very valuable criticism to make of the suggestions of authorities like Dr. J. H. Frazer, Andrew Lang, and others, who have concerned themselves with the obscure beginnings of human society. He has likewise invented a useful series of technical names, which enables him to put his information in condensed form, though this terminology naturally makes his exposition somewhat dry and difficult reading.

In "Die Semiten als Träger der ältesten Kultur Europas" (Gleiwitz: Neumann) Konrad Schmidt endeavors to show that the oldest European culture was Semitic in its origin and character. In order to maintain this proposition, the author must prove that the Etruscans, Pelasgians, and Phœnicians belonged to this family of nations. That the Phœnicians were Semitic may be admitted, but this view cannot be maintained in regard to the Pelasgians, as is evident from the lack of Semitic elements in the Greek language; nor of the Etruscans, who still remain a puzzling ethnological problem, to the solution of which the present work does not make any important contribution. Some interesting questions are discussed, but no satisfactory evidence is adduced in support of the thesis embodied in the title of the volume.

Enno Littmann, the successor of Theodor Nöldeke, in Strasburg, has already contributed to our knowledge of life in Syria and Palestine. He now issues a new collection of material, entitled "Arabische Beduinenerzählungen," a book of 131 pages, with Arabian text and translation (Strassburg: Trübner). The present stories, collected by a South Palestinian peasant, who lived for years among the Beduins, are thoroughly Beduin in character. Practically all treat of one theme, though it is developed in various forms, namely the restoration to his own tribe of a worthy Arab, who through misfortune had been separated from his own people.

The volume of Dr. W. Staerk of the theological faculty of Jena, "Das Assyrische Weltreich im Urteil der Propheten" (Göttingen: Vandenhoeck & Ruprecht), undertakes, with the help of the data secured from recently discovered cuneiform inscriptions, to study Assyria in the light of the Biblical prophecies.

Dr. Friedrich Wiegand, professor of church history in the University of Greifswald, assisted by Dr. Alfred Uckley, also of Greifswald, has begun the publication of an annual, containing all the important church documents issued during the year, under the title, Kirchliche Bewegungen der Gegenwart (Leipzig: Theodor Weicher). The volume for 1907 has just appeared, a book of 188 pages, costing 3.50 marks. It promises to be an excellent collection for the study of contemporary church affairs, supplementing the weekly reports of F. M. Schiele in the *Chronik der christlichen Welt*, Marburg. A fairly complete but not altogether objective report of current theological and religious developments in Germany, with a bias toward conservatism, has been published by Prof. F. Kropatscheck of the University of Breslau, in Nos. 4 and 5 of the *Neue kirchliche Zeitschrift*, under the title "Zum Kampf der kirchlichen Richtungen."

The Catholic Herder'sche Verlagshandlung in Freiburg-im-B. has just issued the first volume of a new annual, entitled Jahrbuch der Zeit- und Kulturgeschichte, 1907, edited by Prof. F. Schnürer. It contains a critical survey of modern thought and life, and in connection with the Jahrbuch der Naturwissenschaften, published by the same house, and now appearing in its

twenty-third annual volume by Dr. M. Wildermann, is intended to cover from the point of view of the editors and publishers the world of research and thought in all departments.

One of the most ambitious contributions to ballad criticism in recent years is "Niels Ebbesens Vise Med Kritisk Kommentar," by Sophus Larsen (Copenhagen: H. Hagerup). The work is a philological investigation of the analogues and variants of the Ballad of Niels Ebbesen for the purpose of restoring it to its original form. The difficulties of such a task are, however, very great and the author can hardly be said to have given us a thirteenth-century ballad.

Part I. of Miss Olive Bray's metrical translation of the Elder Edda, which was announced two years ago by The Viking Club of London is now nearly printed and will soon be issued. It will contain the mythological poems and will have the Old Norse and the English rendering in parallel columns. It will also be supplied with an extensive introduction and notes by Miss Bray and several illustrations by W. G. Collingwood.

In the publications of the Royal Norwegian Scientific Society, No. 8, Th. Peterson discusses "A Celtic Reliquary Found in a Norwegian Burial Mound." The work relates to a discovery made at Melhus, in Namdalen, about eighty miles north of Throndhjem. With the Celtic character of this find established and its date fixed at about the beginning of the ninth century, this reliquary offers evidence that the inhabitants of the region north of Throndhjem also took part in the Viking expeditions to England, Scotland, and Ireland.

To our knowledge of the Faroes many contributions have been made in recent years. The eminent Faroese scholar Jakob Jakobsen, resident in Copenhagen, has made an important addition to these in his "Diplomatarium Faeroense: Foeroyskt Fodnbraevasavn," recently issued at Thorshavn (in the Faroes) and Copenhagen. The work forms the first instalment of the author's collection of records and documents relating to the pre-Reformation period of the islands. The work is written in Faroese, a language which stands about halfway between Modern Icelandic and the west coast dialects of Norway.

The Cleveland Public Library has prepared an interesting and suggestive handbook, "The Work of the Cleveland Public Library with the Children and the Means Used to Reach Them." The librarian, William H. Brett, writes to the *Nation:*

> While we compiled this publication for members of the National Education Association and for our own citizens who are interested in social betterment, I should be glad to comply with requests from your subscribers for copies, free of charge.

The Bibliothèque Nationale has received from the estate of the late M. de Naurois a collection of manuscripts of authors of the seventeenth and eighteenth centuries, some of them edited by Jean and Louis Racine and André Chénier. There are also autograph letters of Jean Racine, Rousseau, and Voltaire.

Mrs. William U. Moulton, better known as Louise Chandler Moulton (born Louise Chandler), died in Boston August 11, at the age of seventy-three. From the age of eighteen she had been a voluminous contributor to newspapers and magazines, and had covered a wide range of subjects in her verse, stories, sketches, and literary criticism. Among her books are "This, That, and the Other" (1854), "Juno Clifford" (1855), "My Third Book" (1859), "Bed-Time Stories" (1873). "Some Women's Hearts" (1874), "Swallow Flights," poems (1877), "New Bed-Time Stories" (1880), "Random Rambles" (1881), "Firelight Stories" (1883) "Ourselves and Our Neighbors" (1887), "Miss Eyre from Boston, and Other Stories" (1889), "In the Garden of Dreams" (1889), "Stories Told at Twilight" (1890), "Lazy Tours in Spain and Elsewhere" (1896), "In Childhood's Country" (1896), and "At the Wind's Will" (1899).

Miss Katharine Prescott Wormeley died August 4 at Jackson, N. H. Born in England in 1830, she came to this country in her girlhood, and at the time of the civil war she actively engaged in the work of the United States Sanitary Commission. She was author of "The United States Sanitary Commission" (1863), "Life of Balzac" (1890), and "The Cruel Side of War" (1899). Her chief literary work, however, was translations from the French. She translated Balzac in forty volumes, Molière in six, "Versailles Historical Memoirs" in twenty, and Daudet's "Tartarin" and "Kings in Exile."

We regret to record the death of Alfred Webb of Dublin, for many years a valued contributor to the *Nation*. He was a member of the Society of Friends, took a great interest in philanthropic work, and was active in promoting the aims of the Peace Society. In 1870 he was at the meeting in Dublin at which it was decided to form the Home Government Association, and in 1873 he took part in organizing the Home Rule League. He served as treasurer of various movements in connection with the National League, and at the time of his death was treasurer of the Irish Nationalist party fund. Under Parnell's leadership, he entered Parliament, and for some years represented West Waterford in the Nationalist interest. While in Parliament he addressed the house but rarely. He was, however, a frequent contributor to the newspapers, and he was author of a "Compendium of Irish Biography."

Thomas Frost, a well-known English journalist and author, born in 1821, has died at Littleover. He had been editor of the *Magazine of Art*, *Gentleman's Journal*, and Sheffield *Evening Post*. Among his books are: "Half-Hours with Early Explorers" (1873), "The Old Showmen and the Old London Fairs" (1874), "Circus Life and Circus Celebrities" (1875), "Lives of the Conjurors," "Life of Thomas, Lord Lyttelton," "Secret Societies of European Revolution" (1876), "Forty Years' Recollections," "In Kent with Charles Dickens" (1880), "Modern Explorers" (1882), and "Reminiscences of a Country Journalist" (1886).

The death is announced of Camille Chabaneau, the well-known philologist. Born in 1831, he held various university positions. Among his publications are: "Histoire et théorie de la conjugaison française," "Poésies intimes," "Fragments d'un mystère provençal, découverts à Périgueux," "Grammaire limousine," "La Langue et la littérature provençales," "Comput en vers provençaux," "Traduction des Psaumes de la pénitence en vers provençaux," "Les Troubadours Rénaud et Geoffroy de Pons," "Fragments d'une traduction provençale du roman de Merlin," "Poésies inédites des troubadours du Périgord," "Notes sur quelques manuscripts provençaux perdus et égarés," "Paraphrases des Psaumes de la pénitence en vers gascons," and "Saint Marie-Madeleine dans la littérature provençale." He was also a contributor to the periodical press.

Peter Weinberg, professor of German literature at the University of St. Petersburg, has died in his seventy-seventh year. He had translated into Russian a number of German authors, including Heine; also Victor Hugo from the French, and Shelley and Byron from English.

STUDIES IN FRENCH HISTORY.

The Life of Louis XI., the Rebel Dauphin and the Statesman King: From his Original Letters and Other Documents. By Christopher Hare. New York: Imported by Charles Scribner's Sons. $2.50 net.

Charles the Bold, Last Duke of Burgundy. By Ruth Putnam. New York: G. P. Putnam's Sons. $1.35 net.

Marie de Médicis and the French Court in the XVIIth Century. Translated from the French of Louis Batiffol by Mary King; edited by H. W. Carless Davis Ball. New York: Imported by Charles Scribner's Sons. $2 net.

Mirabeau the Demigod. By W. R. H. Trowbridge. New York: Imported by Charles Scribner's Sons. $3.75 net.

The Last Days of Marie Antoinette. From the French of G. Lenôtre; by Mrs. Rodolph Stawell. Philadelphia: J. B. Lippincott Co. $3.50 net.

Ever since the novelist and playwright have taken hold of Louis XI. and lent him some of the glamour of romance, this most unlovely and prosaic of kings has been a subject of interest to English readers. His rival, Charles the Bold, to whom, in 1864, John Foster Kirk devoted 1,713 pages, seems, on the other hand, to have attracted more attention from the American scholar. We have this very year a new book on the King of France by an Englishman who writes under the name of Christopher Hare, and an American woman, Miss Ruth Putnam, presents us the last results of historical scholarship on Charles the Bold, who thus enters the series of the Heroes of the Nations. Both authors have brought to their task a complete knowledge of most of the documents available up to date, and a personal interest in the subject that is likely to put on his guard a less enthusiastic and somewhat critical reader. Granted that history ought indeed to be, in Michelet's words, a "resurrection," there is yet something misleading in a method that makes everything too dramatic and too lifelike.

The main feature of Mr. Hare's book is his abundant use of the mass of Louis XI.'s correspondence (1935 *lettres missives*) that in late years were edited for the Société de l'Histoire de France. Thus Mr. Hare has been able to devote more than the usual space to Louis as dauphin, namely three chapters out of sixteen, while the thirteen others are given up to the endless and confusing struggles of this first standard-bearer of absolute monarchy against the riotous and hungry hordes of feudalism. The classic stage villain of the drama, the monster of Plessis-les-Tours, familiar to the reader of "Quentin Durward," comes out of this book as a despot, to be sure, who ruthlessly curbed the pretensions of the lords and Parliament, was rough and cruel with his enemies, and bled his subjects to the last drop; but this despot also secured for the kingdom some of the benefits of peace, facilitated communication between the provinces, created the first royal mail service (1464), strengthened the military, developed the silk industry, regulated the exploitation of mines, approved of the introduction of printing presses, was interested in letters, art, and painting, encouraged the embellishment of the churches of Bayeux, Troyes, and Rouen, and had a hand in the "Cent Nouvelles Nouvelles." Even this portrait, however, is still too conventional and the author who does not mention in his bibliography the latest synthetic effort of historical scholarship, namely, the "History of France," edited by M. Lavisse, might have found there some new traits to give the finishing touches to the sketch of his hero. In the first place, there was his shabbiness of dress, which so astonished the people when they saw him enter Abbeville at the side of the gorgeously attired Philip of Burgundy, and caused some one to remark that his whole outfit, including the horse, could not have cost more than twenty francs. Then we learn also about his wanderings through his kingdom in a pilgrim's garb, mounted on a mule, stopping at odd places, and giving audience to foreign envoys in a peasant's hut. His childish and mercenary devotion which wanted immediate results, like that of a Neapolitan woman of to-day, and his freedom from formality and charm of manners are well known; but the nervous restlessness and garrulous habits of this traditionally sullen and taciturn character are not so familiar to us and are worth emphasizing in a new study that aims at supplementing the work of preceding historians.

Miss Putnam's work is an excellent sketch of 484 pages with an index and an elaborate bibliography; it is written with perhaps more dash and fervor than both the hero and the subject warrant. The book opens with the description of the assembly of the Knights of the Golden Fleece at Dijon, 1433, when the newly born son of Philip the Good was initiated into the order; and the last pages take us to the plains of Nancy, where Charles's body was found, on one of the first days of January, 1477, embedded in the ice and half mutilated. The picturesque and dramatic elements that the short career of the last Duke of Burgundy offer to the biographer, the brilliancy of his court in so sharp contrast to that of the King of France, his plans of aggrandizement, his dream of reviving the old kingdom of Lotharingia, his long fight with Louis XI.—all this confused story is vividly told by an historian behind whom one feels a woman of alert mind and keen sympathy. In her last chapter Miss Putnam accurately points out the weakness of the plan of Charles the Bold to unite such heterogeneous provinces as happened then to be under his control, a country corresponding to the Netherlands, Belgium, and Luxemburg of to-day, to which must be added a section of France representing nine departments. These countries, foreign in race and language, and separated from each other by strips of foreign territory, lacked the vital and germinating principle that forms a nation.

Those who are tired of political and diplomatic history will read with relief a book like M. Batiffol's on "Marie de Médicis and the French Court." It offers concrete and tangible facts, and gives us the kind of information we are all hungering for. How a young Florentine princess married a foreign king who needed her money to pay his debts; what a marriage by proxy was like at the beginning of the seventeenth century; how the Italian princess was disappointed when she entered the Louvre and believed herself the victim of a practical joke, so dingy this palace seemed to one who was born in the Pitti; how the queen spent her days in her new residence, what she ate, what she wore, how much she spent on her household, for her stable, her jewels; what her relations were with her husband and his mistresses, who her friends were, what influences ruled her, what sort of interests she had; what she did to encourage art and artists; how much money she received, how she used it—all that and much more is told by a trained historian who has consulted first-hand documents and gives us a most instructive chapter in the history of civilization. Such books, even if, like this one, they cover only the short period between 1600 and 1617, help us to understand better a whole century, both in its social and political life. The volume is most elaborately printed, and the translation by Miss King is faithful as well as readable.

To take a life like that of Mirabeau and deliberately narrate it after the method and style of the popular novelist, with sensational chapter titles, fancy and improbable incidents, manufactured dialogues, to draw from imagination elements that reality surabundantly furnished—all this seems to us a sign of poor judgment. But since the historical novel, which is dying out elsewhere, has still many adepts in this country, there will probably be readers who may want to get in this way some information on the romantic career of the great orator of the Constituante, on his stormy youth, his half-lunatic father, his impossible mother, his wild sisters, and the quarrels, suits, disorders, and disturbances of this unique family. Partly fictitious, partly biographical, this story of "Mirabeau the Demigod" (404 pages, with illustrations, bibliography, and index) will satisfy the class of readers whose higher education is being taken care of by the writers of Sunday supplements. There is a prologue with a picture of Gyp, the Parisian novelist (who is a descendant of Mirabeau), and strange conversations that the author credits to a woman innkeeper at Bignon (Loiret), Mirabeau's birthplace, and still stranger remarks addressed to him by a "barefoot gamin." Then comes the story, the "true and romantic story," as the title reads, of the life and adventures of the hero. It follows pretty closely the lines of the true biography; but to gratify the tastes of the novel reader it is divided into three parts: "The Boy," "The Man," and "The Demon of the Impossible." To a lover of true biography the most irritating feature of the book is the dialogues, which, the author tells us, are "seldom imaginary," but which he too frequently ornaments with his own wit, eloquence, and taste.

"The Last Days of Marie Antoinette," now presented in English for the first time, appeared in French in 1897. G. Lenôtre, who has made his specialty of all the byways and untrodden paths of the Revolution, has gathered here some original documents on the life of the queen during her captivity, from August, 1792, to October 16, 1793. These documents, some of which are now first published, are generally narratives or statements of eye-witnesses whom their official functions or their humble occupation brought in touch with Marie Antoinette, while she was awaiting her trial. Some of these authorities are of a kind that historians seldom find—a menial of the pantry like the faithful Turgy, an upholsterer, a servant girl, and a sweeper. From this mass of material of uneven value (some of it was written as late as 1824, and some contains statements too improbable to believe) we get a more vivid and tragic picture of the life at the Conciergerie and the Temple than any continuous narrative from second-hand sources could have given us. The translation of Mrs. Stawell is good and well printed. In every respect this English book is far superior to the French edition.

CURRENT FICTION.

The Greater Love. By Anna McClure Sholl. New York: The Outing Publishing Co.

The story is of a high-spirited girl who ran away from a dull, uncomprehending American home and became an eminent portrait painter in Paris. The English lover who would fain have married her has an insane wife. And when years later Eleanor returns with a charming daughter to her childhood's home, only her immediate family know that the young Constance is an illegitimate child. To keep the secret from the daughter, and comfortably to establish her, are the two objects of the passionately loving mother's life. The former she is unable to compass. The latter, after one broken engagement, is on the way to accomplishment when the book ends.

The tale has a certain carrying force, for the end is not evident and the way not a thoroughfare. There are firmly modelled characters among the many, and there is forcible writing. The heroine Eleanor's vividness and her daughter Constance's aerial charm are made palpable. Mrs. Grundy speaks out loud and clear and always under the author's evident censure. Even more loud and more clear speak the apologizers for the heroine. As a statement of the omnipresent problem, the book has some novel adjuncts and complications. As a contribution to solution it is worthless, since morally it is a long, indeterminate muddle. The Anglican priest who wishes to marry Constance breaks his engagement, then offers to renew it on certain conditions. The daughter refuses to bring a stain to the escutcheon of her later lover, but is not allowed to stand on that decision; the lover, represented as peculiarly fastidious on points of family honor, quails not an instant. His mother, a sternly austere patrician, comforts herself with the knowledge that Constance's father had been an aristocrat. Most unstable of all is Eleanor herself. Persisting in her reflection that it was "society which found her guilty, not God nor nature," "she longed in her despairing moods for a sense of sin on which to build up some new fabric of existence." Eleanor's whole attitude toward the affair may be summed up as jaunty. Neither her sensibility nor her suffering can disguise the fact. When her most oppressive brother says to her: "You've made a lot out of your life, even though you've never acknowledged that you were in the wrong," her answer is, "I can't regret a liberal education." Made to pose as a source of spiritual counsel, she can cajole the bridegroom retreating from her daughter, with, "All that I have can be used for your work. . . . My wealth would be at your disposal"—a bribe which the priest is man enough to refuse. To him, discoursing of judgment, she says, "I have never accepted man's estimate of God, which makes of him a gigantic bookkeeper. The God I know blesses joy." And even when she has set her feet in the way of self-denial, "how she had sinned against God was still a mystery to her—for she had yet to identify the human and the divine morality."

The Little Brown Brother. By Stanley Portal Hyatt. London: Archibald Constable & Co.

Considered merely as a novel, this book is of unusual interest. Written by an English war correspondent, the only journalist at the front during the Pulajan campaign of 1904-1905, the work has the freshness of first-hand observation, the vivid picturesqueness of the trained reporter, and the vigor of a man accustomed to write cable dispatches. The heroine is a high-spirited English girl who likes men that "do things," and who shares with her father, a wealthy hemp-buyer of Calbayog, a belief that it is the white man's business to keep the little brown brother in his place with a strong hand. The hero is an Englishman who has resigned his captaincy in the Indian Army in undeserved disgrace, and has become temporarily a soldier of fortune, casting in his lot with the Americans. Both of these popular types of the "new romance" are admirably drawn and pretty thoroughly likable characters—the way in which the hero quells the inferior race with a glance of his Anglo-Saxon eye is simply irresistible. There is, besides, a crowd of subsidiary characters—the handicapped American members of the civil government, the treacherous native governors, the American soldiers, brave and long-suffering, the unscrupulous gun-runners, the Filipino constabulary, the bloodthirsty hill men, and the much-butchered taos, or peasantry.

But the book is more than a novel; it is also a sensational political pamphlet. The interest of the narrative is overshadowed by the sweeping indictment of the American administration of the Philippines. The author writes, to be sure, as a fervid advocate of the British colonial policies. He is of the opinion that the brotherhood of man includes only the Caucasian race. He warmly applauds the officer who agreed with his fellows to "recognize no man in public who had a native with him." In spite of the evidence of three hundred years of misrule, he praises the Spanish colonial empire because it was free from the "brown-brother nonsense" and recognized that "color is color":

> It was white man's rule, almost to the end, the rule of those who knew the difference between black and white, East and West; who understood that the Oriental is not an individual at all, but merely part of a vast, unwieldy mass, which is incapable of guiding itself, incapable of thinking for itself, needing all the time a firm, strong hand to steer it into the right course, to force it along that course; a mass which, if it leave the track, must be driven back with lead and bayonets and high explosives.

It is not to be expected that a man with such inveterate contempt for the Oriental should sympathize with any movement looking toward Philippine independence. But Mr. Hyatt goes on to impeach the sincerity of our efforts to benefit the islands. He represents that the entire conduct of the campaign was regulated by political wire-pullers in the United States. He makes it appear that from fear of losing votes in the Presidential election, general insurrections were represented as insignificant local outbreaks, and little handfuls of police were sent out to lose their lives in putting down revolts that every one knew demanded the sending of an army. This is bleeding ground, indeed, and if these charges are not true it was, to say the least, questionable taste to incorporate them in a work of fiction.

The Enchanted Castle. By E. Nesbit. New York: Harper & Bros.

E. Nesbit and W. W. Jacobs are the two contributors who have given a certain cheap magazine some circulation among a constituency at whom, to judge by the rest of its matter, it was not aimed. E. Nesbit is, one may almost say, the only person now telling fairy stories in public for love of the game. "The Enchanted Castle" is a very good example of her craft. Its humor consists in the continual jumbling of the realities of English child life, and the unrealities (or deeper realities) of the land of fancy. The wits of these young Britons are, when they choose, mazed with fairy-lore, and they have the dialect of romance at their tongue's end. Probably no such deep philosophy could be read into their adventures as ingenuity has connected with the exploits of their great progenitor Alice; but the absurdity of the things they do is made delightful by the whimsical air of the writer. In short, the book illustrates once more the English faculty of amusing children without boring one's self.

Bertrand of Brittany. By Warwick Deeping. New York: Harper & Bros.

If this is a yarn of the swashbuckling type, and therefore to be regarded without enthusiasm by the austere critic, it has a certain youthful gusto which should commend it to the honest citizen. After all, the gentle knight is still pricking o'er the plain of all healthy young imaginations, and even the fiction of the motor car is powerless to put him to rout. Bertrand of Brittany is one of your ugly ducklings, neglected by his own family and fated to win his way by dint of the hardest of knocks. He is

suitably unencumbered with brains, as the Orlandos and Romeos should be; he deserves the fair, and gets her. Of the detail of his adventures we need say nothing. It is only for his boy-virtue that we say anything of him at all.

The Poetical Works of Giles and Phineas Fletcher. Vol. I. Edited by Frederick S. Boas. Cambridge English Classics. New York: G. P. Putnam's Sons. $1.50 net.

For ordinary use the edition of the two brothers published by A. B. Grosart in 1868 and 1869 may be thought quite sufficient; but Grosart's carelessness in minute points is well known, and if we are to have the works of these lesser poets in ancient orthography at all—they would really be far more serviceable in modern dress—we might as well have their text reproduced with minute exactness. Not having the original editions and MSS. before us, we can only assume that the present text follows the example of the series in being scrupulously correct. It is to be noted also that Mr. Boas has straightened out the confusion into which Grosart had fallen in regard to the MSS. of the "Locustæ," and has taken pains, by collating the Quarto edition and the MSS. of Phineas Fletcher's "Sicelides," to arrive at an authoritative text of that academic drama.

The present volume contains all the works of Giles and those of Phineas which were published before 1633. "The Purple Island," of Phineas, which, probably in part on account of its romantic title, is the best known poem of the brothers, is reserved for the second volume, but the two long English poems already printed, "Christ's Victory and Triumph," by Giles, and "The Apollyonists," by Phineas, are sufficient to afford an interesting comparison of their work. We confess to have felt always—contrary, we believe, to the common opinion—that "The Apollyonists" is a more readable and considerable poem than anything of Giles's, or than the later work of Phineas himself. There is more of romantic charm in single lines or passages of Giles's poem, with occasionally a note of haunting melody:

One of ten thousand soules I am, and more,
That of his eyes, and their sweete wounds complain,
Sweete are the wounds of love, never so sore,
Ah might he often slaie mee so againe;—

but as a whole the poem is amorphous and its ideas ill digested. "The Apollyonists," or plot of the Jesuits to blow up the Parliament House, on the contrary, moves on with vigor to its end; there is a certain massiveness in its effect which can without great impropriety be compared with Milton. And if the general plan of "Paradise Regained" may have been suggested to Milton by "Christ's Victory," it is practically demonstrable that much of the spirit and some of the imagery of "Paradise Lost" were borrowed from Phineas's work. It is impossible to think that the later poet, while writing his debate in hell, did not have the similar scene of Fletcher's in mind. Almost we might think it Milton's, and not Fletcher's, Satan, addressing his fallen comrades:

Now by your selves, and thunder-danted armes,
But never danted hate, I you implore;

and again it seems, in character if not in style, almost the Belial of Milton who rises to temper courage with cunning:

His matter fram'd of slight equivocations,
His very forme was form'd of mentall reservations.

The most striking parallel, an example at once of Milton's readiness to take suggestions and his genius in sovereign alchemy, is afforded by the scenes of "Hels yron gates" in the two poems. Fletcher begins valiantly:

The Porter to th' infernall gate is Sin,
A shapeless shape, a foule deformed thing,
Nor nothing, nor a substance; as those thin
And empty formes, which through the ayer fling
Their wandering shapes, at length they'r fastned in
The Chrystall sight. It serves, yet reignes as King:
It lives, yet's death: it pleases, full of paine:
Monster! ah who, who can thy beeing faigne?
Thou shapeless shape, live death, paine pleasing, servile reigne.

It is a thin Milton, indeed, but the likeness comes out more strongly when the whole scene is read. One sees in reading the Fletchers the sources of Milton, and one sees, too, how his classical training and the trend of taste exemplified by Waller saved him from the empty conceits and quibbling tongue of the later Elizabethans.

Bibliography of the Philippine Islands, Printed and Manuscript. By James Alexander Robertson. Pp. 437. Cleveland: The Arthur H. Clark Co. $10 net.

This book, which recently appeared as Volume LIII. of the monumental series, The Philippine Islands, 1493-1898. is now issued separately in a limited edition of 150 copies. Mr. Robertson's work is quite indispensable for one who wishes to make "a thorough bibliographical survey of the Philippines"—the test of usefulness which the compiler had in view. It is not, however, a comprehensive bibliography, to be independently used as such. Indeed, when it is stated that attention is devoted primarily to listing manuscripts, it will be apparent that one volume could not cover such a scope. The "Aparato bibliográfico" of Retana catalogues more Philippine titles than any other, yet not all the printed titles, even of importance, are there listed. But the Library of Congress bibliography of 1903, combined with the "Biblioteca" of Dr. Pardo de Tavera, produced under the same auspices, furnishes a fairly complete catalogue of printed Philippina (and one also of greater practical utility than Retana's, especially for Americans). Mr. Robertson did not set out to perfect these bibliographies, but undertook to help the student using them, and to list Philippine manuscripts. With the Manila archives being catalogued, with a fresh discovery of much valuable material in the Mexican national archives, and with some portions of Spain's archives still but half explored for Philippina, it is clear that no thoroughly selective list can yet be made. Yet, in the nearly three hundred pages here devoted to manuscripts we have entries for almost every year from 1518 to 1898. Only one of Mr. Robertson's lists of printed titles describes Philippine works in general; that gives the printed books, pamphlets, etc., directly drawn upon in the preparation of this historical series. It is of great practical value, because of the data brought together concerning rare Philippina. The fifty-page introduction is highly serviceable. Its data regarding the principal collections of Philippina, printed and manuscript, are available nowhere else, except in fragmentary form. The further data on linguistics, maps and cartography, photographs, and views, museum collections, etc., are also useful. The pains taken in the compilation of this volume are evident throughout, and the reviewer has so far found only a very occasional error in transcription of foreign names.

Conscientiousness has, in fact, been the characteristic of the editorial work upon the whole series above named, which is closed by this volume, except for the analytical index that will occupy Volumes LIV. and LV. The undertaking, which is a large one, executed in the main very well, in the face of difficulties and discouragements, has received but scant notice, especially in the United States. Not long after the earlier volumes were issued in 1903, it became evident that the support counted upon would not be forthcoming. Facing their loss, the publishers undertook to carry the series to completion in an edition limited strictly to the subscribers already obtained. Economies were enforced, and the editors had to toil on for five years without hope of other reward than the recognition of their work as scholars. Under the circumstances, much praise is due Miss Emma Helen Blair and her co-editor, Mr. Robertson.

Books produced under such disadvantages inevitably have defects. But the

main criticism is that the series was planned too early and too ambitiously. Even with adequate support, the time had not come in 1902—has not yet come—when the selective process can be satisfactorily applied to the undigested mass of Philippine historical data. Fault may be found also with the distribution of material. One regrets much of the space given to translations from some of the old friars' chronicles, when one finds only two volumes of reprinted selections or hitherto unused documents bearing on the nineteenth century; the regret is all the greater because these two volumes are crammed with matter having direct relation to events since 1898. Moreover, various important incidents of the last third of the eighteenth century had to be summarily treated, owing to the previous encroachments of seventeenth century chronicles. This shortcoming is, of course, partly explained by the fact that the work was originally planned to extend only to 1800.

This fault in proportion has in part been remedied by the editors' own labors in preparing compilations, *e. g.*, on the contests with the Moros, on ethnology, on education, etc. These compilations, published as appendices in the later volumes, commonly cover the entire period of Spanish rule under the given head. The comparatively small space assigned to the nineteenth century is also in part remedied by the publication of a special contribution covering the years 1860-1898, and furnishing a working bibliography and commentary for the closing period of Spanish rule.

The Land in the Mountains: Being an Account of the Past and Present of Tyrol, Its People, and Its Castles. By W. A. Bailie-Grohman; with an introduction by Charles Landis; illustrated with 82 plates and maps of modern Tyrol and ancient Raetia. Philadelphia: J. B. Lippincott Co.

In this latest work, the prolific author of "Camps in the Rockies" returns to the subject which awakened his boyish interest; for his first book, "Tyrol and Tyrolese," was published when he was but twenty-four. Here he has given us what is mainly a collection of historical and biographical facts connected with the country about his summer home, a mediæval castle on the Brenner Pass, about twenty-four miles east of Innsbruck. As a whole, it must be confessed, the book is not easy reading; for much of it is interesting only to those well versed in the early history of Europe. Some readers may be tempted to echo the sentiment of an American visitor at the castle. On being shown a collection of Tyrolensia, he exclaimed: "What! all those books written about this mouldy old country! Why, the man at the hotel in Innsbruck told me that there isn't a single count or baron or country gentleman in the whole of Tyrol who owns a motor, or who ever travelled in a special car!"

Nevertheless the work supplies a felt want. In English there is no history of this land which for twenty centuries has played a prominent part in European affairs; and we are grateful to our author for opening our eyes to its importance by his brief outline of its history and the sketches of the leading men who took part in it. Much of what is related might have been seen from the windows of his castle on the great thoroughfare connecting the Po and the Danube—from the passing of the Emperors Maximilian and Charles V., each bearing his coffin with him, to the draped railway train with the body of the wife of Francis Joseph, "the last homecoming of the unhappy Empress Elizabeth." Especially valuable are the glimpses of life in the feudal days. Then nearly every man above the rank of peasant lived in a fortified castle, if possible on some well-nigh inaccessible cliff, as the existence of some six hundred castles, half of which are now in absolute ruins, in a region about as large as Maryland, testifies.

After a short description of the country, the author sketches the history of the Brenner Pass, the oldest over the Alps, in which are some interesting details as to travelling expenses in the thirteenth century. An account of the peasantry, while it emphasizes their isolation and the persistence with which they cling to their old customs and principles, yet calls attention to a change being brought about by the utilization of the water-power, with which Tyrol is so richly provided:

> For the ugly poles of electric works are going up apace all over the country, and even remote valleys in the heart of the Alps have started little electric works for the lighting of their villages and to furnish power for domestic purposes. Many a Tyrolese peasant house that, up to yesterday, knew only the flare of the pitch-wood torch, or the dim flame of a tiny lamp consisting of a pan of tallow, with a wick of twisted thread, is to-day furnished with a number of eight-candlepower lights, at a rental of six shillings or so a year per lamp.

The latter half of the book contains the noteworthy facts connected with the author's castle and others on the Pass, and the two great families who lived in Matzen. The first of these was the Frundsberg, who possessed it for three hundred years and played a prominent part in the wars of those ages. In 1589 it became the property of the Fuggers, who from being simple weavers of fustian, became the first millionaires of Europe, "in whose hands for upwards of a century lay the purse-strings of Europe's monarchs, on whose financial help depended the election of emperors and whose nod decided the duration of wars." Among other interesting people who flit across these instructive pages are the minnesinger, Walther von der Vogelweide, immortalized by Longfellow, and the last of these bards, Oswald of Wolkenstein, of whose adventurous career a brief account is given.

A pleasant introduction of Mr. Bailie-Grohman to his readers is offered by his friend of many years' standing, Mr. Landis, who pictures him to us in his two widely separated homes in British Columbia and the Tyrol. Of the charming illustrations with which the volume is adorned, of the beautiful scenery, the castles, their courtyards and interiors, and the specimens of the wonderful native art of the dawn of the modern age, it is difficult to write in fitting terms. Sufficient is it to say that they alone would fill one with a longing to visit this "land in the mountains" in which still lingers the impress of a romantic age.

Italica: Studies in Italian Life and Letters. By William Roscoe Thayer. Boston: Houghton, Mifflin & Co. $1.50 net.

These fourteen essays, "bye-products of the past ten or twelve years," are here gathered, we infer, because they "contain information about contemporary Italians and the recent conditions in Italy that may not be easily accessible elsewhere to readers in English." Other essays, writes Mr. Thayer, "record friendships, personal or literary. Others, again, spring out of enthusiasms still unquenched, or were inspired by some feature of that Enchanted Land, whose beauty is inexhaustible, and whose boundless interests touch, and will always touch, men and women who perceive the deepest concerns of the human soul." Mr. Thayer's enthusiasms are as genuine as these words promise. He writes with a zest often verging on passion, and at times, perhaps, allows his feelings to permeate his facts, tingeing them with strong colors of his own. Being interested himself, he interests the reader, but his method will not gratify those historians who demand documentary evidence at every step, and reject as unscientific all *ipse dico* systems of writing history.

In describing the Italy of to-day, Mr. Thayer's method gains in validity; for no reasonable critic will blame a sincere observer who records, without quotation of authorities, what he has noted upon the spot. The chapter on Luigi Chiali, for example, is a personal reminiscence (p. 241); so, too, the account of "Leopardi's Home" (p. 171); the essay on "Cardinal Hohenlohe—Liberal" (pp. 287-303) is mainly a review of Levi's book; another essay is a study of Giordano Bruno, or, rather, of that martyr's "Expulsion of the Beast Triumphant" (pp. 101-140), in which we

find Bruno modern, contemporaneous, "'a God-intoxicated man,'" whose attitude as to the miraculous and as to religions is, however, comparatively familiar to readers of history. The pages on "Thirty Years of Italian Progress," dealing with modern Italy, might have been more valuable if Mr. Thayer had compared his statistics with analogous statistics for other countries. For most questions of industry and education "Italy To-day," by B. King and T. Okey, is a more enlightened book. Again, though his description of "Italy in 1907" is on the whole a vivid and accurate summary, why not have devoted a sentence to Renato Fucini?—a story-writer of almost epic quality, whose portrayals of every-day realities reveal what the Church is coming to more plainly than does Fogazzarro's haze-wrapped "Santo," a book here described as its author's masterpiece (pp. 3-27). On the other hand, "The Election of a Pope" (pp. 177-195), besides being vivid, undoubtedly epitomizes what most intelligent anticlerics, at Rome and elsewhere in Italy, believe to occur within the Vatican's walls between the death of a Pope and the announcement of his successor. Their opinion, as well as Mr. Thayer's, is revealed in the ironical observation that "cardinals, whatever they may profess, do not rely wholly on divine guidance in their selection of a Pope" (p. 192), and this, we believe, has been true ever since Boniface hastened Celestine to make the *gran rifiuto*. What they do rely upon is so plainly stated that no student of the mediæval Church can fail to see how faithfully she is perpetuating her traditions.

In conclusion, we may note that Mr. Thayer ranges widely; consequently the liability to commit various demonstrable errors (as, for example, with regard to Italian versification, p. 258), or to deal with inadequate data (as in "Dante in America"), is increased; but not a few readers will be stimulated by this book.

Theodor Fontane: Aus dem Nachlass. Herausgegeben von Josef Ettlinger. Berlin: F. Fontane & Co.

Theodor Fontane occupies a unique position in German literature. Though his reminiscences of intellectual Berlin reach back to the romanticism and revolutionism of the first half of the century, his own work is more closely related with that of the latter half. He was a link between two generations of German writers and the first of the old to judge impartially of the new. Any appreciation of Fontane the poet and novelist would be incomplete without reference to his work as dramatic and literary critic of the *Vossische Zeitung*, a position which he held for many years and in which he gave proof of the depth and the breadth of his judgment. The selections presented in this posthumous volume include fiction, poetry, and criticism. The editor justly says that the fame of Fontane did not need a posthumous reinforcement, but the steadily growing number of Fontane's admirers had a right to be acquainted with writings which harmoniously complete the impression made by the man and his work during his lifetime. The volume appropriately contains the latest portrait of the author and the reproduction of an original drawing which Adolf von Menzel had sent him for his seventieth birthday.

"Mathilde Möhring," the novel which introduces the selections, is a story which one would not like to miss from his collected works. It is thoroughly characteristic of his firm grasp upon reality and his sympathetic understanding of human nature. The modern school with all its bare and naked naturalism has produced no more real and convincing "segment" of the life of the Berlin middle class of limited means than Fontane pictures in the little flat in the Georgen Strasse occupied by the widow Möhring and her daughter. Nor has the same school, so vociferously emphasizing its scientific methods and its psychological insight, produced two equally searching portraits of the soul of a hero and a heroine. They are not types, but individualities. The girl, Mathilde Möhring, is a true child of the poet's brain: she is of his own mettle. For throughout the poetry of Theodor Fontane and in some of his prose works one can recognize his sane philosophy of life reduced to the simple formula: Accept the inevitable. It is this brave and cheerful acceptance of things as they are which made his works so refreshing in the period of morbid pessimism which characterized German literature towards the end of the century. The story of Mathilde Möhring's rise in the social scale when Hugo is appointed mayor of Wildenstein and her calm return to her mother when his death puts a check upon her ambitions, is told with a delightful blend of humor and pathos.

The second part of the book contains verse. Some of it belongs to Fontane's earlier periods. The remainder is of his last years, and with its pithy commentary upon current life adds essentially to his portrait. "Old Fontane" was a merciless critic of his time, and newspapers and science receive their share of his satire. But even the most serious lines among these last gleanings radiate the sunshine of his temperament. The resignation of

> Leben: wohl dem, dem es sendet
> Freude, Kinder, täglich Brot,
> Doch das Beste, was es sendet,
> Ist das Wissen, das es sendet,
> Ist der Ausgang, ist der Tod—

this has in it an element of strength and health.

In the critical part of the volume the study of Willibald Alexis is the most comprehensive, and, when Fontane compares Alexis with Walter Scott, is very interesting; for the German novelist had begun his career by attempting to parody the English master and ended by emulating his example. The impressions of Goethe are admirably frank and direct. Fontane's views on "Hermann und Dorothea," "Werther," "Wilhelm Meister," and the "Italienische Reise" are likely to provoke protest from those who are wont to accept every line penned by the *Altmeister*. The study entitled "Die Märker und das Berlinertum" is a remarkable achievement. No other man was equally qualified to inquire into the racial and social antecedents of the type which has gradually given the Mark Brandenburg its character and is modifying that of its neighbors, the *Berliner*. Among the statements which are particularly interesting is the fact that the year 1685 added five thousand French Huguenots to the eight or ten thousand inhabitants of old Berlin.

Science.

A Text-book of the Principles of Animal Histology. By Ulric Dahlgren and William A. Kepner. New York: The Macmillan Co. $3.75 net.

The name of the senior author alone leads us to expect much from this volume, and the most careful scrutiny reveals almost no defects. It easily takes first place among histologies, chiefly because of the invaluable comparative element. With few exceptions, histologies, intended as they have been primarily for the medical student, have heretofore been based for the most part on the genus *Homo*. Morphologists and anatomists will welcome a general histology which in the widest sense holds to its title, treating its subject as a pure science. Where circumstances warrant, fundamental facts, such as mitosis (the splitting of the chromatin of a nucleus or the subdivision of any minute granular bodies embedded in living protoplasm), are elucidated even by botanical material. Owing to the great difficulty of consistent treatment by the embryological, or ontogenetic, method in such widely different groups as vertebrates and invertebrates, this system has not been adopted, but the subject has been treated from the point of view of *function*. The value of this plan is evident from the fact that "all structures exist only for the purpose of performing certain functions in some particular way."

The various tissues of organisms are discussed in twenty-three chapters, a final chapter treating of general technic. Perhaps the most valuable feature of the volume is the great number (no

fewer than 470) of excellent pen-and-ink drawings of generous size, carefully correlated with the context. Of especial interest to the student of comparatize zoölogy are such chapters as those on the electric tissues, light, pigment, and gas production. Selecting the discussion of light as typical, we find a well-balanced general discussion of the occurrence, the chemistry, the physiology, and the morphology of the production of light. This is followed by specific examples of photogenetic tissues, presented in taxonomic order, with careful descriptions and illustrated by fourteen drawings. Each general group is introduced by a sentence or a few words in heavy-faced type, facilitating quick reference, such as: "The protozoön, *Noctiluca*, is probably the best-known example of a luminous, one-celled animal"; "The Mollusks have many light-producing tissues." . . . "Several worms possess a fairly strong and steady luminosity"; and "Light organs have been described in the young of some birds." A paragraph on technic follows, and the chapter is concluded with a list of the six most comprehensive and authoritative articles in the literature of the subject.

One can scarcely imagine a clearer or better arranged text-book either for the general student or for the specialist in any of the many related sciences. Since scientists in many fields often have occasion to refer to or to verify some point in histology, the volume will appeal to readers outside of the domain of histology proper.

Charles Scribner's Sons will publish this autumn "Life Histories of Northern Animals," by Ernest Thompson Seton; "Camp-Fires on Desert and Lava," William T. Hornaday; "A Theory of Mind," Prof. John Lewis March; and "The Bible of Nature," Prof. J. Arthur Thompson.

The second volume of Dr. George M. Gould's "Borderland Studies" (Philadelphia: P. Blakiston's Son & Co.), following the first at an interval of a dozen years, contains fourteen short articles reprinted for the most part from various medical journals. While the author commonly has the professional reader in mind, the layman will find much of interest besides getting a good idea of the cleverness of the writer, of his fondness for mannerisms, which are almost sophomoric, and of his use of the sledge-hammer even when a tack-hammer seems quite sufficient. The opening chapter, abundantly illustrated, treats of "the history of the house and the struggle for light and air" in an entertaining way, but apart from the question of beds makes few very definite suggestions. Students of history in its various aspects will hardly be ready to adopt the inference (p. 40) as to the relation of Oriental nomadism to bedbugs and filth, or of the relation of the bedbug to civilization in general. Of the other articles, that on "Disease and Sin" is perhaps the most suggestive, and that on "Child Fetiches" the most entertaining, while the one on "Some Ethical Questions" will add least to the author's reputation. The other chapters touch many topics, ranging from the importance of official records of personal statistics to problems of "style." The final chapter, on "Vocation or Avocation," is likely to confuse and mislead the lay reader, and its excessive hitterness is pretty sure to defeat the purpose of the writer.

Readers of Dr. H. S. Upson's "Insomnia and Nerve Strain" (G. P. Putnam's Sons) will hardly find as much satisfaction in it as the title suggests. The author's views concerning the action of the nervous system are not altogether clear and rest upon an interpretation of nervous phenomena which few students of these subjects are ready to accept. This may be said in general of the application of the doctrine of epicritic and protopathic fibres, of the assumption of a mobility of the neuroglia cells, and particularly of the effort to find resemblances or analogies in a comparison of nerve force with electricity. To speak of a "vascular potential" or to regard the "vitality" of cells, and of the ganglion cells in special, as the ability "to maintain a difference of potential sufficient to carry on nutrition by electric osmosis" (p. 105), is to choke a fair garden with rank weeds of speculation. More promising is the discussion of cases in which the impaction of teeth or the existence of dental defects, often apparently insignificant and readily overlooked, has proved to be the cause of serious mental disturbance. Dr. Upson gives numerous skiagrams to illustrate this point, and adds a brief chapter by Dr. E. B. Lodge on the technique of dental skiagraphy. The influence of very limited inflammatory processes in causing remote and often quite obscure results has been much discussed of late, and these questions are evidently worthy of most careful attention.

The Société Hollandaise des Sciences publishes the eleventh volume of the "Œuvres complètes de Christiaan Huygens." It comprises the mathematical works from 1645 to 1651.

In 1901 the French Parliament voted a permanent Fund for Scientific Research. Last year the amount paid out was a little over $40,000 for its chief object—"the progress of biological sciences, especially to the end of discovering new methods of treating the diseases of man, of domestic animals, and cultivated plants." Tuberculosis, with its myriad experimental problems, had rightfully the lion's share. To Professor S. Arloing $1,600 yearly has been assigned for the past five years, applied to his special research as to the modifications of the virulent agent in tuberculosis; various modes of anti-tuberculous vaccination; reaction to tuberculine; and the latest processes for diagnosing tuberculosis. Prof. L. C. A. Calmette of the Institut Pasteur had $3,000 in 1907 for his investigation of the conditions of tuberculous infection by the digestive tube; and clinical and experimental diagnosis of tuberculosis by the new method of "opthalmo-reaction." Among the thirteen other students of tuberculosis who have received aid, problems of equal interest are being investigated. This Fund for Scientific Research also publishes the volume of studies made in 1907 by Professor Calmette and his assistants on the biological and chemical purification of sewer waters. It gives a summary of all that is known on this subject, so important to municipalities, with an outline of what has been done in England, Germany, and the United States, and the year's experiments in Paris and Lille.

The Fourth International Fishery Congress will be held at Washington September 22-26. The presiding officer will be Dr. Hermon C. Bumpus, director of the American Museum of Natural History.

Dr. George Michael Edebohls, since 1893 professor of the diseases of women in the New York Post-Graduate Medical School, died in this city August 8. He was born here in 1853, was graduated from St. John's College, Fordham, and from the College of Physicians and Surgeons, and he was on the staff of several hospitals. He had contributed to the medical journals many articles on diseases of the kidneys, and he was author of "The Surgical Treatment of Bright's Disease" (1904).

Word has been received from Danish Greenland that Mylius Erichsen and two others of the party that sailed from Copenhagen on the Denmark June 24, 1906, to explore and chart hitherto unknown parts of Greenland, perished in a snow-storm. They were overtaken by the storm while on an ice floe. The purpose of the expedition, which was backed by the government of Denmark, and approved by the American Geological Society and other scientific organizations, was achieved. Large tracts of land new to the geographers were mapped out, and the entire northeastern coast of Greenland was charted. Erichsen had attained fame as an explorer by leading a party across Melville Bay to the Cape York Eskimo settlement on the west coast of Greenland.

Drama and Music.

BRONSON HOWARD.

For many years Bronson Howard bore the courtesy title of the leading American dramatist, when he should have been described more properly as the leading playwright of America. This position he won by virtue of half a dozen conspicuous successes in different departments of drama and the comparative rarity of his failures, to which no further reference need be made. But, although he dealt largely with American subjects and types, his work was in no way distinctively national. For all his sharpness of observation, and his later capacity for satire, he was a story-teller, rather than a dramatist. His plays, resting upon a foundation of pre-ordained incidents, were essentially conventional in structure. They never grew out of the everlasting conflict between circumstance and character, and seldom touched upon any of the graver racial or social problems demanding a comprehensive outlook and philosophic insight. Not infrequently they represented certain phases of modern life with nota-

ble felicity; but, as a rule, they were mimetic, not inventive, and had no deeper purpose than the provocation of a transient interest.

Mr. Howard had the good fortune to come to the front in a period—between the late sixties and the early seventies—when the supply of American dramatists was at its lowest ebb, and he shone brilliantly by the side of far duller rivals. It is doubtful whether his "Saratoga," which was his stepping-stone to fortune, would win much favor to-day, even if it could be as well acted as it was then. From the critical point of view, it was the flimsiest and most insignificant of farces. But it was packed with situations which were funny, if manifestly preposterous—moved with great rapidity, and was sufficiently well knit to hold together in spite of its bewildering intricacies. In respect of technical workmanship, and effective handling of familiar characters, it was a decidedly creditable performance for a beginner. The fact that it probably had its inspiration in some of the touch-and-go French farces of the time does not lessen the skill of the adapter. And Mr. Howard was always an intelligent, adroit, and conscientious artificer, who, if he lacked the imagination to create original designs, put the best that was in him into the imitation of selected models.

When his second pronounced success, "The Banker's Daughter," was produced, the local stage had been abandoned to adaptations from the French of Sardou, D'Ennery, Augier, Feuillet, and others, and the influence of these writers might easily be traced in it. But it was, nevertheless, an original work, so far as the general outlines of the story and the various personages were concerned, and proved that the new dramatist had studied closely the devices of emotional melodrama and learned how to apply them to his own purposes. It is possible that "The Banker's Daughter" might be able to stand the test of revival, with a little modification. All the characters are variations of puppets long in use in the theatre, but the story is interesting, the crises ingeniously devised, the mechanism smooth, and the suspense well maintained. Undoubtedly, the popularity of this piece was due to its own intrinsic merit as fiction, as well as to its admirable performance. When war plays were the fashion, Mr. Howard presented his "Shenandoah," and again achieved a brilliant popular success. In this he also displayed an intimate knowledge of theatrical resources and of the requirements of public entertainment. Again, his story was conventional in its panorama of the woes of civil war, in its appeal to the patriotic enthusiasm of both sides, and its careful avoidance of offence to either; but it was well told and carefully elaborated. In short, it was the product of a shrewd, skilful, and laborious workman.

He never appeared to more artistic advantage than in his "Old Love Letters," a charming little piece in which a pretty but by no means original bit of fancy is put to excellent theatrical effect with no small measure of literary grace. But his best dramatic achievement, undoubtedly, was his comedy, "Aristocracy," which, in spite of its occasional exaggeration and melodramatic sensationalism, was a piece of purposeful and potent satire, aimed with vigor and directness at two of the worst forms of modern snobbishness. Neither in motive nor in development did this play exhibit much power of fresh imagination, but it was written with considerable literary force and much fearless independence of spirit. His latest composition, an unacted comedy called "Kate," was an attempt in the later style of emotional comedy, and is not likely, should it ever be performed, to add greatly to his reputation.

If Mr. Howard's abilities were not of the highest order, they were above the level of mere respectability, and they were not devoted to base ends. He never descended to the expedients of the lower sensationalism for the sake of money, and his memory will be more fragrant in this respect than those of some of his contemporaries. Possibly, if he had not been so fortunate at the outset of his career, he might have attained to higher literary and artistic distinction. But if he did not do much to elevate the stage, he never did anything to abase it, and he bore his triumphs with a modesty and dignity which were very becoming. He was ever ready to champion the best interests of the stage, and the whole theatrical world is the poorer for his loss.

Scribner's autumn list includes "Richard Mansfield: The Man and the Actor," by Paul Wilstach; and "The House of Rimmon," a drama in four acts, by Prof. Henry van Dyke.

In "Sudermanns Dramen" (imported by G. E. Stechert & Co.) Karl Knortz, a veteran writer on German themes has published his lecture on the dramas of Sudermann, once delivered in New York under the auspices of Die germanistische Gesellschaft von Amerika. Knortz is no representative of the dry-as-dust German investigator, and he enlivens his always interesting, if not always cheerful, pages by facetious thrusts at the weak spots of the social organism. Knortz has too a good word for idealists, if only their dreams have a practical foundation; he believes they prepare the way for succeeding generations, and he recalls the idealistic endeavors of Plato, Kant, Goethe, Nietzsche, and others. Of this class Sudermann is, in the opinion of Herr Knortz, the most talented and most successful German representative. Part of this lecture consists of brief digests of Sudermann's plays, with here and there a word of specific criticism. The defect of the review is that space allotted to the separate works is not always well proportioned. In general Knortz holds that Sudermann has cast the ancients aside, and followed French influences, with this exception, that instead of depicting noble pleasure and furnishing a stimulus to better thinking and living, he has created characters who go after their own sinful inclinations. Adultery and seduction are the stereotyped themes of the majority of Sudermann's plays. Of course, the artist has the right to treat the hateful and improper in life, but only in the service of the beautiful; and while it is impossible to lay down exactly the bounds within which a dramatist should work, there is no doubt that Sudermann has frequently overstepped the limits of propriety. Sudermann is, however, as Herr Knortz views him a great moral preacher, whose object, while showing the evil, is to point out that sin is punished on earth.

J. M. Barrie's new play will be produced in the Duke of York's Theatre, London, in September. It is in four acts, and is said to contain several studies of Scottish characters. Gerald Du Maurier, Lillah McCarthy, Mrs. Beerbohm Tree, Sydney Valentine, and others have important parts. It will be staged by Dion Boucicault.

G. P. Putnam's Sons announce for publication this autumn "Johann Sebastian Bach, Composer," by Sir Hubert Parry.

A good life of Brahms (in German) may now be had for a nickel abroad, or a dime in this country. It forms a new volume in Reclam's Universalbibliothek, and is by Richard von Perger, who knew the composer well.

At four of the musical festivals in England this autumn, Worcester, Sheffield, Bristol, and Norwich, Mendelssohn's "Elijah" will be given. At Worcester, Sir Edward Elgar's "Wand of Youth," Suite 2, will be produced; at Sheffield, October 5-9, Henry J. Wood, conductor, and Dr. Henry Coward, chorusmaster, Fritz Delius's "Sea-Drift," a suite from the opera, "Eve of Christmas," by the late Rimsky-Korsakoff, Bach's "Matthew" Passion, Verdi's "Requiem," Berlioz's "Te Deum," Cæsar Franck's "The Beatitudes," Dr. Walford Davies's "Everyman," and Debussy's cantata 'L'Enfant prodigue"; at Bristol, October 14-17, George Riseley, conductor, Sir Charles Villiers Stanford's "Ode on the Death of the Duke of Wellington," Felix Woyrsch's "Passion Music," and Cyril B. Rootham's cantata "Andromeda"; at Norwich, October 28-31, Henry J. Wood, director, the prize cantata "Cleopatra," by Julius Harrison, Hugo Wolf's "Christmas Night," Dvorák's "Stabat Mater," Brahms's "Requiem," Debussy's "The Blessed Damozel," and Sir E. Elgar's "Dream of Gerontius" and "King Olaf."

Paul Joseph Maria Homeyer, one of the most famous of German organists, has died in his fifty-fifth year. His grandfather, his father, and his uncle were musicians. Born at Osterode, he studied at Kildesheim and Leipzig. At the time of his death he was organist at the Gewandhaus, Leipzig, and teacher at the conservatory there.

Art.

Old Cottages and Farmhouses in Surrey, illustrated on one hundred collotype plates from photographs by W. Galsworthy Davie, with an introduction and numerous sketches by W. Curtis Green. Pp. xiv+69. New York: William Helburn.

Books devoted to the minor domestic architecture of England have great interest for those who care for the artistic aspect of the dwelling; for there is no other country in which there is so large a proportion of attractive design, picturesque treatment, unassuming novelty, in country houses of small cost and of no pretension. Three such books are published in a well-known series by B. T. Batsford (imported by William Helburn), with illustrations from photographs; and these books are modelled on Ralph Nevill's volume of 1891, with his own drawings of the cottages of southwestern Surrey. The four volumes, in crown quarto, with page 7x10 inches, all deal with the heart of southern England, from the Channel to Northamptonshire. The new volume whose title is given above is made up of 100 plates, from photographs by Mr. Davie, and 69 pages of text by Mr. Green, with slight drawings in the text and a few half-tone prints of details of architecture.

The special interest is in the charm to be found in simple disposition of a few necessary parts—roof and walls, chimney stacks and dormers, and broad, low, lattice windows; and in such variety of surface decoration as may lie in tiling, weather-boarding, walls of varied masonry and timber framing. The drawings of Mr. Nevill's book in many cases represent the same houses which are given in the photographs of this work; and, as the points of view are different in most cases, the comparison is valuable. Thus, at Witley, in Surrey, the White Hart Inn has the ground story built of stone, a low second-story covered with tile hung from laths, and a large hipped roof, an unusual feature in England, covered with square tiles. The possession of two quite different views of this building, with two separate comments by men as competent as Mr. Nevill and Mr. Green, is a distinct advantage for the student.

The new book, taken by itself, is devoted chiefly to the houses of the ancient yeomanry. The lingering on of the picturesque element of mediæval art throughout the neo-classic revival is one of the paradoxes of architecture. The designer of the court, chosen by the noble and the bishop, had to pose as the advocate of Roman dignity and neo-classic grace, but the unknown builder, who, in the seventeenth century or in the days of Queen Anne, laid the brick walls of Bonnet's Farm, near Ockley (Plate lxi.), and the stone masonry of the house at Shamley Green (Plates lxxiii. and lxxiv.), was able to plan as he and his workmen had learned from their teachers—simply, unaffectedly, and with a natural turn for picturesque and therefore graceful results. The same influence is seen in the older Colonial houses of New England and Virginia. Evident, too, is the retention of the way of work of the mediæval builder, who staked out his house and proceeded to lay up his walls, without having carefully finished and figured drawings to follow. It must be said, too, that the text of these books, and especially of the latest, written by Mr. Green, is wholly in harmony with the spirit of the ancient impulse.

The defect of the book is the general absence of ground plans. If we could have a plan, or even two plans of each house which is given in photography, and a measured drawing of unusual bits of framing, the value of the work to the serious student would be doubled.

Duffield & Co. will issue in their Art and Letters Library this autumn "Artists of the Italian Renaissance," stories of the Italian artists as set forth by Vasari, Ridolfi, Lanzi, and others, collected by E. L. Seeley; "Stories of the Italian Artists from Vasari," also edited by Mr. Seeley; "Stories of the English Artists, 1700-1850"; and "Stories of the Flemish Artists from Van Eyck to the Seventeenth Century," by Prof. Paul de Mont, director of the Royal Museum, Antwerp.

Those who are interested in the question as to the encouragement of art by the state will find grist for their mill in "Les Beaux-Arts et la nation" by Charles M. Couyba, now a member of the French Senate, but better known as a public school songwriter under his anagrammatic name, Maurice Boukay. He deals with the duty of the state to foster art, with æsthetic pedagogy, decorative art in France and other countries, art in schools, and national museums and manufactures.

Jacques Baschet, secretary of the École nationale des Beaux-Arts, publishes two volumes on "La Peinture française au dix-huitième siècle et au dix-neuvième." They complete the series covering the entire history of French painting, a volume published last year being devoted to the period from the first beginnings down to the eighteenth century. The present volumes practically reach from Watteau to Édouard Manet, inaugurator of the new art of the nineteenth century's end. The writer is in sympathy with these new ideas, which claim for themselves the sole genuine representation of life and nature.

The Louvre Museum has acquired, at the price of 200,000 francs, Hans Memling's portrait of an old woman, which was exhibited in 1902 at Bruges, with other Flemish Primitives. It was originally the left-hand panel of a diptych. The right—portrait of a man—is a well-known possession of the Berlin Museum. The present panel comes from the Meazza collection of Milan.

The French Académie des Beaux-Arts has announce the awards in the Sculpture Section of the Prix de Rome. The Grand Prix is won by Marcel Armand Gaumont, who obtained prizes in 1903 and 1906; the Deuxième Grand Prix, by Camille Crenier; the Premier Second Grand Prix, by Paul Ponsard, who won in 1905, 1906, and 1907; and the Deuxième Second Grand Prix by Louis Lejeune.

Eugène Feyen, a former student of Paul Delaroche, has died at the age of ninety-three. He was particularly successful with pictures of the French coast. His best-known work is Les Glaneuses de la mer.

Walter Leistikow, one of the leading Berlin "secessionists," has died in his forty-third year. His most popular subjects are the landscapes about Berlin.

Finance.

LOW RATES FOR CALL MONEY.

Call money was lent on the Stock Exchange last week at ¾ of 1 per cent. Such a low rate had not been seen in four years; in only three years—1904, 1895, and 1884—has such a low level been touched in August. Last year the lowest rate in this month was 1¾ per cent., on August 21. The opening of August usually witnesses low rates for call loans, but less than 1 per cent. is abnormal. After dropping to ¾ cent. the rate rose again to 1¼ per cent., but 1 per cent. prevailed throughout the week. Are such low figures likely to continue?

They are, provided that the Stock Exchange demand does not impose unusual burdens upon the banks. At Paris discount rates fell last week to 1 per cent., the lowest point since 1895; they have also been lowered at London and at Amsterdam. Money has also been so easy here that not since March has call money commanded more than 2 per cent., and at no time since the end of January more than 2¼. The record of 1904 furnishes a somewhat similar instance, for in that year 2 per cent. was the highest rate between the close of January and the end of September, except for a single day in May. In July and August, 1904, conditions in the money market were like those of to-day. Call money

stood at ½ and ¾ per cent. throughout August and at ⅞ per cent. for three weeks of September. Then the rate gradually worked higher, until by October loans were commanding 2½ per cent., by November 3 and 4, and by December 4 and 5. This precedent may not be followed this year, although the New York bank surplus stands now about where it did then. After a financial crisis, however, interest rates always fall. Following the panics of 1903, 1893, and 1883, Wall Street had periods of ½ per cent. for call money; after 1873, the rate went to 1 per cent. Thus the present course of money rates is not at all unusual.

Such low rates are naturally disliked by the banks, since they commonly mean a great reduction in earnings. At ¾ per cent. $100,000 brings the lender only $2.08 per day. Under ordinary conditions, such a small return would not pay a bank for the trouble of making the loan, if it was to hold only for a single day; a call loan, however, usually runs for several days and sometimes for months, and the rate is often changed many times. Last year the banks received an average of 6.38 per cent. for call money during the entire twelve months; if present conditions continue, this year's average may be nearer 3 per cent.

JUST PUBLISHED

Dewey and Tufts's Ethics

By JOHN DEWEY, Professor in Columbia University, and JAMES H. TUFTS, Professor in the University of Chicago

618 pp., 8vo, (AMERICAN SCIENCE SERIES). $2.00 net

The significance of this book lies in its effort to awaken a vital conviction of the genuine reality of moral problems. Instead of presenting a ready-made system of ethics, the authors have adopted the historical method of approach. A study of *conditions* in successive stages of evolution puts the student in a position to judge the problems of conduct for himself. Part III. applies the results reached to problems of the present day.

The Nation.

NEW YORK, THURSDAY, AUGUST 20, 1908.

The Week.

What is the greatest evil confronting this republic? Is it special privilege, the growth of Socialism, or the prevalence of race hatred? Any intelligent foreigner, reading the newspapers of last Sunday and Monday mornings, would, we think, find in the general outbreak of lawlessness one of the most serious menaces to the stability of our institutions. Race riots in the home of Abraham Lincoln, a nearly successful attempt at lynching in the vicinity of this city, mobs in Cincinnati and Chicago, a whole State, Kentucky, terrorized by bands organized to nullify the laws and defy the authorities, cold-blooded murders in every direction—this is an appalling record of crime such as could be paralleled in no other country, unless it be one in the throes of social revolution. If Liberty stands triumphant and honored at our gates, Justice appears but a discredited drab. Waves of national lawlessness, we are aware, have not been uncommon before this. The Reconstruction period, with its Ku Klux horrors in the South, the ravages of Molly Maguires in Pennsylvania, and the uprisings of the mob in parts of the West are not to be forgotten. But the country has progressed in the last twenty-five years, with the settling of the West and the introduction everywhere of the court-house and the orderly procedure of justice. In the South, too, there has been much improvement, though in some regions the conditions are still bad enough.

But look at the facts. In editorial after editorial the Louisville *Courier-Journal* has been contending that the night-riders and the lynchers "have been making civilization a myth, law a joke, and the 'inalienable rights of man' a delusion." The Governor has had to call out the larger portion of the State troops and devote all his energies to this problem of maintaining order. And in Illinois, too, Gov. Deneen has had to send the militia to Springfield. The firmness with which the Governors of Kentucky and Illinois have acted is ground for genuine encouragement; but behind them the sober, steady elements must rally, unless we are willing to have the world regard this country as half-civilized, and to see the democratic movement everywhere receive a serious setback. For democracy, like autocracy, must insist upon the reign of law; without it both go under. Our legislators need concern themselves little with the theoretical anarchists, the Berkmans and Goldmans and Mosts. The real anarchists of to-day are those who declare themselves above the statutes, and stalk abroad, revolver in hand, to deal destruction as they see fit—to the mockery of government.

Not quite good enough for Representative J. Sloat Fassett and Herbert Parsons, not good enough for William Barnes, jr., of Albany and Mr. Ward of Westchester, Gov. Hughes has yet been found good enough to open the Republican national campaign in Ohio next month and to make many speeches in the West. Accused of being recreant to his party, the Governor has now supplied, after his own effective manner, an answer that confounds his enemies. The local bosses are, of course, still at liberty to maintain that the Governor's partisanship is but a poor thing. Has he appointed and decapitated, has he pulled and pushed, has he whispered in corners, has he bargained and pledged, has he, above all things, taken orders? No. Then it is absurd to call him a party man. That he saved his party from utter defeat in 1906, that the Republicans of the West are turning to him with increased attention and respect—all that does not make good partisanship in the eyes of the machine politicians. And when Gov. Hughes speaks in the West, he will be all the more popular there if, as Congressman Fassett asserts, the railways as well as the bosses are against him.

Under present conditions there is some plausibility in the prediction by Secretary J. E. Pritchard of the pavers and rammers' union that if the American Federation of Labor goes into politics it will also go to pieces. He pregnantly cites the case of the Knights of Labor. When the Knights entered politics, animosities and factions were immediately engendered in the local unions. It was not exactly with *éclat* that the Federation itself emerged from its fight to prevent Congressman Littlefield's reëlection. In the internal struggle for mastery of the union in the interest of a political organization the *prima-facie* interests of the worker are likely to suffer neglect. Moreover, when the feeling becomes widespread that the union is principally an organization to advance some person's political fortunes, all virtue goes out of it—and many of its members follow in virtue's footsteps. After Powderly's accession to a Commissionership of Immigration, we imagine that his influence with his former brethren declined. Mr. Gompers may be a disinterested advocate of the rights of the unionist, but malice will suggest that his espousal of Mr. Bryan's cause may be prompted by a selfish motive.

The government report on foreign commerce in July shows that in this direction, at all events, the business conditions have not changed. Last month's merchandise exports were reduced $25,000,000 from 1907, chiefly because of decline in shipment of other articles than products of the farm; but the reduction in imports was $38,000,000, or no less than 30 per cent. During the seven completed months of the present calendar year this falling off in imports has been no less than $267,000,000—a contraction so enormous that, notwithstanding a heavy reduction of exports also, the excess of exports over imports for the period has been $179,000,000 greater than in the same months of 1907. It might be imagined that, with such curtailment of our purchase of foreign merchandise, the country's import trade would have fallen to an abnormally low figure. Yet so far is this from true that our imports for the year to date, far as they have fallen below those of the same period in the three past years, are larger than the seven-months' total in any year prior to 1905. In other words, what has appareutly happened is the return to what was regarded as a normal trade before the sensational expansion in American business and speculation which began with 1905. This change in foreign trade conditions was inevitable, when the suddeu contraction of the

country's consuming power, as a result of the shock to credit, left even home manufacturing industries with barely one-half the orders which they had been receiving a year ago. In the twelve months after the panic of 1893, merchandise imports decreased $211,000,000 from the preceding year. They recovered in the fiscal year 1895 for a peculiar reason—namely, a sudden outburst of speculation and rise of prices in the home industrial markets, which had the double effect of cutting down our exports and increasing our imports, and soon afterwards weakened the economic position of the country, then in reality only slowly recovering from the panic. The genuine start was made in trade revival, and the way was opened for the era of great prosperity which followed, when the American manufacturer set to work making goods at prices which would fairly compete with outside producers.

Napoleon used to boast shortsightedly that the natural vices were the best patriots in his empire, and he illustrated his contention by pointing to the revenue from the taxation of intoxicants. The recent fall in our internal revenue receipts from distilled spirits suggests the same paradox. Is it better to have a full treasury and an average per capita consumption of 1.63 gallons of whiskey, as we had a year ago, or a fall of $15,767,038 in the drink duties, as indicated by the returns for the last fiscal year, and a reduction of about 10 per cent. in the amount of spirits consumed? The hard times beginning in 1893 steadily reduced the average consumption until it fell to one gallon per capita in 1896. British Chancellors of the Exchequer have impressed on Parliament more than once the financial problem—of finding additional sources of revenue—which the spread of the temperance movement would eventually create. Fortunately, they have taken the ground that the greater sobriety of the nation is an asset of more importance than the fiscal advantages derived from the heavy consumption of liquors—and our own Treasury officials may well urge the same argument.

The higher rate-schedules are apparently being kept as an instrument in the railway armory. If, under the suit filed by the Texas Commission, a significant synchronous rise in rates of many railways is not held a transgression of the Sherman Anti-Trust act, if the election news is reassuring, if crop prospects indicate that the traffic can bear another stiffening of charges, the project for higher rates will be quite ready. Meantime a stray item of railway news shows a more excellent way of augmenting earnings. Southern New Jersey distributed more than $1,000,000 of produce over New England, the Middle West, and Canada last month, an increase of $750,000 over last year's July shipments. The significant explanation given is:

> Special schedules were established, and trains known as "preference freights" were run, making time equalled only by passenger trains. The market was greatly widened as a result of the development campaign undertaken by the Pennsylvania Railroad in behalf of the commercial and agricultural interests of southern New Jersey.

The defects in our system of appellate jurisdiction enumerated by the special committee of the American Bar Association relate specifically to the Federal courts, but the principles laid down may well be extended to the processes of many State tribunals. These defects have been summed up as "the law's delays." But more than the law's delay is involved when higher courts persist in ruling on technicalities and disregarding the merits of the question. The law's miscarriage is often the result, and that, not alone because a delay of justice is also a miscarriage of justice. The higher court may hold that it rules only on form when it sends a case to the lower courts for retrial. But actually the ruling of the higher tribunal influences the outcome in the lower court. Here, for instance, your trial judge gives oral hearing on an indictment of so many dozens of counts, listens to testimony, argument, and pleading, asks for supplementary briefs, and then decides, as judges from the beginning have always decided, on the basis of intuition and psychological data, as well as on the spoken word. His decision is brought up for revision in a higher court, and there, because one witness out of a score may have failed to receive his full rights, the case may go back for trial on "error." It does not matter that the error had only the remotest influence in shaping the original decision. Back the case goes, on form ostensibly. But a lower court will not always remain unswayed by action above, even though it was on form only.

A more remarkable memory than that of the late Ainsworth R. Spofford is not often recorded. Of untiring industry and the widest knowledge, he could yet retain details in a way to stagger every one who witnessed an exhibition of his powers. In the days of the old Congressional Library, when, for lack of space, books were piled up in every direction, on chairs, desks, tables, and the floor, Mr. Spofford could go to a pile and select the book he wished with unerring accuracy. Nor was this knowledge confined to his own library. It is related that on one occasion, after failing to satisfy Gen. Lew Wallace by giving him the books on a certain subject in the Congressional Library, he said that the desired volume was in the Harvard library; and Mr. Spofford went on to state the title, library number, shelf number, and the position the volume occupied on the shelf—"sixth from the south end." This story, if not true in every detail, is at any rate characteristic. In addition to a memory for such things Mr. Spofford had a fairly encyclopædic knowledge of all topics of human interest. He himself was for years the Congressional Library, at least to all intents and purposes, and the number of Congressional and Senatorial speeches he influenced would run into the thousands. When the new library was completed, Mr. Spofford's services were retained, despite his lack of business capacity. And no servant of the government ever deserved more consideration at its hands.

The withdrawal of Alfredo Zayas, leader of the Zayistas, and a chief conspirator in the late revolution, from his candidacy for the Presidency of the Cuban Republic, is an event of great significance. Not lacking in brains or in legal ability, Zayas has been the best of the candidates in the field, but beyond that nothing can be said for his fitness. Now that the Conservatives have suddenly shown such great strength, Zayas finds it necessary to withdraw in favor of the Miguelistas, the followers of Miguel Gomez, in order that both factions may make common front against the new—or old—enemy. Ever since Gov. Magoon has been in Cuba, Gomez and Zayas, companions in the insurrec-

tion, have been engaged in fighting one another for the spoils of office, or any possible personal advantage. The net result should now be the division of the people into two parties: the horse-thieves and insurrectionists of 1906 on one side; and on the other those who supported Palma, backed, let us hope, by the solid property-owners. These men have hitherto held aloof from politics, because of disgust and a well-founded fear that a new insurrection might witness the destruction of all their property for their temerity in entering politics. The curse of Cuban politics is that there are no issues whatever on which to divide; that no party dreams of a platform; and that Zayas and Gomez are interested merely for the offices they can hold and the money they can make. Hence the desirability of the entrance into the Presidential contest of a man of fine character like Gen. Mario Menocal, who is likely to lead the Conservatives.

That Great Britain has consented for another fishing season to extend the *modus vivendi* arranged some two years ago with this country concerning the fishing off Newfoundland, is a cause for congratulation. The dispute centres about the claim of our fishermen, based on the treaty of 1818, to take fish in Newfoundland waters on the same terms as British subjects. This protracted difficulty over our several rights in this matter promises to be settled eventually, without serious friction, before the Hague Tribunal. The arrangement is but another instance of the spirit of reasonableness in which our relations to Great Britain are now fortunately regarded by both governments. It is a matter of regret that any discordant note should be evoked by this joint agreement to abide by a provisional adjustment until the whole matter can be fully arbitrated. The London *Morning Post* seems to attribute the happy outcome of the affair to Sir Edward Grey's weak "yielding to American pressure," but weakness is not commonly supposed to be a characteristic of the present Foreign Secretary. He is probably broad-minded enough to see that public opinion in Great Britain would hardly condone an attempt to enforce disputed rights when the matter is in process of amicable adjustment.

That women of the harem have played an important part in the Turkish constitutional overturn, should not come with a shock of surprise to the Western world. Pierre Loti, in his "Désenchantées" of two years ago, only gave a wider publicity to the known fact that European ideas and manners had followed Parisian clothes and novels into the *penetralia* of Constantinople's leading families. Separation and seclusion have supplied the wives and daughters of the ruling class with unlimited leisure for study and self-improvement; and we take it that Loti is true to life when he makes his heroine speak English, French, German, and Italian with equal excellence, and includes in her list of reading, Schopenhauer and Nietszche and Spencer, and the very latest of the symbolists and decadents. It is another question how far such enlightenment has spread among the women of Turkey, and whether sufficient basis has been laid for an active suffragist movement. But within two weeks of freedom the workingmen of Constantinople have already learned to strike, and it may be that women's rights will be swift in coming. Reforms nowadays travel in large companies, and a radical movement in a backward country may actually have this advantage over its counterpart in a more enlightened state, that when one inevitable change comes, others ride in with it. In England the suffragists have still the country to convert, but in Russia the great bulk of liberal opinion is for female enfranchisement.

There is nothing that binds like red tape. The story is told of a private in the French army who desired to buy and wear a special kind of shoe rather than the regulation article. He discovered that it was possible only after months of delay, and after securing written permits from some seven bureaus or more. The latest illustration of the lethargy of bureaucratic administration in that country comes in a renewal of protest against the Parisian telephone system conducted by the French Post Office. The Chamber of Deputies has been petitioned to turn over the service to private enterprise, because the petitioners despair of obtaining better service from the public administration. M. Noulens, Deputy for Gers, recently made a startling arraignment of the telephone management in his report from the Parliamentary Committee of Posts and Telegraphs. The plant is said to be antiquated, the staff untrained and inefficient. The department has fought measures for improving and extending the system, and still maintains the flat rate of 400 francs per year. A new exchange authorized by law in 1906 is just rising and will probably be completed in 1910. It is estimated that a measured-rate tariff would immediately increase the subscribers by almost 100 per cent. Unfortunately, the plant now in operation is not adequate to cope with such an extension, and several years must probably elapse before a modern telephone system can be expected in the French capital.

THE ADROIT MR. BRYAN.

How much Mr. Bryan has profited by his years of campaigning appears clearly in his speech of acceptance. It has all the earmarks of the man accustomed to addressing the nation on public affairs, and is not lacking in ability and shrewdness. He has had the wisdom to confine himself to readable limits, and his vigor and clearness of diction, it must be confessed, contrast most favorably with the ponderous style and the tiresome length of Mr. Taft's address at Cincinnati. That the Nebraska fencer is quick on his feet and at ease in the tourney has been apparent from the beginning. He is not lacking in self-confidence, and is not afraid to take the lead. He scored visibly in the bout over campaign expenses, and, in this more formal one, he has slipped past his adversary's guard and pinked him not once but several times. The umpires, to be fair, must cry "Touch" at Mr. Taft's expense.

On the vulnerable parts of Mr. Taft's address Mr. Bryan readily puts his finger. There was Mr. Taft's grave summary of "known abuses" that have been ended, and others that still remain uncorrected. Mr. Taft, it will be remembered, is one of those who believe that, if Mr. Roosevelt had not come to the rescue, this country was in danger of "a plutocratic government toward which we were fast tending." Under what Presidents did these evils grow apace, under what system of laws? asks Mr. Bryan. Why were the evils which Mr. Roosevelt is said to have throttled as the infant Hercules the snakes, allowed to become

so formidable under successive Republican administrations? Since the party of Roosevelt and Taft has been in power from 1861 on, with the exception of two separated periods of four years, it is a fair deduction that Republican policies and Republican laws are responsible for the loss of political power by the people, for the rule of the many by the few, and for the growth of those astounding fortunes which our tariff barons have so readily shared with the Republican campaign managers. And why, asks Mr. Bryan with great effect, have not *all* the evils been corrected? If there are adequate laws, why have they not been enforced; and if there are no laws why have they not been enacted? The Republicans have had undisputed control of both houses; on many issues they have had the support of Democratic votes. Yet they have passed neither the anti-Trust bill nor the railway laws which their own President has declared necessary. Mr. Bryan is correct in saying that Mr. Taft as President could not have larger majorities or a more despotic Speaker behind him; and he does not forget to dwell upon that schism in the Republican party, a contest between reactionaries and radicals, so evident in Kansas, where Senator Long has just now been defeated for renomination, largely because he did not favor the radical railway legislation that both Mr. Bryan and Senator La Follette have urged.

But it is in dealing with the tariff that Mr. Bryan strikes the heaviest blows. Both Mr. Taft and Mr. Roosevelt have pronounced for revision; both have postponed it with politicians' cowardice until after the election. Had Mr. Bryan wished he could have cited from Mr. Roosevelt's New England speeches of 1902 some brave anti-tariff utterances the like of which the President has not ventured upon since. Mr. Bryan could have asked why those lips are padlocked, precisely as he has laid stress upon the direct connection between the campaign contributions of tariff beneficiaries and the inability of the Republicans to reform the tariff save by raising the duties.

But, if we must in justice to Mr. Bryan welcome this note of aggressive opposition, we must say also that the adroitness of the politician and his skill with the rapier are after all what stand out most clearly. He is attacking his adversaries; he has comparatively little to say in defence of his own hosts. The legends on their banners he sums up in the question, "Shall the people rule?" The details he leaves for other occasions. Moreover, he takes a position that is new and absurd in American politics when he declares himself bound wholly by the platform of his party and unable to discuss matters beyond it or behind it. He will not go into the various causes which he has been advocating in the last twelve years. He will say nothing about free silver, about the election of judges, his plans for the Supreme Court, or his foolish scheme of government ownership of railways. They were trial balloons. The wind of popular favor did not blow in his direction, and they are to be forgotten. If anything could render this attitude more ridiculous, it is that Mr. Bryan himself dictated if he did not write the platform.

That this silence as to the unhappy past is an appeal to the conservatives of the East, like his assertion that the Democratic party is the "defender of honest wealth" and seeks "not revolution but reformation," is obvious. "You do not like some things I have said? Well, don't worry; I shall talk about them no more. I'll only talk about what is in the platform. I am at my worst there. And don't forget that I want only one term." This is the wisdom of the ostrich. It will deceive no person; close no one's mouth; keep nobody from referring to Mr. Bryan's former hobbies, which throw so much light on both his character and his theories of statesmanship. For it is not the fencer, however adroit, or the circus tumbler, that this country wants in Washington; not the man who urges one set of ideas one day and declines to have them even spoken of the next. We are not yet ready to entrust the United States to men whose policies are as changeable as the wind.

THE MINOR PARTIES.

In the Presidential election of 1904 the Socialists, the Prohibitionists, the People's party, and the Socialist Labor party polled a total of 809,251 votes. All four organizations are in the field this year, and to them is added W. R. Hearst's new-born National Independence party. The Socialists and the Prohibitionists look forward to large gains; and with good reason. Socialism since 1904 has been widely agitated; it has made converts among what stern Marxians a few years ago would have called the non-producing classes; and in the present campaign it has industrial depression to feed upon. The Prohibitionists, in tangible results, have done even better than the Socialists. The movement has swept over the South, and is gathering impetus in the Central States. The Prohibition candidate for the Presidency estimates that one-half of all our population is now living in prohibition territory. Even if signs of reaction are apparent here and there, it is too early yet to look for a cessation of the last two years' growth. Mr. Hearst's strength can only be guessed at from the showing made by his local organizations in New York, Illinois, Massachusetts, and California. But Hearst, Debs (whose followers see visions of a million votes), Watson, and the Prohibitionists will probably poll between a million and a million and a half of votes. What effect will that number of neutralized ballots have on the fortunes of Mr. Bryan?

We say Mr. Bryan, because we assume that the minor parties, embodying as they do various degrees and shades of radicalism, have been mainly recruited from Mr. Bryan's radical Democracy; and that any large gains of Debs or Watson will be made at the expense of the Democratic party. Mr. Hearst, indeed, is in the campaign with the unconcealed purpose of hurting Mr. Bryan. Just what can he and Debs do? It is easier to answer with regard to Hearst. Were the campaign at the outset not restricted to a comparatively narrow fighting-ground, the Hearst influence might count for more. But in spite of iridescent visions of Democratic victory on the Pacific Coast, it is obvious that Bryan's hopes abide chiefly in the Mississippi Valley. California is practically conceded to the Republicans; New York is likely to go Republican unless the local leaders are silly enough not to renominate Gov. Hughes; in Illinois Democrats have a slight chance, because of Republican strife; Massachusetts is, of course, Massachusetts. Yet these four States contain almost all of Mr. Hearst's strength. Say that he vindicates his boast of carrying Massachusetts. He will only earn Mr. Bryan's gratitude for reducing the Republican electoral vote. Even if Mr.

Hearst flourishes a very heavy knife, he cannot get at Mr. Bryan's vitals. But Hearst journalism and Hearst money are mobile and resourceful. Will they not invade those Central States in which Bryan contemplates a serious campaign? Cannot the National Independence party make just enough headway in Ohio, Indiana, Kansas, and Nebraska to blast whatever hopes the Democracy may cherish? The outlook for a Hearst boom there at Bryan's expense, or, for that matter, at any one's expense, is not bright. With at least three different brands of radicalism to choose from—the Taft-Roosevelt, the Bryan, and the Debs kind—the voter should scarcely be in a mood for a fourth variety, and especially one that has just been placed on the market. We can imagine, on the other hand, an old-fashioned conservative finding it impossible to vote either for Taft or for Bryan; for Bryan because he is Bryan; and for Taft because he is Roosevelt. That the conservative who cannot stand Bryan will accept Hearst is manifestly absurd. Such a vote will go to the Prohibitionists, or to no one at all. To imagine Hearst winning new ground with his radical platform more or less eclipsed by other radical platfoms is very hard. We doubt, indeed, whether he can keep his strength even in his own citadels. In this State signs of dissolution in his following are abundant. A drift back to Bryan is perceptible, notably in New York city.

From Debs, Mr. Bryan on the face of things has more reason to fear harm. The Socialists are present in appreciable strength in the States Mr. Bryan has selected for the battleground. In Colorado, which gave a Republican plurality of 34,582 in 1904, and 18,134 in 1906, the Socialist vote of 4,304 in 1904 rose to 16,938 for Haywood for Governor in 1906. These are undoubtedly votes of protest against a Republican régime, a protest by which the Democratic party might have profited if the Socialists were not there. Idaho gave the Republicans a majority of 8,890 in 1906; two years earlier Debs had polled 4,954 votes, a very respectable number, where the margin between the two leading parties was so small. In Indiana the Republican plurality in 1906 was 30,825; at that time the Socialists cast 7,824 votes (a decline from 12,013 in 1904). In Iowa, the Republican plurality in 1906 was 20,285; Debs in 1904 had polled 14,847 votes. In Kansas, the Republican plurality in 1906 was 2,123; Debs had received there 15,494 votes. In Missouri, the Democratic plurality in 1906 was 9,077, and the Socialist vote was 11,528. In Montana the Republican plurality in 1906 was 8,410, and Debs's vote, two years before, 5,676. Oregon, which has shown a leaning toward Democracy, gave 7,651 votes to Debs. All these Socialist votes Mr. Bryan would be glad to get.

But this year there are conditions which minimize the danger to the Democratic party from Socialist aggression. If the Socialists are to pofit by hard times, it is not against the Democrats that they must direct their attack. How can we be held responsible for anything, Mr. Bryan may plead, if we have been excluded from responsibility for so long? The Democracy itself is now a party of protest, and expects to profit by discontent. Far from losing many votes to the Socialist party, Mr. Bryan may even hope to intercept a number on the way from Mr. Taft's camp to Debs's. And it must always be remembered in contemplating the prospects of the small parties that some of their gains will be offset by the natural increase in the electorate.

THE REACTION IN GERMANY.

With the light of constitutional liberty ablaze in the Near East as never before, the reactionary tendency of the various German governments seems to be distinctly strengthening. Having taken the Liberals and Radicals into camp by making them a part of the Parliamentary *bloc* that sustains the government, Von Bülow and his imitators seem to feel freer than ever to suppress anything that looks like liberty of speech or criticism of the government on the part of its subordinates. Even if one be but a simple teacher in a small State of the Empire, the muzzle is applied. As for the Social-Democratic movement, it would be political suicide for any official even to sympathize with it. When a commanding general in Berlin can order his soldiers to refrain from traversing portions of a popular park because it is sometimes frequented by Socialists, it is obviously impossible for any one in government employ to betray the slightest interest in the theories of Bebel and his school.

It is in Bavaria that the school teachers have been catching it. Two of them have dared to have opinions of their own, only to be threatened with the loss of their positions on the repetition of their offence. Their cases are soon to be discussed in the Bavarian Diet. But the incident which has aroused the greatest feeling is the attempt to discipline the burgomaster of Husum, Dr. Schücking, for his temerity in writing newspaper articles for the Liberal Berlin *Tageblatt* and in becoming a candidate of the Radical People's Party at the last Prussian elections. Dr. Schücking declares that, just before the election, he was visited by a fellow-official, who told him that he was to be summoned before his superiors to explain his candidacy, which the government could only regard as hostile and improper. Dr. Schücking was advised further that if he should plead that he took the nomination in order to save the city from a Danish candidacy—Husum is near the border—all might yet be well. Dr. Schücking, however, declined to avail himself of this excuse, was recently cited to show cause why he should not be punished for misconduct, and has been duly disciplined. Just what the other facts in the case are the ablest German newspapers have been unable to determine exactly. There have been charges and counter-charges, and official denials innumerable.

But, as the *Frankfurter Zeitung* points out, the net result is fresh proof of the ultra-conservatism of the government and its insistence that every one shall think and speak as it wishes. This is the late policy of the Sultan of Turkey, modified to conform to German conditions, since poisoning and banishment are not popular under the Prussian eagle. Naturally, the desire of the Prussian government is to reserve the offices for those who can be relied upon. The proletariat is often excluded; the aristocracy favored in civil life as in the army; and the sons of officials are particularly welcome. As always happens, there is much public resentment, while the very attitude of the government makes hypocrites of its subordinates and inclines them to accept radical doctrines even when they cannot avow them.

That there lies back of the Schücking case a deliberate intention to force the Liberals into becoming more complai-

sant servants of the government, is openly charged. Von Bülow might, however, have rested content with his shrewd move in taking into camp the Liberal parties. They have, in consequence, lost much of their influence, and split up into smaller factions. Dr. Theodor Barth and some of his associates have formed a new organization, the Demokratische Vereinigungspartei, and are greatly encouraged by the recruits they have received. Their platform may best be described as a Liberalism that does not believe in compromising in order to pull Von Bülow's chestnuts out of the fire. Many Liberals and Radicals have heretofore been satisfied with the adherence of their parties to the Chancellor; but it is now plain that these men are on the point of revolt because of just such evidences as Dr. Schücking's case offers of the reactionary tendency of the day.

On this movement which has rendered German Liberalism so pitifully ineffective Prof. Otto Harnack of Stuttgart throws considerable light in a recent issue of *März*. Admitting that the government of Prussia is narrower and more conservative than that of the rest of Europe (except Russia), he finds that the responsibility rests, after all, with the people themselves. They are more and more, he says, bowing down to the will of powerfully centralized authority. It is becoming rarer and rarer to find people of position who have opinions contrary to those of the ruling classes, or who, having them, dare to voice them. For this condition of affairs the military system is partly accountable. Each German has to serve in the army, and while there he learns that opposition to the will of his superiors is the one unpardonable crime. This, Dr. Harnack points out, influences him throughout his life. In the fields of religion and education there is unusual freedom of opinion and expression, which, however, ceases abruptly when the discussion borders on the political. It is as if the German had forgotten Aristotle's definition of man as primarily a political entity, and concerned himself preferably with anything but politics. Again, Dr. Harnack thinks that a false ideal of patriotism—not unknown in this country—as something to make one swear by heaven and earth that nothing in Germany could be improved, also gives reaction its opportunity. And reaction in the Empire is making hay while the sun shines.

SHIPPING AND SHIPBUILDING.

The cable reports of the address made in London last week to the shareholders of the Anchor Line by the chairman of the directorate, Richard Henderson, but reflect the depressed condition of the shipping trade. The speaker described the recent stagnation as "probably the worst since the formation of the company." Like other persons in misfortune the ship-owners have found that their troubles come not singly but in battalions. Some of the causes of recent difficulties are accidental and probably temporary, while others threaten to be permanent. The coincidence of the financial panic in this country with relatively short crops for export has been very trying. Next has followed (and partly as a consequence) tight money, and an ebb of the tide of westward migration—the latter offset for a time by a returning throng of third-class passengers who have been thrown out of employment in this country. More persistent among adverse influences is the rise in the price of coal; and even more menacing still is the enormous increase in the number of ships the world over in the last two decades.

Naturally, the depression in the shipping trade has been speedily communicated to the shipbuilding industry. In this ancillary branch of transportation, the reaction has been more severe, because freighters afloat have found it cheaper to lose a little for a time by according low rates, than to lose everything by rusting at anchor. The laying down of new bottoms is governed, on the contrary, by future prospects, and as these have been black enough, the shipbuilding industry in many places has practically collapsed. The significance of the increase in tonnage of the world's freighters may be readily grasped from tables recently published in the *Frankfurter Zeitung*. In 1889 the tonnage of steam vessels was about 7,748,000, and of sailing vessels over 11,000,000. Last year the steam tonnage had risen to 20,000,000, while the sail-borne tonnage had fallen to 7,250,000. The net increase on the basis of tonnage alone has been about 50 per cent. in eighteen years. But the real carrying capacity of the world's fleet has increased in a much higher ratio, inasmuch as a steam-driven ship on the average will carry three times as much freight in a year's time as a sailing vessel of equal hold capacity. The actual increase in carrying efficiency, therefore, between 1889 and the present is reckoned at over 300 per cent. Even without any slackening of commercial activity, the expansion in the world's merchant marine must have caused the sharpest competition for business—a competition intensified by the profuse subsidies such as those granted for a time by the French Government.

The quick response of the shipbuilding industry to the recession in the carrying trade is registered in the sharp decline in new tonnage laid down. In Great Britain, where the most careful records of this movement are kept, the fourth quarter of 1905 proved the banner one, with keels actually laid for a tonnage of 514,000. That this pace, though rapid, was not greatly in excess of normal appears from the fact that the figures for the fourth quarter of last year were 477,000. From this point there has been a drop to 161,000, and 160,000 tons for the first and second quarters respectively of the current year. A word of explanation is fairly in order to make clear why any new tonnage at all should be laid down, when the relative excess of freighters is so marked. The explanation is partly that lighters, machine-ships, crane-boats, and similar craft are included, and that their construction is incidental to carrying on repair work and the like. Passenger steamers, it should be noted, require a longer period for construction than the ordinary freighter—a period often extending over two years—and their completion has involved some work that could not be postponed.

The international distribution of the shipbuilding industry, as evidenced by the survey given by the *Frankfurter Zeitung*, carries little encouragement to those who think that subsidies are the only way, or even the main way, in which to create a merchant marine. Great Britain still retains its primacy, laying down in 1907 not far from 60 per cent. of the world's tonnage. On the other hand fifteen years ago, over 80 per cent. was the share that went to the English builders, so that while absolutely the trade has expanded in England, it has lost relatively to other rapidly growing nations. In this interval the

United States, Germany, and Japan have all made marked progress. Our own growth is due, of course, in great part to our monopoly of the coasting trade; but our abundant stores of cheap iron constitute a natural advantage of great magnitude, which must tell increasingly in the future. Germany, though it now lays down a tenth of the world's tonnage, is hampered by costliness of coal transportation, and complains that Holland, because of its free-trade policy, can buy German iron for ships at lower prices than are accorded at home to German builders. Japan's growth has been forced, purchased at great cost in taxing a hard-working people not supplied with large natural deposits of mineral. France, now that the subsidy orgy has been checked, has fallen astern of little Holland in the race. In this industry the controlling causes are the deep-seated ones, and if those who pant so noisily for a subsidy policy, will only wait, they may find their wish—the creation of a great merchant marine—but not their method, granted in the not too distant future.

THE RESERVES OF THE MODERNIST ARMY.

The strike of the university students of Austria gives us a glimpse of one of the powerful forces with which the reactionaries in the Catholic Church must contend. Prof. Ludwig Wahrmund of Innsbruck, through pressure exerted by the clericals, was forbidden to lecture because he had written a Modernist pamphlet. By way of protest against this attack upon academic liberty, the students struck; and since the suspension of Professor Wahrmund was sanctioned by the government, the movement spread to the other Austrian universities. The outcome of this particular strike and the fate of Professor Wahrmund are matters of little consequence. The principle involved transcends the fortunes of any individual or any institution—be it even so mighty an organization as the Roman Church. The point we would make is that the opponents of Modernism must reckon not merely with the priests of to-day who may be disciplined and silenced, but with the rising generation, and the generation behind that, and the next and the next, to the end of time. The conservators of the old tradition are fighting with an army which is eternally renewed and refreshed; beating it back is like beating back the flooding tide. Unless the hosts of orthodoxy can meet their enemy with as steady and strong a stream of reinforcement their battle is lost.

Modernism is, we take it, not a set of doctrines, but a point of view. The Modernist asks that conceptions of religion and of spiritual life be stated in terms that are intelligible to the man of to-day, that is, in terms which recognize the results of scientific and historical investigation. A creed which embodies the notion that the world was created in six days is incomprehensible to educated persons, because they know that as a matter of fact the world was not so created. The Church appeals to certain historical documents in support of her position and her dogmas. The Modernist replies, "Very well, we will examine those documents by the best critical methods. We will scrutinize the manuscripts in which they are transmitted; we will study the language and the ideas; we will compare the variants; we will analyze the interpolations and other alterations. We will weigh the evidence ascribing these documents to particular persons or periods; we will try to determine whether the sentiments are really those of traditional interpretation." If the authority of the Church rests on these documents, the Church cannot logically refuse to submit them to the analysis which scholars apply to all other such testimony. The Church has refused; and its decision is accepted by older men, trained in the schools of a by-gone day. But the Church cannot maintain this stolid *non possumus* against the demands of university graduates of the twentieth century.

The inevitable course of events has been demonstrated within fifty years. The doctrine of evolution was received with hoots and jeers by orthodox religionists of every sect. The clergymen who went over to the new theory were denounced by bishops and tried for heresy. Throughout the length and breadth of Protestantism there was as bitter an outcry as in the Catholic Church now over Modernism. The adherents of the faith once delivered seemed as strongly intrenched in their ecclesiastical fortresses as the Pope and his counsellors are in theirs. The old men clung as doggedly to the old views. But the old men are dead and dying, and the new are silently and swiftly taking their places. Since 1870 every biological laboratory in every college in Christendom has been a laboratory for the study of evolution. The Church could not bar out evolutionists without barring out all men trained in modern scientific methods, and thus relinquishing completely its intellectual and moral leadership and its hold upon nations that are educated and progressive.

This will be the difficulty that in a decade or two will confront the Papacy. In spite of its compact and centralized power, it is in the long run subject to the same influences that have disintegrated the traditions of Protestantism. In this connection one of the features of the recent Pan-Anglican Congress is deeply significant. In commenting on the various sessions, the London *Nation* says:

> A general attack on the critical method was everywhere severely discountenanced. A few years ago any oration could draw approving cheers from such multitudes by cheap sneers and denunciations of those "higher critics" who had disproved the Flood, or dissected the Pentateuch, or divided Daniel into fragments. To-day, such attempts, when essayed, evoked no corresponding approval. The audiences were revealed as representing a community, cautious, reserved, anxious as to the ultimate results of criticism of the Bible, clinging desperately and often defiantly to faiths and affirmations which have long been regarded as sacred. But it is a community also which has moved, and moved remarkably, both in the acceptance of results held to be heretical a generation ago, and also in toleration for the method by which such results have been obtained.

Acceptance of the results and toleration for the method—this looks like the beginning of the end of an acrimonious conflict. Toleration for the method means, of course, acceptance of results; for one cannot grant the premises and deny the conclusion.

Not even the Papacy can do that for any long period. Its laymen, if they are to compete with the rest of the world in the arts, the sciences, and commerce, must attend the best universities; and there they will surely become tainted by Modernism. The priesthood must continue to be men of culture and of disciplined mind; and that, again, implies at least a tincture of Modernism. The Church, in fine, cannot subsist merely by an appeal to the unlettered masses. Indeed, with the spread of free public schools in Europe and both Americas, we are fairly in sight of the hour when large unlettered masses will

no longer exist in Christendom. Every schoolhouse will propagate the method of the Modernist; and those findings of exact scholarship which to-day excite something like a shock in the diminishing circles of rigid orthodoxy will be received to-morrow calmly and even listlessly as the current commonplaces.

"GOSPEL HYMNS" FOR 80,000,000.

The death of Ira D. Sankey has filled the newspapers with anecdotes about his life. We are told of the impression which his singing first made on Mr. Moody, of his improvising the tune for "The Ninety and Nine," of the huge crowds, sometimes 20,000 people, who came to the Moody and Sankey revival meetings, and of the enormous sales of the "Gospel Hymns." The number of copies printed is reported to be 50,000,000; and even if this figure be somewhat exaggerated, the great popularity of these hymns is one of the facts with which historians of American culture must reckon. Publishers complain that there is little or no demand for good poetry; but year in and year out the Moody and Sankey hymns keep the presses busy.

Such revival services as first gave them vogue we are not likely to see again, at least in the East. The efficacy of this method of appeal is now gravely distrusted even in denominations—like the Methodist and Baptist—which once relied on it. Mr. Moody himself, in his later years, is said to have doubted whether the effect of revivals was permanent. He found that, after the excitement had died out, the tears and groans from "conviction of sin" and the ecstacies of conversion left many men about where they were before, only a little more indifferent and callous. A community "burnt over" by a wild revival often proved a difficult field to cultivate by sober and steady means. Mr. Moody's interest thus became more and more engaged in forming the character of the young by the slow, calm, and laborious process of education. The results of that work were, he thought, lasting.

With the passing of the old-fashioned revival, which from Whitefield to Moody has thrown whole cities into agitation, the few hymns that are peculiarly fitted to provoke a religious frenzy may perhaps fall into disuse. But the bulk of the "Gospel Hymns" seem likely to hold their own indefinitely. In the first place, it must be said that the book contains many old favorites by hymn-writers of the eighteenth and early nineteenth century—such as Watts's "There Is a Land of Pure Delight," Toplady's "Rock of Ages," John Mason Neale's "Ah, My Heart," and Keble's "Sun of My Soul." These, however, which are found in many other collections, are not the characteristic "Gospel Hymns." The distinctive feature of Mr. Sankey's book is those lively, rattling pieces like "Hold the Fort" and "Pull for the Shore" and the crudely sentimental hymns of Fanny J. Crosby, P. P. Bliss, and their imitators. The music, from the point of view of a severe critic, is as contemptible as that of a music-hall ditty; but it has some of the same popular qualities. The air is simple, strongly marked, easy to sing, easy to remember, "catching"—just the thing for children and for adults who in their musical taste are still children. And the words fit the music. Many of the hymns are a mere wooden versification of the commonplaces one hears in the "testimonies" and exhortations at a Methodist prayer-meeting. This, for example, by Miss Crosby (Mrs. Van Alstyne):

> Now just a word for Jesus,
> Your dearest friend so true,
> Come, cheer our hearts and tell us
> What He has done for you.
>
> Refrain:
>
> Now just a word for Jesus—
> 'Twill help us on our way;
> One little word for Jesus,
> O speak, or sing, or pray.

Less baldly hortatory, but worse in point of style, are these lines by Mr. Bliss:

> Oh, how happy are we
> Who in Jesus agree,
> And expect His return from above;
> We sit 'neath His vine and delightfully join
> In the praise of His excellent love.
>
> When united to Him
> We partake of the stream
> Ever flowing in peace from the throne,
> We in Jesus believe, and the Spirit receive
> That proceeds from the Father and Son.

But the book is notable chiefly for its sentimentality—with "The Ninety and Nine," "Where Is My Boy To-night?" "I Am So Glad that Jesus Loves Me," "Let the Lower Lights Be Burning," "Scatter Seeds of Kindness," and hundreds more in the same vein.

The taste for this sort of psalmody seems to flourish as vigorously as ever, especially in the country. Millions of people derive enjoyment and edification from the kind of talk that is heard at a rural prayer-meeting. They are not disturbed by the unspirituality and crass materialism of the ideas there presented. They are not fastidious about either the form or substance of religious truth, and without a qualm they throw themselves into songs such as we have quoted. Human nature being what it is, and the liking for bathos being so widespread and ineradicable, the "Gospel Hymns" as a whole will probably remain popular and even increase in popularity for a long time to come. The people who sing them with such zest would not appreciate the delicacy and refinement, in thought and expression, of the few great hymns. For these honest folk the triviality of the music, the cheapness of style, the shallowness of conception, and the cloying sentimentality are exactly what lend charm to the "Gospel Hymns." While the *Ladies' Home Journal* continues the model of a successful periodical in America, the "Gospel Hymns" will go on selling by the million.

And yet we would not undervalue these hymns—the solace they have brought in sorrow, the inspiration in moments of despondency, the strength in the hour of weakness. They are, after all, not to be judged by the strict canons of musical and literary art. In their own field they are a law unto themselves. Many a man who can coolly dissect poetry and music of far higher technical excellence and can lay his finger unerringly upon the flaws, would hesitate to subject these hymns to critical analysis; for behind the empty and jingling words may lie a world of tender memory and profound emotion. The familiar cadence may recall the quiet Sundays of childhood and the menacing or pleading voice of the preacher; the aspirations of youth and its lofty resolves; and the solemn farewells of death. These images may come thronging back, more vivid than any evoked by the organ-notes of Milton. And even those for whom personally the "Gospel Hymns" may mean little or nothing, will do well to remember that it was Pater, a very high priest of culture, who said that "nothing which has ever interested living men and women can wholly lose its vitality—no language they have spoken, nor oracle beside which they have hushed their voices, no dream which has once been entertained by ac-

tual human minds, nothing about which they have ever been passionate or expended time and zeal."

NEWS FOR BIBLIOPHILES.

The most recent issue of the Bibliophile Society is a volume entitled, "Charles Dickens and Maria Beadnell: Private Correspondence." It consists of letters written by Dickens to his first love, Maria Beadnell, said to be the original of Dora of "David Copperfield" and Flora of "Little Dorrit." The book is edited by Prof. George Pierce Baker of Harvard, and the original letters belong to W. K. Bixby of St. Louis, whose generosity in allowing the society use of his unpublished manuscripts has done much to give its publications a permanent interest.

"David Copperfield" was, as is well known, largely autobiographical; and Forster in his "Life of Dickens" prints a long extract from a letter written to him by Dickens in 1855, telling of the intensity of his early passion. But Forster does not give the name of the young woman, and it is not certain that he knew it. Maria Beadnell was the daughter of John Beadnell, manager for a firm of bankers, Smith, Payne & Smith. Dickens was introduced to the family by his friend Henry Kolle, who married Anne Beadnell in May, 1833, shortly after the first five of the letters here printed were written. These five letters are apparently the ending of a happy intercourse of some months. In the first of them, dated only "March 18," Dickens declares that their recent meetings have been "little more than so many displays of heartless indifference" on her part, and he returns to her some present which he says "I have always prized, as I still do, far beyond anything I ever possessed." The original of this letter was returned to Dickens, and it is printed from a copy retained by Miss Beadnell. Of the other letters of this first series one is undated, the others are dated simply "Thursday," "Friday," and "Sunday," but all were written within a few days. There was apparently never any engagement, but that Dickens was on familiar terms with the Beadnell family for three years or more is shown by a poem, "The Bill of Fare," written in the autumn of 1831. The manuscript of this, preserved by Miss Beadnell, is also printed in the volume. In it Dickens characterizes his friends, including the Beadnells, and of himself says :

> And Charles Dickens, who in our Feast plays a part,
> Is a young Summer Cabbage, without any heart;—
> Not that he's heartless, but because, as folks say,
> He lost his, twelve months ago from last May.

But on April 2, 1836, Dickens married Catherine Hogarth, and Miss Beadnell (perhaps earlier) married Henry Winter.

More than twenty years later a new correspondence was taken up, and twelve letters written to Mrs. Winter in 1855, 1857, 1858, and 1862, are included in the volume. The first of these letters are full of thoughts of the past. In one dated February 22, 1855, he says:

> A few days ago (just before Copperfield) I began to write my Life, intending the manuscript to be found among my papers when its subject should be concluded. But as I began to approach within sight of that part of it [referring to his early love] I lost courage, and burned the rest.

But after he had seen Mrs. Winter, Dickens seemed to feel that the youthful romance was gone, and a different tone pervades the later letters. He gave her a copy of David Copperfield inscribed "Charles Dickens to Maria Winter. In remembrance of old times." It is possible, perhaps probable, that Dickens preserved Miss Beadnell's letters until that September day in 1860 of which he wrote:

> Yesterday I burnt in the field at Gad's Hill the accumulated letters and papers of twenty years. They sent up a smoke like the genie when he got out of the casket on the seashore, and as it was an exquisite day when I began, and rained very heavily when I finished, I suspect my correspondence of having overcast the face of the heavens.

Professor Baker says in a foot-note:

> It is reported that some ten years ago a series of letters from Dickens to the friend of his youth, Henry Kolle, changed hands in Birmingham, England. The present editor hopes that the publication of the letters in this book may bring this set to light, for they should supplement and explain the letters here given.

The letters to Kolle were acquired by the late Augustin Daly, and at the dispersal of his collection after his death, they passed into the library of a private collector in this city, but it is not likely that the present owner will consent to their being printed.

The Bibliophile Society volume is sumptuously got up. It contains several new portraits, including an etching by W. H. Bicknell from a painting, signed "E. P., 1870," found in the collection of the actor J. L. Toole, and now owned by Mr. Bixby; a reproduction of an unpublished drawing by Charles Martin; Dickens at the age of eighteen from a miniature by his aunt, Mrs. Janet Barrows; and three portraits from unpublished sketches taken by Pierre Morand while Dickens was in America. Of these one is a full-length printed in colors, one a bust profile, and the third, heads of Mr. and Mrs. Dickens. Four hundred and ninety-three copies have been printed for members, but some extra copies have also been printed on special paper for Mr. Bixby. The engraved title-page is the work of F. S. King.

In the Seventh Year Book of the Society, sent out by members with the Dickens volume, the treasurer says:

> Two persons have been dropped from our rolls in the past year because it was found that as soon as they got their books they promptly placed them in the auction room for the purpose of selling them at a profit.

Among the original material printed from manuscripts in this Year Book is an article by Sir Walter Scott, entitled "Literary Information," supposed to be the earlier chapters of "The History of John Bull," which appeared in the *Weekly Journal*, though these chapters are not there printed. Another is an important letter from Robert Fulton to President Monroe, January 20, 1811, relating to Fulton's steamboat patents and his disputes with Fitch. The volume has an etched frontispiece on copper by J. W. Spenceley.

The second Dickens exhibition, under the auspices of the Dickens Fellowship, has opened in the new Dudley Gallery in Piccadilly, London; it will close September 29. The features of the exhibition are portraits and illustrations, letters and manuscripts, and a complete set of first editions. The catalogue has been prepared by J. W. T. Ley and Percy Fitzgerald.

To the Westminster Series of technical books (D. Van Nostrand Company) has just been added "The Book: Its History and Development," by Cyril Davenport. The chapters on printing, paper, methods of illustration, leathers used in binding, and ornamentation of bindings have brought together much interesting information for the collector. Since Mr. Davenport's special field is bookbinding (he is author of the monographs on Thomas Berthelet and Samuel Mearne, published by the Caxton Club of Chicago), he naturally gives binding and decoration greater prominence than printing. Although both vellum and parchment are now generally characterized as vellum, Mr. Davenport points out that this term should only be applied to the prepared skins of calves, that from sheep or goats being parchment. Russia leather, a calfskin prepared with willow bark and scented with birch oil, soon dries out, the binding breaks at the hinges, and the surface rubs off in a dry powder in our modern heated houses. The leather will last longer, he says, if the book is frequently handled, for it absorbs a small amount of animal oil from the hands. Human skin, used occasionally in the binding of books, "looks like thick calf, and it is most difficult to get entirely rid of the hair." Mr. Davenport cautions collectors against spurious old bindings, especially those purporting to be books from the libraries of Grolier, Henry II. of France, and those known as "Canevari" bindings. He says:

> A fraudulent finisher looks out for an old Italian book of the right date, bound in plain leather. Then he copies parts from one or other of the many Groliers which can be seen and studied by any Londoner or Parisian for the asking, and if he is fairly clever at his trade it will take a very skilled expert to detect the fraud. Many such imitations are about, and every day they become more like genuine examples.

We notice a few misprints as "broad" for "bound," in the last line of page 154, and "De Santy" for De Sauty" on page 231.

The latest addition to the London Library (E. P. Dutton & Co.) is "The Book-Hunter," by John Hill Burton. Since the first publication of this delightful work in 1860 it has been reprinted in various forms. The present edition, like all the other volumes in the series, is remarkably well made for the price. Some foot-notes have been added by J. Herbert Slater, author of "Book Prices Current," "How to Collect Books," and "Early Editions."

The Graphische Gesellschaft of Germany has undertaken the reproduction of the "Edelsteine," a collection of fables by Ulrich Boner, originally published by Albert Phister. Only two copies are extant, one dated 1461, in the library at Wolfenbüttel, the other without a date in the Royal Library of Berlin. These volumes are generally regarded as the oldest German publications with movable type and illustrations. The new edition is to be a photographic reproduction of the Berlin copy. The agent of the Gesellschaft, Bruno Cassirer, Berlin, receives subscriptions at 30 marks per copy.

Correspondence.

A PLEA FOR THE LOCK-STEP.

To the Editor of The Nation:

Sir: As to the "lock-step" in the public grammar schools (which you condemn in your article "Straining the Theory of Democracy," August 6), the question may be asked whether or no the uniform pace has not its advantages in most cases? The course of study is laid out for the work of the normal child under normal conditions, and it represents about all that the ordinary child can do under ordinary conditions. It is the result of countless experiments during many years of trial. It represents about all the mental work that most children can safely and profitably do during four years of school between the ages of ten and fourteen. Yet there is no question that by eliminating part of the programme and by hard driving, one could hustle classes through the course of study in considerably less time. But would it pay?

The child requires a certain length of time to assimilate its mental food; it must ruminate, chew, and digest; ideas have to percolate, sink in, and adapt themselves to multitudes of other new and strange impressions and inferences. The things a child has to learn look very simple to us older persons, but to the nascent mind these same things loom large and formidable. A commercial transaction that seems to us as plain as the nose on your face seems to the child a most complicated and wondrous phenomenon. A simple historical event or geographical fact, if duly comprehended and assimilated to other knowledge already in the child's mind, is, when first met, a most marvellous affair. Each fresh phenomenon must be studied, measured, tested, and classified for reference and subsequent use. It hardly needs to be pointed out that this elaborate and complicated process of assimilation, rearrangement, and adaptation requires time. It is true that you can drive a child through the regular course of study and you may think he has accomplished the work, but he probably hasn't. The child has in one sense to chew its cud like a cow, not bolt its food like a dog.

So much for the normal cases. Now in the case of the exceptionally bright child the course of study offers plenty to do. Every well equipped grammar school has in its library a number of supplementary volumes. If a child has an interest in history, he can slake his thirst with generous pulls at Parkman, Fiske, or Rhodes. If a child naturally and spontaneously takes to geography, mathematics, or literature, he will find plenty of material to appease his hunger. Mischievousness in school is generally the direct result of misused superfluous energy, and a teacher of plain common sense, though no psychologist, will ordinarily know enough to set a mischievous boy to work on some of the many subsidiary and ancillary subjects intended for just such cases. And it surely can't be said that the child is wasting time spent in a school library under competent and sympathetic direction. The grammar school curriculum may be said to regulate the speed of the progress of the child along the highway of knowledge; there is a minimum width for the swath he *must* cut, but there is hardly any limit to the width he *may* cut. It is frankly not adapted to the case of a future Mill or a Macaulay—the one child out of ten million. The fact that it is not so adapted entitles it to generous appreciation.

On the other hand it is easy to underestimate the value of play in school, if by play is meant spontaneous activity in directions *prima facie* pleasurable and attractive to the child. The time spent in the gymnasium in rhythmic movements to music or in miniature athletic contests between sides or teams enables the child to accomplish more serious work during the day than would be possible without them. The psychological value of a good hearty romp has only lately been appreciated in scholastic circles. The child's mind is incapable of sustained effort for a long period; about the total of progress in modern pedagogy consists in learning how to alternate work and play; the old school used the rod to stimulate flagging interest; the modern school watches the child till the fatigue point is reached, when an entirely new set of activities is started. The boy that saws wood with intervals of turning a handspring and rolling on the grass will saw more wood than the boy who tries to keep at that task without recreation. The doctrine of interest is, of course, often overworked and much namby-pamby coddling occasionally occurs, but that fact need not prevent a recognition of its substantial value.

The elementary school, the period of childhood, is the most important epoch of the human being's life. The strength, poise, endurance, and resistance, mental and physical, of after life depend directly on the heartiness and fulness of the individual's childhood. He can be hurried or he can be retarded—to his own harm. But the accepted principles of modern child study agree that the child should be given ample time to grow, both mentally and physically, and that all hurrying and crowding should be discouraged. E. L. C. Morse.

Chicago, August 10.

A TRIBUTE TO FRANÇOIS LAURENT.

To the Editor of The Nation:

Sir: I thank you for publishing in your issue of August 6 the eloquent and well-deserved tribute to François Laurent by ex-President White of Cornell. More than fifty years ago, when I was a student of the University of Pennsylvania, my attention was directed to Laurent's "History of Humanity," by the late Provost Stillé, and at his suggestion I wrote a notice of Laurent's work for the *Penn Monthly*, which seemed to please Laurent. Later through the kindness of the late Senator Lippens, one of the Liberal leaders of Ghent and Belgium, I had the honor of making the personal acquaintance of Laurent. I have never forgotten the pathos of his statement that as a native of Luxembourg, he was a man without a nationality, and therefore well fitted to write his "History of International Law." To Lippens and the Liberals of Belgium, Laurent was always an admirable example of sound liberal culture. President White's summary of Laurent's contributions to history will, I hope, introduce him to your younger readers, and lead many Americans to contribute to his statue. J. G. R.

Philadelphia, August 8.

THE WISDOM OF INDIA.

To the Editor of The Nation:

Sir: I thank you for a very sympathetic review of my translation of the "Bhagavad Gita," in your issue of August 6. But as to the "wisdom of India" being the property of the Rajput race, will you allow me to supply a few references? First, as to the four races, which made up the ancient Indian polity. This fact was well recognized in ancient India, as, for instance, in the following passage from the "Mahabharata" (Shantiparvan," l. 6,934):

> Of the Brahmans white is the color, and of the Kshattriyas red;
> Of the Vaishyas yellow is the color, and of the Shudras black.

The Kshattriyas are further described, a few lines later, as "red-limbed"; two different Sanskrit words, *lohita* and *rakta*, being used to describe their skin-color. In an essay, "The Red Rajputs," published in the *Asiatic Quarterly*, the testimony of such men as Fitzedward Hall, Sir William Moore, Sir George Birdwood, Gen. Sir Richard Meade, and Sir Richard Temple, all familiar with Rajputana and its peoples, is cited to prove that the Rajputs of to-day are "red," and "red-limbed," as they were in the days of the "Mahabharata."

Having distinguished between the two races, the white Brahmans and the red Rajputs, it remains to see which has the better claim to the "Indian wisdom." The spiritual eminence of the Rajputs, or Rajanyas—they have both names in ancient Sanskrit—is recognized by such scholars as Weber, Deussen, Elphinstone, Muir, and others; but the decisive proof is in the ancient scriptures themselves. Thus, in the "Panchagnividya" (in the "Brhadaranyaka Upanishad"), which contains the essence of the "Indian wisdom," and notably the twin doctrines of Liberation and Reincarnation, we have these notable words, addressed by a red Rajput to a Brahman:

> Therefore reproach us not, O descendant of the Gotamas, thou and thy forefathers, since this Wisdom has not dwelt in any Brahman before thee; but I will declare it to thee, for who is worthy to refuse thee, speaking thus?

On this Shankaracharya comments:

> This teaching, asked for by thee, before being given to thee, never dwelt in any Brahman, and thou also knowest that this teaching was always handed down from Master to disciple among the Kshattriyas.

The parallel passage in the "Chhandogya Upanishad" is even more striking:

> As this teaching, O descendant of the Gotamas, never before thee goes to the Brahmans, but among all peoples was the instruction of the Kshattra. . . .

Again Shankaracharya comments:

> Before thee, this teaching went not to the Brahmans, nor were the Brahmans initiated into this wisdom; formerly among all peoples this was the teaching at the initiation of pupils of the Kshattriya race. For so long a time this teaching was handed down in succession of Master and disciple among the Kshattriyas.

Both "Upanishads" explicitly describe the speaker of these words as a Rajanya; that is, a Rajput.

This ought to be decisive. It is supported by the fact that the Vedic hymns make no mention of the twin doctrines of Liberation and Reincarnation, but are under

the sway of primitive ancestor worship, exactly like that which prevails in Korea to-day. Further, Krishna was a Rajput, and, in the "Bhagavad Gita," expressly declares that "this doctrine was handed down by the Rajanya sages." Buddha was also a Rajput, of the race of Ikshvaku, whom Krishna mentions, in the passage cited (Bh. G. IV.). Therefore I think we are justified in saying that "the wisdom of India" is the hereditary teaching of the Rajput race.

CHARLES JOHNSTON,
Bengal Civil Service, retired.

New York, August 8.

Notes.

Among the books soon to be published by G. P. Putnam's Sons are: "The Great Fight: Poems and Sketches," by the late William Henry Drummond, with a biographical sketch by May Harvey Drummond (Mrs. W. H. Drummond); "Narrative Lyrics," by Edward L. White; "Racial Contrasts: Distinguishing Traits of the Græco-Latins and Teutons," by Albert Gehring; "A Commentary," described as "a series of typical character sketches or social studies," by John Galsworthy; "The Niagara River." by Archer B. Hulbert; and "The Writings of Washington," a volume of selections edited by Prof. Lawrence B. Evans. This last book is the first of a series, entitled Writings of American Statesmen, which will eventually contain selections from the pens of Jefferson, Franklin, Hamilton, and perhaps others.

Among the publications promised for the coming season by the McClure Co. is Volume III., of "The Reminiscences" of Carl Schurz, completing the set; "The Life of Mary Baker G. Eddy, and the History of Christian Science," by Georgine Milmine; "The Boyhood of Lincoln," by Eleanor Atkinson; "The Death of Lincoln," by Clara E. Laughlin; "Justice and Liberty," by G. Lowes Dickinson; "Hungary and the Hungarians," by W. B. Forster Bovill; "A Book About Yorkshire," one of the volumes in the English Countryside Series, by J. S. Fletcher; "A Woman's Way Through Unknown Labrador," by Mrs. Leonidas Hubbard, jr.; "Paris," in McClure's Vest Pocket Guides; "The Guest of Quesnay," by Booth Tarkington; "The Point of Honor," a military tale, by Joseph Conrad; "The Great Miss Driver," by Anthony Hope; "The Wild Geese," by Stanley Weyman; "Lynch's Daughter," by Leonard Merrick; "The Gentle Grafter," by O. Henry; and "Round the Fireside," a collection of stories by A. Conan Doyle.

Henry Frowde announces as in preparation for the Oxford University Press, "Pacific Blockade," by Albert E. Hogan, and the "Poetics" of Aristotle, edited with a translation and commentary by I. Bywater. To the Oxford Library of Translations will be added Virgil, by John Jackson, Statius's "Silvae," by D. A. Slater, and Jowett's Translation of Plato's "Republic."

B. W. Huebsch, New York, announces for publication this autumn: "With the Battle Fleet," by Franklin Matthews, a record of the voyage of the Atlantic fleet from Hampton Roads to San Francisco.

Warner's "American Charities," for several years a standard work of reference, is to be presented in entirely revised and enlarged form by its publishers, Thomas Y. Crowell & Co. The same firm announces a new poetic version of "The Pearl," by Prof. Sophie Jewett of Wellesley.

Moffat, Yard & Co. announce as soon to be published "Historic Ghosts and Ghost-Hunters," by H. Addington Bruce.

Among recent reprints is a handsome edition of Lady Charlotte Bury's "Diary of a Lady-in-Waiting," in two volumes, with eighteen full-page portraits (John Lane Co.' When the work first came out in 1838, under the title, "Diary Illustrative of the Times of George the Fourth," it had a *succès de scandale;* indeed 5,000 copies were sold of the *Literary Gazette*, which supplied some of the names that had been left blank. The book has since passed through a number of editions. Part of the interest lies in the fact that it was written by one of the most beautiful and popular women of the time, and part in the fact that it gives a vivacious and almost scandalously intimate picture of Princess Caroline, whose indiscretions and whose troubles with her husband had made her name notorious in England and on the Continent. Though the "Diary" was published anonymously, the authorship was easy to guess, for Lady Charlotte, as a lady-in-waiting to the unhappy princess, was familiar with her life and her circle of friends; Lady Charlotte was also a fashionable novelist. Into the matters which the "Diary" treats we cannot go here; the story is an old one. Both the Prince Regent—afterward George the Fourth—and the Princess Caroline had their bitter partisans; but perhaps the rights and wrongs of the case were summed up in a sentence attributed to the daughter of the ill-mated pair: "My mother was wicked, but she would not have turned out so wicked had not my father been much more wicked still." This book has often been quoted; Thackeray drew on it for some of the touches in his "Four Georges." We have room here for only a short bit about Shelley, from a letter written at Oxford in 1811 by Charles Kirkpatrick Sharpe:

> Talking of books, we have lately had a literary Sun shine forth upon us here, before whom our former luminaries must hide their diminished heads—a Mr. Shelley, of University College, who lives upon arsenic, aqua-fortis, half-an-hour's sleep in the night, and is desperately in love with the memory of Margaret Nicholson. He hath published, what he terms, the Posthumous Poems, printed for the benefit of Mr. Peter Finnerty; which, I am grieved to say, though stuffed full of treason, are extremely dull; but the Author is a great genius, and, if he be not clapped up in Bedlam or hanged, will certainly prove one of the sweetest swans on the tuneful margin of the Charwell.

For the present edition A. Francis Steuart writes a short but competent introduction and a number of footnotes. He also fills out, so far as possible, the blank names of the original edition.

With the fourth volume, Harry A. Cushing completes his "Writings of Samuel Adams" (G. P. Putnam's Sons). More than half the volume is composed of letters written during the Revolution, and the subsequent years offer little in quantity or in subject matter. Adams's jealousies are personal, as well as political, for he fears Washington, internal enemies, Deane, the refugees, the Cincinnati, and the rulers of the people. "I was led to believe in early Life that Jealousy is a political Virtue" and "one of the greatest Securities of Publick Liberty"; but he showed this political virtue in so many directions as to reduce his public usefulness, and strongly affect his relations with his colleagues. He was not a good judge of men, and took up doubtful causes with an obstinacy that made him impracticable. He criticised Washington, for many reasons, and he much disliked Hancock. He was a firm believer in Arthur Lee, whose unbalanced mind caused so much trouble in France and in the United States; and he was a partisan of Gates and Landais. The letters on Manley, Temple, and Deane are good examples of his bias. He was in a condition of perpetual alarm, fearing that America was "too unsuspecting long to continue free," and that the arts of the British would succeed where arms had failed. Social pleasures became to him forms of dissipation, and he was severe upon the tendencies to extravagance in dress or living. With so strict ideas, he naturally took a high view of public office, and his devotion and incorruptibility long made him the trusted representative of Massachusetts in Congress. "No man," he wrote, "has a claim on his country upon the score of his having rendered public service." Mr. Cushing has shown industry in gathering his material, but his notes could have been more illuminative in explaining many of the references in the letters. To one who should read the whole work, these references will generally be clear. A compilation of this sort is not, however, read, but consulted, and a short note or the use of a name instead of a letter would be of assistance. For examples: the member of Congress on page 45 was Dana, the Pennsylvanian approached by the British commissioners (p. 47) was Reed, the deceased friend (p. 167) was Warren. The usefulness of the four volumes is much diminished by the very imperfect index, which is, in fact, all an index should not be. It tells nothing (see under Massachusetts), and it omits many references (as to Kirkland, p. 313). Why should there be Romane and Romanet in text and index for the same person, and an imperfect proclamation on p. 92, when the full text was readily accessible? In spite of its defects, the work is valuable, and will do much to establish the position of Adams in the history of the Revolution.

"International Law Applied to the Russo-Japanese War," by Sakuyé Takahashi (New York: The Banks Law Publishing Co.), is the most recent addition to the extensive literature on the international questions and legal relations raised by the Russo-Japanese war. The work falls far short of the excellence that was to have been expected from an author who had been one of three legal advisers to the Department of Foreign Affairs of Japan during the war. There is evidence of great familiarity with the facts, and numerous documents of value have been incorporated, but the result produced is that of a collection of facts, selected without due proportion, rather than a systematic discussion of the principles of international law as they were applied in the war. Some of the most important cases, such as the Allanton, Arabia, Smo-

lensk, and the North Sea incident, are not included, on the ground of their familiarity to the Western world. Careless statements, English far from idiomatic and bearing unmistakable marks of its foreign authorship, misprints in quotations from foreign languages, and a general tone of extolling Japanese observances in contrast to Russian breaches of international law mar the value of the book.

In recent years a number of works have been written on the local nomenclature of Celtic Scotland. "The Place-Names of Decies" (London: David Nutt), by the Rev. P. Power, is a valuable study of the same sort for a piece of Irish territory. The ground covered is the present diocese of Waterford and Lismore, which appears to correspond to the former domain of the Deisi. The population in the region is still to a considerable extent Irish-speaking, and ancient names and traditions are well preserved. In bringing them together the author has done a service to linguistic and historical students alike. The facts with which he deals are not in most cases such as can be tested without making observations on the spot, but his method of handling them is sound and cautious, and he seems to have spared no pains in procuring information both from old records and from oral tradition. The introduction, in so far as it treats matters of history and ethnology, is meagre and unsatisfactory—a hasty summary of opinions, parts of which are extremely doubtful. The author's general account of his own results, however, is full of interest and instruction. One of his judgments may be cited as correcting a widespread impression. There has been much exaggeration, he holds, regarding the poetry latent in Irish place-names. "The dreamy country schoolmaster and the disciple of Vallancey" have read into them unwarranted complexity of idea, whereas they are really for the most part the simplest of descriptive appellations. Mr. Power's lists confirm this statement, so far as the land of the Deisi is concerned. Yet we are struck even here with the number of mythological or legendary names.

T. R. Sullivan's "Lands of Summer" is an unassuming little book, containing, as its sub-title announces, "Sketches in Italy, Sicily, and Greece." With none of the ecstasies and personalities that usually form the preface to similar volumes, Mr. Sullivan, with refreshing directness, plunges us at once in his first chapter—unfortunately entitled, "Spring Time with Theocritus"—into the "ghastly parody of real spring" that chill April air may produce even in Taormina, and then proceeds to describe at length a strike in Catania. The second chapter deals in a cursory fashion with the route usually followed by the non-archæological traveller in Greece, and the rest of the book treats of places in Italy more rarely visited by tourists—the Casentino, the Pistoian Apennines, and the Bergamesque Alps. Mr. Sullivan does not offend our taste by attempting to discuss technically subjects in which he is merely a layman; but he writes of Italy with an unpretentious assurance that comes only from old acquaintance with country and people, and his accounts of Poppi and Gavinana, for example, form interesting supplements to the all-important Baedeker. But the work lacks distinction, a quality as difficult to define in the case of a book as of an individual. The narratives leave us wondering just why they were narrated; the descriptions recall pleasantly what our eyes have beheld, but they fail to make the unfamiliar live before us. The book's "failings lean to virtue's side," but its virtues are not on a conspicuously high level, and as a whole it is scarcely less monochrome (but more attractive) than its sickly blue cover. It is to be regretted that the illustrations, otherwise good, are half-tones far below the standard of the publishers, Houghton, Mifflin & Co.

"Over-Sea Britain" (E. P. Dutton & Co.), by E. F. Knight, is the first of two volumes intended to offer in a work of moderate size a comprehensive account of the British Empire, its origin, history, and the physical, political, and commercial geography of its various parts. The "nearer empire," including the Mediterranean, British Africa, and British America, is the subject of this volume. The plan of treatment is to give a general description of a country, as South Africa or Canada, its physical features, some ethnological data, the principal historical events, the products, and the government, and then a particular description of the same kind for each separate colony. It should be noted that there is no information in regard to religion, education, and finance. In a work largely devoted to facts and figures absolute accuracy would, of course, be impossible. The statistics agree substantially with those of the Statesman's Year Book, but in some instances they differ so materially as to awaken serious doubt as to their correctness. In reference to dates we have noted only three errors: both 1493 and 1494 are printed as the year of the promulgation of the Papal Bull giving Africa to Portugal and the Americas to Spain; 1484 and 1486 for the first doubling of the Cape of Good Hope by Diaz; and 1871 and 1872 for the transfer of the Dutch of their trading posts on the Gold Coast. But these are minor blemishes, easily corrected in another edition. Though the book is not intended for the casual reader, the author has a pleasant style, and there are occasional touches showing a familiarity with most of the countries treated, as, for instance, his attractive picture of an English farm in Cape Colony, with its beautiful flower garden, orchard, and grain fields all encircled by the boundless veldt, where thousands of cattle and sheep are grazing. Nine maps and an excellent index add much to the usefulness of the book as a work of reference.

The latest volume in the series of text-books issued by the Central Committee on the United Study of Missions is "The Nearer and Farther East," by Dr. Samuel M. Zwemer and Dr. Arthur Judson Brown (The Macmillan Co.). The contrast in treatment between the first and the last halves of the volume is as suggestive as it is striking. Dr. Zwemer, who writes on the general characteristics of Islam and the problem of Christian missions in Mohammedan countries, dwells vividly and fervently on the points in which Mohammedan theory and practice in religion, morality, and government, especially as regards the status of women and freedom of thought and discussion, are inferior to those of Christianity; at the same time, he frankly admits the slow gains of Christianity in Moslem countries, and notes the comparatively slight efforts which as yet have been put forth in that direction. That the specific allegations of fact, however partial the presentation, are true, and that the chapters as a whole are distinctly informing, does not take this part of the book out of the class of appeals in which the absolute sufficiency of Christianity, and the absolute hopelessness of a people professing any other form of faith, is the main thesis. Dr. Brown, on the other hand, who writes of Siam, Burma, and Korea, describes in a broad and straightforward fashion the physical, social, and political conditions of those countries, with simple recitals, excellently put, of what enlightened missionary effort has accomplished. The one writer has a repellent but powerful mass of error to combat, the other a record of achievement to narrate. One cannot but hope that those who will use this volume as a basis for missionary studies in churches and societies may rise from the complacent spirituality of the first part to the wider social plane of the second. We cannot discuss details, but the movement for denominational union in missionary work in Korea, which Dr. Brown sketches, deserves mention as one of the most hopeful of recent developments.

Three university centres of Germany have recently sent out excellent collections of characteristic academic sermons. The volume by Dr. C. Stange of Greifswald, entitled "Akademische Predigten" (Leipzig: Dieterich), is an expression of progressive orthodoxy. More conservative in matter and manner is the volume by the four Rostock theologians, Profs. Wilhelm Walther, J. F. Hashagen, Justus Köberle, and Richard Grützmacher, entitled, "Ein Herr—ein Glaube: Rostocker akademische Predigten" (Wismar: Hans Bartholdi). From Halle comes an excellent collection entitled "Akademische Predigten," belonging to the series of modern religious discourses known as Prediger der Gegenwart, published by C. Ludwig Ungelenk, Dresden and Leipzig. The author is the church historian Prof. Frederich Loofs.

Hans Hinrich Wendt, professor in Jena, has just published a substantial volume of 676 pages, "System der christlichen Lehre" (Göttingen: Vandenhoeck & Ruprecht). The work runs largely along the Ritschlian lines, but from a modern point of view; and is semi-popular in manner of presentation. A characteristic of Wendt is that he substitutes for the traditional formal basis of Protestantism, the authority of the Scriptures, the original gospel of Jesus, which finds its official expression in the Synoptics and partly also in John.

Dr. Johannes Müller, whose religious writings, such as his interpretation of the Sermon on the Mount, his "Hemmungen des Lebens," and his "Von den Quellen des Lebens," have been very popular, has just issued a new work, "Bausteine für persönliche Kultur" (Munich: C. H. Beck). It consists of three parts: "Das Problem des Lebens," "Persönliches Leben," "Das Ziel."

Considerable independent scholarship is evinced by the Catholic professor of theology, Dr. W. Homanner, who has just published in the Biblische Studien (Freiburg-im-B.; Herder) "Die Dauer der öffentlichen Wirksamkeit Jesu: Eine patristisch-exegetische Studie." The work is a de-

fence of the three-year ministry of Christ as against the more or less current hypothesis of one year.

The same house has just issued as one number in the Strassburger theologische Studien, a work by Dr. J. M. Pfättisch, "Die Rede Konstantins des Grossen an die Versammlung der Heiligen," in which the author vigorously defends the authenticity of this famous document, which has quite generally been regarded as spurious.

Eduard Schwartz is issuing in two editions, on the basis of careful textual studies, what is doubtless the best form in which the original Greek of the Church History of Eusebius has thus far appeared. Herr Schwartz began in 1903 with the first volume of the large edition, containing also the Latin translation of Rufinus of Aquileja, as edited by Mommsen. Early this year the second volume, containing the second half of the History, from books 6 to 10, appeared. Before publishing the third and last volume of this edition, to contain extensive prolegomena and other literary apparatus, Schwartz has just got out a text edition, entitled, "Eusebius Kirchengeschichte; Kleine Ausgabe" (Leipzig: Hinrichs).

The Verlagsanstalt Concordia in Berlin has begun to issue under the general title Das Erbe a collection of what can be regarded as the permanent contributions of leading writers to literature. Each volume is supplied with biographical and literary notes. The editor, Ernst Lissauer, inaugurates the venture with a selection from the poems of Eduard Mörike.

One of the fruits of the recent sixtieth anniversary of the reign of the Austrian Emperor is a collection of poems "Felix Austria: Österreichische Dichter im Jubiläumsjahre 1908," edited by J. F. Willigens (Vienna: Verlag Lumen). There are some fifty-two contributors.

Humor as viewed by a German scientific critic is expounded in "Heine und sein Witz," a desiccated *Abhandlung* of 200 pages by Erich Eckertz (imported by G. E. Stechert & Co.). The introduction seeks to define the joke as Heine felt it, and one of the chapters points out that a thousand and more jokes of the ancient Jews, Teutons, and Gauls flowed in the blood of Heine's ancestors until they united in a common joke that thrilled the author of the "Reisebilder." Another chapter treats of Heine's own jokes and those he stole from others, and points out the close or distant relationship of Heine's humor to that of such distinguished predecessors and contemporaries as Aristophanes, Cervantes, Shakespeare, Molière, Goethe, Lessing, and Jean Paul. There is also a catalogue of Heine's rhyming jokes, another of his jokes in prose, still another of his thrusts at himself, and finally a formidable list of Heine's puns.

"Roma e lo Stato del Papa dal ritorno di Pio IX. al XX. Settembre," by R. de Cesare (Rome, Forzani & Co. 2 vol., pp. xii. +395; 489), has proved one of the most popular books of the year in Italy. It is a narrative history of the loss of the temporal power of the Papacy, written by a Catholic and based upon unpublished documents, some of first-rate importance, and upon oral traditions, which were fast being forgotten. Its serious side has received the praise of competent critics, while the abundance of anecdotes pleases those who seek mere entertainment.

An association, called Gesellschaft zur Erhaltung der Lessinghauses in Berlin als Museum, has been organized for the purpose of converting into a museum the house, Königsstrasse 10, where the poet lived, 1765-67, and wrote "Minna von Barnhelm" and "Laokoon." Several rooms are already filled with Lessing mementos. The membership fee is five marks.

In response to an appeal issued a year ago, a sufficient sum has been received for the erection of a memorial to Berthold Auerbach, and the Duke of Baden has authorized Prof. H. Volz of Karlsruhe to prepare a bust larger than life, to be ready for unveiling next May in Cannstadt.

Ainsworth Rand Spofford, for many years librarian of Congress, died August 11 at Holderness, N. H., in his eighty-third year. He was born in Gilmanton, N. H., and after trying both book-selling and journalism in Cincinnati, he was appointed in 1861 assistant librarian of Congress. From 1864 to 1897 he was the chief librarian, and since 1897 he had been the chief assistant. He contributed numerous articles to the magazines; he edited the Catalogues of the Congressional Library and the American Annual Almanac (1878-1889); in collaboration with others he edited the "Library of Choice Literature," "Library of Historic Characters and Famous Events," and "Library of Wit and Humor"; and he was author of "Practical Manual of Parliamentary Rules" and "A Book for All Readers."

Friedrich Paulsen, professor of philosophy and pedagogy in the University of Berlin, died in Berlin August 14. He was born in 1846 in Langenhorn, studied in Erlangen and Berlin, and in 1871 received his doctor's degree. He began his teaching as a docent at Berlin in 1875. He has been a voluminous writer. Among his books are "Versuch einer Entwickelungsgeschichte der kantischen Erkenntnistheorie" (1875), "Gründung, Organisation, und Lebensordnungen der deutschen Universitäten im Mittelalter" (1881), "Geschichte des gelehrten Unterrichts auf den deutschen Schulen und Universitäten (1885), "System der Ethik mit einem Umriss der Staats- und Gesellschaftslehre" (1889), "Das Realgymnasium und die humanistische Bildung" (1889), "Einleitung in die Philosophie" (1891), "Immanuel Kant: Sein Leben und seine Lehre" (1898), "Schopenhauer, Hamlet, Mephistopheles: Drei Aufsätze zur Naturgeschichte des Pessimismus" (1900), "Philosophia militans: Gegen Clericalismus und Naturalismus" (1901); "Die deutschen Universitäten und das Universitätsstudium" (1902), "Zur Ethik und Politik," a collection of papers (1905), and "Das deutsche Bildungswesen in seiner geschichtlichen Entwickelung" (1906). Professor Paulsen's best known work in this country is probably his "Einleitung in die Philosophie," which, in an excellent translation by Prof. Frank Thilly, has attained popularity as a textbook. For a manual it has the rare quality of an exceptionally picturesque and animated style, which rises at times to a high plane of eloquence. Paulsen is in method an adherent of the Neo-Kantian school, with a pronounced predilection for the panpsychic theories of Fechner. His exposition of the cosmological problems of philosophy is particularly attractive. He states the monistic and dualistic positions with absolute fairness, but subjects them to a keen criticism which precedes his own argument in favor of a universal parallelism. The same method is applied to every other problem that comes within his scope, and he thus succeeded in producing a book that is at the same time a just summary of the nature and historical development of philosophical theory in general, and a vigorous exposition of his personal views. Paulsen's "Die deutschen Universitäten" has also been translated by Professor Thilly (see the *Nation*, September 6, 1906, p. 208).

The death is announced from Paris of Arthur Ranc, chief editor of *L'Aurore*, and representative of Corsica in the French Senate. He was born at Poitiers in 1831. Among his books are "Le Roman d'une conspiration" (1868), and "Sous l'Empire" (1873.)

HOME LIFE IN VARIOUS LANDS.

Norway at Home. By Thomas B. Willson. New York: Imported by Charles Scribner's Sons. $1.75 net.

New Zealand at Home. By R. A. Loughnan. New York: Imported by Charles Scribner's Sons. $1.75 net.

South Africa at Home. By Robert H. Fuller. New York: Imported by Charles Scribner's Sons. $1.75 net.

America at Home. By A. Maurice Low. New York: Imported by Charles Scribner's Sons. $1.75 net.

Home Life in Germany. By Mrs. Alfred Sidgwick. New York: The Macmillan Co. $1.75 net.

The first four of these volumes evidently belong to a series, although no mention of the fact is made on title-page or in preface. The design is to afford the general reader information, in easily assimilable form, in regard to the more superficial aspects of each country treated; and although no one of the books has qualities of style or thought to keep it alive, the volumes are both useful and agreeable. All four of these books are provided with indexes—albeit of the scantiest—with fairly good illustrations, often placed in entire disregard of the context, but with no maps. In the case of countries like New Zealand and South Africa, which have almost come into existence, practically speaking, since the average reader studied geography, this lack is serious.

The author of "Norway at Home" appears to be thoroughly familiar with the country and inspired by genuine affection and respect for its people. His sincerity and sympathy quite win the reader's heart and shine through the trite figures of the tame and old-fashioned style. The chief impression one receives from these painstaking pages is of an enviable, almost Arcadian simplicity of life—a country in which are no rich and no poor, no nobility, no large

cities (there are but four towns with a population of over 30,000)—a country, moreover, where expert intelligence is applied to the problems of education, municipal government, and the regulation of the drink traffic. What strikes an American most oddly is the mixture of genuine democracy, both political and social, with a depth and tenacity of conservatism rare in much more aristocratic states. The State Church, for example, holds unquestioned sway, and confirmation according to its rites is absolutely necessary as a testimonial of character. Oddest of all in a country which knows no titles, no feudalism even in decay—of 120,000 holdings of land 109,000 are freehold—in which members of all classes mingle freely in the elementary schools, and in which $5,000 a year spells wealth, and university professors count as members of the aristocracy, is the spectacle of an overwhelming, almost unanimous vote for a monarchy over a republican form of government.

Unlike in almost every other respect, Norway and New Zealand resemble each other in the advanced stand each has taken in regard to woman suffrage. In Norway what Mr. Willson calls "the fair sex" share not only as voters but as office-holders in municipal government, and have just won, but not yet exercised, the parliamentary franchise, while their sisters in New Zealand have enjoyed full voting rights for seventeen years, with no obvious result, we are told, except—a very important exception—in the marked gain of prohibition.

Mr. Loughnan's book is one in which, in spite of the interest of the subject, it is difficult to take much pleasure. His cheap, smart, illogical style abounds in jewels like the following: "When their wives are with them, they do exactly as they do, and the influence is doubled"; "Before this the wife and mother came to the front, and taking command, the towns were not so often painted red, and the color was less lurid." His geographical chapters are so ill-planned as to be almost unintelligible in the absence of a map, his opening chapter on the population tells the reader absolutely nothing about it, and his moral tone in treating of gambling and intemperance suggests the jauntiness of the man with a large cigar tipped up between his teeth and his hat on one side of his head. Those institutions of New Zealand—her old-age pensions, labor legislation, and various other adventures in state Socialism—which are just now of greatest general interest receive no particular light from Mr. Loughnan, who views them all with a complacent optimism on which the best comment is afforded by Henry Broadhead's "State Regulation of Labor and Labor Disputes in New Zealand," commented on in the *Nation* of July 23, p. 67, and the statement in the London *Spectator* of July 18 that the arbitration law is regarded with despair by the leaders of both political parties.

A more competent, skilful, and entertaining writer than Mr. Willson or Mr. Loughnan is Mr. Fuller, late headmaster of Dale College, one of the leading educational institutions of South Africa. His experience is wide and firsthand, his style very fair, his temper admirable. Nothing could be more sympathetic and generous, without sentimentality or lack of shrewdness, than his treatment of the Boers. He not only bears witness to the charm and polish, the intelligence and progressiveness, of the cultivated Dutchmen of Cape Colony, he not only shares with many Englishmen the national respect for "human bravery and tenacity" as shown by the Great Trek Boers, he has the rarer gift of understanding as well as noting the faults and limitations of the Boer farmer and tracing them to their sources:

> Vast solitudes have always a paralyzing effect. In thinly populated areas it is the new-comers who keep fresh the spirit of industry and enterprise. It is not only that wisdom is found in a multitude of counsellors, but the incentive to industry and to clean methods of life flourishes by companionship. "It is not good for man to live alone," is writ large in the history of man.

The same sympathy and common sense are apparent in Mr. Fuller's account of the natives. "As a general rule," he says, "in my experience both in England and in the Colony, I have found all household servants remarkably honest, black and white alike, but there have been as many aberrations from it among the whites as blacks." Amusing anecdotes are told on the other hand showing the limitations to which Kaffir honesty is liable, when a question of trust is not involved. It is satisfactory to know that Mr. Fuller does not "join in the prejudice against the school Kaffirs," and he mentions the Kaffir editor of a paper in King William's Town as a very clever man whom he knows personally. Mr. Fuller's book also abounds in delightful descriptions, particularly of old-fashioned Boer customs.

The reader who has contemplated reading Mr. Low's "America at Home" is counselled to save the time for South Africa instead. Mr. Low's book is of very unequal merit, and the best chapters, those which deal in a clear and accurate way with our political institutions, are of no especial value to the American reader. Once off the political ground, Mr. Low flounders hopelessly. His task of giving a bird's-eye view of the United States in one short volume was of course much more difficult than those of his fellow-workers dealing with small or thinly settled countries, but he lacks the sense of selection. Thus he gives no description of any of our cities and even in the most general remarks ignores the existence of the Rocky Mountains and the Pacific Slope, but devotes an entire chapter—including three and a half pages of newspaper quotation—to Atlantic City, and almost as much to Newport. While greatly puzzled how to define "society," he seems finally satisfied that it means the multi-millionaires, and deals with it henceforth on that basis. Some of his more surprising statements are that "it costs as much to keep a girl at one of these colleges [Smith, Wellesley, or Vassar] as it does a man at Oxford or Cambridge," that at the high school "the young man or woman can obtain an education equal almost to that offered by the universities," that Saratoga is a fashionable resort, and that horse-racing is as popular in America as it is in England. Finally, it is confusing to read on p. 208 that "the day of sensational journalism in America now only survives in the smaller places of the Far West," and on p. 213 that "the so-called Yellow Press is as vile, infamous, and untruthful as the worst gutter-rag of the boulevards," while on p. 214 Mr. Roosevelt's authority is given for the "reckless indifference to truth or decency displayed by papers such as the two that have *the largest circulation in New York city*," and a few lines below Mr. Low dismisses "the 'Yellow' press, which *only the dissolute and the ignorant read*" (the italics are ours). In short, this book is not at all valuable, but it contains some effective summaries and a few good anecdotes, of which we quote one:

> Not long ago I was at the White House waiting to see the President. Three other men were in the ante-room. . . . They were probably men of some substance, men of more than ordinary shrewdness. . . . Suddenly, one of the men, apropos of nothing, remarked to his companion, in a detached and almost impersonal tone:
>
> "By gad, we're a great people."
>
> "The greatest on earth," was the answer, made dispassionately, and as if the remark were so obvious that it scarcely called for comment.

Worth rescuing, also, is the following astounding quotation from the New York *Sun:*

> PITTSBURGH, March 11. 1904.—Sheriff Dickson has received an order from Gov. Pennypacker to hang William L. Hartley and John Edwards, on the same day, and is much disturbed over it. "Under the circumstances," he said, "it strikes me as entirely improper that the two men should be hanged at the same time. One is a white man and the other a negro, and there is a natural prejudice against associating the races. They were never together in their life, and that is another reason why they should not meet death together. Of all places in the world the scaffold is one where nothing which could offend the condemned man should be done. There is more than sentiment in this, there is humanity."

Although somewhat similar in title,

size, and general appearance to the four books just noticed, Mrs. Sidgwick's "Home Life in Germany" is emphatically a horse of another color. Even in make-up the volume is in quite a different class, and is delightful in its lightness, its clear, sharp printing on dull-finished paper, and its charming illustrations, many of them taken from *genre* paintings. Mrs. Sidgwick undertakes a much more limited task than that imposed upon the writers of the series, but what she does could hardly be better done. A well-bred, cultivated woman, of German parentage but born and bred in England, and evidently absolutely at home in both countries, she is rarely competent to chat amusingly and agreeably of "the insignificant trifles that make the common round of life" in Germany as in every country. These are what interest her and these, sympathetically and intelligently noted and vividly and humorously described, make up an intimate picture worth a shelf full of statistics and philosophical reflections. One of the pleasantest impressions the reader carries with him from these pages is that the old Germany, "the Germany we know, the dear country of quaint fancies, of music, and of poetry," . . . of "the dreamy unworldly German" has not, after all, been wholly driven out by the "praiseworthy but most unamiable *Wunderkind* amongst nations," the Germany "armed to the teeth, set wholly on material advancement, . . . a model of municipal government and enterprise, a land where vice, poverty, idleness, and dirt are all unknown." It is the old Germany, even the dear unforgotten Germany of "Quits" and "The Initials," that Mrs. Sidgwick is still privileged to see and to set before us with tender smiles, though she is, of course, not blind to the changes which are coming with violent and startling impact upon the long-established customs and ideas. There are many things worthy of quotation if space permitted. On marriage-customs, education, cost of living—as to which she gives some most interesting "budgets"—Mrs. Sidgwick has a seemingly inexhaustible supply of entertaining information, seasoned by lively anecdotes.

CURRENT FICTION.

Marotz. By John Ayscough. New York: G. P. Putnam's Sons.

In the opening chapter of "Marotz" the reader plunges headlong into a court ball, presumably in Vienna, described in brief, gasping paragraphs of hectic enthusiasm. The chronicler is so bedazzled, indeed, by the spectacle of royalty that it would be unfair to hold him to a rigid standard of style or geography; still, one is a little puzzled to read:

> Though her father was, indeed, the subject of the two sovereigns yonder, she could hardly feel that she herself was. All her life they had lived in Sicily, with now and then a rather brief visit to Palermo or Naples. She counted herself of the South: it was not that. It was the *idea* of loyalty to which she suddenly found herself bowing down, with a gasp of emotion, and the illustration of it here to-night. . . .
>
> The Imperial and Royal Court Bandmaster gave his signal, and the Marseillaise of Imperialism obeyed it.
>
> There never was so astounding a conductor as that fierce, small, dark figure. Had he pointed his bâton at a tree, music must have scattered out of it, like rusted leaves in autumn. Had he called to the great Pan to come up out of Oblivion and play for him, the dead God would have drawn a reed from the oozy edges of the Styx, and lifted it to his long silent lips to breed harmony again.

And after this *fanfare*—no more Emperor and Empress, no more bandmaster, nothing more about the "idea of loyalty" to sovereigns or the magic of music in the whole volume!

A book so begun would seem predestined to the scrap-heap, yet "Marotz" has real and unusual merits. It is not a good novel—it is a chronicle, rather, of three generations, slowly and clumsily related, and delayed in its course by many elaborate studies of eccentric character quite unnecessary to the plot. Read these studies, however, for their own sake, and you discover close observation, sympathy, an eye for the picturesque, and a power, in spite of constant temptation to be over-ornate, of vivid presentation. Very charming is the sketch of San Vito, the old feudal magnate of the Sicilian mountains. Rarer and finer still is the portrait of Poor Sister, the great lady who to expiate her husband's crime has founded the little Community of the Reparation, and rules it from the lowest seat—a wholly dedicated soul, yet full of human tenderness perspicacity, and fun, simple with the costly simplicity of those who have come out of great tribulation.

The Gates of Life. By Bram Stoker. New York: Cupples & Leon Co.

Stephen Norman, in her fourteenth year, had a firm-set jaw, square chin, flame-colored hair, full crimson lips, and purple-black eyes. These traits were "Saxon through Norman," with a dash of mediæval Saracen. From that time to the end of her story she always wore a scarlet riding-habit, and the intensity of her feelings matched her color-scheme. Harold An Wolf (Gothic through Dutch) had nothing very remarkable about him, except his six feet four inches and the propensity, common to all the characters in this book, to behave as nobody in his senses would do. In short, Mr. Stoker has written a blatant melodrama, all the trashier for the grandiloquent moralizings—in which the word "sex" is unpleasantly frequent—which punctuate the surprising actions of his characters.

Young Lord Stranleigh. By Robert Barr. New York: D. Appleton & Co.

The charm of this book lies in its bland childlike preposterousness. To sit in judgment on it would be to add to the sum of that criticism which pronounces shipboard life in "Pinafore" improbable, and the self-floating devices of Mesdames Lecks and Aleshine absurd. We confess to having found charm in the financial, mining, privateering proceedings of Lord Stranleigh, from the opening scene when he is approached by a distressed stockbroker, down to the sublime moment when he saves the credit of the Bank of England. He is so amiable and complete a dandy, so beneficent in his plots, so philanthropic in his adjustments, so genial an abstainer from vengeance, binding up all the wounds that justice compels him to inflict, that it is impossible not to extend to him the weakness one has for Van Bibber and Lord Dundreary, adding a touch of the natural human admiration for Sherlock Holmes. His inanity, his shrewdness, and the touching loyalty with which he confesses his allegiance to Clark Russell in the matter of marine law, contribute to the joke, and a glamour is over all from the unplumbed wealth that makes of him a fairy godfather.

Delilah of the Snows. By Harold Bindloss. New York: Frederick A. Stokes Co.

The story is of some young English Socialists who fled to Canada from the danger of arrest innocently incurred by one of the party. In Canada they drift to Vancouver and thence to the Green River country, where the real story begins—proving to be a tale of placer mining, of claims that are forfeited by a few hours' absence, of hardship, fellowship, hostilities, and of oppressive mining laws enforced by a necessarily soulless police. The tussle of man with a nature as ready to crush as to enrich him is always a thrilling theme. It is here set forth simply, understandingly, and at as leisurely a pace as nature's own processes. The absence of crisp epigram is rather solacing than otherwise in a day when epigrams are to be had on every highway.

A few of the characters stand out as vividly as their adventures do, leaving a perfunctory remnant to swell the pages of a story to which after all one does not grudge length. The hero is a man who has the habit of being and doing the obvious thing and is finely conceived and drawn. Hetty, the plucky girl who bakes for the miners, is as wholesome as her own bread, and withal is no lay figure of wildwood fiction, neither seraph nor cat, a thoroughly

human compound. Delilah is only a girl who betrayed a police secret, and, incidentally, her lover, for no apparent reason.

In spite of a heavy-footed gait and a superfluity of scene, the book is worth reading for the sincerity and picturesqueness of its adventure.

The History of Twenty-five Years. By Sir Spencer Walpole. Vols. III. and IV.; 1870-1880. New York: Longmans, Green & Co. $8.

Readers who have discovered the excellence of the first half of Walpole's work (see the *Nation* of August 18, 1904, p. 139) will be glad to know that he had brought his history so near to completion, at the time of his death last summer, that it has been possible to edit his manuscript and issue these final volumes. He could have asked for no more loyal or competent literary executor than Sir Alfred Lyall, to whom the task of editing was assigned. Doubtless the author might have added here or trimmed there, and he intended to write chapters on the South African and Afghan wars, and on the rise of the working classes; but the sequel as we have it evidently represents his views, and it is hardly less valuable than the earlier half.

Walpole, as usual, treats history topically, taking up a movement or cause at its beginning and following it through to its conclusion. Having covered the Franco-Prussian war in his second volume, he selects for his main subjects in his third the Treaty of London and the Geneva Award, the close of Gladstone's ministry, and the opening of Disraeli's spectacular administration. An American cannot fail to be gratified at the evidence on every page that Sir Spencer is not only familiar with the American sources, but also appreciates our point of view. The grave contention that was amicably settled at Geneva he here calmly describes. On the whole, we feel that the historian does full justice to the American position, and that he considerately refrains from emphasizing, as he might very properly have done, some of the astonishing performances of our public men. Charles Sumner's course, for instance, which finds few apologists now even in America, might be scathingly criticised by an English writer; but Sir Spencer withholds his hand. Possibly in his analysis he has somewhat underestimated the personal influence of the late J. C. Bancroft Davis in bringing about the final result; but his account in general is both candid and conclusive.

His chapters on home politics are naturally well-informed; for to the temperament of the historian he adds the qualification of being either officially an actor in or an observer of the parliamentary struggles of the decade. A convinced Liberal, he yet writes with posterity and not party in view. So that, although his verdicts may not always please his political opponents, they are not to be hastily dismissed. Even Tories have begun to draw a veil over Disraeli's jingo administration, just as it was the late Lord Salisbury himself who confessed that in the Crimean war—the pet exploit of jingoes twenty years earlier—England had put her money on the wrong horse. Walpole dissects Disraeli's dealings with Russia and Turkey, after 1874, his purchase of the control of the Suez Canal, and his theatrical behavior at the Congress of Berlin. The "Peace with Honor" finale, when scrutinized in the cold light of history twenty-five years later, looks very much like buncombe; but since we have not space to criticise in detail, we must content ourselves by saying that the first two chapters of Volume IV., dealing with the Eastern question from 1856 to 1878, contain the best summary account of that intricate subject with which we are acquainted in English.

Very remarkable is the monograph on "Ritual and Religion," which fills nearly a third of this same volume. Walpole defines the position of the Anglican Church in the middle of the nineteenth century, and then takes up one by one the chief manifestations of change, the branching out of High, Low, and Broad sects, the basic ideas of the leaders—Maurice, Colenso, Pusey, Stanley, Seeley, and the rest—and especially the questions which, after being agitated in the Church, came at last before Parliament for a settlement. A foreign Christian who reads for the first time this amazing catalogue of sacerdotal finicalities—such as whether to burn candles on the communion table; whether to call this table an altar, and make it of stone instead of wood; whether to turn to the east, etc., etc.—might conclude that since Nero fiddled when Rome was burning, no similar example of irrelevancy has been witnessed. Walpole himself, however, indulges in but little comment, and in no sarcasm. He prefers to state that while these matters were absorbing the mediæval minds in the Anglican Church, modern science was inexorably changing the attitude of every reasoning man or woman towards Bible, revealed religion, and supernaturalism. Sir Spencer concludes with a brief outline of Tennyson's "In Memoriam" which he regards as the typical expression of the age.

His final chapter has chiefly to do on the political side with the rise of the Irish Home Rule party, which, with the discontent aroused by the bad financiering of the Conservatives and with Gladstone's stupendous Midlothian campaigns, caused Beaconsfield's fall. The year 1880 may well stand as a dividing line in the development of the British Empire, and, accordingly, Walpole's history, in ending with the elections that closed Disraeli's career, has an artistic rounding out.

The history itself deserves much praise. It is the best in its field. Herbert Paul and Justin McCarthy may be more popular, but Walpole outranks them both as an historian. He has, indeed, a remarkable gift for analysis. As a writer he is clear, straightforward, and dignified. He possesses neither Mr. Paul's smartness nor Mr. McCarthy's love of purple patches. His mind is judicial. He has wide knowledge not only of his English material, but also of Continental and American politics and persons. This equipment is much rarer; and it enables him to place British history from 1856 to 1880 in its proper relation to the world-history of that quarter of a century. He lived long enough after the events he describes to get access to most of the most important correspondence and biographies of the leading men; and he could supplement from his private sources of information the material open to every one. So far as his history is partisan, it may serve as the explanation or apologia of the ideals and actions of British Liberalism in its prime. But partisanship is not its characteristic. These various qualities assure for the book permanence, until another generation shall demand the rewriting of this period from a different point of view. Even then Walpole's work will not lose its value as an authentic register by a well-qualified contemporary.

Thought and Things: A Study of the Development and Meaning of Thought, or Genetic Logic. Vol. II. Experimental Logic, or Genetic Theory of Thought. By James Mark Baldwin. Pp. 436. New York: The Macmillan Co. $2.75 net.

The author here continues the working out of his purpose with the same industry, and with the same quality of ability, if not perhaps in so full measure, as in the first volume (see the *Nation* of February 28, 1907, p. 203). But it now becomes quite clear that, however desirable the main inquiry of the work may be in itself, the project of connecting it with the science of logic was very unfortunate for the one subject and for the other.

The main motive of logic has always been to get possession of a method for determining the values of arguments. Now, it is obvious that whatever bearing the truth of one thought may have upon the truth of another will depend exclusively upon what the states of things are which the two thoughts represent to be real, and not at all upon the psychical or linguistic forms in which they are dressed, nor upon the psychical processes by which that dress is

given to them. Whether we say that among sea-animals will be found some that give milk to their young or whether we say that among animals that give milk to their young will be found some that inhabit the sea, is for all purposes of argumentation quite indifferent; and the equivalence is here so evident that the school of "exact," or mathematical, logicians are almost unanimous in adopting, as their standard, or canonical, form of expressing the same fact, substantially this: "There is an aquatic mammal." Newton's great discovery is usually stated in elementary books, and is thought of by ordinary people in the form that each separate body in the solar system has an instantaneous component acceleration toward every other proportional to the mass of that other and inversely proportioned to the square of the distance between them, but is otherwise constant for all and at all times. But in writings on celestial mechanics (as in Equation 15 on p. 175 of Dr. Moulton's admirable little "Introduction" to the science), the form in which the same fact is often stated and intended to be thought is that the sum of the *vires vivæ* (or their halves, according to the old definition) of all the bodies of the system subtracted from the sum of the reciprocals of the distances between the several bodies, each reciprocal being multiplied by the product of the masses of the pair of bodies concerned and these masses being expressed in terms of a gravitational unit, remains unchanged. Since these two statements represent, and would in all conceivable cases represent precisely the same state of things, they are for all purposes of reasoning interchangeable. It follows that for logic they are equivalent, although, since this equivalence is not self-evident, they cannot strictly be called identical. From such considerations it follows that, in general, logic has nothing to do with different dresses of thought which cannot possibly represent different states of things; or at most has no more to do with them than to demonstrate that whatever state of things is represented by the one is equally represented by the other. That this principle, suitably modified for modals, ought to determine what is and what is not relevant to logic has been practically or virtually acknowledged in every system of logic excepting some of those which have arisen since the bankruptcy of Hegelianism, with the consequent *de facto* supremacy of psychology in current philosophy. But none of those which deny that application of the principle have improved reasoning in the smallest particular.

What Professor Baldwin means by calling his logical system "genetic" is that in it the main stress is to be placed upon the psychical processes by which each form of thinking is brought about. As soon as the first volume came before us, we thought it almost if not quite inevitable either that there was to be no logic, properly speaking, in the work, or else that the logical matter was to be confused by the introduction of entirely irrelevant conclusions. Since the whole of that first volume, with the exception of seventy pages, was regarded by the author himself as relating to "pre-logical" topics, and since it seemed unfair to condemn the whole on account of that fragment of seventy pages, or simply because it did not relate to logic as we conceive that science, we contented ourselves with acknowledging that it was a sound piece of scientific work as far as it went. But we find the second volume to be distracted from the pure consideration of the genesis of thought by discussions of truly logical questions—discussions which are far from strong in themselves, and which do not evince the knowledge of logic that would have been necessary for carrying them through intelligently. In these discussions, positions are taken which neither necessarily result from the genetic theory nor are supported in any solid way, but which, rather, seem to have been selected on grounds of personal predilection, or at random. For example, the author regards judgments of probability as intermediate between the "universal" and the "particular" propositions of formal logic. He comes to that opinion in consequence of his understanding the "particular" form as being, for example, "Some men are mortal," and the "universal" as being, "All men are mortal." He thus shows us that he has not read logic with sufficient attention to remark that the subject in both the logical forms is in the singular number, "Some man is white," *aliquis homo est albus*, and "Any man is white," *omnis homo est albus*. Had he told us that he proposed to wipe out the existing terminology of logic and to use the old terms in new senses, the question would have been a different one; but as the architect of a "Dictionary of Philosophy," he must, and does, know that to do so (especially without notice) would have been to trifle with the ethics of science; and therefore he certainly intends to use the terms "universal" and "particular" according to their authoritative definitions. He even goes so far as to say that when in a judgment of probability, the probability becomes 1, the proposition becomes the logical "universal." A student of the doctrine of chances who did not distinguish between the two would soon find himself in a snarl. A very large number of players sit down to play an even game against a banker. That is, each bets at each play one franc that an event will turn out one way or another, the probability being one-half that it will turn out in the one way and one-half that it will turn out in the other way. If the player loses, he pays a franc to the banker; and if he wins, he receives a franc from the banker. But as soon as a player has made a net gain of one franc, he retires from the table, and his place is taken by a fresh player. On the other hand, as soon as the banker has netted a gain, he yields the bank to a fresh banker. Now, every player and every banker is supposed to have unlimited funds or credit. Consequently, by one of the easiest of those problems in the doctrine of chances that are called "problems on the duration of play," the probability is 1 that any given player will, sooner or later, make a net gain, and the probability is equally 1 that every banker will ultimately net a gain. So, then, if probability 1 were equivalent to a logical universal affirmative, every player and every banker must come out of the game richer than he went in, which would obviously be making money out of nothing. But the truth is that probability relates to what would happen in "the long run"; that is, in an endless run; and probability 1 means that in such endless run the expectation to which it refers will be verified infinitely oftener than it is falsified; but, for all that, it may be falsified infinitely often. A teacher of logic ought to make this clear.

Some of Professor Baldwin's work in this volume is of a far more ambitious kind than that which we have illustrated. The reader will naturally suppose, however, that if he has not been able to control his mind to sound reasoning in the small problems, he is unlikely to have done so in the greater ones. At any rate, we can testify that, having gone through the whole with the utmost care and with predilections not unfavorable to the author, we do not think it worth our reader's while to enter into the necessarily more lengthy criticisms of the more difficult problems as treated in this volume. We greatly regret our disappointment with it.

Science.

African Nature Notes and Reminiscences. By Frederick Courtney Selous. New York: The Macmillan Co. $3 net.

This contribution to hunting lore and natural history is by the last of the big-game hunters of South Africa. It is an attractively written narrative of the adventures of over thirty years, spent mostly in the regions south of the Zambesi. President Roosevelt suggested publication and furnished a "foreword" in which he heartily supports, from his own observations in the Rocky Mountains, the views of the author as to the fallacy of much of the theory as to protective coloration of animals. Mr. Se-

lous's opinions are stated in the first two chapters; his chief argument is that the carnivora seek their prey almost entirely by night, when color is no protection. In all his experiences he never saw but one lion hunting by day. Environment, together with sexual selection, is, he holds, the strong influence in the evolution of color. The notes on the lion will probably excite the greatest interest, for they give much information as to habits, and recount many adventures and some tragedies, as for instance the killing of an Englishman while asleep in a railway carriage on the Uganda Railway by a man-eater. This "terrible and terrifying" beast's lust for killing is illustrated by the fact that a lioness once got into a piggery, and, after eating parts of two pigs, killed more than a hundred others. There are chapters on the hyena, the wild dog, the cheetah, the rhinoceros, and the giraffe. In reference to the general belief that giraffes are capable of going for months without drinking, the author states that, according to the natives, giraffes and antelopes which live in the desert paw from the sand great tubers—often as big as a man's head—white in color, looking something like turnips, and containing as much water as a juicy orange. He adds:

> At certain times of year a kind of small watermelon grows in the Kalahari in great profusion, which, as long as it lasts, renders all wild animals entirely independent of drinking water.

An entertaining journey in search of the inyala is described at length, and many valuable facts are given concerning the haunts and habits of this rare antelope, "perhaps at once the most beautiful and the least known to naturalists and sportsmen." The notes on the tse-tse fly contain strong reasons for doubting the opinion that "the existence of the fly is not dependent on wild game of any description," as stated by Sir Alfred Sharpe in the *Field* for November 2, 1907. Mr. Selous holds that in South Africa the flies become so highly specialized that they could maintain their vitality only on the blood of buffaloes, for in the districts in which buffaloes were completely killed off, these insects entirely disappeared. In the closing chapter on the Bushmen of South Africa Mr. Selous makes the interesting statement:

> I do not think there is any instance on record of a tribe or family of the aboriginal yellow Bushmen having given up their wild free life in the desert and taken to agricultural or pastoral pursuits.

He also says that he has never met with or heard of the dwarf race spoken of by Professor Keane in his book, "The Boer States." The work is well illustrated by E. Caldwell.

The "Collected Works" of Lord Lister, and "The Physics of Earthquake Phenomena," by Cargill Gilston Knott, are in preparation for the Oxford University Press.

Prof. Andrew Gray's recent article on Lord Kelvin in the Glasgow *Herald* now appears in extended form as the latest volume of the English Men of Science Series (E. P. Dutton & Co.). It is not strictly a biography. but aims to give a survey of Lord Kelvin's scientific work with a mere sketch of his personality. The sections describing his methods in the classroom and laboratory will be found the more interesting as Professor Gray is one of the band of students who worked under Kelvin, then William Thomson, in the old "tounis colledge" of Glasgow. We get a graphic picture of this first of physical laboratories, which gradually spread from an unused basement room. One sees both the inspiration and the occasional bewilderment among his scholars produced by Kelvin's impatience at the ordinary routine of teaching. Certainly the arrangements of the laboratory were not orderly, nor was the class instruction systematic, but the abler men enjoyed inestimable stimulus of personal contact with a genius. The author gives clearly the impression of the originality and of the enormous vitality and energy of this intellectual giant who ranks with Galileo and Newton. The remainder of the book is also well treated, but such a survey of Kelvin's scientific work is hardly so valuable since physicians should be already acquainted with it and the subjects treated are almost too technical to be understood clearly by others.

There is no immediate fear that the supply of garden literature will fail. There are so many amateurs desirous of obtaining every possible hint as to the selection and care of plants and soils, that each new book stands a good chance of finding a place on hundreds of shelves. By far the larger number of new garden books come from European hands, and are not strictly adapted to our surroundings. One of the best of the newer practical works is "The Perfect Garden," by Walter P. Wright of England (Philadelphia: The J. B. Lippincott Co.). Mr. Wright's aim is to show an amateur how to pick a suitable spot for a garden, and then "how to keep it beautiful and fruitful." He deals with flowers, fruits, and vegetables, and gives some space also to glass-houses. Naturally he offers very little that is original; but he makes all his points with skill and excellent judgment. His chapter on the cost of gardening and the pleasure to be obtained from caring personally for a garden, is full of sagacious advice which is likely to be of service in this country, where too many amateurs surrender their gardens wholly to their gardeners, and remain idle lookers on. Mr. Wright has an interesting chapter on color in the garden, one of the most important subjects in the whole field.

This special topic has been taken as the theme of a volume of 150 pages by Gertrude Jekyll, entitled "Color in the Flower Garden" (imported by Charles Scribner's Sons). The volume is worthy of the highest praise from all points of view. It is to be regretted that the publishers have not availed themselves of the color processes in the engravings. The photographs themselves are excellent, but their value would have been much increased by direct representation instead of description. Miss Jekyll is an artist and a patient student of difficult problems in color. She meets with success the serious difficulty in arranging plants so that in successive months, or groups of months, the scheme of colors will be equally effective. Even in our own country, the hints here given will be of great use in preventing the unpleasant effects produced by gaps between seasons. The most charming part of the volume is that which is devoted to gardens of *one* color, such as the green gardens or the gold gardens. These are extremely effective and are hard to plan. But the author gives suggestions which, with a few changes, would insure success, even in our colder and more capricious climate.

Closely following the new edition of Prof. Vernon L. Kellogg's "American Insects" (see the *Nation* of August 6), comes "insect Stories," by the same author. The book places Professor Kellogg in the short list of scientific writers of distinction who can interest the popular mind in their specialties. The "Stories" are simply vivid narratives of entomological jaunts in the neighborhood of Stanford University, California. His companion is a bright child, "Mary," and the only bit of imaginative color in the text appears in her way of looking at things. The reader who follows on these excursions and listens to the learned professor's account of the habits of his insect friends shares the enthusiasm of the various discoveries. The manners of wasps, bees, dragon flies, May flies, spiders, ant-lions, galls, and ants have never been more graphically described. And yet all is accurately told by one who has full knowledge of the facts, as well as the literary temper and touch. "Insect Stories" is not a child's book, in the strict sense; it is written *with* the child rather than for him. But no intelligent youth can fail to read it with delight and profit. (Henry Holt & Company. American Nature Series).

"Principles of Breeding; A Treatise on Thremmatology," by E. Davenport (Ginn & Co.), is the second volume in the Country Life Education Series, edited by Prof. C. W. Burkett of the Kansas State Agricultural College. This is one of the first attempts to collate the results of recent scientific theory and experiment with the practical side of breeding. The author intends the work for both the student of agriculture in college and the practical breeder on the farm. With this aim in view, Mr. Davenport devotes the first 575 pages to a consideration of the theoretical, evolutionary side, with the causes of variation as the dominant theme. As an outline of the processes of evolution, the treatment is thus very one-sided, but this phase of evolution is of vital importance to the breeder. The first five chapters treat the kinds of variation, morphological, meristic, functional, and mutational. The author's position is summed up in a paragraph:

> The writer is strongly of the opinion that while selection is a powerful agent for "shaping up" and "finishing off" a fairly acceptable type, and while it is the only means of deciding what shall live and what shall disappear, yet much of the real advance in both animal and plant breeding is likely to come through distinct offsets which are now called mutations, and which in Darwin's time were erroneously, if not reproachfully, denominated "sports."

Then follows a careful review of the causes of variation, both internal and external, and those affecting the individual as well as the race as a whole. This discussion, while admittedly incomplete, owing to the present state of our knowledge, is yet perhaps the most valuable part of the book; for it furnishes an excellent résumé of widely scattered theories and results. In dealing with the practical problems, the author addresses himself particularly to the inexperienced but educated breeder; and his advice is rational and practical. In many cases he quotes the opinions of expert breeders, and where data in the field of animal and plant breeding are notavailable, he presents analogous results of scientific experiments with unrelated groups of organisms. The index is very full. Prof. Davenport is to be congratulated on so happily combining scientific accuracy with practical advice.

In "Essays on Evolution" (Henry Frowde), Prof. Edward B. Poulton has collected and reprinted ten of his essays and addresses in a volume which will be most welcome to scientists in America. The first seven essays are general in character and though they bear the stamp of the author's thoroughness, yet most of them but review well-known ground. The first is a reply to the argument of the late Lord Salisbury that the age of the globe is not sufficient for the processes of organic evolution, as promulgated by Darwin. The second attempts to answer the question "What is a species?" This matter is presented in a rather confusing manner, without regular sequence or clear summary, and adds nothing new or satisfactory to this perennial discussion. The third and fourth addresses deal respectively with the various theories of evolution and heredity; next Professor Poulton takes up the inheritance of acquired characters in insects. The sixth essay shows how J. C. Prichard the anthropologist, anticipated modern theories of evolution and heredity; and the seventh discusses Huxley's attitude toward natural selection. This article is really an introduction to the next two chapters which, with the introduction to the book, and the final chapter, form the most valuable part of the work. Here we have Professor Poulton in his special field, color and morphological mimicry in insects. From careful consideration of the innumerable facts bearing on the latter interesting phenomenon, the author concludes that natural selection is the most satisfactory explanation of its appearance and evolution. Finally, as a summary of the argument, a chapter is devoted to a comprehensive classification of the various uses, which external coloring and appearance subserve. In the front of the book in an interesting introduction of some fifty pages, entitled "Mutation, Mendelism, and Natural Selection," the author acknowledges the value of Mendel's discovery, but properly protests that the recent supporters of the theory of mutation have made it too universal in its application. This introduction, together with the last three or four chapters, should have formed an independent volume on natural selection and mimicry. There is a remarkably full analytical index of over eighty pages. Unhappily, the large, black faced type used throughout the book is rather trying to the eyes.

In "Retrieval at Panama" (New York. Technical Literature Co.), by Lindon W. Bates," the most important points are that the canal is costing a great deal more than the estimates, and that in excavation and sanitation we are not, as we have been induced to believe, doing so much better than the French. Mr. Bates has had to get his data, however, from last year's reports, and later figures would mitigate his strictures. The cost, to be sure, is still piling up, but the amount of excavation has greatly increased and the death rate is slowly falling. The complete abolition of yellow fever is in itself a remarkable achievement. But the volume is chiefly devoted to criticism of the plan for an 85-foot lock-fight canal which was adopted in spite of the fact that it was condemned as a dangerous experiment by a majority of the board of consulting engineers. Mr. Bates makes much of the inconsistencies, reversals of opinions, and erroneous estimates in the reports and testimony of the various experts and commissioners, and prophesies calamlty for the great Gatun dam and locks; and a large part of his criticism is undeniably justified. The board of consulting engineers in 1905 considered three projects presented by Mr. Bates and rejected them, although the lock project favored by the majority was more like his than that finally chosen by the commission.

The fifth volume of the Practitioner's Handbooks (John Lane Co.) is a "Short Practice of Aural Surgery," prepared by J. Arnold Jones, a surgeon of Manchester England. For so small a book—250 pages of text—the subject is presented with such clearness and conservatism that it ought to be useful to the student for review or the general practitioner for rapid reference. Little that is essential is omitted, although the method of puffing the cheeks, to raise the soft palate during inflation, appears to be unknown to the author. There is a short appendix of German medical terms, "with conversational examples," but it has too many misprints and other errors to be very helpful.

Drama and Music.

The McClure Company will publish this autumn "Recollections and Reflections," by Ellen Terry; and Volume X., containing "Dépit amoureux," in the Temple Molière.

Several of the New York theatres will open late in August or early in September. In the Hudson Theatre on August 24 Robert Edeson will be seen in the new play by George Broadhurst, "The Call of the North," founded on Stewart Edward White's story, "Conjuror's House." On August 27 Miss Billie Burke will appear at the Lyceum with her own company in "Love Watches," an adaptation of the comedy, "L'Amour veille," made by Miss Gladys Unger. Miss Burke's leading man will be Cyril Keightley, recently a member of Arthur Bourchier's company in England. At the Lyric on September 7, Miss Mary Mannering will give "Glorious Betsy," by Miss Rida Johnson Young. The play has for its central figure Betsy Paterson of Baltimore, who married Jerome Bonaparte.

Cleveland Moffett's "A Square Deal," in which Wilton Lackaye will be the star, will be seen for the first time on September 23 in Chicago.

Joseph J. Schurman's company of Sicilian actors, which has been playing in Paris and London, will sail for America about the middle of November and will be here some three months. The company consists of forty-four players.

"Piano Playing," a little book of simple suggestions, by Josef Hofmann, is promised by the McClure Company.

Art.

*DOMENICO GHIRLANDAIO.

The use of the artist reduced to simplest terms is to see for people. He brings records of a vision peculiarly sensitive, selective, and intense. He rescues all manner of beautiful appearances from the void of the unperceived. By using his eyes we may fine and extend our own vision. In most of us this faculty, the basis of practically all knowledge, is blunted and restricted by constant utilitarian association. The eye becomes merely a convenient instrument of identification, and sifts out from the varied spectacle of the world that small dull portion which seems actually serviceable to the consciousness. But for the artist the eye opens upon a universe constantly weaving new forms of beauty. Some of these he grasps, combines, and records, thus sharing his vision with his fellows. They, too, if

*"Ghirlandaio," by Henri Hauvette (Paris: Plon), is the latest addition to the illustrated series of Masters of Art published under the auspices of the Ministry of Public Instruction. The book is virtually a rehabilitation of the prolific Florentine. If such a work were to be done, France was the place, a Minister the proper patron, and a scholar primarily an investigator of the literature and civilization of Italy the ideal author. M. Hauvette knows his Italy new and old as few living men. Constant association with the art of that favored land can hardly replace criticism and connoisseurship, but it may provide a very agreeable substitute. We agree with M. Hauvette that a narrow discrimination of the school production of Ghirlandaio is otiose. Nor does the purely æsthetic criticism of this master afford alluring possibilities. As a sort of official limner of wealthy bourgeois Florence in its full-blown prime, Ghirlandaio is worthy of all attention, and it is this aspect of his art that M. Hauvette puts forward. Nobody could do this work with greater competence. The opening chapter on Ghirlandaio's world is admirable. Such suggestive side lights as the secularization of the religious drama at Florence, *sacre rappresentazioni*, we should hardly get from a professed student of art. Of the large critical reservations to be made M. Hauvette is conscious, but his enthusiasm survives all qualifications, and where the book lags, it is from inevitable drawbacks of the subject. In general, it is sober, fully informed, and well constructed, a contribution to the history of art in conformity with the sound traditions of academic scholarship in France. It may be read with pleasure by those already familiar with the subject, and novices need hardly be condoled with if they catch from this volume an enthusiasm they are likely to outgrow. We note certain omissions, but no serious one except the failure to take into account in connection with the Innocenti altarpiece, the researches of Uimann in the Prussian Jahrbücher and of Berenson. This is one of the very few instances in which in an important work the relative parts of master and assistant have been clearly made out. The example is instructive for all of renaissance art, and might well be included in a new edition.

any capacity for attention remains in them, may repeat his ocular adventures. By humbly learning of the real seers they may gradually regain the joy of the eye, may attain to the sense of a visible world infinitely lavish of pleasureable appearances. They may become, in all but the power to create, the peers of the artist himself.

A wise man then values the artist most who sees most unlike himself. A foolish man, on the contrary, admires the artist whose vision repeats and confirms his own in all its limitations and imperfections. And since as regards the æsthetic use of the eye the incompetent are always in a vast majority, the real artist will usually find in the singularity and superiority of his seeing a barrier to wide popularity, while the artist who sees precisely like the rest of the world may expect its favor in fullest measure. Stalwart, average, money-earning humanity stands before his canvas, marble, or bronze, and avers complacently: "There is a great artist, why he works precisely as I should, had I but the time to acquire his manual skill." Such artists are the pets of the dealers, the heroes of the auctioneers, the darlings of paying society. They pass quickly as the fashion of seeing passes, and the historian is rarely occupied with their names. Yet not invariably. Domenico Ghirlandaio was preeminently the type of everyman's artist in the Florentine renaissance, and today he has his admirers and finds his able critical apologists. The interest of his career, which has just been reviewed sympathetically by a distinguished French scholar, M. Hauvette, lies in its exemplary character. If we understand the painting of Ghirlandaio, we shall know just how much and how little these everyman's artists may be reckoned among those of pure and unquestioned race.

And here we should avoid prepossessions. There is a tendency to rule these plebeian talents promptly out of court. They invariably lack, for instance, the *finesse* which we are used to believe is of the very essence of art. Did not Jules Lemaître in a precious essay on the novels of Georges Ohnet—works surely which any one of some millions of Frenchmen might have conceived and with favoring circumstances written—declare the whole production to be outside of literature, *hors de la littérature?* One is tempted to take this short way with the whole class, but the case is not so simple. We may not apply to the artist who actually is of the people in all his ideals the condemnation that befits him who deliberately condescends to what he knows to be a worse taste than his own. Ghirlandaio never painted with his tongue in his cheek. His emotional life and æsthetic ideals were precisely those of the complacent merchants and bankers he served. The mark of the meretricious painter is a technical decline; thus, if the case were worth arguing, it might readily be shown that a late Carolus or Millais is inferior to an early one. In Ghirlandaio, on the contrary, we find a singular uniformity. He progressed very little after his early years, and where his own hand is at work he never is below himself. He is said to have wished that the new walls of Florence might be offered to his brush. And in fact his dozens of frescoes seem as if cut off from one long roll. Yet this portentously even production has qualities that have made it popular for more than four centuries (a phenomenon worthy of investigation) and is everywhere evidently sincere (a fact rarely presented to criticism). It will not do with Ruskin to rule Ghirlandaio out of court for the lack of a religious poignancy he never attempted to express. We must try to see him candidly for the laborious, successful craftsman he was.

He was born in 1449, the son of Tommaso Bigordi, a goldsmith, nicknamed the Garland-maker, *il Ghirlandaio.* Domenico was three years older than Leonardo da Vinci. Sandro Botticelli was his senior by about five years, Luca Signorelli by eight, Pietro Perugino by three. Growing up in a Florence teeming with innovations in pigment, color, drawing, and composition, the young Domenico prudently avoided them all. He studied with that fine draughtsman and pioneer of landscape, Alessio Baldovinetti. But Domenico never meddled with his master's unfortunate experiments in oil mediums, emulated his sinuous line, or studied landscape seriously at first hand. At an early age Ghirlandaio gained the kind of facility which is ever admired of the throng and suspected by true artists. His line went pertly about any conceivable form, never searching it, but defining it sufficiently for a languid eye. His figures had the appearance of solidity without the reality. His method was dull, but had the merit of seeming accurate and sprightly. Above all, his work was neat. Every composition was full of orderly items, sleeked over by his impartial brush. His colors were bright without being harmonious. His works had the comfortable quality of being neither more nor less than they seemed at first sight. The eye identified the subject at a glance, and complimented itself on its cleverness. Here were no lines surging passionately about the picture as in the works of that odd Botticelli, no gaunt, straining limbs as in Pollaiuolo, no mystifying nonsense of half-shadowed forms as with young Leonardo. They were comfortable pictures to look at. You never were in doubt what was intended; and, best of all, you never could, if you were a patron, mistake your well-fed self and the likenesses of your interesting family, modestly yet conspicuously drawn up alongside the sacred subject for which you had paid your good florins.

A mere enumeration of the important commissions that came to Ghirlandaio is instructive. Before 1475, his twenty-sixth year, he did important work at Ognissanti for the Vespucci. That year he was called to Rome to paint in the Vatican Library, but of these frescoes nothing survives. A little earlier he had begun the stories of the life of Santa Fina, for her chapel in the Collegiate Church of San Gemignano. The unusual subjects, the naïveté of the legend of the girl saint, were favorable to him. In spite of technical deficiencies, particularly the inflexible arrangement of the figures and the mean proportions of the architecture, these pictures have a charm to which he rarely afterwards attained. At Ognissanti once more, in 1480, he painted a very famous St. Jerome in his Cell, and a Last Supper, a composition several times repeated by his pupils. The Last Supper, considering the awkwardness of the space to be filled, is of considerable decorative effect. Ghirlandaio carries the heads of the figures as near the spring of the vault as possible, defining the line by a painted wall. The two unmanageable lunettes above he treats as if they opened to the sky, filling them with tree-tops and flying birds. It must be said that this obvious decorative device attenuates the effect of the subject, making it seem merely an *al fresco* feast. The figures, too, are inadequate to the emotions they are supposed to represent. Judas, according to the pictorial usage of the time, sits alone on the near side of the table. A stubborn nose and bearded chin are held high, and a shoulder and elbow are defiantly obtruded that we may not fail to perceive he is a traitor. The Saviour makes a mild gesture as if not to awake the beloved disciple who sleeps on his bosom. The other apostles turn to each other in pairs in mild expostulation. Two, even, have some air of challenging the traitor peremptorily, but in the main the feasters are as it were gently ruffled. One could imagine a similar emotion if Judas, who has a little the air of a *raconteur* had perpetrated a bad pun. Now, a certain emotional inadequacy is almost inherent in this subject. In this regard Ghirlandaio has come short with many other painters. Our real issue against him is less his failure to grasp the significance of the scene than, given his idyllic and decorative point of view, the comparative cheapness of all the ingredients of the composition. These mild persons, who sit without weight, and gesticulate without energy, who are bounded by a line of uniform quality in the soft forms of adolescence or the rugged contours of age—these are not cre-

ations worthy of a competent craftsman. Their superficial attractiveness is specious, resting merely upon a certain smartness in design and an unstudied gayety of color. Recall how Andrea del Castagno, in an equally uninspired version of this theme, at least made the figures portentous, tragic, and individually vital. Think how the nameless Umbrian who painted the Cenacolo of Foligno, on the whole a feeble performance, spent himself in contriving gracious postures for his beautiful heads. These comparisons will suggest the very limited range of Ghirlandaio's artistic curiosity in what remains, after all, perhaps the most inventive of his works.

His St. Jerome, in Ognissanti, is so evidently fine that one hesitates to subject the impression to the test of reflection. The gaunt cardinal fills his neat, well-appointed, curtained cell so comfortably, looks at you, as he steals a moment from writing, so austerely, the Eastern rug on his desk and the jars on his shelves are so well painted that you are tempted to admit that this is the ideal portrait of a great saint who is also a great scholar and gentleman. But study the picture a little, and you begin to feel uncomfortably the uniform rigidity of the treatment. Flesh, hair, furniture, textiles, know only one touch. The saint is still life, in spite of the deceiving alertness of his eyes. The hands are inert and wooden; compare them with those speaking hands of Botticelli's St. Augustine, just across the church. Finally, the recluse looks not like an inspired scholar but rather like an indefatigable scrivener. He is not translating or commenting the "Divine Oracles," but copying them at so much a page. In real life I have seen this St. Jerome in a vice-consul admirably faithful to his routine duties. The picture with all its apparent authority, and its four centuries of admiration, shows that hopeless absence of distinction which is ever characteristic of Ghirlandaio. From the execution of these two works in 1480 till his early death fourteen years later his *bottega* was kept busily occupied. His two brothers, David and Benedetto, led a number of minor assistants. The master himself bid those who kept the shop refuse no commission however humble. In 1482 he went to Rome and painted in the Sistine Chapel two frescoes, of which the surviving one, The Calling of Peter and Andrew, is one of his most dignified compositions, though overcrowded with individual figures that have no part in the main movement of the group. The same year he had the signal honor of a commission to paint the triumph of San Zanobi in the Hall of the Great Council in the Palazzo Vecchio. His perfunctory treatment of this vast space shows how fortunate it was that his desire of picturing the city wall was denied him.

It was curiously enough the caprice of a parvenu client that gave Ghirlandaio the chance to show himself the painter he might have been. Francesco Sassetti, the man of business of old Cosimo, had quickly drawn a fortune for himself out of his association with the Medici Bank. Wishing to found a chapel for his patron saint, he first tried to get the finest position in Florence, the choir of Santa Maria Novella, where still might be seen Andrea Orcagna's damaged and neglected scenes from the lives of St. John and the Virgin. The monks refused to grant the chapel except on condition of repeating the old subjects, so the frescoes concerning St. Francis were painted in a narrow and dark chapel of Santa Trinità. In these six subjects Ghirlandaio incurs a rather unhappy comparison with Giotto at Assisi and Santa Croce. Yet it would be unfair not to admit the maturity of these works, their skilful adaptation of the principles of space composition invented by the great Masaccio. Moreover, the usually smart and merely approximate line becomes here more severe and expressive, in the portrait really masterly. One should note the happy invention of the resuscitated boy sitting stiffly on his bier in the Piazza of the Trinità, while the Franciscans pray fervidly and grave citizens survey the scene tranquilly, as those that rightly expect such interventions. A still finer invention, if intrinsically rather preposterous, is The Granting of the Franciscan Rule by Honorius III. The consistory is held in a *loggia* opening upon the Piazza della Signoria, all the architecture of which is indicated with truly monumental, and (in Ghirlandaio) most exceptional effect. Cardinals and poor friars vie with each other in sweetness of aspect. It is a stately scene, and the flavor of holiness is in it. In the other subjects Ghirlandaio is merely adequate. Perhaps one might be tempted to admit much more of The Death of St. Francis —the nearest approach to a tragic effect ever made by our stolid artist— were it not too evident on comparison how much and how poorly he had borrowed from Giotto for the figures, and from Filippo Lippi for the architectural setting which has been cheapened in transcription.

Where these frescoes are really memorable is in the portrait groups that depict the Sassetti family, their friends, and their patrons, the Medici. Throughout these are admirable, and at times the arrangement of such inorganic groups is masterly. Note the bottom of the scene of The Granting of the Rule: A staircase opens at the extreme foreground. A swarthy, sardonic face emerges near the top, waist-high. Between us and him is a beautiful lad; the heads of two other boys, of princely simplicity in their bearing, appear from lower down the stair, and farther back still the placid profiles of two humanists. The whole group has an extraordinary reality and amenity. In spite of the strangely cut figures, the passage could be excerpted as an oblong composition of a most novel and modern sort. It hardly adds to our interest to learn that the ironist is the great humanist poet Angelo Poliziano, and two of the boys Giovanni and Giuliano de Medici, a future pope and a grand duke. Here we have Ghirlandaio quite at his best as a keenly observant portraitist. Except for certain groups in Santa Maria Novella, the lovely panel, formerly in the Kann Collection, depicting Giovanna degli Albizzi, and that amazing portrait in the Louvre of a bulbous-nosed grandfather with his little grandson—an effigy quite as portentous as an Antonello da Messina, and more humanely conceived—we have really nothing to set beside this vision of a great scholar with his princely wards. In fact, the study of the human face always worked a strange concentration in this too façile artist. Before this problem Ghirlandaio forgot his repertory of flourishes and graphic formulas. His line becomes incisive, searching, and fairly nervous. His heads are comparable to Dürer's, and may be set beside those of Masaccio and Botticelli. If his achievement in portraiture seems to fall short of theirs, it is only because he was less successful in giving the characteristic poise and expression of the whole body. So great a limner of the face and head was he at his best that we must count it a misfortune that his patrons, instead of imposing their full-length effigies upon the religious scenes they paid for, were not contented with those admirable half-length portraits, of which only two have come down to us.

To trace the hand of Ghirlandaio through the half-dozen fine altar-pieces he made in the later years would be to repeat much that has been already said. It would be particularly ungracious to analyze down to its miniaturelike prettiness and pettiness the great Adoration of the Kings in the chapel of the Innocenti hospital. At a single glance, with its smiling river background, angelic choir, stately elders, and girlish Madonna, it is the most radiant thing in Florence. Why not leave it at this first glance, and apply the critical probe where it will cause less pain? Perhaps it is better yet to climb the ladder and, nose to the enamel, enjoy the exquisite irrelevance of the workmanship. The great panel might shrink into a few inches of space, and still remain a lovely miniature. This is the highest praise we can accord it, and also the severest blame.

It was painted in 1488, by which year Ghirlandaio had been already working for two years on the lives of the Virgin and John the Baptist in the choir of Santa Maria Novella. This time the

commission came from the greatest patrician of Florence, barring the Medici. Giovanni Tornabuoni, desiring to honor God, our Lady, and his patron saint, and not forgetful of "the exaltation of his own family and house," contracted for the work at the generous sum of twelve hundred broad pieces of gold, retaining, however, complete control of the design and execution of the paintings. The bargain was struck, the frescoes by Orcagna representing the same subjects were either destroyed or covered with plaster, and Ghirlandaio set to work with his full force of assistants. Vasari, who wrote when some of these assistants were still alive—the youthful Michelangelo may have been of the company—and their pupils, famous, spared these frescoes no praise. They seemed to him rather the creation of a philosopher than of a mere painter. The lyrical Sir Joseph Crowe regarded them as the perfect consummation towards which since Giotto the art of Florence had been aspiring. The spacious choir of the Dominican temple is still the most popular place of tourist resort in Florence. Into this harmony of admiration burst one John Ruskin about thirty years ago, with results that are not yet forgotten. To repeat his criticism of these frescoes would be a little like slaying the slain. I may say that, in objecting to the superfluous and insignificant ornament with which these compositions are filled, he seems to me to strike their real weakness, while in emphasizing their lack of true religious emotion he, perhaps, makes an unfair requirement. The objection would lie with equal force against most of the religious painting of the renaissance. No, we may not fairly demand that the artist feel poignantly the emotion of any assigned subject. It will be a kind of luck if he does so naturally, a superior exercise of imagination if by the will he projects himself into the desired state of mind. As an honest workman, however, he is bound at least to intelligent and interested reflection upon the theme he has undertaken. His enthusiasms are his own, but we rightly expect of him a certain seriousness and ingenuity. It is the lack of these qualities in these last works of Ghirlandaio that is their real condemnation. Everywhere the accumulation of sumptuous detail is offered in place of organic and well-knit composition. An abundance of pretty faces and graceful forms describing conventionally attractive gestures is presented where we properly ask dignity, expression, and purposeful movement.

But, we are told, it is a remarkably vivid picture of the life of the patrician merchants of Florence in her prime. Is this quite true? We have admittedly a number of fine portraits of the Tornabuoni and their kin on parade. We have certain interiors tricked and tortured with decorative detail as we must believe no rooms of the time actually were. The trouble with these frescoes as documents of Florentine life is the trouble with the people who ordered them. Ghirlandaio was hardly allowed to paint the Tornabuoni as they really were at home, but as they wished to seem to the town. There is nothing intimate or convincing about the delineation; it never transcends a sort of official character, in its way as insincere as the religious scenes into which it is thrust. Throughout, these frescoes show the lack of constructive genius in Ghirlandaio. He was incapable of creating a complex and harmonious whole, incapable of those ingenious and spirited evasions, the product of an incorrigible artistry, which make the religious painting of Venice at once the most secular, sincere, and charming the world has seen. At bottom he too was sincere, but with the odd, limited sincerity of those merchant patrons who gave a little space in a painting to some story of Our Lady, reserving most of the wall for the exaltation of the family and firm. He had the good luck to die in 1494 before the grim preacher from Ferrara overthrew the pageantry of that plutocratic Florence whose favorite Ghirlandaio had been for a quarter-century and more. Let us be candid. If we really wish the materials for a vision of the Florence that prayed and paid with equal enthusiasm, a score of those painted fronts of bride chests, many of them by obscure or nameless artists, would be far more suggestive than the entire work of Domenico Ghirlandaio. M. Hauvette bids us value him because he embodied in graphic form the average ideals of the piping times of Florence. This seems to us the advice of an historian. No critic would, I fancy, tell us to reverence Bouguereau because he embodied precisely the mythological ideals of the Third Empire. It takes a Ghirlandaio to make us realize the true greatness of a Signorelli or a Botticelli; or, coming to fairer parallels, the resourcefulness and freshness of such routine talents as Gozzoli and Pintoricchio. We need Ghirlandaio to show us how far even the lesser lights among the true artists transcended the average taste of their patrons.

If all this is so, some unconvinced reader will ask, why does nearly every visitor to Florence love to linger in the choir of Santa Maria Novella? For the very good reason that except for Gambrinus and one vaudeville garden, it is about the only place in Florence that lays no tax upon the visitor's mind. Everywhere else strange beauty stares one in the face, requiring swift and exhausting intellectual readjustment. Here is nothing of the sort. You may bring to Ghirlandaio the satisfactory habits of vision you acquired in Oshkosh or Surbiton, and they will not fail you. After the baffling adventure of the Uffizi and the still more perilous pass of the Academmia, what a rest to come home to these stately comfortable folk of quaint old Florence, patronizing such pretty saints. It is something to have had so little idiosyncrasy as to charm for four centuries and more the indolent eyes of all nations and of many critics. I do not underestimate such an accomplishment, but, believing it to lie apart from the criticism of art, I gladly commit it to more competent judges. To Ghirlandaio, portraitist, I return with increasing pleasure, and with continued regret that in this field his course was hampered. The rest of him, for the most part, I leave to whatever sociologist, humanitarian, or mere historian desires the greater share of a prolific and much admired painter. Happily he needs no praise of mine. As I write doubtless the choir of Santa Maria Novella is full of passionate pilgrims, while Florence itself still loves him. I almost regret what has been said, for to speak ill of Ghirlandaio in the City of the Baptist is still to give grave offence, and some day I shall want to go back there. M.

Charles Scribner's Sons announce for publication this autumn "A Chronicle of Friendships," by Will H. Low, a volume or reminiscences; and "The Story of English Art," Sir Walter Armstrong.

"The House Dignified; Its Design, Arrangement, and Decoration," by Lillie Hamilton French, will soon be published by G. P. Putnam's Sons.

The McClurc Company will publish this autumn "The Higher Life in Art: A Series of Lectures on the Barbizon School of France," by John LaFarge.

The nineteenth annual exhibition of the New York Water Color Club will be held in the galleries of the American Fine Arts Society, October 31 to November 22. The jury of selection consists of: Reynolds Beal, W. Verplanck Birney, Mrs. Charlotte B. Coman, Colin Campbell Cooper, E. Irving Couse, Albert Herter, Miss Clara T. MacChesney, F. Luis Mora, Mrs. Rhoda Holmes Nicholls, M. Petersen, Edward H. Potthast, and Cullen Yates.

James Wilson Alexander MacDonald, the sculptor, died at Yonkers August 14 in his eighty-fourth year. He was born in Steubenville, Ohio, and while a young man in business in St. Louis, he studied art diligently at night. He is said to have made the first portrait bust cut in marble west of the Mississippi—that of James T. Benton. The first order he executed in New York was that of Charles O'Conor, now in the central hall of the Appellate Court. MacDonald also designed the bronze statue of Edwards Bates, attorney-general in Lincoln's Cabinet, which stands in Forrest Park, St. Louis; the bronze statue of Fitz-Greene Halleck, in Central Park; a colossal bust of Gen. Winfield Scott Hancock, in Hancock Square at One Hundred and Twenty-second Street, in this city; another of Gen. Hancock in the Metropolitan Museum of Art; a colossal bust of Washington Irving, in Prospect Park, Brooklyn; a bust of Thomas Paine, in a park in New Rochelle;

and the portrait of George Washington, more than 300 copies of which have been placed in the public schools of New York city. Shortly before his death Mr. MacDonald completed a companion bust of Lincoln.

J. R. Spencer Stanhope, an English painter born in 1829, died August 2 at Bellosguardo, Italy. He was at first a pupil of G. F. Watts, and later his associations were with the Pre-Raphaelites under the leadership of Rossetti. His mature work shows the influence of the Italian masters of the fifteenth century.

Finance.

THE QUESTION OF FINANCIAL RECOVERY.

The sharp fall in prices on the Stock Exchange, last week, has as usual led people to ask whether unfavorable indications have not appeared. To such a question, the reply is that the decline signifies, not that business has taken a turn for the worse, but that investors are beginning to see that actual conditions have never warranted the prolonged advance in stocks, during July. A London financial journal, commenting lately on events in America, remarked that every incident in industry, politics, or finance seemed to result in a "bull market." The Republicans nominate Mr. Taft on a moderate platform, and prices go up; the Democrats nominate Mr. Bryan on a radical platform, and prices rise again. The steel manufacturers refuse to reduce prices for their commodity, and stocks go up; an independent mill cuts prices, the Steel Corporation follows suit, and stocks go still higher. In June, the government "crop estimates" promise an unprecedented yield of wheat; the Stock Exchange responds by an advance. In July, unfavorable weather compels radical revision of the figures, and suggests the possibility of a crop not much greater than last year's, and a violent rise in stocks ensues.

The description will be recognized by most people as correct. The London paper explains the movement on the theory that speculating capitalists, with access, on easy terms, to the abundant hoards of money in the banks, are putting up prices of securities on borrowed money, in the conviction that if they keep the ball rolling, regardless of outside conditions, they will virtually force the investing public to relieve them of their load at such prices as may be fixed. This theory is attractive, and would doubtless go far to explain the anomalies referred to. But the people who may be acting on it assume two essential facts—first, that the outside investing public, which is to be lured into the speculation, can get the necessary purchase money; second, that the securities offered are sufficiently attractive, on a pure investment basis, to bring the higher prices. The first consideration has to do with the effects of last autumn's panic on private fortunes; the second concerns the real condition of business.

Up to a certain point, a recovery in Stock Exchange prices, after a great panic, will naturally be attributed to the fact that powerful capitalists, who, in the hour of shaken credit and impaired bank reserves, were forced to sell the securities which they were carrying on borrowed money, are repurchasing, now that credit is restored and money easy. But to this process there is a limit. Even the greatest of capitalists will not buy securities unless he foresees a good return on his investment, or unless he is confident of selling later to somebody else, at a higher price. Money was quite as easy, eight months after the panic of 1893, as it is to-day, but the powerful capitalists did not buy. On the contrary, the ensuing twelvemonth was chiefly marked by continuous efforts, on the part of large and small investors, to dispose of what they held at the best price obtainable, and the stock markets merely reflected the prevalent discouragement.

What is the condition of the real investing public to-day? Certainly there can be no such increment of profits from private business, to reinvest in securities, as there was, say, in 1906. Trade returns show that the volume of sales has been running, on the average, 30 to 50 per cent. below that of a year ago, and prices have universally been lower. Since the beginning of the year, commercial failures in the United States have been nearly 60 per cent. more numerous than in 1907, and liabilities have been unprecedented. It is true, on the other hand, that holders of investment securities, who are the largest reinvestors on the Stock Exchange, have not suffered such loss in income from suspended dividend and interest payments as they did in the general bankruptcy of railway undertakings after 1893; and this consideration is important. But to suppose the accruing fund, available for investment, to be anything like that of 1907 or 1906, would be to suppose an absurdity.

The question, whether the rise in stocks has or has not been legitimately founded on a promise of early return of business to the profitable basis of a few years ago, is somewhat different and far more perplexing. Wall Street tells the country what will happen later on. It deals in expectations. If it relied on actual figures, it would have to admit a more severe setback in trade than was witnessed even after 1893. Railway earnings are still running 20 per cent. or thereabouts below 1907, and the shrinkage in the volume of trade has been mentioned above. It is a favorite argument, not without plausibility, that this very abstention of consumers during the past eight months means accumulating requirements which must be met later by proportionately larger purchases. But the same argument was available in 1894, and it turned out to have no validity whatever. Consumers had reduced their purchases because they had not the money with which to buy. Their customary purchases had not been postponed, but were either permanently cut down, or else abandoned altogether.

The legitimate part of the present feeling of hopefulness probably arises from one important fact—the entire absence of pecuniary distress in our agricultural community. The people engaged in agricultural pursuits make up more than one-third of our entire population. In the financial troubles of the nineties, it was they more than any other class who felt the pressure and embarrassement. To-day, on the contrary, the farmers are enjoying an unusually profitable market for crops of satisfactory size, with the assurance that the outside world will have to buy their surplus—the stored-up supply having been much reduced by the world-wide harvest shortage of 1907. The farmers as a whole are as prosperous as in 1905 and 1906. Even this fact, however, is not proof positive that the country as a whole is forthwith to enjoy the full flood of prosperity of two or three years ago. The people who are not farmers remain to be reckoned with. The chances are that for American industry in general the process of recuperation will be more gradual than the enthusiasts of Wall Street have imagined.

Age, Growth, and Death

By CHARLES S. MINOT
Professor of Comparative Anatomy in Harvard University

8vo. Illustrated. $2.50 *net.*

This volume deals witb some of tbe fundamental problems of biology, and presents a series of views (the results of nearly thirty years of study), wbich the author bas correlated for tbe first time in systematic form in tbe present work.

The book is so wide in its scope tbat it has a bearing upon almost every branch of biological inquiry. The subject matter, though treated in the most scientific spirit, is so presented as to appeal to general readers witbout special knowledge of biology.

Shakespeare Library

A comprehensive series of texts and studies, under the editorship of Professor I. Gollancz, valuable alike for students and general readers.

DUFFIELD & COMPANY 41 WEST 25TH ST. NEW YORK

THE CLEVEREST BOOK OF THE YEAR
ANNE OF GREEN GABLES
By L. M. MONTGOMERY

September Third

The Nation

WILL PUBLISH

AN EDUCATIONAL NUMBER

Among other special features there will be an article on The Teaching of Literature in College by Prof. John Erskine of Amherst.

There will be reviews of recent text-books.

5,000 extra copies will be mailed to Professors of English, Mathematics, Natural Sciences, Sociology and Political Economy in the Universities and Colleges throughout the United States.

Usual rates for advertising. Forms close September 1st.

NEW YORK, THURSDAY, AUGUST 27, 1908.

The Week.

Mr. Bryan made a good speech on the tariff at Des Moines last Friday. We do not mean that he has gone profoundly into underlying principles. The occasion may not have called for such treatment, and in any case Mr. Bryan is not in the habit of going to the bottom of questions. But he presented in interesting form some of the salient abuses of our tariff system and urged that we return to the basis of a tariff for revenue. He was happy in his quotations; with telling effect, for example, he introduced the statement of H. E. Miles, chairman of the tariff committee of the National Association of Manufacturers:

> I have made money every year out of the tariff graft. Not much, but, still, a little.
>
> The tariff barons raised their price $50,000 to me. I made a charge against the jobber of $60,000, and I know that he charges more than $70,000 for the $60,000 he paid me. Before reaching the consumer the $50,000 charge became about $100,000 to be paid by the agricultural consumer.

Mr. Bryan also dwelt on the new version of the tariff creed:

> In all tariff legislation, the true principle of protection is best maintained by the imposition of such duties as will equal the difference between the cost of production at home and abroad, together with a reasonable profit to American industries.

This presposterous demand for a "reasonable profit" is, as Mr. Bryan points cut, "an addition to the rule, and is likely to be used as an excuse for raising the tariff." "To what other business," he asks, "does the government guarantee a 'reasouable profit'? To the farmer or the merchant or the laborer?" His strongest arguments, however, deal with the Republican record of shuffling and inconsistency. The Republicans have talked tariff reform, have admitted the inequalities of the Dingley schedules, and yet have done nothing. A Republican President has urged the abolition of a duty on wood pulp, but the stolid "standpatters" have blocked the way to all changes. The Republicans, in fear of offending the protected interests, have not dared to make those alterations which they have acknowledged are necessary. Mr. Bryan, then, is justified in asking whether the Republicans can now, after their eleventh-hour repentance, be trusted to revise the tariff in the interest of the consumer.

It is also fair to ask whether Mr. Bryan and his following can be trusted to undertake this, perhaps the most important task which confronts Congress. The Democratic party is, we grant, the party that has traditionally stood for tariff reform; Mr. Cleveland made his second successful campaign with the tariff as practically the sole issue. But pressing as tariff reform has been, according to Mr. Bryan's own confession, he and his party have been indifferent to it in the last three elections. The tariff should have been revised in 1896, in 1900, or in 1904. Eight years ago, as well as four years ago, the iniquities were quite as monstrous as Mr. Bryan now sees them to be. But the Democrats, first under the leadership of Mr. Bryan and then under the leadership of Mr. Parker, were extremely slack in this matter. They were interested in other things, and as tariff reformers they were almost as lukewarm as the Republicans. Indeed, tariff reformers were bitterly disappointed with the conduct of Mr. Bryan and Judge Parker, and felt that tariff reform has been betrayed in the house of its friends. It is for this reason that Mr. Bryan's fiue professions, and his charges of insincerity and inconsistency urged against the Republicans, fail to move us. We go as far as anybody in denouncing Republican indifference, cowardice, and corruption on the tariff. But we are not yet ready to accept as our saviour Mr. Bryan, who is the very image of inconsistency, who has never cared about tariff reform, and who has never used his enormous influence with the Democratic party to make that a dominant issue.

"I am a protectionist," said Mr. Sherman to the notification committee last week. At this statement no one will cavil; for it is not to be expected that a party owned so many years, body and soul, by the protected interests would nominate a free trader for Vice-President. As soon expect the devil to sprinkle himself with holy water. The significance of Mr. Sherman's utterance lies in the fact that he has generally been regarded as standing with Speaker Cannon and Representative Sereno E. Payne among the most immovable of the "standpatters." He now commits himself to the revised version of the protectionist creed:

> Such duties must and will be imposed as will equalize the cost of production at home and abroad and insure a reasonable profit to all American interests.

For years all the protectionists ventured to ask for was what they called "an equalization of cost of production at home and abroad." The difference, they ingenuously explained, was due to the difference in wages. All they wanted was a chance to pay the darling American workman at a high rate and save him from the horrible fate of the pauper laborer of Europe. Protection was, on the face of it, a scheme of pure philanthropy. But now the protectionists impudently demand duties that shall "insure" a reasonable profit. For the rest, Mr. Sherman's speech is commonplace, but happily brief.

It appears that there is a prospect that Mr. Taft may, after all, take the stump in the West. The reason given is that there are "so many calls for him"—just as if there were not always many calls for Presidential candidates. Such a swinging round the circle might be of marked value to Mr. Taft in improving his oratory and checking his tendency to verbosity. In a speech at Boisé, Idaho, he once told his audience that he must be uncomfortably long, because he had "abstruse legal matters" to expound. Nothing, however, is more abstruse or obscure to an audience than prolixity itself. When Mr. Balfour, as Prime Minister of England, had made several vast speeches in 1903 on the very complicated problem of colonial preferences, an insistent popular clamor arose that he should put his ideas on "a half-sheet of note-paper." Perhaps Mr. Taft shares the opinion that copiousness of language is popular and democratic; terseness, cold and unsociable. But it is necessary to distinguish times, places, and degrees. How can we call conciseness undemocratic, seeing that the concisest of all expressions of experience are also the most genuinely popular—the proverbs? Disraeli, who longed to return to "those sober times when the aptitude of

a simple proverb was preferred to the verbosity of politicians," mentions an Englishman of Elizabeth's reign who made a successful speech on a financial question in the House of Commons by simply stringing a dozen proverbs together; and also "one of our old statesmen, who in commending the art of compressing a tedious discourse into a few significant phrases, proposed the use of proverbs in diplomatic negotiations, convinced of the great benefits that would result to all." Archbishop Whately surmised that "more than half the cases in which men are led into misapprehension are due to want of sufficient conciseness of expression." Surely, a collection of proverbs may safely be recommended as a pillow book to every honest campaigner.

The opposition to the renomination of Gov. Hughes has collapsed. Roosevelt, Taft, Sherman, and Hitchcock are for him, and the little local bosses may as well quiet down and swing into line. The subject was thoroughly discussed at a conference at Oyster Bay last week, and the persons who came away from that meeting are sure that Hughes is the man. Mr. Sherman says that "the consensus of opinion is favorable to the renomination of Gov. Hughes," and that this candidacy is "broader than the questions involved in New York State politics." In other words, the New York Republicans must take Hughes partly for the sake of the national ticket. There is just one reason why this conclusion in regard to Hughes has been reached: he is stronger with the people than any one else; he is, in fact, the only Republican who has a chance to be elected Governor. The bosses hate him as much as ever; but they find him, as they have found him during his two years at Albany, irresistible. He can do as he likes with them, because he has the mass of the voters on his side. It is reported that no formal announcement of the President's attitude will be made, but the word will be passed along that Woodruff, Barnes, Ward, Hendricks, and the rest of the small-fry had better discover at once that the party wants Hughes, and that he is the man whom they, too, have always preferred.

It is a singular decision which President Roosevelt has reached in the case of the West Point cadets. The law, which explicitly orders the dismissal of every cadet found guilty of hazing, is circumvented in the cases of all but two; the lucky six are sentenced to a minor punishment never contemplated by Congress. The authority of the Superintendent, Col. Scott, is upheld, and the law to a certain extent vindicated by the reaffirmation of the dismissal of the two worst offenders. Col. Scott alone comes out of this affair with credit.

WASHINGTON, August 18.—That the Panama Canal can be completed within five years and at much less cost to the government than has been generally supposed is the information which Col. George W. Goethals, engineer in charge of the canal construction, is expected to bring to Secretary of War Wright from the Isthmus early next month.

The time for the completion of the canal is decreasing so rapidly in these days before election as to arouse wonder, if not suspicion. Last March, the time set for the opening was 1915. Mr. Taft, in his speech of acceptance, changed this to 1914, and now Col. Goethals makes it 1913. If our official optimists be but allowed to keep on we shall surely find ourselves by next December in possession of a completed canal. Meanwhile, it is interesting to note the smiles of the minor officials on the canal when these figures are mentioned. Those two great flights of locks—can these enormous masonry works be erected in five years? If so, Col. Goethals has solved for the first time the problem of making government work more efficient than that of private contractors.

The clergymen of Springfield, Illinois, after holding a meeting, have announced that the riots there were the natural result of the lax government of the city. Lawlessness had prevailed; the evil elements, being in politics, did about as they saw fit; brothels and saloons flourished. The ignorant foreigners and the ill-disposed negroes together took advantage of the complaisance of the authorities—and the race riots followed, as a matter of course. Two and one-half years ago, in February, 1906, there were precisely similar scenes in another city of the same name—Springfield, Ohio. There were killings, incendiarism, and the ordering out of troops. After all was over the contributory cause appeared to be precisely the same—the rottenness of the government of the town. The lawless elements came to believe that they owned the place and might kill and burn and rob as they saw fit. That the negroes who suffered were merely a convenient excuse appeared from the burning of some of the homes of the best-behaved and most prosperous of the race. The American who prides himself so on his efficiency, administrative ability, and shrewdness has yet to grasp the fact that bad government is the most wasteful and costly of extravagances—to say nothing of its immorality.

The Dutch nation seems not particularly bent on going to war with Venezuela. Like so many heavy draymen watching a fight between street urchins, the larger Powers have been benevolently encouraging little Holland to attack Castro. We have played the part of the good-natured policeman who looks the other way, and have assured the government of the Netherlands that the Monroe Doctrine will not be invoked against any legitimate efforts made by Holland to obtain a satisfactory answer to its demands on Venezuela. Go ahead and bombard, we have said; but the Dutch government hesitates because, in spite of fine talk about national honor and trade interests, it is not quite sure that it has cause sufficient for beginning war. The press dispatches tell us:

> Nothing less than the speedy withdrawal of President Castro's decrees, which have been the means of crippling trade in the island of Curaçao, and something in the nature of an apology for the humiliation of the Dutch Minister, will be satisfactory to Holland.

But, after all, if a nation within the civilized pale refuses to trade with you, you cannot go and force it to, at the cannon's mouth. And as to the humiliation of the Dutch Minister, France and the United States, in minor degree, have had the same experience. The nations that took part in the blockade and bombardment of 1902 had, after all, a definite cause to plead. Contracts had been violated and public debts were being repudiated. Holland has as yet no such strong case.

The annexation of the Congo by Belgium is nearly an accomplished fact. The problems involved in the change are many. Not the least is connected with the quality of material the Belgian government has at hand for building up a reorganized civil service for the Congo. In this respect the country is fortunate. Testimony is practically unanimous

that, even under the present mismanagement, the officials in the colony exhibit a degree of ability, training, and devotion to duty which can scarcely be equalled. The Congo civil service is largely made up of foreigners, representing almost every country in Europe. North Europeans, and especially Scandinavians, are exceptionally numerous. Yet neither the sense of being strangers nor the iniquity of the ruling powers in Belgium and Congo has prevented the organization of a body of men whom Englishmen have favorably compared with their own civil servants in India. When a system shall have been established which has for its object, not the collection of as many tons of rubber as forced labor, spurred by whip and gun, can produce, but the building up of European interests on the basis of freedom of occupation and trade for the natives, the Congo civil service should attain still greater efficiency. Belgium, in beginning her colonial career, has the advantage of the two decades of experience in the Congo. Governments that first venture on such an undertaking are bound to make errors costly to the peoples they would rule and to their own reputation. But for Belgium it is no longer a question of apprenticeship.

It comes hard for Frenchmen to admit that in Morocco they have been betting on the wrong horse, but from the tone of their newspapers it is evident that they are getting ready to make a confession of error. The latest defeat inflicted upon Abd-el-Aziz by his brother, Mulai Hafid, is decisive, not because any single defeat in the loose Moroccan game of fighting and running away can be called decisive, but because it has been preceded by a series of setbacks for the former Sultan which shows that the tide has set steadily against him. The French government may now be sorrowing for two errors of policy—that it should have helped Abd-el-Aziz at all, and that it should not have helped him more. By giving him refuge at Rabat, by driving Mulai Hafid's bands out of the coast region, and in other ways it went far enough in friendship for Abd-el-Aziz to add strength to the belief among the natives that he had sold himself to the foreigners. On the other hand, France might have given Abd-el-Aziz active military support against his brother. This, it is true, would have aroused European clamor. As it is, France has lived up honorably to her pledges, only to see her prospects in Morocco rapidly waning.

Macedonia, for years the home of misery and misrule, feels itself now Macedonia the blest. It would be wrong to speak of the dawn of liberty in the Sultan's unhappy provinces. "Dawn" suggests a deliberate process, whereas upon Macedonia the light has broken as if at a single word of command. The effect upon the people has been commensurate. At Constantinople, we read in the dispatches, "Mohammedans, Greeks, Bulgarians, Servians, Albanians, military and civil officers, peasants and members of revolutionary bands joined hands, and swore to sustain their rights and liberties." In one place in Macedonia, "after an address by a Turkish officer, prayers were offered in turn by a Turkish woman, a Protestant Bulgarian preacher, and a Jewish priest, while tears flowed from the eyes of many persons in the great crowd." The European traveller who crosses the frontier into Macedonia finds himself in the midst of a nation in festival, and his ear catches strange outcries: *Yashassin kuriett*, "Long live freedom!" *Yashassin asker*, "The army"; *Yashassin millet*, "The nation." It is pleasant to look back from times of rejoicing to times of adversity; but with the view comes regret for the suffering and the wrong that should never have been permitted. How often did Bulgaria, Greece, and Servia protest that positively they could do nothing to hold their bands in check! The world knew that these civilized governments were lying, but the tragic farce continued.

The intense enthusiasm over Count Zeppelin's achievement and the desire to help him to further successes continue unabated in Germany. Such an outpouring of money is almost unprecedented, even in cases of national distress. The Zeppelin relief funds are now well into the million of marks; and every possible device is used to increase them. "Tag-day" is still an American institution, but passengers on the steamers on Lake Constance are being "held up" by women passengers for the benefit of the fund. Since the suggestion that this large sum be turned over to a trust committee has been denounced by Count Zeppelin and the press, the whole amount, together with the half-million of marks given by the state, will be disbursed by the inventor himself. Of course, this practical sympathy is not wholly for Count Zeppelin's personal plight. All Germany thought that he was on the point of capturing for the German nation the "command of the aerial seas"—as the Crown Prince phrased it in his address to the public; and the matter has become one of national pride. A fit of hysteria like this is, we confess, somewhat startling, where the victims are a people hitherto regarded as stolid and phlegmatic. But the truth is that Germans have always been an imaginative people, and it is precisely the imagination that Zeppelin so strongly appeals to.

Sir Oliver Lodge, president of Birmingham University, has been asking the British colonies to succour that institution. He suggests that they may wish to "express their gratitude" to the Chancellor, Joseph Chamberlain, "for his services to them, which it is believed they recognize," by "endowing the university substantially." This is probably the first instance of a British university looking to the colonies for support, and it may be a sign of the times. When Oxford and Cambridge appealed recently to the public at home, and the response was not satisfactory, the explanation was that those ancient foundations were supposed to be well-to-do already, and only, or chiefly, embarrassed through mismanagement; also, that their curriculum was not utilitarian enough to attract the Mæcenases of to-day. Birmingham University is open to none of these charges. A modern institution, it is undoubtedly poor, and as utilitarian in its aims and practice as any university has yet shown itself. But Sir Oliver addressed those outside of the island. The response of the colonies will be interesting for more than one reason. Is Sir Oliver right in supposing that they have any strong desire to express "gratitude" to Mr. Chamberlain? The campaign started by the late Secretary for the Colonies in 1903 against British free trade on behalf of an imperial preferential union aroused some enthusiasm in Canada and Australia at the time; but how much of it survives to-day? The colonial demand for preferences is avowedly disappointing British protectionists.

THE REVISION OF THE TARIFF.

Mr. Taft's promise of an extra session of Congress to consider revision of the tariff immediately after his inauguration has been heralded in the newspapers as if it were a new and important decision. As a matter of fact, the Chicago platform says:

> The Republican party declares unequivocally for a revision of the tariff by a special session of Congress immediately following the inauguration of the next President.

Moreover, in his speech of acceptance Mr. Taft took the same ground. His reiteration of his pledge is, therefore, to be regarded as having been called forth by Mr. Bryan's speech of Friday. We hope, too, that it has been forced by signs of impatience within Mr. Taft's own party and by a recognition that the radical Republican element, which is winning victories at the primaries in the West, is in earnest in its desire for relief from the burdens of our extortionate tariff.

But to call an extra session and to get the tariff revised, are two wholly different things. The Chicago platform commended the step taken by Congress for "investigating the operation and effect of existing schedules" by appointing committees of the Senate and House, to sit during the summer recess and employ expert assistants to secure the facts "necessary for an intelligent revision of the tariff." This action of Congress was taken on May 16, more than three months ago, just as if the summer of a Presidential year were not the worst possible time for such an inquiry. Well, the Senate committee held its first session Monday; and Senator Burrows explained that the meeting would last three or four days. Moreover, Senator Burrows must make a number of campaign speeches, and can, therefore, give little time to this work for the present. Further comment upon the value of the undertaking is superfluous.

Even if expert assistants zealously employ the time between election and the extra session, and gather a mass of enlightening statistics, Congress will not be permitted to devote itself quietly to this great constructive undertaking. The instant it assembles it will be raided by the protected manufacturers who now have their feet in the trough, and want not less but more room. The hearings in the autumn of 1893 before the Ways and Means Committee were fitly described as displaying "fatuity, political and economic blindness, and undisguised selfishness" put on exhibition as a "rational basis for the fiscal policy of the nation." The tariff hearings this year and next will be no more edifying; if Mr. Taft is elected the Republicans who throng to them will come as victors insisting on the spoils. These are the "friends of the tariff," by whom alone, so Mr. Taft and the Republican leaders think, the tariff should be revised. Yet to let them write the tariff as heretofore would be, as Senator Beveridge put it, to let business make a tariff law for itself, "instead of Congress making a tariff law for the people."

That a newly elected President may appeal for tariff revision and appeal in vain, recent history teaches us. All of Mr. Cleveland's earnestness and ability and the skill of William L. Wilson could not prevent members of their own party from betraying them. The seductions, the bribes offered by the protected interests, were too much for Democratic virtue at a time when, if ever, it should have stood firm. And Mr. Taft has laid up special trouble for himself by asserting—what is beyond belief—that there are some schedules that need "revising up." Every manufacturer will assert that this was a direct reference to his own business. Then, too, the very language of the act which authorized the committees to meet this summer left the same loophole, for they were authorized "to obtain equal treatment for agricultural and other products." Hundreds of producers will display violent discontent with the inequality of their treatment if they think they can secure larger favors.

It must also be remembered that our tariff covers thousands of items. What duties and how large should be placed on them are difficult problems even for an impartial expert to solve. These delicate questions we refer—about once in ten years—to our Congressional committees. The Committee on Ways and Means framed the Dingley bill in less than four months; the Senate Finance Committee then carved the measure for six weeks more. The two committees that drafted the McKinley bill gave seven months to the task, and the same time was spent on the Wilson bill. The last German tariff revision committee comprised thirty experts who spent nearly six years at their task, after which a Reichstag committee put in ten months of continuous work upon the law.

Clearly, then, something more than merely calling a special session will be necessary if we are to have tariff revision. There must be a serious disposition and an earnest effort to put an end to these injustices. Real tariff revision will not come from the Republicans or Democrats until the mass of the people are as indignant over the present outrages as they are in the West over the misdeeds of the railways and the Trusts.

ANGLO-GERMAN WAR MONGERS.

David Lloyd-George may or may not discuss the reduction of naval armaments with the officials at Berlin; Sir Edward Grey may stand by his protest against any interference by other ministers with the affairs of his department; King Edward may or may not have taken up the subject in the course of his recent interview with Emperor William—but there is no denying the fact that in England especially the sentiment grows against the mad competition of shipbuilding with Germany, and the still wilder talk of imminent German invasion and imminent British collapse. The rumors of approach to an understanding between Great Britain and Germany are the harbingers of reawakening common sense. It is impossible that all the fire-eaters of the press in both countries, all the professional jingoes, all the politicians with axes to grind, should continue to lash public feeling into a fury over nothing at all. Germany cannot dredge a fishing harbor without intending it as the point of embarkation for an invading army. She cannot build a railway without making it part of a mobilization scheme directed against England. And England, that once feared nothing but God, now shivers in pallid fear before the German waiter and governess. For we have it on the authority of an entire school of war-novelists that the waiters are disguised German officers and the governess is a spy.

We have mentioned the small politicians with axes to grind. Unfortunately, the big politician with a hobby is also to be reckoned with. Even a Roberts or a Cromer may nod and say more than he intends; his words are sure to

stir the little dogs of war to louder yelping. Five years ago Lord Robert spoke of the need of universal military training for Englishmen in a way that made him appear a prophet of speedy war with Germany. Lord Cromer supplied the war mongers with a luscious morsel in his assertion that old-age pensions would lead indirectly to war with Germany. But even he must know that war could not come for ten years. A great statesman, it is true, should look far ahead, but he should also be cautious of the manner in which he utters his warning.

Sociologists who like to talk about race-degeneration and folk-decay and similar things, have been citing the recurrent outbreaks of anti-German hysteria in England as evidence of a general decline in the nation's physical and moral fibre. In the way Englishmen have been crying out in fear of their defencelessness against invasion, war, defeat, and Imperial doom, there seems to be almost justification for the charge. To read the jeremiads of the English jingo, one would imagine that Britain has been moving post-haste to destruction. Yet British prosperity has been undergoing no serious checks of late. England has not been threatened by mob law, or class war, or pestilence, or famine. The forms of civilization still subsist, and England's voice is still heard in the counsels of the nations. Why, then, should England's straining eyes discern armies of invasion—which is bad enough—and its flagging spirit cry that it cannot repel invasion—which is a much more serious state of mind for an Englishman?

All this would imply that in the race for prestige and authority Great Britain has been falling steadily behind; that her Imperial and foreign policies of late have been unsuccessful; that Germany has been scoring on her in the diplomatic game. We turn to the facts, and see that English prestige during the last five years has been growing steadily. The empire is holding well together, and in the field of international politics Britain has won triumph after triumph. On the debit side there is the unrest in India and Egypt—a serious problem; but England always has had problems of the kind. And on the credit side? Canada has just emerged from a love-feast of loyalty. In South Africa a new British confederation is in the building. In Australia there is occasional recusancy, perhaps, but growing need, too, of the mother country's protection. In foreign politics the record is brilliant: The alliance with Japan checkmated anti-British policy in China; this was defeat for Germany. The understanding with France, and the agreement with Russia, have been surely no German victories. In Persia, British influence has helped to establish a constitutional régime long before Germany's Bagdad railway has reached the Persian Gulf and German influence could be brought to bear on the Shah, as on his brother in Islam, Abdul Hamid. The latter's recent overturn is generally recognized as a blow to German ambition, and a corresponding gain for Great Britain. In the light of these events, it is hard to see why the British jingoes should go on wailing over the German peril.

THE OLD JENA AND THE NEW.

The recent celebration of the three hundred and fiftieth anniversary of the University of Jena has naturally aroused interest far beyond the borders of Germany. Long the home of democratic ideals, this institution, with its romantic setting and splendid history, has drawn many American students to its well-trodden classrooms. It was the Elector Johann Friedrich who founded it in a day-dream during that dark period in 1547 when he looked out of his prison in the castle of Jena upon streets full of Spanish mercenaries, and planned a school which should be a stronghold of Lutheranism. When seven years later he was released from confinment, he set to work for his project, but soon died, and left the task to his sons. They proved faithful to their trust, and in 1558 an academy was established with two professors, one a theologian, one a humanist—a college reduced almost to the lowest terms. Thus in its origin Jena was a type of the old university ideal—a place where men escape the mental and physical oppression of the outer world, and work out for themselves in comparative seclusion intellectual freedom and strength. The professoriate, also, well represents the older university tradition. In those early days the proper study of mankind was man in his relation to his fellowmen, as revealed in humane letters, and in his relation to his creator, as revealed by the Scriptures.

The golden age of Jena was the last fifty years of the eighteenth century, and especially that happy period when German genius flowered around Goethe's patron, the Duke Karl August of Saxe-Weimar. Seldom has a seat of learning boasted such a brilliant and inspiring galaxy of lecturers—Reinhold and Fichte, Schelling and Hegel and Schiller, and Schlegel and Oken. The spirit of the Jena of those days was voiced by Fichte, who insisted that no man should have a place in the university who did not love truth for its own sake and seek intellectual power as an end in itself. Yet the love of truth, as these men understood it, was a somewhat different impulse from the scientific spirit of which we hear so much to-day. Mankind, envisaged under philosophical and poetical aspects, was still the centre of the universe. Because of their ability to conceive grandly of the human intellect and its destiny the followers of Kant teaching at Jena taught the civilized world. For a short time the little old university town was the home of a moral and spiritual renaissance which kindled all Germany and lifted the horizons in England and America.

Since her golden age the fortunes of Jena have on the whole pretty steadily declined till within recent years. The great scholars died or went to other universities, drawing their students with them—for in Germany the men and not the buildings constitute the attraction of a seat of learning. New universities were founded and entered into competition with the old. Berlin, especially, with its central position and large salaries and opportunities for scholarly leisure, has been a growing menace to the individual distinction of Jena as well as of the other smaller institutions. In proportion as Berlin grows in size and influence, the struggle for existence in the little universities waxes intense, and the danger increases that they will lose their character in an effort to imitate their great rival. The problem is similar to that which confronts the small colleges in America. The difficulties in Germany are aggravated, however, by the fact that all German universities are government institutions and derive the greater part of their income from the state. Under the present sovereign it can hardly make for Jena's

prosperity that she has long had the reputation of nourishing the spirit of democracy.

It is significant, therefore, that the accretion of financial strength with which Jena begins another fifty years comes from the private beneficence of a wealthy manufacturer. Commenting on this fact in the *Berliner Tageblatt*, Professor Borkowsky says, half-regretfully, that these new means are bringing in new features, and the beloved old nook is becoming the most modern of the universities. It was doubtless necessary for Jena to fall in with the modern spirit or to perish. A generation ago the poet Hoffmann von Fallersleben had detected the set of the tide in the universities toward materialism and the bread-and-butter studies:

Brot ist das einzig Universelle
Unserer Universitäten—
Dies reimt sich nicht, ist aber doch wahr,
Und wer's nicht glaube, dem wird's mit der Zeit noch klar.

This prophecy is rapidly being fulfilled. The old unworldly idealism of university life has already become obsolete, and the love of knowledge and the pursuit of culture are becoming more and more subordinate to practical ends. As this process continues, the quantity of the influence exerted by the higher institutions of learning increases, but the quality of the influence is bound to decrease." "All German education," says an American student who has spent several years at various of the universities, "is being Prussianized"—or, as a French critic would say, Americanized.

That means, of course, that the German universities are becoming less and less attractive to American students and less and less instructive. Twenty or twenty-five years ago the American who returned from Germany with a higher degree wore a sort of educational nimbus, and his head was full of suggestive differences. He brought back also a store of fond memories of the quaint formalities and underlying simplicity of life in the charming little old-fashioned university towns. But all that elder and intimate fascination is vanishing; to become the "most modern of the universities" is the ambition of the new era in Germany as in America. Already the higher degrees—sought only for their commercial value—are more difficult to obtain in our leading institutions than abroad; accordingly the man who goes to Germany for his degree is looked upon with suspicion. The enchantment of the German university is in retrospect. It is known only to the Americans of the older generation who go abroad for the summer and under a rose arbor with a stein of cool Münchener at hand listen to the music of the municipal band and conjure up the glories of the past.

THEIR FAVORITE BOOK.

The style, with its candor and temperance, will draw admiration even from those who are most pained by the disruption of their favorite book.

Were we to start a guessing match, after the manner of modern journalism, none of our readers could, we are confident, pick the author of this "favorite book." The sentence occurs in the London *Times's* review of the second volume of the "Cambridge History of English Literature," and the critic is discussing the revolutionary theories which Prof. J. M. Manly of Chicago has advanced in regard to Langland's "Piers the Plowman." At first glance the assumption that "Piers Plowman" can be anybody's darling seems like the grossest affectation; yet when we examine a little more closely into the qualities which make an author a favorite, we perceive that quite possibly somebody may love even William Langland. For reading, like kissing, goes less by merit than by favor.

Were we to ask a class of high-school students what books they prefer, some of them might dutifully choose from the great works on the college admission list—the plays of Shakespeare, the minor poems of Milton, and Burke's "Speech on Conciliation." We may be quite sure, however, that in their hours of ease few persons, young or old, turn to Shakespeare, Milton, and Burke. These names are too august, the writing is too dazzling in its excellence to inspire anything resembling mere affection. We admire "Hamlet" and "Lycidas" and the "Conciliation"; we admit everything that may be said in praise of these masterpieces; and yet most of us remain a little cold. We reserve our sentimental attachments for books that partake somewhat of our own weakness—like the applewoman in "Lavengro" who found in "Moll Flanders" an unfailing source both of interest and edification. The poetry of Wordsworth, Byron, Keats, Shelley, and Tennyson is ranked below that of Milton, and yet we believe that each of these writers can summon more warm partisans than the author of "Paradise Lost." The novels of Thackeray, Dickens, Reade, Trollope, and Meredith, of Fielding, Scott, and Jane Austen are not to be mentioned in the same breath with "King Lear." Yet most of us, if compelled to choose companions for solace and entertainment on the proverbial desert island, would prefer "Vanity Fair," "David Copperfield," "The Cloister and the Hearth," "The Last Chronicle of Barset," "The Ordeal of Richard Feverel," "Tom Jones," "The Heart of Midlothian," and "Pride and Prejudice." Perhaps we should be even less severe in our tastes, and should pack our box with "The Master of Ballantrae," "Under Two Flags," and one of those volumes that recount the enlivening adventures of Sherlock Holmes. In these matters we are not heroic, but human.

For an author cannot be a genuine favorite unless something in him—like the quips of Charles Lamb, the asides of Thackeray, the felicities of Horace, and the wittiest touches in Jane Austen—seems intended for one's private ear. Burke, for example, is too magnificently impersonal; he is always addressing a public meeting; and on that account he often bores us, just as Gladstone used to bore Queen Victoria. And once we begin to seek the personal note, there may be almost as many favorite authors as there are individuals—nay, more; for the author who appeals to us in one mood may fail to move us in another. Sometimes it may be Thomas à Kempis; sometimes Rabelais. If Byron is the poet of youth, Matthew Arnold may be the poet of our maturity. These idiosyncrasies in reading are as various and whimsical as the human mind itself. We know a grave and learned college professor who is wont to turn on occasion to the inanities of Oliver Optic. The impossible careers of Optic's machine-made heroes seem to call across the years and evoke again the silly dreams of this scholar's boyhood. "Alice in Wonderland" has charm for grown-ups as well as children; hard-headed lawyers may be found, we venture to say, who read it through at least once a year. And "Little Women"? Are there no graduates of Vassar, Bryn Mawr, Smith,

and Wellesley who now and then throw aside their burden of erudition and in the pages of Miss Alcott renew the visions and hopes of sweet sixteen? In some hearts the child dies early, but where the freshness and zest of childhood happily survive, the favorite book, the real favorite, is likely to be some story, be it "Robinson Crusoe" or "Water Babies," that stirs the old emotions and re-creates the heaven that lay about us in our infancy.

But most of us have travelled so far into the light of common day that our eyes are dulled to the splendor of the irrevocable past. We are guided to books by our painfully acquired tastes and aptitudes. Familiarity with other tongues may make one more at home with Plato or Lucretius or Montaigne than with the writers of one's own race. And the specialist, moved perhaps by a secret vanity in his knowledge of authors that are inaccessible to the rest of the world, makes his favorite the Cuchulin Saga, the Song of Roland, the Romance of the Cid, or even "Piers the Plowman." "Piers the Plowman" rather than Chaucer; for Chaucer is so vivacious and modern, and so easy to read after a very little practice that no man can make the Canterbury Tales a sort of private preserve or strut through them with the pride of individual ownership. But in Langland one may be free from intrusion and from the annoyance of the mob who admire defects rather than beauties. Yet when all is said for "Piers Plowman" we doubt whether either Professor Manly or the critic of the London *Times* would seriously try to make out a case for it as a favorite book. For those who must go to older English, they would probably recommend "The Owl and the Nightingale," "The Debate between the Body and the Soul," "Pearl," or "Syr Gawayn and the Grene Knyght."

But these are works for the few and fastidious. For the mass of mankind the favorite books must be those that express the common aspirations, the common consolations, and the common creeds in the common language. It is this, for example, that has made the Bible, for so many centuries and so many millions of men and women, ignorant and lettered, in health and sickness, joy and sorrow, the incomparable Book.

TOLSTOY THE REFORMER AT EIGHTY.

Fame may come to a man in such large measure as to make him more than celebrated; it may make him a commonplace of our daily thought. Thus, as I see it, Tolstoy has impressed himself on his age. Since Goethe died at Weimar there has been no secular shrine and oracle like the old manor-house at Yasnaya Polyana, in which Tolstoy, still occupied with his message of labor and peace, quietly waits for the close of the busy life which began in the same spot eighty years ago. The pilgrims come to Yasnaya as they come to St. Peter's at Rome, or to the Alps; some to learn, some to find rest, some with Baedeker in hand just to stare. Such variety of motive in his visitors is no discredit to the man. It only proves that he has become as great a fact as the Matterhorn, for instance, which you may climb over, or photograph, or write verses to, or even trim and rope off for Cook's tourists, without robbing of its essential dignity. There is no other man now who may so sit in his chair and have the world present itself for review. Surely there is no other man living to whom the world would offer such lavish tribute as it will bring to Tolstoy on his birthday to-morrow.

I.

About this great original figure has grown up a solemn platitude. "Do you know," says Smith at the dinner-table, "I firmly believe that 'Anna Karenina' will be read when all of Tolstoy's preachments are forgotten." The implication is that we have in Tolstoy's life and works a dual personality and a double product, and that it is quite easy to throw away the preacher in him and to keep the artist. But even if it were a fact that the future may slice Tolstoy in two, and keep of him what it likes best, that would only prove that the world likes stories better than it does serious thinking. It should not influence our complete view of the man now, when his sermons are not yet forgotten. For that matter, it may be true that Christ, the marvellous parable-teller, is better remembered nowadays than Christ the teacher. Smith, of course, is not to blame for his view, since Tolstoy himself has chiefly contributed to the upbuilding of the theory of his dual development. He has told us that as a man he lived a life of sin and worldliness till a new birth came to him at the threshold of old age; and he has told us that as an artist he made use of his powers without making use of his conscience, until he discovered that art and the law of God and the common weal of man were one. So that this curious thing has happened: Tolstoy splits his life's career into two. Smith accepts the division. "Part of my life was evil; part was good." Smith assents. "I did wrong when I wrote 'Anna Karenina' and 'War and Peace,'" says Tolstoy. "I have made confession and atonement in my 'Dogmatic Theology.'" "Oh, no," replies Smith, "I don't care in the least for the 'Dogmatic Theology,' and I prefer 'Anna Karenina' and 'War and Peace' to 'What Is Art?'"

But how if, after all, there has been no such sharp separation between earlier life and old age in Tolstoy, between the unmoral artist and the moralist? On the first point, I am aware, Tolstoy speaks emphatically enough, as in his "Confession":

> I cannot now recall those years without a painful feeling of horror and loathing. I put men to death in war, I fought duels to slay others, I lost at cards, wasted the substance I wrung from the sweat of the peasants, punished them cruelly, rioted with loose women, and deceived men. Lying, robbery, adultery of all kinds, drunkenness, violence, and murder, all were committed by me, not one crime omitted—such was my life for ten years.

A terrible indictment, indeed, if on its face it did not reveal the abnormal sensitiveness, the magnifying vision with which the ascetic always regards the faults of his past. Bunyan thought himself the worst of sinners. St. Francis will have it that his youth was an orgy. Tolstoy is at one with them when, in his seventy-fifth year, he traces the following lines in his diary:

> I am now suffering the torments of hell. I am calling to mind all the infamies of my former life—these remembrances do not pass away and they poison my existence. Generally people regret that the individuality does not retain memory after death. What a happiness that it does not! What an anguish it would be if I remembered in that life all the evil committed by me in a previous life!

Yet we may cite Tolstoy against himself. What he has told us in the series of autobiographical studies under the form of fiction, "Childhood," "Boyhood," and "Youth"; what we learn from his earlier correspondence; what we know of his earlier career, make such depravity as he has professed inconceivable. In "Youth," Nicholas Irteneff, who is Tolstoy himself, is depicted as a young man given to severe introspection, adhering passionately to a rigid code of self-perfection, constantly in struggle against temptation, failing sometimes, but strong-willed, and always conscious of the light—the type of youth, in short, which, if promise counts at all, would never fall into such degeneracy as Tolstoy describes. At an early age, Tolstoy tells us, he had already attained firm belief in the existence of God. From his twenty-third year, when he went into military service in the Caucasus, his life was one of busy activity in the field, in literary labor, in travel. He speaks of himself as shy, timid in the presence

of women, and extremely sensitive to his lack of physical attractiveness—no equipment, evidently, for the Don Juan. And so I might pile up the evidence. The point is that the habit of self-castigation was always with him. At twenty-two we find him already at the task: "I am living a completely brutal life, although not an utterly disordered one. I have abandoned almost all my occupations, and have greatly fallen in spirit." He regrets the "disgracefully spent three years" of his life. Did he at eighteen look back with compunction at the preceding three years? Did he at fifteen sorrow for the evil of his conduct since he was twelve? It is possible. The purified soul is hard upon its own past.

II.

If we cannot break Tolstoy sharply apart into the man of sin and the man born again, neither can we tear the artist from the teacher. He moralized in the earliest of his imaginative works, and he has retained the artist's vision and the creative touch in the latest of his didactic pamphlets. Smith, who would remember "Anna Karenina" and forget the Tolstoian ethics, will find it hard to do so, since in "Anna Karenina" the moral is formulated as plainly and as rigidly as in any of his later treatises. And if Smith insist on having his way with "Anna Karenina," what shall we say of "Resurrection"? Has the artist there been swallowed up by the preacher? In spite of the fact that the book is a great sermon, are not the pages alive with men and women, just as "War and Peace," written thirty-five years before, is laden with Tolstoy's social philosophy in spite of the fact that it is a great novel? Forty years must have elapsed between the appearance of "Youth" and a sermon on temperance called "The Feast of Enlightenment." Compare the descriptions of a student's carouse in the two sketches, and you see that you cannot escape either artist or moralist in Tolstoy, at whatever age you take him. Let us admit once for all that the venerable platitude about what will be remembered in an artist who has also preached, and what will be forgotten, is only a paraphrase of that seductive formula about "art for art's sake." Let us not overlook the fact that of this facile theory of "art for art's sake," Tolstoy, like other towering figures, like Hugo, like Dickens, like Ibsen, Meredith, and Hardy among his contemporaries, embodies, indeed, the complete refutation.

III.

Nothing gives such unity to Tolstoy's entire career as the principle of human brotherhood that underlies his gospel of labor and love. Again we are compelled to take issue with what Tolstoy himself tells us: how only at the beginning of old age he learned that service in the common welfare is man's sole duty, and that the life of the toiling masses is alone worth living. Did it really take Tolstoy years of spiritual travail to reach this new faith which makes of a group of peasants working in the field the only true church and religion? In its most elaborate form, it may be. But in Tolstoy's earliest writings we find the note of reverence for unselfish service, for humility, for silent and uncomplaining labor, sounded clearly enough. Natalya Savischna, in "Childhood," was a maid in the service of the boy Irteneff's grandmother; then she was his mother's nurse, and in her old age she became stewardess of the household. When a young girl she fell in love with a fellow-serf and asked her master's permission to marry. For her presumption she was banished to a distant village. Brought back within six months, "she entered grandfather's presence, threw herself at his feet, and besought him to restore her to favor and affection and to forget the folly which had come upon her and to which she swore not to return. From that time Nataschka became Natalya Savischna, and wore a cap. All the treasures of love which she possessed she transferred to her young mistress." This mistress, Irteneff's mother, died when the lad was nine, and neither upon husband nor children did the blow fall as heavily as upon Natalya Savischna:

> She folded her hands on her bosom and looked upwards; her sunken, tearful eyes expressed great but quiet suffering. She cherished a firm hope that God would not long part her from her upon whom she had for so many years concentrated all the power of her love.

There entered Foka the butler and asked for a pound and a half of raisins, four pounds of sugar, and three pounds of rice:

> "Immediately, immediately, batiuschka," said Natalya Savischna, taking a hearty pinch of snuff; and she went to her cupboard with brisk steps. The last traces of the grief called forth by our conversation had vanished when she set about her duty, which she considered extremely important.
>
> "What are the four pounds for?" she grumbled, as she took out the sugar and weighed it in the scales. "Three and a half will be enough," and she took several bits from the scales. "Who ever heard the like? I gave out eight pounds of rice yesterday, and now more is demanded. You will have it so, Foka Demiditch, but I won't let you have the rice. That Vanka is glad because the house is upset and he thinks no one will notice. No, I will not shut my eyes to attempts on my master's goods. Now was such a thing heard as eight pounds?"

When Natalya Savischna died, her property, after sixty years of service, was found to consist of twenty-five paper rubles. To-day, Tolstoy admits no such relationship as master and servant; but his Natalya Savischna of fifty-five years ago completely typifies his latest view of religion and ethics. The sentiment had only to develop into principle and to receive formal statement.

IV.

Prince Kropotkin has said that Tolstoy's gospel of complete identification with the life of the masses is not novel in Russia. Even when Tolstoy would make art in its highest form submit to the tests of moral utility and universal appeal he reasserts a theory which Russian critics have upheld for "more than eighty years." While Tolstoy, according to his own account, was still stumbling through the dark, the generation of the sixties had set on foot a great movement "to the people." How their missionary work among the peasants met with ruthless suppression at the hands of the government is too well known to need restatement. Prohibited from working for the amelioration of the peasants' lot by the peaceful methods of education, young Russia threw itself into revolutionary terrorism. Only twenty years after his contemporaries, Prince Kropotkin asserts, did Tolstoy finally attain that faith in the "people" which he has made his religion. From the popular movement when it was still in its first flush of hope and altruism, Tolstoy had held aloof. As to the reason, our critic offers no explanation. But we may find one for ourselves in Tolstoy's self-centred personality. Natures given to constant introspection, to the weighing of issues in the fine balance of the conscience, are always reluctant to adopt the ready panacea offered by the world. If they arrive at the same result they must do so in their own way. It may seem regrettable waste that a Tolstoy should struggle for twenty years to reach the answer he might easily have had by trusting others; but it must be recalled that Tolstoy had already tried his hand at working with the "people," and had failed. As early as 1849 he had established a school for peasant children; it was unsuccessful. Between 1859 and 1862 he developed the celebrated Yasnaya Polyana system of education—an intensified Rousseauism—only to have his schools closed by the government. When Tolstoy, at fifty, finally found in the Russian peasant a sound foundation for his theory of life, it was not really a belated discovery, as Prince Kropotkin would have it, but a return.

Observe, moreover, this wide difference between Tolstoy and those who initiated the popular movement after 1860: The young men and women who on the abolition of serfdom went to the villages aimed to educate and uplift, as Tolstoy had done in his youth and early manhood. The Tolstoy of the present has gone to the "people," not to teach, but to learn. To the revolutionists who slew Alexander II. the government was a foe, because it stood between the peas-

ants and progress. To Tolstoy, governments and churches are enemies, because they keep the peasant from exerting, for his own happiness, capacities that already abide in him. In this sense Tolstoy has gone back to the "people" with a thoroughness which the revolutionists have not even approached. Their love for the peasant has been genuine enough. In order to raise him to a higher plane, they have laid down their lives in battle against despotism. Tolstoy's love for the peasant has been the kind that sees no faults to remedy. Progress, art, learning, high material comfort, individual distinction, are shams. Let civilization march on; will the need for labor, for fellowship, and for love ever disappear from earth? No. Then, why strive for progress, when you have these already? And it is this difference between Tolstoy's attitude towards the masses and that of the revolutionists which helps explain that subject of much misunderstanding, of ridicule, and of scorn—Tolstoy's creed of non-resistance, or, more correctly, and as it appears in later form, of pacific resistance.

V.

To Tolstoy's mind, although I do not know that he has ever put the idea into words, there is a tragedy which we may describe as the tragedy of leadership; for leadership is a business which consists in trafficking with other men's lives. Tolstoy, unlike that other great advocate of the silent and laborious life, Carlyle, finds in the scheme of the world no place for heroes and leaders. History is the record of unknown laws—the will of God, he would call it now—working upon large bodies of men. Your hero, your leader, is an individual whom accident throws up into momentary prominence. He is at bottom as much the creature of circumstance as the humblest of his so-called followers, but he assumes, and the world often is blind enough to assume with him, that he is a guide of the forces whose slave he is, a compeller of the storm of which he is only the uptossed spume. Such pretension would, in Tolstoy's view, be only comic if, within a limited range of action, heroes and leaders did not possess power for harm. They create petty issues; they foment unnecessary conflicts; they devise standards and temporary battle-cries—to their own greater glory and the heavy cost of the pacific masses. There seems something sacred about a "cause." The word connotes high moral purpose, supreme effort, duty, self-sacrifice. Yet, often "cause" is merely synonymous with personal aims, with ambition, pleasure, fleshly desires, medals, epaulets, and trumpets, or mere lust of battle. The leader plays the game high, but it is "They," the silent masses, history's food for cannon, that pay. Always they pay. If their leader loses, it is the leader on the other side that wins. The musket-bearers on both sides, who are only scythe-bearers and axe-bearers taken from their fields and forests, never win.

Say that your cause is really inspiring, that the leader has attempted to sanctify it by showing himself ready to give away his own life as well as that of others—as the case was only the other day in revolutionary Russia. Even then, on the weak basis of your personal reason and belief, Tolstoy feels, you have no right to stake the lives of others. You would overthrow Alexander or Nicholas, and make Russia a republic, and to that end you send forth boys just out of school to hurl bombs and build barricades; you send young girls, revolver in hand, to meet a fate worse than death; you incite mutinies and stir up peasants to burn and slay. You play with men as with pawns and counters. You take a gambler's chance in which the stakes are—other people's lives. You go even further: you calculate that, if a great number of Russian men and women are hanged, shot, or bludgeoned, there will come a state of general exasperation which may overthrow the Romanoffs; and you readily make the investment—with other people's lives. You will not stop to think that, even if you attain what you regard as success, you have no right to mint other people's lives into the coin of victory—not even if that victory stands for what you call freedom, progress, civilization. For every empty form or reform you may win, for every deputy in your new Duma, for every copy of your uncensored newspaper and every epigram of your manipulators of free speech, you have paid with other people's lives, and with increase of hatred, and with fostering that passion for violence which is the real enemy of society. Next year some new revolutionary will feel himself justified in staking a thousand lives against your Parliament; and against him, in turn, some other leader will throw human lives into the scale. Thus history, as you would make it, shows nothing but a succession of leaders guiding silent masses towards the shambles, and for no common good. If Nicholas wins, you, the leader, go to the gallows; but if Nicholas loses, you grasp his crown and sceptre—you the leader. The masses never win.

To Tolstoy, then, human life is the ultimate sanctity after that God of which all human life is a part. He clings to life with a passion that would be Epicurean if we did not know him better. If there is God and a future life, he has argued, how foolish to strive over petty causes. If there is no other existence, how dare we tamper with the only reality we know? No, not even when you cite the ancient instance of the child in the murderer's grasp will he admit that violence on your part is justified. Are you sure that the criminal really means to kill the child? And, if he does, have you weighed the relative values of the two lives? How do you know what the child will grow up into? How do you know what the assailant's future may be? Over your own life, you as a creature of reason, are master. Throw yourself between the murderer and the child, if you will, but do no murder yourself. Stake your life against tyranny, against violence, against evil, but attempt no violence in return, and lead not others into violence. And it shall be that violence, confronted with passive challenge, shall in the end grow weak and afraid. Weak, because violence must have violence for its food, and cannot live without it. Afraid, because in the end disorder blanches before order, and tumult before silence.

VI.

So vast a faith in democracy, so profound a distrust in leadership of all kinds—in statecraft, in church, in science, in art—is grounded on a conviction of the goodness of the natural man which, of course, derives from Rousseau. Man left to himself will labor, help his fellowmen, and submit to the will of God; and in that is summed up all the Law and the Prophets. It is a proof of that unity in Tolstoy's development for which I have argued that in "War and Peace," a novel finished when he was forty, we find the idea completely stated. There, further, the notion is brought out that only under the evil influence of government, leaders, military discipline, codes of honor, and other artifices, does the natural man become either a victim or a beast. Count Peter Bezoukhoff (in "War and Peace") has wealth, talents, position, friends, and high aims; but he is unhappy because he cannot discover the meaning of life, and of his own life in particular. His crisis comes with the battle of Borodino, in which Napoleon's army of invasion receives its first serious check. Peter comes down from Moscow as a spectator, is caught in the cross-fire of batteries, sees death all about him, but suffers no harm. Henceforth Peter can only think of "Them" as they stood there serving the guns until nine out of every ten of them fell:

> And again he felt an indefinable pain as he compared his own moral failure and life of falsehood with the mighty simplicity of the men whose image was stamped on his soul.

"They" were the peasants, the "good-natured, foolish workingfolk," as Tolstoy called them forty years later, "who, yawning, show their white, healthy teeth," and let themselves be led to slaughter. Well, the French enter Moscow, and Peter, a prisoner charged with incendiarism, is sentenced to be shot, and escapes only at the last moment:

> The next two victims were led out; their imploring looks seemed to claim some help,

some rescue, as if they could not believe that they were to be bereft of life. Again Peter looked away; a louder report than ever rang in his ear. With a heaving chest he looked round at the men who stood near him—on every face he saw the expression of the same amazement, horror, and disgust that were seething in his soul.

"Whose doing is it? They are all as much sickened as I am," he muttered to himself. . . .

The twenty-four soldiers whose guns had been fired, fell in as the files went by them—all but one, quite a lad, as pale as death, who remained without moving from the spot by the side of the grave where he had stood to fire. His shako had fallen back to the nape of his neck and his musket was reversed. He staggered like a drunken man, swaying backwards and forwards to save himself from falling. An old sergeant ran towards him, seized him by the shoulder, and pulled him back to his place. The crowd slowly dispersed, every one hanging his head in silence.

Government and leadership, as embodied in Napoleon, had taken this young French boy and turned him into a murderer. And Peter is plunged again into darkness till once more he thinks of "Them." He attains complete salvation when he makes the acquaintance of Platon Karataieff, a peasant soldier and a prisoner, who shares with him his food and rags, harbors enmity against no man, prays every day to the Lord and Saint Nicholas for himself, and to Saint Florus and Saint Laura for his horses. He tells Peter his story:

He had been caught one day by the gamekeeper of a neighboring wood, flogged, condemned, and sent to serve with the army. "And what then," he added with a smile, "it looked like a misfortune, and it was really a blessing. If I had not gone wrong, my brother would have had to go and leave five children behind him. I, you see, left only a wife; I had a little girl once, but God Almighty had taken her back again. I went home once on leave. What can I say about it? They live better than they used to, though there are several mouths to fill; the women were at home, two of my brothers were away; Michael, the youngest, was the only one left. My father said to me, 'All my children are just the same to me; it matters not which finger is nipped, it hurts just as much. If they had not caught Platon it would have been Michael.' So then, would you believe it, he led us in front of the Images; 'Michael,' says he, 'come here; bow down to the earth before Him, and you women too, and you little ones.' Do you understand, master? That is how fate takes us by chance and we find fault and complain. Happiness is like the water in a landing-net; you pull it along, and it is full; you lift it out, and it is empty."

The French, in their retreat from Moscow, shot those prisoners who could not keep up with the march of the army. They shot Platon Karataieff one morning; but though his death saddened Peter for a while, it could not shake him. From Platon, Peter had learned the secret of life, which is service and submission.

VII.

This lame old world, it is to be presumed, must stumble on towards its fate over the zigzag paths of compromise. Our need is all the greater for counsellors of perfection who shall at least mark the limits of the course on either side. It is good that every now and then we shall be wrenched from the soft bed of complacency, find the fragments of our little compromises and conventions scattered about our feet, and have our blinking eyes turned towards the full light. Why complain? We can be trusted to go to sleep again soon enough. It is easy to criticise the theories of Tolstoy; easy, or, as you take it, extremely hard; for when a man questions the solidity of the very ground you stand on, what common meeting-place can there be? Yet, therein, as I have said, lies Tolstoy's peculiar service. If a Nietzsche, with supreme audacity, announces his belief in dominion and servitude as the social ideal, he has played a useful part. We can only rejoice, however, that against him a Tolstoy (that service he expressly claims for himself) should choose to continue the ancient tradition of human brotherhood and love, as it has been formulated by the Chinese sages, by Buddha, by the Hebrew prophets, and by Christ. The little artists, the little philosophers, and the little statesmen have been increasingly busy with their easy generalizations about unmoral art, unmoral philosophy, and unmoral statecraft. But it only needs a man to light up again the beacon fires of the old Law, if only once in several centuries, to send all these little theorists gibbering into the shadows. When such a man appears, the world instinctively yields him its respect as it now does to Tolstoy.

SIMEON STRUNSKY.

NEWS FOR BIBLIOPILES.

Obadiah Rich, in his "Catalogue of Books Relating Principally to America," 1832, records, under date of 1663, "A Discourse and View of Virginia, by Sir William Berkeley, the Governor. London. Small 4to. pp. 12." Rich owned copies of most of the books he described, but no price is affixed to this title, and it is not probable that he owned the volume. Sabin merely copies Rich and Winsor in his turn refers to Sabin. The only copy heretofore traceable is that in the British Museum, described in the catalogue as lacking the title-page. A second copy has recently been discovered, bound in a volume of pamphlets, and has found its way to New York. It also is without title-page, and consists of six leaves, the first bearing the signature mark "A2" and the fourth and fifth having the signature marks "B" and "B2." The pages are numbered from 1 to 12. At the top of page 1, is a heading in large type "A | Discourse | And View of | Virginia." At the end is "Finis." If the work was originally printed as two signatures of four leaves each, then a leaf at the beginning (probably the title) and a leaf at the end (probably a blank) are lacking. But until a third copy turns up we cannot tell, and it is possible that the first leaf of signature A was a blank, as was often the case. The Governor's complaint is that the entire attention of all the planters is given to the raising of tobacco:

Amongst many other weighty Reasons why Virginia has not all this while made any progression into staple Commodities, this is the chief. That our Governours by reason of the corruption of those times they lived in, laid the Foundation of our wealth and industry on the vices of men; for about the time of our first seating of the Country, did this vicious habit of taking Tobacco possesse the English Nation, and from them has diffused it self into most parts of the World; this I say being brought to us from Spain at great prices, made our Governour suppose great wealth might be raised to particulars by this universal vice.

Since Berkeley left Virginia on April 30, 1661, returning in the fall of 1662, the pamphlet must have been printed between these two dates, probably some time in 1662.

Only two, or at the most, three copies of the first book printed in Dublin, The Book of Common Prayer, printed by Humphrey Powell in 1550 and 1551, have been hitherto known. But thirty-four leaves, or about one-fourth of another copy, have just been discovered, pasted together to form the boards of an old book-cover, probably of the first part of the seventeenth century.

Ambassador Jusserand writes in the London *Athenæum* that he has discovered in the Paris National Library a First Folio Shakespeare, which was overlooked by Sidney Lee when he was making his census. The book is perfect, although the leaf of Ben Jonson's verses, and the title-leaf are both mounted and a few other leaves are mended. This copy was bought for the Paris Library, at the sale of the books of the Rt. Rev. Samuel Butler, bishop of Lichfield, headmaster of Shrewsbury School, who died in 1839, and whose library was dispersed at Christie's in 1840. The price was £75. At the same sale the National Library acquired copies of the Second, Third, and Fourth folios at a uniform price of £20 each.

A. Claudin, the Paris book-seller, and the greatest authority on early Paris printing, is very anxious to trace a copy of the following book:

Vie et Miracles de saint Menoux, evesque breton, patron de l'abbaye de Saint-Menoux-en-Bourbonnois, par Sêb. Marcaille.. Molins, P. Vernoy, 1606.

This book, he says, has been frequently cited by French bibliographers during the last two centuries, but they have copied, he thinks, one from another. The most recent positive reference to the book which he can identify was in the catalogue of the Seccousse sale in 1775. There may be a copy in America. Brunet gives the title, exactly as above, but doubts if it was actually printed at Moulins.

Part 3 of the current volume of "Book-Auction Records," covering English sales from April 1 to June 30, is just ready. It contains 5,243 records taken from twenty-five sales. The preface to this part is a five-page account of the "Early Printers, Publishers, and Booksellers of Glasgow."

The Ex-Libris Society held an exhibition

of book-plates at the Alpine Club, in London, from July 7-16. The catalogue contains reproductions of the book-plates of Edward VII., Queen Alexandra, Queen Maud of Norway, and others.

Correspondence.

ALFRED WEBB.

To the Editor of The Nation:

Sir: By the death of Alfred Webb, in his seventy-fourth year, Ireland has lost the services of one who in the highest sense was not only a true patriot, but whose sympathy, and help, where possible, were given to every benevolent movement throughout the world. He was the son of R. D. Webb, a Quaker and a printer. Alfred Webb served his apprenticeship to his father's business, and was associated with him in publishing an anti-slavery newspaper during the time that emancipation was a stirring movement. This laid the foundation for an extensive acquaintance with many of the leading emancipationists in England and in the United States. Always poor, he saw more of the world than many with ample means. As a young man he went to Australia, and toiled in the bush and at the gold diggings. Though he paid his passage on board the sailing ships in which he went to and from Australia, he worked as a seaman, kept watch, and took his part in making and taking in sail, going aloft in all weathers, and learning all that was possible of seamanship. This was typical of the man. He could not see others work and abstain from helping all he could.

On his return from Australia he resumed work in the printing business. As a boy he had seen the distressful scenes of the great Irish famine, and travelled through the country with the late W. E. Forster distributing and organizing the relief funds raised by the Society of Friends. In this way he learned to know Ireland and the Irish as few Dublin citizens do, and even in his later years he was in the habit of making tours on foot and visiting farmers in their fields and homes. He was a frequent contributor to the press, and wrote many magazine articles and pamphlets, mainly on Irish subjects. His most solid work was a "Compendium of Irish Biography," 1878. It was characteristic of Webb's modest and inadequate self-appreciation that, underestimating the worth of his work, he printed quite an insufficient number of copies of a book which is now very scarce and valuable.

Webb, with his knowledge of Ireland, was able to estimate justly the political and social degradation due to the subordination of Irish needs to English interests, to the rule of the minority through Dublin Castle, and to the neglect of admittedly needed remedial legislation. He attended some of the many political trials between 1860 and 1870. As a member of the Society of Friends, he was not an advocate of physical force, but he was stirred to bitter indignation by the unfairness with which these trials were conducted, by the open partisanship of the judges, and bare-faced packing of juries. Ready to take part in any Constitutional movement for reform, he joined the Protestant Home Rule movement formed by the late Isaac Butt, became a strong Nationalist, and, with one or two intervals, continued to the end to be the trusted treasurer of the Irish Parliamentary Fund. When, in the most troubled times, duty seemed to call, he became member of Parliament for Waterford. He seldom spoke at Westminster, and had no claims to eloquence, but his earnestness and common-sense always secured him a hearing.

Always a champion of the oppressed, he did what was possible in Parliament to call attention to the neglect of Indian affairs, and to Indian grievances. As a result, he was invited to preside over the Indian National Congress at Bombay. His sense of humor enabled him to see a comic and incongruous element in the royal reception given to him. The quiet Dublin printer, when he landed at Bombay, was garlanded with flowers, enthusiastically greeted by enormous crowds, and attended wherever he went by guardians anxious to minister to every want. He knew well what an empty and ugly thing is popularity, but years afterwards when he came to the writer's house to see a Mahratta native of the State of Baroda, he hardly concealed the pleasure he felt when the Indian expressed his gratification at meeting one whose name was known from the Himalayas to Cape Comorin.

After the defeat of Gladstone's second Home Rule bill, Webb retired from Parliament, and went on a tour to Australasia, revisiting with his wife the scenes of his youth, and some of the abandoned penal settlements in which the Irish political prisoners had been detained, or from which others, as John Mitchell and John Boyle O'Reilly, had escaped. Ireland was never out of his thoughts, and, though no longer in Parliament, he took up on his return his work as treasurer of the Parliamentary Fund, and continued to write occasional pamphlets and letters for publication. He built himself a house, Shelmaliere, near Dublin, and, after the stormy political times in which he had lived, he seemed to enjoy garden, books, and friends. Though years brought many disappointments, his hope never failed, his faith in what be considered right principles never grew weak. He was steadfast to the end. The universal respect and estimation in which he was held have been shown by the resolutions of regret and sympathy passed by nearly every public body in Ireland. For many years he contributed letters, articles, and book-reviews to the *Nation*, most of which were signed "D. B." the last letters of his Christian and surname.

M. O'B.

Mount Eagle, Killiney, Ireland, August 13.

A STATEMENT FROM FATHER TABB.

To the Editor of The Nation:

Sir: Please let me make to my friends through your paper the following statement:

My sight nearly gone, I remain where I am—not as the faculty would generously have me—a pensioner of the college; but paying as long as I am able full board. It is only to keep me from seeking some asylum that the faculty consents to my having my own way—the greatest kindness it can do me. John B. Tabb.

St. Charles College, Ellicott City, Md., August 19.

A CLASSIC DESCRIPTION OF THE NEW CUNARDERS.

To the Editor of The Nation:

Sir: On a recent Wednesday I went to the Cunard pier to see the Mauretania set out on her race to Liverpool. It was an impressive sight, as any one knows who has witnessed it. The next day, while reading Cicero "De Natura Deorum," I ran across the following passage (II., ch. 35), which gives a strikingly accurate description of the great ship; in fact I think your readers will agree that it fits the modern monster much better than it fits the Argo, the sight of which struck such awe into Accius's shepherd as he gazed at the apparition from his mountain peak. "Fremibunda" is a capital word for the muffled thumping of the machinery; and to one who had just the day before heard the Mauretania's hoarse blast, and the weird whistle of the siren as its "spiritus" writhed and swayed in the air, the words "ingenti sonitu et spiritu" seemed as if made expressly for that. And what "whirling eddies" could the Argo stir up compared with those created by the revolutions of the Cunarder's gigantic propellers? The words are these:

Tanta moles labitur
Fremibunda ex alto ingenti sonitu et spiritu.
Prae se undas volvit, vertices vi suscitat,
Ruit prolapsa, pelagus respergit, reflat.

I subjoin the rendering given in Freund's translation:

Eine solche Riesenmasse gleitet dahin
Aus der Tiefe dumpf tönend, mit gewaltigem Getös' und Schnauben,
Sie wälzt die Wogen vor sich her, mit Macht wühlt sie Strudel auf,
Sie rennt vorwärts, spritzt die See zurück, schnaubt sie aus.

Addison Hogue,

Washington and Lee University, Lexington, Va., August 17.

RACE ANTIPATHY.

To the Editor of The Nation:

Sir: Permit just a few words relative to your comment of August 13 on the lawlessness in the Alabama strike. While the paragraph in question is not a direct discussion of the Southern treatment of the negro, it is, I think, fairly representative of the *Nation's* attitude on that subject.

Whatever may have been the attitude of the thinking body of Southern men toward lynching in the years of storm and disturbance which followed the reconstruction period, I think I may say that the dominant majority of the South is now unalterably opposed to lynch law, or to unjust treatment of any kind toward the negro offender. I have only to instance the actions of Gov. Montague or of Gov. Swanson of Virginia repeatedly in times of stress to illustrate this. The South, I believe, however, pleads guilty quite readily to a charge of race antipathy so long as race antipathy be not interpreted to mean race injustice. This is, of course, seen in the separation of the races in the schools, railroads, and hotels, and in the strict line of cleavage in all social concerns.

Southerners, I say, admit this race antipathy, naked and unashamed, and they find justification for it in instinct for self-preservation. Sometimes the sleeping dogs

of a primitive savagery awaken and work horrors in the name of this principle, but sad and evil as are such exhibitions, it is better to have a race antipathy with occasional outbursts of cruelty than it would be to have absolute social equality and intermingling, with a resultant miscegenation, however peaceful and quiet it might be. The South thinks, right or wrong, that the present problem is to restrain this sentiment and to turn it to useful ends, *i. e.*, the maintenance of the race in its European if not in its Anglo-Saxon purity. Further, Southerners feel that an occasional wrong done to an individual is in the long run wiser than a continuous evil done to a whole race. In some measure this frame of mind seems to be a problem of arithmetic rather than of ethics, for wherever the races are placed together in sufficient number, there is found the same state of mind which is sometimes held so culpable in Southerners. The pitiful scenes at Springfield, Ill., that Mecca of all who hold absolute social democracy a stronger and wiser standard than the individual preservation of the races, bear a testimony only too bitter to this truth. And if more were needed the stalwart sons of Washington and California, and of British Columbia, for that matter, are adding their witness to the inherited longing for racial purity and racial supremacy.

The glass windows of the South are far too fragile to allow any reckless hurling of projectiles, but the opinion is all the while becoming more evident that this ethnological principle, sound or unsound, is the future attitude of the whole people wherever the problem is not merely doctrinaire. Feeling this, it would be wise for Americans, whether from Georgia or from Illinois, from New York or Virginia, to keep a strong hold on those primitive instincts of brutality which sleep but lightly in the best of men.

W. L. Chenery.

University of Chicago, August 15.

THE ELECTION OF A POPE.

To the Editor of The Nation:

Sir: In the *Nation* of August 13, in a brief notice of my volume of Italian Studies, "Italica," your critic refers to my account of the Election of a Pope as containing what "most intelligent *anti-clerics*, at Rome and elsewhere in Italy, believe to occur," etc. If your critic were familiar with the histories of the electoral conclaves, of which there are many, he would not use the word "anti-clerics." These histories have been almost invariably written by the stanchest Clericals, usually by "conclavists" who served as secretaries to cardinals. Consalvi himself, the most eminent cardinal of the early nineteenth century, compiled one of these histories. Artaud, the special biographer of several of the nineteenth century Popes, was not only a thorough-going Papalist, but he had unimpeachable inside information. R. De Cesare, who wrote the monumental history of the "Conclave of Leo XIII.," is not a Papalist; but the fact that all parties accept his account as substantially accurate would warrant the most careful writer in referring to it. The fact is, that I drew my sidelights for the description in question from Papalist and not from Anti-Clerical sources.

Let me add that, it is not safe to infer, that because in essays for general reading the writer does not give more references than text, he cannot cite chapter and verse for his statements. The *Atlantic Monthly*, the *Century Magazine*, the *North American Review*, and the other journals in which my papers appeared, do not encourage such use of foot-notes as would properly be looked for in a Ph.D. thesis.

William Roscoe Thayer.

Annisquam, Mass., August 15.

Notes.

Henry Holt & Co. expect to publish this month "Apollo and the Seaman and Other Poems," by Herbert Trench; "Canadian Types of the Old Régime," by Prof. C. W. Colby; "Builders of United Italy," by Rupert Sargent Holland; and "Sense of the Infinite," by Prof. Oscar Kuhns.

The American Baptist Publication Society announces the Message Series, the early volumes of which will contain discourses by the Rev. P. S. Henson, the Rev. Johnston Myers, and the Rev. Madison C. Peters. The society will publish this autumn: "The Christian State," by Samuel Zane Batten; "Our New Testament: How Did We Get It?" by the Rev. Henry C. Vedder; "Fresh Water from Old Wells," by the Rev. Robert G. Seymour; "How to Grow in the Christian Life," the Rev. W. Wistar Hamilton; and "The Outlines of Systematic Theology," the Rev. Augustus H. Strong.

The J. B. Lippincott Co. will soon issue handsome illustrated editions of Scott's "Kenilworth," "Ivanhoe," and "The Talisman." Each volume will contain a preface by the Hon. Mrs. Maxwell Scott, the granddaughter of Scott's biographer, Lockhart, and great-granddaughter of Sir Walter himself. Lippincott will also publish "The Sunny Side of the Hill," by Rose N. Carey.

Harpers & Brothers announce for next month "The Testing of Diana Mallory," by Mrs. Humphry Ward; "A Spirit in Prison," by Robert Hichens; "Every Man for Himself," by Norman Duncan; and "The Speaking Voice," by Katherine Jewell Everts.

Thomas Y. Crowell & Co. will publish in September "Counsels by the Way," by Henry Van Dyke; "On the Open Road," by Ralph Waldo Trine; and "The Free Life," by Woodrow Wilson.

Doubleday, Page & Co. expect to publish this month "Studies in the American Race Problem," by Alfred Holt Stone.

The Kyo-Bun-Kwan Publishing House, Tokio, has in press a volume by J. Ingram Bryan, entitled "The Feeling for Nature in English Pastoral Poetry." This work, written as a thesis for the doctorate at the University of Pennsylvania, contains a careful study of the nature feeling in the Greek, Latin, and Italian sources of the English pastoral, as well as a treatment of the subject in the leading British pastoralists.

Roger Ingpen, of No. 3 Seymour Villas, Annerley, London, S. E., is preparing a collection of Shelley's correspondence, and he will be "very thankful for copies or particulars of any original Shelley letters, either published or unpublished."

Two new editions of the indispensable Baedeker have just been imported by Charles Scribner's Sons, "London" and "Berlin." This, the fifteenth edition of "London" contains nine maps and nineteen plans, as against four maps and twenty-four plans in the fourteenth, 1905. The "Berlin," the third edition, contains five maps and twenty plans.

"Twelve Thousand Words Often Mispronounced," by William Henry P. Phyfe, is issued by G. P. Putnam's Sons as a revised and enlarged edition of this author's "Ten Thousand Words Often Mispronounced."

The third edition of Gen. George B. Davis's "Elements of International Law" (Harper & Bros.) brings that excellent textbook thoroughly up to date by the revision of certain chapters in the light of recent events and particularly the action of the Second Hague Conference. Not the least valuable portion of the work is the appendix, which includes a full text of the treaties and declarations concluded at The Hague, on October 18, 1907, as well as other documents of value to the student of international law.

The history of Europe and the world is reflected in the history of the parks and gardens of London. If we study Hyde Park alone, beginning from the days when Bayswater Road and Park Lane were the Via Trinobantina and Watling Street, we make acquaintance with the serf and the manor; we see the Roman church as a landed proprietor, and behold her eviction by Henry the Eighth; we witness the gayeties of Tudor and Stuart courtiers, and in the next vision the turf on which they strolled is thrown up in Roundhead entrenchments. But it is not only internal history that we get from the gardens of London. When foreign plants begin to appear we realize that the world is opening out. When the chrysanthemum, the banana, the cedar, and the orchid are at home in Gerard's garden in Holborn, or in Lord Zanche's in Hackney, the exploits of Columbus and Magellan and the East Indian Company are epitomized. And when gardens tend to be Italian or Dutch, or, later, Japanese, a chapter is written in the history of foreign relations. Things less concrete, the very temper of the English people, their love of nature, and of growing things, as well as their love of doing what they like, are expressed in London's open spaces in ways varying as the times vary. The formalism of the eighteenth century, the philanthropy of the nineteenth, the socialistic realism of the twentieth, are here written as plainly as the name of a rural railway station is sometimes written in clam shells or coleuses on its green bank. All this picturesque material is dealt with by the Hon. Mrs. Evelyn Cecil in her "London Parks and Gardens" (E. P. Dutton & Company), but unfortunately in a style of amiable flatness. Full, painstaking, and enthusiastic, the book is nevertheless too dull for pleasure; and by renouncing foot notes and exact attribution, it forfeits its place among books of reference. The colored illustrations by Lady Victoria Manners are attractive, though varying considerably in felicity of color.

"The Happy Moralist," by Hubert Bland (New York: Mitchell Kennerley), is a vol-

ume of small essays which might well be called, in the magazine slang of the day, "essayettes." They are bright, light, and lively. They flutter far and wide, over depths they do not sound, under heights they do not scale, on perilous edges they just miss slipping over. They state neatly, argue wittily, are studiedly inconclusive. The tendencies of women's clubs, the influence of art upon the slums, early religious teaching, Ibsen, and Shaw are among the topics illumined by Mr. Bland's flickering torch. He is succinct and fitfully clever. He baits his hook with shining little hints of the improprieties. He is even eloquent at moments, talking of east winds that "whicker and gash," and of ruling classes that go "pavid with fear." His chapters amuse a little, persuade a little, but refuse to nourish and leave us somehow feeling emptier than we were before we read them.

The American Book Co. publishes a useful little volume called "Teaching a District School," by John Wirt Dinsmore, professor of pedagogy in Berea College Mr. Dinsmore writes from lifelong familiarity with his subjects, and if the reader is tempted to an occasional smile by the naïveté of the conditions suggested and the advice offered, his smile should be a sympathetic one, for the earnest, conscientious spirit of the work is as admirable as its practical, detailed instructions are valuable. True, he who fulfilled all the duties imposed upon him by Professor Dinsmore's idealism might fall exhausted by the wayside, but counsels of perfection are in no danger of being followed to the letter, and it may well put heart of grace into the discouraged teacher in the "back districts" to perceive how many paths to public and social as well as professional usefulness lie open at his feet. It is interesting to note that the author urges with considerably more emphasis the duty of combating the tobacco habit than that of waging war against alcohol. The book has a cordial introduction by President W. G. Frost of Berea.

Henry Frowde publishes in an edition of 255 copies, "Notes on Scottish Song by Robert Burns," edited by the late James C. Dick, who edited the valuable "Songs of Robert Burns," with the melodies for which they were written. The present volume is made up of the poet's annotations in an interleaved copy of the first four volumes of Johnson's "Scots Musical Museum," to which he was a copious contributor; the notes written by Robert Riddell, who owned the copy of the "Museum" in question; and sundry spurious notes by R. C. Cromek, which he inserted in his "Reliques of Robert Burns," and which for a hundred years have passed unchallenged as from the hand of Burns. There are also two chapters by the editor: one on "Scottish Song Prior to Burns"; the other on "Burns and His Songs." Dick here, as elsewhere, lays great stress upon Burns's wide acquaintance with Scotch melodies, and upon the close relationship between the words and the airs—in nearly every case the tune was mother to the song. The whole discussion is illuminating, not only for the light that it throws on the poet's method of composition, but also for the renewed emphasis upon the profoundly national character of his genius.

"Stories from the History of Oxfordshire," by John Irving (Henry Frowde), and "Chinese Fables and Folk Stories," by Mary Hayes Davis and Chow-Leung (American Book Co.) are two desirable books for children's reading. Mr. Irving, who is head master of a boys' school at Oxford, has made thirty little stories out of the historical and legendary material of a country rich in traditions. It is his purpose to stimulate the child's interest and imagination, and to lead him imperceptibly on to desire a more substantial acquaintance with history. The Chinese stories, while primarily intended for young readers, are, in these days of awakened curiosity about things Oriental, of considerable interest for elders also. A special feature of the collection is a number of fables, not unlike Æsop's, which disprove the common assertion that the Chinese literature has no fables. Both of these books meet the demand for juvenile literature that shall suggest and inform, as well as entertain.

Among the new material in the recently published thirty-fourth volume of the critical Weimar Edition of Luther's works, is the evidence that Luther, early in his career, visited Cologne and saw there the relics of the Magi. In the course of a sermon preached in 1531, and here given in two recensions, the reformer, in speaking of the relics, says: "Ich habe sie gesehen." The editors conclude that this visit of Luther must have taken place while he was yet a monk and before the beginning of the Reformation in 1517; and Prof. Walther Köhler, in the *Christliche Welt*, in commenting on these data, maintains that it must have taken place at Pentecost, 1512, when the Augustinian Order, to which Luther belonged, held a general convention in Cologne, called by Staupitz, the general of the order and the special friend of Luther.

The Jahrbuch über die deutschen Kolonien for 1908, by Dr. Karl Schneider (Essen: G. D. Bödecker), begins a new annual to report fully the status and problems of the German colonies. The present volume contains eighteen parts by fifteen authors, all of them recognized specialists.

"Mit Dernburg nach Ostafrika," by Adolf Zimmermann (Berlin: Schwetschke & Sohn) is a study of the German East African problem, by one who does not write to please the government authorities. Economic interests, the railways, labor, the rights and proper management of the natives, Christian missions and missionaries—these and similar problems are discussed critically, yet fairly.

Of the many works called forth by the recent celebration of the three hundredth anniversary of the birth of Germany's greatest hymnologist, Paul Gerhardt, the best and most critical is "Paul Gerhardt: seine Lieder und seine Zeit," by Hermann Petrich (Gütersloh: Bertelsmann). Two of Gerhardt's poems, hitherto unpublished, find a place here.

The radical change which modern thought has effected in the fundamental conceptions of the character of Christianity, is the subject of an interesting book by the Rev. Hermann Kutter of Zürich, "Die Revolution des Christentums" (Leipzig: M. Haessel). The contents, seventeen chapters, are summarized under the general headings, "Glaube," "Liebe," "Der lebende Gott."

Prof. W. Köbler of the University of Giessen has just published (Tübingen: J. C. B. Mohr) a timely work, "Katholizismus und moderner Staat," as one of the volumes in the Sammlung gemeinverständlicher Vorträge und Schriften aus dem Gebiete der Theologie und Religionsgeschichte.

Friedrich Landgreen has published an instructive study of more than two hundred pages, entitled "Die Benutzung der Pflanzenwelt in der alttestamentlichen Religion" (Giessen: Töpelmann). In four parts he discusses the use made of the flora for religious purposes in the Old Testament.

The International Congress of Orientalists, which was in session in Copenhagen last week, will meet at Athens in the spring of 1911.

The third International Congress for Philosophy is held at Heidelberg this summer, August 1 to September 5, under the presidency of Prof. Wilhelm Windelband. In addition to the regular papers which will be given before the seven different sections into which the Congress is divided, there are to be addresses by Benedetto Croce of Naples and Profs. Émile Boutroux and Henri Bergson of Paris, Theodor Lipps of Munich, and Josiah Royce of Harvard.

A note from a number of Danish scholars appears in the last issue of the *Danske Studier*, announcing the formation of a society to further the knowledge of "the now vanishing remains of ancient faith, beliefs, poetry, customs, language, and life." The following works, already in the course of preparation by prominent Danish scholars, will be issued by the society in the near future: "The Belief in Elves," by H. F. Feilberg; "Peasant Life in Falster," by Fr. Grundtvig; "Popular Tales of Southern Jutland," by Carl Ludvigsen; "The Danse in Northern Countries," by Hj. Thuren; "Games and Sports," by Fr. Knudsen. The members of the executive committee are: Hj. Thuren, J. Bloch, and Axel Olrik; and the various Danish provinces (Copenhagen, Sorö, Mön, Lolland, Falster, Aarbus, Ribe, etc.) will each have a representative to direct research within his special territory.

Cæsar Litton Falkiner, a writer on Irish history, has died from an accident which befell him while mountain-climbing in Switzerland. Among his writings are: "Studies in Irish History and Biography," and "Illustrations of Irish History." He edited the Ormonde Papers for the Historical Manuscripts Commission, and the poems of Moore for the Golden Treasury Series; and at the time of his death he was engaged upon an edition of Swift's letters.

The death is announced of Charles Félix Lenient, who was appointed in 1875 professor of French poetry at the Faculté des Lettres de Paris. Born at Provins, in 1826, he taught at the lycée of Montpellier before he was called to Paris, where, in 1854, he became adjunct professor of rhetoric at the Lycée Napoléon. Among his books are: "Étude sur Bayle," "De Ciceroniano Bello," "La Satire en France au moyen âge" (1859), a work crowned by the Academy; "La Satire en France, ou la littérature militante au XVIe siècle" (1868), "La Comédie en France au XVIIIe siècle" (1888).

BURLINGAME PUBLIC LIB.

and "La Poésie patriotique en France au moyen-âge" (1891.).

The death is announced of Hector France, a French novelist of the realist school. He was born in Mirecourt in 1840, and as a young man he served in the army in Algiers, where the scenes of some of his earlier books are laid. Later, having taken part in the Commune, he took refuge in England, where he gave lessons in French, in London, and after 1875 in the Military Academy of Woolwich. Among his writings are "L'Homme qui tue," a sort of autobiography, "L'Amour au pays bleu," "Sous le bournous," "Le Roman du curé," "L'Armée de John Bull," and "Sac au dos à travers l'Espagne."

LIGHT ON NAVAL PROBLEMS.

The Art of Naval Warfare. By Admiral Sir Cyprian Bridge. London: Smith, Elder & Co.

Over the face of Christendom there is now sweeping a wave of struggle for naval superiority. This concrete fact, however regrettable, can neither be denied nor ignored. Even we, whom nature has blessed with the ideal defence of geographic isolation, have voluntarily entered into this contest, of which the immediate result is a vast and constantly increasing expenditure, with the assumption of grave international responsibilities never dreamed of by our fathers. What it may yet bring us, of good or evil, lies in the lap of the gods. Rightly or wrongly, Great Britain's concern in this movement is conceded to be paramount. There are few Englishmen who do not believe firmly that their country's very existence depends upon her supremacy on the seas. Any light on the subject, any counsel as to the best method of maintaining this supremacy with the least strain on the public purse, must therefore be welcome to them, and, incidentally, to us, who have entered the lists with aspirations for second honors at least. For this reason, it may be said that seldom has a more timely book appeared than this little volume, from which no sentence can be spared, so packed is it with wisdom presented in a simple and agreeable style by a British admiral, known throughout the maritime world as a skilful, practical officer, as well as a deep student of his profession. His object is twofold: first, to teach the necessity of careful study of naval history and the persistent use of its lessons as touchstones by which to try new ideas, new designs, and new methods; and, second, to urge the logical adaptation of means to end, so that his government may not fall into extravagance or folly through the fascination of some specious novelty or through some faulty interpretation of fact. It was essential to the author's plan that his discussion should be free from detail, that it should sketch only the broad lines, and lay down basic principles. Undue elaboration would have produced a bulky work, and would have lost him the larger public which ought to read and ponder every word of what may not inaptly be termed a "Primer of Naval Warfare."

In these days of arithmetical comparison of force, it is refreshing to hear a capable commander-in-chief place training and efficiency above mere numbers. "You cannot defeat any Power," he says, "strong enough to be a serious rival by the bare process of out-building it." He discusses (naturally, from the point of view of the Briton) the form which a maritime war is likely to take, and he indicates the way in which his people should prepare for the various contingencies that may arise. "Settling the Standard of Naval Force" (or "the amount of naval force which we can and ought to maintain") is the very kernel of the matter:

> The strength, as far as the resources available permit, should be proportionate to the interests to be defended, and the force by which they are likely to be attacked.

To meet the necessity by a well-considered provision of power is, however, the very thing that naval authorities seem to have neglected entirely. It is so much easier to ask for too much than to determine the least which will yield the desired result. In this country, for example, we are told in one year that one battleship is sufficient; and in the year following a clamor is raised for four ships. This change is proof enough of the lack of a well-digested plan.

As to the ships themselves, constant reference to history, as Sir Cyprian suggests, would have spared the United States the expenditure of vast sums of money, uselessly thrown away upon the passing fancy of the moment. Even since 1882, the date of the birth of our new American navy, our record of foolishness is humiliatingly full. We actually committed ourselves to the heresy of commerce destroyers (against the indignant remonstrances of the wisest expounders of naval doctrine) when we built the Columbia and Minneapolis. Moreover, if anything was proved beyond question during our war with Spain, it was that armored cruisers are helpless in an action against battleships, yet since the Treaty of Paris we have, in spite of protests against the sacrifice of military qualities to excessive speed, actually built ten of these craft, each as costly as a battleship, and wholly unable to "lie in the line." It is four years now since the last of this class was authorized, so that our naval pundits finally show signs of having seen the light. Even recently a type of vessel, the so-called "scout-cruiser," has been introduced against the advice of many students who deny its value under the conditions which we shall probably have to meet. The reason for these departures from sound policy may be found in a too servile imitation of foreign practice. Apparently, we must have a certain thing because our neighbor has it, and not because it is suited to our own wants. Sir Cyprian urges strongly that the particular conditions be carefully thought out. As he says, those charged with the direction of naval matters have frequently been "unable to distinguish between the accidental and the fundamental."

Sir Cyprian returns to the indictment against the glorification of material when he deprecates the frequent re-arming of old ships and the frequent change in equipment and instruments:

> Naval history demonstrates that often—indeed, more often than not—it was the side with inferior equipment that won. The equipment which really gained a victory was moral and intellectual.

Hence follows the necessity of constant exercises and of training under conditions simulating, as closely as possible, those of actual battle. This necessity, it may be remarked, has been largely neglected by us. Except for a few days of drill last summer under the spur of the Navy Department's peremptory orders, our great fleet is not so well off in this respect as when under Admiral Barker's intelligent and capable command. Three years of its life have been practically wasted, so far as this essential is concerned, however popular the navy may have been at flower shows and in spectacular parades.

Our naval establishments on shore violate in every particular the author's dictum:

> No portion of the naval expenditure of a country should be scrutinized more closely or incurred with greater reluctance than that devoted to their creation and expansion. . . . The number of government establishments of the kind in question should be kept as small as possible. What is wanted is, not the most we can get, but the fewest that we can manage to do with.

Sir Cyprian has not to reckon with such indefensible drains on the treasury as our Portsmouth and Charleston navy yards, or with the personal and political objects for which alone they exist. It is quite generally believed, by those in a position to know, that if the navy yards were put on a business basis, at least one battleship could be built every year with the money saved.

Once upon a time, we could have skipped the pages on "Colonial Defence." To-day they are filled with suggestions that may sooner or later be invaluable. On the other hand, we could never have overlooked his important chapter on "Strategic Operations." Briefly, we may say of the treatise as a whole that, short as it is, no student of naval affairs, and especially no naval officer, can afford to be without it.

CURRENT FICTION.

Father Alphonsus. By A. A. Hinkson. London: T. Fisher Unwin.

This Irish story has the usual naïve qualities of its kind. The simplicity of living, the irrepressibility of temperament, the grog, the fox-hunt, the sweet girl, and merry boy are prominent. But the story turns, as Irish stories seldom do, upon the dangers that await a priest who has taken his vows without a distinct call. Two young men friends on the eve of the day of ordination debate the perils of the situation. One withdraws, even at the eleventh hour, while yet he may, because a girl's face has come between him and his devotions. The other, destined from boyhood to the Church by an ambitious mother, keeps to the chosen path, trusting to time and the restraints of a priest's life to supply the lack of a positive vocation. The sequel shows that he who ran away was more brave and more wise than the other. While the story is told as by one familiar with the most amiable and beneficial workings of the priesthood among the peasantry, and while he treats the case of Father Alphonsus as an exceptional one, the moral, if there be any, is that without a genuine calling to the office no man is safe though many have escaped.

The Light Eternal. By Peter Rosegger. London: T. Fisher Unwin.

A diary-tale of exceptional charm. The diarist is a city priest with an itch for writing, and an inclination to pave the way for certain reforms in the church—for example, for the abolition of celibacy as a requirement for the priesthood—by painting the clergy as they are. This brings him out of favor with the authorities, and he is practically sent to Coventry by assignment to a singularly isolated post, the parish of "St. Mary's in the Torwald." The diary records his experiences in the cure of the seven hundred souls placed in his charge. At first he finds himself happy and useful in the solitude of his high valley. The people are simple and pious, and he is unchallenged in his realm. But times change: a spirit of unrest takes possession of his charges. A railroad comes to the Torwald, the world is let in, and the old idyllic life becomes a thing of the past. The priest struggles desperately but vainly against the encroaching powers of evil. His hold upon the people becomes less and less firm. Insensibly his grip upon himself relaxes; he begins to see visions—the ruin of his little world; and he presently dies, broken in mind and spirit. This kind of summary does not fairly suggest the spirit of the record, the moral of which, if it has one, would seem to be that this world is a parlous place for the pure in heart.

Redemption. By René Bazin; translated by A. S. Rappoport. New York: Charles Scribner's Sons.

This book, like the recently translated "Nun" of the same author, represents a type of French fiction comparatively little read in this country. The French heroine with whom we are best acquainted is the young girl married out of a convent and discovering in maturity passions and ideals which she may not legitimately satisfy. The heroine of the "Redemption," on the contrary, is a girl whose mind turns gradually away from the sensual world and self-gratification to a love of conventual virginity and self-sacrifice. Henriette Madiot is, though she is ignorant of the fact, the natural daughter of a wealthy manufacturer, a man of harshly despotic temper. By her work in a fashionable milliner's establishment she supports herself, and in part, her decrepit uncle, with whom she lives, and her rather worthless brother. She also assists a girl whom she has saved from the streets, Marie Schwarz, a handsome creature of voluptuous and reckless character. Living among surroundings little conducive to high moral standards, she yet possesses a physical sensitiveness which makes her shrink sharply away from every soiling contact. At the same time the calamities that befall her and her friends develop in her, along with a growing repulsion for the brutality and squalor of life, a passionate pity for all who toil and suffer. Little by little she frees herself from every personal tie, till at length, after a long talk with her old priest, she feels that she loves the poor with the devotion of a bride for her betrothed. In spite of its modern dress, the "Redemption" impresses one almost as a mediæval saint's legend. Its vital motive is the conviction of a finely strung Roman Catholic reactionary that the world is a place of sin and pain, and that the only peace here obtainable comes from absolute self-renunciation and a life devoted to the consolation of human misery. Whatever one may think of its religious purpose, one must confess that the story of the milliner saint is presented with considerable charm.

Aunt Maud. By Ernest Oldmeadow. New York: The McClure Co.

Another story in the diary form, very English, with a style which may be described as a mixture of Benson and Corelli. The heroine, who is the story teller, is the ingenuous, violet-eyed one of old. Her name is just not Gladys, because it is Irene; but her nature is altogether Gladys. She has, to be sure, an extraordinary faculty for expression, and rings the literary changes upon her moods with a skill unknown to her ancestress of the mid-Victorian school. And as she represents a Gladys in revolt, paradoxically asserting herself, flying in the face of convention through deep addiction thereto, the record of her emotional performance is not without a mild piquancy. The Aunt Maud of the title, who is, according to the diarist, the most beautiful and charming of women, is reported by act and word to be a snob, a busybody, and a shrew. She determines to marry off her niece at a rather tender age to a person whom she regards as eligible; and he is at least not the wicked baronet of convention. She invites the niece and the person to her country-house for a month, and by way of facilitating matters, tells both of them what the little plan is. The outraged Irene assumes a posture of offence, and the result is a series of emotional incidents, described with much vivacity and minuteness, and leading to an event which amiably and not quite unexpectedly vindicates the tactics of Aunt Maud.

The House in the Water. By Charles G. D. Roberts. Boston: L. C. Page & Co.

From this collection of tales it cannot be discerned that Mr. Roberts has anything more of note to tell his readers about animals. These variations upon the old theme strike one as a little perfunctory. Bear and moose and lynx and wolf range again through these pages; and those other favorite heroes and heroines of fiction whom Mr. Roberts is fond of calling "the wild kindreds." Again we hear of feats performed by them which their chronicler does not believe to be attributable to mere instinct. Again, for the price of the book, we secure admission to a series of those bloody combats in which "teeth meet through flesh, sinew, and the cracking bone itself," flanks are torn open with "eviscerating slashes," and, in the end, somebody or other is satisfactorily "ripped to ribbons." This kind of thing is, we gather, pretty generally recommended to school children; and it must be admitted that "nature-writing," apart from its brutal moments, is marked by that sort of amiable sentimentalism which is understood to be food for babes. It is an odd fad; when it passes such books as "The House in the Water" will pass with it.

Round the Corner in Gay Street. By Grace S. Richmond. New York: Doubleday, Page & Co.

They are very wholesome young people, the Bells of Gay Street; and the reader, as well as their fashionable neighbors, feels the contagion of their cheery simplicity. It is unfortunate that the story cannot fully impress the reader with its own merit, containing as it does so strong a flavor of "Little Women" in an up-to-date setting. The unavoidable comparison is as hard on the newcomer as would be that of a delicate but colorless pastel with a spirited

canvas in oils. The book is frankly written for the Young Person.

Quaker and Courtier: The Life and Work of William Penn. By Mrs. Colquhoun Grant. New York: E. P. Dutton & Co. $3.50 net.

History of the Life of Colonel Nathaniel Whetham: A Forgotten Soldier of the Civil Wars. By Catherine Durning Whetham and William Cecil Dampier Whetham. New York: Longmans, Green & Co. $2.80 net.

The King's General in the West, Sir Richard Granville. By the Rev. Roger Granville. New York: John Lane Co. $4.

We have here well-studied biographies of three seventeenth-century Englishmen, written by descendants who cannot be accused of exalting their ancestors unduly. The portrayals are restrained in their temper and show thorough knowledge, both of the individual lives and the historical environment.

By far the most interesting and important of the three is the account of William Penn, the only one of note as an historic figure. As developed here, it is indeed a career strange, picturesque, and full of service. By no means the least interesting parts of the book are those relating to Penn's father, the doughty Ironside sailor, who was a captain at twenty-one, a rear and vice- admiral at thirty, and who played the stoutest possible second to Robert Blake throughout the hard fighting of the Commonwealth and Protectorate. It cannot be laid to his discredit that he afterwards fought zealously for the restored Stuarts. At any rate, he had in his change much company, and of the best. That he was depreciated by Pepys, his intimate, we may lay to small spite. He bore himself well in an age of vigorous men, and nothing about him attracts the reader more than the old seadog's touching acknowledgment, just before his death, of the virtues of his great son whose Quakerism and contempt of the world had tried him sorely.

William Penn had much of his father in him, though his course was so different. The earliest portrait of him presents an athletic youth clad in armor. He had the temper of a soldier, nor, though he early fell under the influence of George Fox, did he ever cease to be combative with tongue and pen. "Quaker and courtier"—it is almost a contradiction in terms. How Penn could be a sincere follower of the austere and fanatical George Fox and be at the same time the friend and counsellor of Charles II. and James II., the one a profligate and the other a bigot, is a curious story. No Quaker of his time showed more fortitude. He endured patiently incarceration in Newgate and the Tower; it was his daily task to face angry mobs; his life was always in danger. Yet Penn fairly conquered his world. He won the multitudes; the Princess Palatine in Germany hung on his words with weeping; Peter the Great listened to him with respect; Louis XIV. granted him audience. Perhaps the best thing that can be said for Charles II. and James II. is that they had for him cordial respect. As to Charles, it may be that he felt interest in Penn principally because he stood as a picturesque relief to the rest of his environment. "Why do you take your hat off before Penn?" Charles was asked, to which he is said to have replied that two being present, of whom the King was one, it was proper that a hat should be taken off, and since Penn would not take off his hat, Charles must save the proprieties. As to James, we are told that his tolerance was due to his belief that if the sects in general were indulged his beloved Catholics would be suffered. At any rate, Penn was so much in favor with them that he was embarrassed at the time, being called a Jesuit in disguise, and on that account has suffered much in his fame in later days. Macaulay bases upon Penn's relations with the later Stuarts grave charges of greed and time-serving, which he was never willing to retract. These charges Mrs. Grant considers with good judgment, and if they ever had weight with any one they may now be regarded as disposed of.

Pennsylvania, we are told, received its name in spite of the protests of Penn. Charles II. insisting upon it as a kind of joke, teasing the Quaker and courtier by thrusting undesired prominence upon him. How Penn received his grant in lieu of £16,000 owed him by the King, how the great province was administered with wisdom and liberality, the original Indian owners having been first treated with strict justice, Mrs. Grant relates satisfactorily, and it is the part of her book which will attract Americans most. But Penn's activities in England and in Europe were also great and fruitful of interesting results, and of all this Mrs. Grant takes good account.

As to Col. Nathaniel Whetham, "a forgotten soldier of the civil wars," no very good reason appears in his biography why his memory should be revived. Though apparently a worthy, he was a very secondary figure, assigned to garrison duty when the more active spirits were engaged in the field, and though faithful, never distinguished in his service. Valuable to his family as his story may be, it will not appeal to the world in general; and although his biographers lay before us the results of much research, the movement and spirit of the time may be better learned elsewhere.

If the resuscitation of Col. Whetham is of doubtful value, that of Sir Richard Granville, "the King's general in the West," is still more so. Though Granville, or Grenville, was the grandson of the Elizabethan hero, Sir Richard Grenville of the "Revenge," his portrait as here given has few traits that attract us. In his private life he was brutal and selfish; in his public life vindictive, rapacious, and cruel. "Skellum Grenville," schelm or rascal Grenville, was his sobriquet, a nickname which Cavaliers, among them Clarendon, seem no less inclined to apply to him than do Roundheads. Though apparently not a debauchee like his associate Goring, he was a type of the less creditable part of the circle which stood around Charles I. The candor of the Rev. Mr. Granville is relentless in setting in full light his disagreeable subject. One gets vivid glimpses of the age, but we have already many books which are more illuminative. One would suppose a man of the same name and blood would prefer to veil rather than expose the nakedness of such an ancestor.

The Witchcraft Delusion in Connecticut, 1647-1697. By John M. Taylor. New York: The Grafton Press. $2 net.

This is a valuable little book. Mr. Taylor, a Hartford banker with an historical and literary turn of mind, has gathered every scrap of evidence that seems to exist to show the extent of the witchcraft delusion in Connecticut and has printed much of it in full with careful references to the sources. The future historian of Connecticut will be grateful to him for his labor and will find in his record, for the first time, a marshalling of all the facts in the case. Neither Levermore nor Morgan, the only writers who have hitherto attempted to deal with the subject in print, succeeded in covering the whole ground; and neither Dr. Hoadly nor Dr. Trumbull, who loved toothsome bits of evidence touching the details of Connecticut history, did more than gather scattered notes in their manuscripts.

Mr. Taylor prints the record of thirty-seven cases of witchcraft suspicion or trial, of which nine certainly and eleven probably were followed by executions. This is a remarkable showing for a colony where witchcraft was formerly thought to have played but little part. The earliest execution, at Windsor in 1647, has always been clothed somewhat in mystery and even doubt, owing to the entry in Winthrop's Journal, with the name of the person executed left blank. This uncertainty was dispelled by Dr. Trumbull, whose deciphering of Matthew Grant's Diary disclosed the entry scrawled on the inside of the cover, "May 26, '47, Alse Young was hanged." Alse Young was therefore the first person executed for witchcraft in New Eng-

land. The cases in Connecticut ran from 1647 to 1768, with no executions after 1663 and only two cases of suspicion in the eighteenth century.

Mr. Taylor's contribution to the literature of witchcraft in America is of so substantial a character, that it is a pity he has not been able to cast it into a somewhat more scholarly and literary form. Despite his apology for the first four chapters they show that the history of witchcraft is beyond the scope of his powers and the bibliographical note at the end displays little familiarity with the literature of his subject. The great works on witchcraft are omitted entirely, and even so well known a paper as Prof. G. L. Kittredge's "Notes on Witchcraft" has been overlooked. The style is rhetorical and the text is frequently overburdened with quotations from all sorts of authorities, a defect that seriously marred Mr. Taylor's previous work on Roger Ludlow. It seems strange that a Hartford man and a member of the Connecticut Historical Society should write of "Dr. Hoadley," when it is well known that the learned editor of the "Colonial Records of Connecticut," in loyalty to his episcopal ancestry, dropped the e in his name, despite its retention by his own brother.

Duanaire Finn: The Book of the Lays of Finn. Part I.: Irish Text, with Translation into English by Eoin MacNeill [Irish Texts Society, Vol. VII.]. London: David Nutt.

It seems at first strange that, in spite of the eager collection and publication of Ossianic material that has gone on at intervals for a century and a half, so valuable a document as the "Duanaire Finn"—comparable in importance, perhaps, to the famous "Book of the Dean of Lismore"—should not have been printed until 1908. The fact is explained by the history of the manuscript. Written in 1627 for an Irish captain in the Netherlands, it came into the possession of the Franciscan Convent at Louvain, where it remained till the time of the French Revolution. It was then removed for safekeeping to St. Isidore's, at Rome, whence it was sent before the entrance of the Italians into the city, to the Franciscan library in Dublin. Thus during the period of intensest argument concerning the person and poetry of Ossian the volume was stored away in Continental libraries, out of reach of Irish and Scottish disputants alike. To-day, when it is published, the old controversy has practically ceased. Historians are pretty well agreed as to the relation between Macpherson's Ossian and the real Ossian of popular tradition, and the rival claims of Ireland and Scotland have been settled by the recognition of the fact that the saga was the common property of both Gaelic peoples. The appearance of a considerable collection of early Ossianic verse is therefore a less exciting event now than it might have been a generation or two ago, but it deserves to be recorded as an occasion of some importance in Celtic literature. The Fenian saga still affords plenty of problems to the scholar, for whose investigations the publication of manuscript materials is a prime necessity; and the "Duanaire" will be hardly less valued by many readers whose only motive for taking it up is a fondness for old romance.

In the volume now published, which contains only the first half of the collection, there are about a hundred pages of Irish verse, with a translation and notes. We have not tried to determine just how much of the narrative can be found in texts previously printed, and the editor makes no definite calculation. But there is a good quantity of material new in form or substance, and the collection differs from other published portions of the cycle, as Mr. MacNeill points out, in the exceptional prominence accorded to Goll mac Morna. Most of the pieces narrate episodes of war or hunting; a few deal with genealogies or the enumeration of champions; some, like "Goll's Parting with His Wife," depict critical situations; and several are short poems of lyric or elegiac character, either detached by themselves or fitting into some familiar narrative. One song, at least, deserves a place among the treasures of Celtic poetry: the "Sleep-song" which Grainne composed for Diarmait when they were in flight together. Lady Gregory has already made this known to English readers in her version of the story of Grainne in "Gods and Fighting Men."

The work of the editor appears to us good as far as it goes, and commendable in some respects for not going farther. Mr. MacNeill was well advised, for example, in the present state of knowledge, in not attempting to normalize the text of the manuscript. He might even, with advantage, have used Roman type and italicized all doubtful cases of expanded contractions, though the instances of real uncertainty are probably few. The notes consist chiefly of emendations, which are supplied scantily and somewhat inconsistently, many lines being passed over that are quite as defective as others that the editor corrects. But readers who can use the Irish text at all will be able to help themselves in most of these places, and the fuller annotation which is promised for the second volume will probably make up for many deficiencies. In the introduction Mr. MacNeill deals with one of the most debated questions in Irish literary history, how it came about that the Fenian sagas so largely supplanted those of Ulster and Connaught in Irish writings of the thirteenth and following centuries. His theory, which involves the general reconstruction of the history of the cycle, offers explanations for many troublesome things, and deserves careful examination. His discussion is sound and scholarly, though the chapter on mythology is inferior to the portion which deals with historical conditions. The paragraph on metre on pages li.-lii. contains some statements with which we cannot agree. We see no reason for assuming that the ordinary accent of words was levelled out in Old Irish verse as fully as Mr. MacNeill maintains. Of course, there was no such recurrence of stresses as English or Modern Irish verse demands; but the requirement in certain Old Irish stanzas that monosyllables shall rhyme with dissyllables does not point, in our opinion, to the disregard of the feeling for the natural accent of the words.

Persia: the Awakening East. By W. P. Cresson. Philadelphia: J. P. Lippincott Co. $3.50 net.

The interest in the prevalent unrest in Persia is so widespread that we welcome Mr. Cresson's work for the light which it throws on present conditions and the problems which confront the Persian reformer. Not that it was written for this direct purpose, for it is mainly a narrative of a journey taken some years ago through the northern part of the country from the Caspian to Teheran and thence across the desert to Bagdad and down the Tigris to the Persian Gulf. The author actually saw but a small part of the land and the people—a considerable portion of his book being devoted to his experiences in Russian and Turkish territory—but his description of the scenes and incidents of his journey and especially of the people with whom he came in contact are lifelike and suggestive. At Teheran he had interviews with several leading men, including the "Threshold of the Universe," as the late Shah, Muzaffar-ed-Din, was always officially styled. The Shah said, among other things:

> The next time you visit Persia, I hope you will be able to travel from one end of the country to the other as easily and safely as in Europe. My ministers and I are especially interested in developing a system of railways for Persia.

The actual influence of the West on this part of the "awakening East" is shown in the sudden and remarkable growth of the Persian press. "Teheran can now boast of no less than four daily and thirty weekly papers." A brief account is given of the principal events leading to the summons by the late ruler of a National Council. The first popular assembly in obedience to this summons, the author believes, undoubtedly represented the will of the more enlightened and progressive inhabitants of the coun-

try, especially in the great centres of population, Tabriz, Teheran, and Ispahan. As in Egypt twenty-five years before, the chief problem to be solved seemed to be financial—"how to raise revenue with every natural resource long since hypothecated in favor of foreign creditors."

Rather singularly in a book published last June, there is but the barest reference to the boundary dispute with Turkey, which is leading to the intervention of England and Russia. Indeed, one remark would seem to indicate an ignorance of it:

> Since the signing of the Anglo-Russian *entente*, regulating the affairs and interests of those two countries, Persia's external troubles are for the moment abated or postponed.

Naturally there is no reference to the recent uprising in Tabriz. No noteworthy incident occurred in the journey after leaving the capital, though the account of a visit to Bagdad is interesting and the author gives some information in regard to the projected Bagdad Railway. Interesting also is his account of the manner in which Menama, the principal port of the Bahrein islands, the centre of the pearl fisheries, gets its water. As he landed from the steamer he saw "a number of small boats anchored a few hundred yards from the shore, the boatmen engaged in drawing fresh water from springs at the bottom of the sea. These springs well up strongly at a considerable depth, and the entire water-supply of the town is obtained from them. The fresh water is procured in two ways—either in a goatskin water-bag, which a diver takes down with him and carefully closes before bringing it to the surface, or by letting down long hollow pipes of bamboo, weighted at the lower end, through which the water rises up uncontaminated to the surface." Notwithstanding the somewhat superficial character of the book, it is instructive, and the author's style makes it easy reading, while the photographic illustrations add much to its interest and attractiveness. We regret that there is neither map nor index.

The Rise of Man. By C. R. Conder. New York: E. P. Dutton & Co. $3.50 net.

It is mainly the political and religious progress of the race that is described in this volume. There is a brief sketch of the development of mathematical, astronomical, geographical, chemical, biological, and archæological knowledge; an account of early man (prehistoric remains, language, race); a history of civillzation, ancient, mediæval, and modern; and a description of the religions of the world, more than half the book being devoted to this last topic. The scheme is defective in that it omits sociological and ethical history, which was, perhaps, passed over from lack of space. The immense mass of facts is handled with considerable skill: the points described are in general wisely chosen, the style is easy and clear; the author's conclusion is that an eternal purpose has guided man to higher things, but we miss in his exposition a clear statement of the ideas that have controlled the progress of civilization.

While the volume shows wide and intelligent reading and a good grasp of salient points, the condensation necessary in so large a survey has produced undue positiveness in respect to certain things obscure and doubtful, with failure on the author's part to distinguish carefully between his theories and certified historical facts. He tells us, for example, that Babylon was founded in 2250 B.C., that the Cretan script was based on the Syrian Hittite hieroglyphics, that the Hebrew has lost the aorist tense, that the Akkadians coasted the Persian Gulf and the Red Sea, that the Semitic religion in Babylonia and Assyria was "founded" on that of the Akkadians, that the Stoics and the Essenes were influenced by Buddhism These are all, to say the least, doubtful points, and should be so described. Doubtful or improbable etymologies also occur here and there. The ethnological scheme of the volume is as difficult as it is simple. According to this scheme, the cradle lands of the three great stocks of the world, the Turanian, the Semitic, and the Aryan, lie not far apart, the centre being in Armenia; the earliest separation of the original human society was into two groups, the Southern and the Northern. The Southern passed into Lower Egypt, and from it the Semitic was developed; the Northern was the Turanian, of which the Aryan was an offshoot. Recent writers have mostly avoided the term "Turanian" for the reason that it is held to be indefinite and misleading, but for Col. Conder it seems to represent the most important factor of early civilization, comes dangerously near, indeed, representing the whole of civilization. Turanian of race, he holds, are the Hittites, the Lydians (and perhaps the Bactrians), the Etruscans, the Basques, the Turks, the Mongols, the Chinese, the Kols and Dravidians, the American Indians, and apparently the Malays and the Polynesians; and, further, the civilizations of Mexico and Peru were Mongol, and the Aryans never developed higher culture of their own before the Greeks came into contact, perhaps 1500 B.C., with the civilized Turanian and Semitic peoples of Asia Minor. This generalization does not rest on exact historical knowledge; it can be considered at most as only a working hypothesis. For the Mongolian origin of North American religion the author cites, among other things, the prominence of wizards in Central Asia and America; but magicians are prominent everywhere, and the resemblance in question has no ethnological significance. The same thing may be said of the alleged Buddhistic character of Mexican ethics—similarities in moral codes may be found among all human communities, high and low, and such general agreements can lead only to a belief in the psychological unity of the human race. A linguistic fact of this sort is urged by our author: about fifty simple roots, he remarks, will be found to run through all known languages of the world. As authority for this statement, he quotes R. P. Greg,'s "Comparative Philology," of which he observes that its vocabularies sometimes require correction, but are reliable as a whole. It is doubtful, however, whether phllologists will derive great comfort from these vocabularies. From the point of view of West-Asiatic archæology, to which. as is well known, Col. Conder has given much attention, he has something to say of the criticism of the Old Testament. It has been not uncommon of late for archæologists to charge Biblical critics with neglecting the results of recent historical discoveries and depending exclusively on precarious literary evidence; if such neglect be a fault, as undoubtedly it is, on the other hand, neglect of literary conditions is not less a fault. Col. Conder remarks that the civilization of the book of Genesis is that of the age of Hammurabi—a statement inaccurate and misleading; and on the basis of this alleged fact and similar supposed facts he announces a theory of early Hebrew literary history that certainly fails to take notice of important literary phenomena.

In a work of this sort the temptation is sometimes strong to gather up a series of events in a single telling sentence. An instance of such epitomizing occurs in our author's treatment of the later Judaism (p. 290). After speaking of Talmudical formalism, he goes on to say:

> In Egypt, on the other hand, Judaism becomes broader and more philosophic, developing the school whch Maimonides represented in our thirteenth century, and which culminates in the Theism of Spinoza.

The natural impression one gets from this sentence is that Maimonides and Spinoza are historically connected with the book of Wisdom and Philo, whereas the three periods are distinct from one another in their philosophical sources and in their intellectual and religious contents, Wisdom and Philo reflecting Platonism and Stoicism, Maimonides the Spanish Arabian Aristotelianism, and Spinoza the spirit of the Christian philosophy of the seventeenth century.

Science.

The Study of Stellar Evolution. By George Ellery Hale. University of Chicago Press. $4 net.

This volume, one of the decennial publications of the University of Chicago, contains some 250 pages of text and nearly as many additional pages devoted to reproductions of photographs of nebulæ, solar phenomena, observatories, and spectroscopic and photographic instruments. The author has two distinct aims: First, to connect the scattered results of stellar study upon the single thread of evolution; and, secondly, to illustrate the processes of stellar study from the most recent work in solar physics.

After referring to the importance of the theory of evolution as a single great problem, Professor Hale takes up the study of the sun as a star and as an exemplar of the stellar universe. Having discussed the relative advantages of large and small telescopes, he proceeds to give the elementary principles of the spectrum analysis and to describe the use of spectroscopes and gratings in the study of the phenomena of the sun's surface. The lay reader will gain some idea of the difficulties of this investigation when he reads that sun spots are still almost as much of a mystery as they were to Galileo when his little telescope first revealed them. The astrophysicist is still uncertain whether the spots are elevations or depressions. A most interesting part of Professor Hale's book is devoted to the explanation of the principles of the spectroheliograph and its additions to our knowledge. On this subject he speaks as an authority of the highest rank, and much of what he describes is embraced in his own contributions to the science of solar and stellar physics. The delicacy of the instruments used in research to-day is illustrated in the measurements of stellar temperatures, as determined by the radiations of heat which reach us from the vast distances of the stars. Thus, the well-known star Arcturus sends us about as much heat as would be received from a candle six miles away, if there were no absorption in the atmosphere. The delicacy of the apparatus which can measure such minute waves of heat is beyond the ordinary conception.

In the later pages Professor Hale takes up the nebular hypothesis as formulated by Laplace, and shows the modifications of Laplace's theory which modern observations of nebulæ and the discussions of Moulton and others seem to require. "It can hardly be denied," he writes, "that Laplace's idea of the development of the solar system must be reconstructed or abandoned." Professor Hale does not enter into a full consideration of stellar evolution, and therefore does not review Darwin's investigations, or the phenomena of variable and temporary stars, and many other topics which would belong in a complete treatise. He contents himself with brief accounts of the meteoric and the planetesimal theories of evolution of nebulæ, which are intended to take the place of the nebular hypothesis. According to both of these theories, swarms of meteorites, rather than matter in the gaseous state, are assumed to form the raw material out of which the stellar systems are gradually evolved. Professor Hale points out that, while these theories afford more reasonable explanations of certain phenomena of star growth, the difficulties of explaining all the observed phenomena are still very great. His purpose is, while emphasizing the idea of evolution as the centre about which the complete explanations are finally to be arranged, to describe the methods and instruments now used in the most advanced research in solving the numerous questions of detail which will finally perfect the main theory. The book closes with chapters on the value of observations at high altitudes, the possibilities of new instruments, and the opportunities for amateur observers. This last part is particularly suggestive and valuable to amateur observers who are provided with moderate sized telescopes and who are skilled in photography.

Professor Hale's book is an interesting contribution to the literature of the new astronomy. It is, however, more available for the amateur astronomer than for the general reader. Probably no other man has had such opportunities for the study of the physical nature of the sun and of the stars as Professor Hale. The Yerkes Observatory, of which he was director, contains the most powerful refractor ever built. On Mount Wilson, maintained by the Carnegie Institution of Washington, he has the advantages of a clear sky and the use of instruments never before equalled. His description of these instruments and the methods by which they are used express the very latest efforts of the modern astronomy. It is to these descriptions and illustrations, rather than to the limited discussion of the nebular hypothesis, that the reader will turn.

The Centre Publishing Company, New York, announces for early publication "Psychotherapy: a Course of Reading in Sound Medicine, Sound Psychology, and Sound Religion." This subject, which has recently been brought into prominence through the Emmanuel Church movement, is here promised scientific treatment. The book is edited by W. B. Parker, and the contributors will include Prof. Josiah Royce of Harvard, Dr. Frederick Peterson of New York, Dr. Elwood Worcester of the Emmanuel Church, Prof. J. R. Angell of the University of Chicago, Dr. Richard Cabot of Boston, Prof. Joseph Jastrow of the University of Wisconsin, and Prof. James J. Putnam of the Harvard Medical School.

Next month Harper & Brothers will publish "How to Understand Electrical Work," described as "a simple explanation of electric light, heat, power, and traction in daily life," by William H. Onken.

"In the Open" is the title of an illustrated volume of essays by Stanton Davis Kirkham, announced for early publication by Paul Elder & Co. Mr. Kirkham deals with the habits of birds, insects, and animals.

"The Book of Garden Pests," by R. Hooper Pearson (John Lane Co.), comes to us from England, with full directions as to the garden pests there. Unfortunately, limitations of space have prevented Mr. Pearson from dealing with the enemies of our forest trees, like the larvæ of certain moths, which often invade our gardens. The garden pests are of two principal sorts: insects and destructive fungi. Our green-plants are food producers; all of these pests are food consumers. When, therefore, we increase the luxuriance or the succulence of our garden plants, we are increasing the risk both from insects and fungi. The war against these pests is by no means hopeless. Most of them are susceptible to poisons which do not too seriously affect the plants. But the war must be waged with skill and with no long remissions. The tactics are simple but exacting. It is well to give in a single small and convenient volume full directions for making and using the insecticides and fungicides and also the means for combating the four-footed and other foes which make their way into gardens. Mr. Pearson's book will supplement some excellent American treatises, especially those which have been given out by our experiment stations and in our garden libraries.

A little volume which will be read with conflicting emotions by many persons this summer and autumn is "Poison-Ivy and Swamp-Sumach," by Annie Oakes Huntington (published by the author, Jamaica Plain, Mass.), in which much information is given. Both plants are attractive in shape of leaves and in autumnal color, but both produce a painful inflammation of the skin. The author clearly sets forth the distinguishing features of the two plants, and she states briefly the important contribution to the pathological side of the subject which we owe to Professor Pfaff. Until Professor Pfaff began the study of poison-ivy, little was positively known in regard to the nature of the poison. Owing to the fact that alkaline washes soothe the pain, it was assumed in some treatises that the harmful agent was a peculiar organic acid, and there was also a general notion that it was volatile. Dr. Pfaff experimented on fresh and dried material, and proved that the poison is a non-volatile oil. Probably the chief efficiency of alkaline washes is attributable to the detersive and not to any neutralizing action. Soap and water, or a weak alcoholic wash, will serve as well in most cases. There was not space in the little volume for more than the briefest reference to the fact that a very poisonous sumach in Japan yields the basis of the fine lacquer of that country. The brilliant varnish is procured by an ingenious process by which the danger from the poison is minimized, but still the industry is said to

be one which is not very earnestly prosecuted. There are many varnishes found in non-poisonous plants, which are more easily procured, and these have been substituted for the rhus varnish. But the old lacquers from the poison plant of Japan were vastly better in lustre and permanence than those from any other source. Another point regarding these plants may suggest itself to anyone who examines them: What is the good of the poison to the plant itself? Does it render it immune against animal or other foes? Can any of our readers find, this summer or autumn, a single specimen of poison-ivy or poison-sumach which has been attacked by any insect or destructive fungus?

A dispatch from Paris August 25 tells of the death of Antoine-Henri Becquerel, the physicist. He came of a line of scientists: his grandfather, Antoine César Becquerel, was a physicist; and his father, Alexandre-Edmond Becquerel, who died in 1891, was a member of the Academy of Sciences and published among other scientific papers the results of interesting research in the solar spectrum and the constitution of electric light. Antoine-Henri Becquerel was born in 1852, and was educated at the Lycée Louis-le-Grand and the École Polytechnique. He was professor in the Muséum d'Histoire Naturelle, where most of his investigations were carried on. He had been president of the Société Française de Physique, the Société Nationale d'Agriculture, and the Société Internationale des Électriciens; and he had been a member of many learned societies, and had received various honors and prizes (including the Nobel, 1903). In the years succeeding the discovery of X-rays he came prominently before the public. His chief interest then was in phosphorescence, the spectroscope, and the invisible radiations from uranium. To these rays, which he discovered in 1896, his name was given. While studying the action of X-rays on certain phosphorescent substances in causing a radiation which, like the X-rays, possessed the power of passing through substances opaque to ordinary light, he noticed the curious fact that in the case of uranium salts previous exposure to sunlight was unnecessary. He discovered that uranium salts were capable at all times of giving off radiations which would, like the X-rays, pass through ordinary opaque bodies and affect photographic plates. For his discovery of the Becquerel rays he received the Rumford medal of the Royal Society of England. Among his numerous writings are: "Recherches sur la polarisation rotatoire magnétique" (1878-1898), "Découverte du phénomène dans les gaz" (1879), "Recherches sur les polarisations atmosphériques, influence du magnétisme terrestre" (1879-1891), "Recherches sur la phosphorescence" (1882-1907), "Étude des spectres infra-rouges; Découverte des spectres d'émission infrarouges des vapeurs métalliques incandescentes" (1838-1884), "Phosphorescence par les chaleurs" (1890), "Recherches sur l'absorption de la lumière dans les cristaux" (1886-1888), "Découverte des directions principales d'absorption anormale," "Analyse spectrale par absorption," "Découverte de la radioactivité" (1896), "Radiations invisibles pénétrantes émises spontanément par l'uranium," "Actions phormiques et électriques de ces rayons," "Étude des phénomènes de radioactivité," "Analyse du rayonnement" (1896-1907), "Influence d'une basse température sur les spectres d'émission des sels d'uranium" (1907).

The death is announced at the age of sixty-two of Alfred-Mathieu Giard, the French zoölogist. He was born at Valenciennes, and after teaching at the Institut Industriel of Northern France and at Lille, he became a professor at the Sorbonne. He was a member of many learned societies, and he had been president of the Association Française pour l'Avancement des Sciences, of the Société de Biologie, the Société Entomologique, and the Société Centrale d'Agriculture. Among his works are "Recherches sur les Eynascidies" (1872), "Principes de biologie générale" (1877), "Contribution à l'étude des Bopyriens" (1887), "Recherches sur la castration parantaire" (1887), and "Controversies transformistes" (1900).

Drama and Music.

The First Folio Shakespeare, which is being published in separate volume form by Thomas Y. Crowell & Co., will be one-half completed in September, by the addition of three new plays, "The Two Gentlemen of Verona," "The Taming of the Shrew," and "The Tragedie of Coriolanus."

A bulky addition to the Yale Studies in English is Ben Jonson's "The New Inn," edited by George Bremner Tennant (Henry Holt & Co.). It is with a certain sense of poetical justice administered that one sees this tedious play, properly damned on its first appearance, now safely buried between twice its bulk of introduction and notes. The justification for this edition is the text, which has been carefully prepared from the earliest editions. The introduction is for the most part a perfunctory discussion of previous discussion, and quite without edification. For example, Dr. Tennant debates at some length the reception of the play, and arrives at the conclusion that whatever uproar there was at its production is to be attributed "to the customs of the times and the unsatisfactory character of the play." But Dr. Tennant attempts to introduce an element of originality by insisting on an entirely unprovable point, namely, that the damning was not due to any personal animosity:

> This much is clear then: Ben Jonson was not at the time of the presentation of the "New Inn" embroiled in any personal controversy. Such an assertion is significantly substantiated by the fact that no documents in regard to this play which might be construed to indicate "brutal hostility" antedate the author's Ode.

We confess our inability to grasp the "significance" of this "substantiation." Surely Macaulay's schoolboy would have considered the possibility that there might have been much personal hostility which failed to get recorded in document form. In fact, Jonson always had enemies, and he himself attributed the failure of his play to the "vulgar censure" of "malicious spectators." Dr. Tennant's equally lengthy discussion of "why the play failed," in which he makes a mathematical calculation of the number of lines that may "safely be pronounced a bore," is an illustration of a point that is not worth making. The notes on the text, although they exhibit much industry, are needlessly copious. For the learned reader, to whom such an edition is addressed, it should hardly be necessary to explain Gyges's ring by a half-page quotation from the "Republic," and the student who is not familiar with the English May-pole before he arrives at the "New Inn" will not be likely to search for information in these 158 pages of notes.

J. M. Barrie's new comedy, "What Every Woman Knows," will be produced September 3 at the Duke of York's Theatre, London.

Cosima Wagner has been for a year in such poor health that her physicians would not permit her to manage this summer's festival at Bayreuth, so the sceptre came into the hands of Siegfried Wagner. This son of Wagner and grandson of Liszt had at previous festivals conducted some of the operas and stage-managed them all, but this time it has been also his duty to select the singers, distribute the rôles, and superintend all the rehearsals, as his mother used to do.

Art.

Les Médailles romaines de Christine de Suède. By Baron de Bildt, of the Swedish Academy. Pp. vii. + 168, with 20 plates containing 85 figures. Rome: Loescher & Co. 12.50 francs.

The Swedish minister to the King of Italy has added a new volume to his series of monographs on the daughter of Gustavus Adolphus. The Queen's profound affection for Cardinal Azzolino was the ruling passion of her life from their first meeting at Rome in 1655 until her death in 1689. To him she bequeathed all her possessions, her collections, and manuscripts. Among the archives of the Azzolino family at Empoli Vecchio the author found some interesting papers relating to the medals made at Rome in honor of Queen Christina. He has added to this material by research among parish and papal archives, and in the chief numismatic collections of Europe. The result is essentially a history of the medal during the seventeenth century at Rome, a hitherto neglected field.

During the Renaissance, medals were cast from a wax model. There was scarcely a printer or sculptor but tried his hand at the art. Their work shows individuality, freedom, and variety of execution. Before the close of the sixteenth century, however, the artist who modelled the design abandoned its execution to specialists; engravers cut the dies and skilled craftsmen struck the medals. This later work has great sharpness of outline, but is often hard and dry and shows little artistic imagination. Christina's own personal taste was correct and she knew how to choose the best artists for her work. She was not content merely to indicate the subjects for her designs, but she was in the habit of choosing the models to be

followed. Her cabinet of coins, one of the richest and best arranged then known, now forms part of the collection in the Bibliothèque Nationale, at Paris. Several of her Roman medals rank among the best of the period. In an appendix, imitations and variants of Christina's medals are indicated, and those falsely attributed to her; and there is a complete list of the designs planned for her "History in Metal." Biographical notes on the Hamerania family (Giovanni Hamerani was head of the papal mint) and a bibliography are added. The illustrations are adequate. The frontispiece reproduces a bronze bust of Christina, owned by the Marquis Azzolino, which, as M. de Bildt now proves, has been long erroneously attributed to Bernini. It is probably the work of Ercole Ferrata or Soldani.

The Pennsylvania Society of Miniature Painters will hold its annual exhibition at the galleries of the Pennsylvania Academy of the Fine Arts, Philadelphia, October 17 to November 9. The jury of selection consists of Ellen Wetherald Ahrens, Sally Cross, Herman Deigendesch, Amy Otis, Mary H. Tannahill, Janet Wheeler, and William J. Whittemore; the hanging committee of Amy Otis, A. Margaretta Archambault, and Sarah Yocum McFadden.

The centenary of the French caricaturist, Honoré Daumier, was celebrated at Valmondois August 9. Thadée Dujardin-Beaumetz, the French Under-Secretary of State for the Fine Arts, presided, a bust by Geoffroy was unveiled, and a tablet was attached to the house in which Daumier lived.

The death is announced of Piet Verhaert, a Belgian painter, who was born in Antwerp in 1852. He had been a professor in the Antwerp Académie des Beaux-Arts, and two of his pictures, the Seaman's Seal and the Old Butcher's House at Antwerp, are in the museum there.

Léon Perrault, a French painter, native of Poitiers, has died. He was a pupil of Picot and Bouguereau, and he was a frequent exhibitor at the Salon.

Finance.

"MATCHING ORDERS" ON THE STOCK EXCHANGE.

All people who have the interests of sound finance and safe investment at heart will applaud the action of the New York Stock Exchange governors, in appointing a special committee to investigate the performances of last Saturday on the floor of the Exchange. The case was this: In a market which the investing public had almost absolutely deserted, and in which even the ordinary speculative operations were at a minimum—the day being like a midsummer holiday in the absence of brokers and customers—a sudden and extravagant rise in prices occurred. The number of shares reported as changing hands during the two hours of business exceeded a million. The purchases, on the face of things, were larger than on any day since the wildly excited "Harriman market" of August, 1906, when the speculation that had been seething for two years reached its culmination.

That these enormous transactions of Saturday were bona-fide, that the principals were really prepared to pay for the stocks which they bought and to deliver the stocks which they sold, is inconceivable. The attendant circumstances indicated that the great activity was a humbug. Brokers were openly declared to have been entrusted with orders for 5,000 or 10,000 shares, orders which they were instructed to execute only with certain other designated brokers. The purpose of this manœuvre is that the purchasing brokers should bid up the price rapidly, but that their bids should be promptly met by offers from the selling agents of the manipulator—only, however, at the rising prices. Such a programme, if entirely successful, would obviously insure a great enhancement of quoted Stock Exchange values, without necessitating the actual purchase of a share of stock by the author of the trick. The risk incurred was the offer of genuine stock by other capitalists, forcing the buying agents of the manipulator to take it and pay for it at the higher prices. But if the "matched orders" could be executed with sufficient dexterity, this risk would be largely evaded. By general agreement among brokers, the operations in question constituted a flagrant violation of good faith and the rules of the Exchange.

The offence was, it must regretfully be confessed, not new. Since the period of million-share markets and millionaire manipulation began, at the time of the Steel Trust flotation in 1901, the two terms, "wash sales" and "matched orders," have become perhaps the most familiar explanations of the erratic movements of prices on the Exchange. Indeed, the spectacular Stock Exchange markets of 1904, of 1905, and of 1906 were believed to be largely made up of such transactions.

The simplest mind should perceive that an operation of this kind is conspiracy with intent to defraud. It is punishable under the rules of the Stock Exchange and under the laws of the State. The reason why it has been practised with such impunity is that evidence is hard to get, the original manipulator naturally distributing his buying and selling orders through intermediate agents, so that his brokers may be honestly ignorant of the nature of their commission. They *may* be thus ignorant; but in such affairs as that of Saturday—in which, by most accounts, the aggressive bidders were visibly determined to avoid acceptance of bona-fide offers—it requires much credulity to accept the theory.

It is not yet by any means clear who was the prime mover last Saturday. The objective point, and the victim of the extravagant manipulation of prices towards a higher level, was a speculative broker house which, as a consequence, was forced into bankruptcy. On this concern, little sympathy need be wasted; it had invited its own fate by reckless operations for the decline, and its sales had been accompanied by unscrupulous dissemination of rumors affecting the solvency of railway corporations. But this circumstance does not affect the nature of the fraudulent bidding-up process which wrecked the firm; and the fact that common report has ascribed the manœuvre to Thomas W. Lawson, whose impudent announcements and promises regarding his own speculative purposes have for weeks been scattered broadcast through the press, does not help towards a lenient view of the affair.

The *Nation* has long felt that the Stock Exchange authorities, if they were to take up the work in earnest, could get to the bottom of these fraudulent transactions and make an example of some notorious offender. Until this is done, the good name of the institution is indisputably clouded, and its claim of providing at all times a fair and open market for securities is placed in serious question. One may not sympathize with the projects, mooted a few months ago at Washington and Albany, looking towards the crippling of Stock Exchange operations, by discriminatory tax or otherwise. But the hostile legislation has been proposed, and will very probably be urged again. With such incidents as Saturday's a matter of widespread comment, common sense would suggest that the Stock Exchange put its house in order.

NEW YORK, THURSDAY, SEPTEMBER 3, 1908.

The Week.

Mr. Taft's impromptu address at Athens, Ohio, on Saturday, was frank and sensible. He said nothing which he has not said before, but in view of the fulminations of the labor leaders, it is gratifying to record that on the labor question he stuck firmly to his guns:

> I don't make any apologies. . . . When I am a judge on the bench in so far as I can I decide cases according to the law and the facts, no matter whom it hurts, because I believe that to be my sworn duty.

He then enumerated the purposes for which workmen may legitimately organize, and added:

> But they have not the right to injure their employers' property; they have not the right by what is called a "secondary boycott" to invite a third person into the controversy who wishes to keep out by threatening a boycott with him unless he assists them in the fight. In this fight between the employer and the employee, or the united employees, they must fight it out between themselves, and they must not involve the rest of the community in it by a system of duress. This law I believe is a fair law.

As to injunctions, Mr. Taft declared roundly that "there ought to be no favored class":

> A man who has property and a man who has labor to sell shall stand on an equality in court, and . . . every man should be entitled to be protected by all the writs and remedies that the law affords, by an impartial judiciary, and that whether he be a laborer or a capitalist.

Mr. Taft then urged the laboring men to forget their particular and especial "class interest" and then, "like patriots," with the interest of the whole country at heart, to sustain the power of the courts. Mr. Taft has not been a brilliant campaigner. His set speeches are in general much heavier reading than Mr. Bryan's—though they are also sounder in logic. But we regard it as "good politics," good for his party, good for his country, to have him come out squarely for the impartial enforcement of law. In no way can he do more to persuade sober and conservative people that he is more fit than Mr. Bryan for the Presidency.

Mr. Bryan's speech at Indianapolis last week was devoted to the impossible task of supporting the Democratic scheme for regulation of Trusts. We need not dwell on minor details, most of which, despite Mr. Bryan's elaborate argument, are plainly unworkable. The most important remedy which he (and the Democratic platform) urges is a Federal license which would prevent a corporation from controlling "more than 50 per cent. of the total amount of any product consumed in the United States." Mr. Bryan here abandons the old theory of the law—tested by the experience of centuries—which condemns monopolies "in restraint of trade." He sets up a novel, a purely artificial, and an absolutely impracticable definition of monopoly. He forgets that the law must be couched in general terms, and that when once you forsake the ancient and sound principle, "restraint of trade," you are adrift without chart or compass. There are, for example, many corporations, most of them small, which produce substantially all of a given commodity that is consumed in this country. They do not restrain trade, for the field is open to any person that will enter; but the established concern, with its reputation and trade-mark, has perfected its methods of manufacture and delivery so that without rebates or special favors from common carriers it can, by sheer skill and efficiency, hold the market against all comers. Is it desirable for the Federal government to step in and say that such a company shall fill only 50 per cent. of its orders? Can the government force another, more poorly equipped and less ably managed, to step in and furnish the goods under another label? A corporation that supplies "forty millions of people with that product," says Mr. Bryan, is doing "enough." But suppose the price be kept so low that no competitor appears; what can the law accomplish? Mr. Bryan, when you get to the bottom of his scheme, is really advocating the vicious doctrine of protection. He would put a prohibitive tariff on the goods after the first 50 per cent. is sold and would thus try to compel an economically weaker company to enter the business.

Furthermore, how shall you define "50 per cent. of the total amount of any product"? Shall all kinds of steel be lumped together, or shall you consider each of a thousand forms, from watch-springs to bridge beams, as a separate product? Shall all wheat products be taken in the mass or singly? What broad principle of division can be laid down? How can a legal concept embodying such a vague idea be framed in words that shall not result in endless confusion? And who shall determine what is 50 per cent. of the consumption? Shall imports be included? What vast army of inspectors is capable of determining the exact amount that is consumed of each product that is shipped from State to State? Shall the 50 per cent. be reckoned on the basis of last year's output? What percentage of allowance shall be made for unforeseen contingencies of business? Who shall make it? To put these questions is to answer them. Mr. Bryan's wild proposals cannot be reduced to general legal terms. A statute cannot be drafted that will formulate them, and the simple reason is that he is clamoring for a muddled, hopeless plan, that violates the fundamentals of both economics and law.

Even Representative Sereno E. Payne, the most bigoted "stand-patter" alive (unless we except Speaker Cannon), admits that "the time has come" for revision of the tariff. Last winter he thought it unwise to attempt revision "on the heels of a panic and in the course of a Presidential election," but he can see no reason for postponing action after March 4; and, as chairman of the Ways and Means Committee, he has "now at work a force of experts" who will, he believes, "be able to lay before the committee all the information necessary." But in his speech of Monday accepting a renomination he reiterated his belief that "the tariff must be revised by the friends of the American workmen. There is no safety in any other way. Rates must be raised where it is necessary and reduced where they are higher than necessary." Twaddle of this kind hardly deserves serious comment. The tariff was never framed in the interests of the American workman. The manufacturer who could contribute to the campaign funds was the only man

whose desires were considered. No doubt an effort will be made to raise the rates on certain articles; some beneficiaries of the tariff will never be content. But the essential thing, after all, is that the question of revision shall fairly come up for discussion. There are many dark places in the tariff law which need the light; but the Republicans, with their fine brute majority, have hitherto choked off every one who has ventured to mention the subject.

Our American railway accidents are horrible enough, without being made to appear worse by inaccurate comparison with European disasters. Some practical joker must have furnished the figures which recently led a magazine writer to declare that, in the year when the United States railways were killing 10,046 persons and injuring 84,155, only 74 lives were lost on all the lines of the German Empire. Official statistics for 1906, just published by the League of German Railways, show that 165 travellers, 1,003 employees on duty, and 746 other persons met death by railway accidents during the twelvemonth, while 5,142 persons were seriously injured. The worst of it all is that, despite precautions, the record has been growing steadily blacker for more than a decade. German railway men are cautious to a fault; stations are rarely more than three or four signal blocks apart; the number of employees is large, tramps are few, and trespass upon tracks a rare form of *lèse-majesté;* and yet 8,100 mishaps and 7,056 personal injuries mar the record of 1906. Bearing in mind that more than half the victims of American railways are tramps and other trespassers, that the enormous mileage in sparsely settled regions makes the nearly perfect German system of track-walking impossible, and that our American labor unions have demoralized more than one division superintendent, this country can obtain some slight satisfaction by a study of the German figures we have quoted. The urgent necessity for reform here should not, however, be overlooked.

"Peace on earth, good will toward *some* men" was apparently the wish of a number of Argentinians when their country joined with Chili in erecting at the summit of an Andean pass a gigantic statue of Christ in token of mutual disarmament on land. This splendid memorial has not deterred the Argentine Chamber of Deputies from authorizing a naval appropriation of $65,000,000 in order to follow the pace set by Brazil. Even though the Senate, backed by terrified taxpayers, will probably thwart this madness, the incident deserves to become a classical illustration of acute jingoism and its consequences. Our South American friends need Dreadnoughts about as sorely as Greenland needs an artificial ice plant. Brazil and Argentine, the only two countries to the south which can seriously consider an ambitious naval policy, have no conflicting interests at home; and neither is looking forward to territorial expansion. Both have all they can manage for generations to come in the way of internal developments. In short, the whole ridiculous frenzy at Buenos Ayres and Rio de Janeiro suggests that the descendants of Tartarin of Tarascon have gone into politics down there.

In postponing the Tokio International Exposition until 1917, the Japanese government displays sagacity beyond that of Western nations. Sufficient reason for the sudden action cannot be found in the statement that the later date coincides with the fiftieth anniversary of the Emperor's accession. If the Japanese are anxious to defer the celebration, after having made many expensive preliminary arrangements for 1912, it must be because they have discovered that world's fairs are nowadays a losing investment, their deficits varying directly with the distance from Paris. Since Chicago's splendid but costly effort in 1893, imitations have been attempted wherever two or three enthusiasts in search of employment have gathered together, discovered somebody's anniversary, and coaxed funds from gullible hotel-keepers and open-handed legislators. The result is that, both here and abroad, the "international exposition" is less clearly distinguishable from an exalted county fair than it ought to be. To get up a really worthy exposition costs a vast sum of money, and at present Japan must practise every possible economy.

The Kaiser's speech for European peace is all the more welcome because, had he wished, William II. might have easily given the Continent one of those shivering fits which so often follow a German Imperial pronunciamento. Opportunities are not lacking. There is, for instance, the Moroccan affair, which has more than once troubled the peace of Europe. Owing to the defeat of Abd-el-Aziz, France is now confronted with the necessity of radically readjusting her programme. A new policy must be built up around the new Sultan. Had the Kaiser decided openly and in advance to antagonize French plans in this field, had he raised his old complaints about Germany's rights being imperilled in North Africa, something like another serious crisis would have been at hand. The Turkish upheaval, too, has seriously disturbed the European chancelleries. The downfall of Abdul Hamid is generally regarded as a setback for German influence. Had the Emperor chosen to declare that conditions in the Balkans offer cause for disquiet, or patience, or some other diplomatic state of mind, the war-mongers of Europe would immediately have struck up in chorus. To have William II. under such circumstances in such good humor is a distinct matter for congratulation. Evidently, he has made up his mind that all those pernicious attempts at isolating Germany have not, after all, done her much harm. As a worker for peace, the Kaiser can be of greater service to the world than almost any other living man.

Under the Workmen's Compensation Act, passed in England in 1906, it is provided that an employer shall be liable to pay damages to workmen who receive injuries during their employment, unless such injury is directly attributable to the serious and wilful misconduct of the workman himself. The case of Lowey vs. the Sheffield Coal Company, recently decided by the English Court of Appeal in favor of the employee, shows how broadly the phrase "during the course of employment" is being interpreted. In this instance a man had stopped work at five o'clock on Saturday morning, and at midday was going for his wages along a path made by his employers to their works, when he was injured by a passing train not owned or controlled by the defendants. Although the man was not to work again on that day, the court held that it was part of the contract of employ-

ment to require the workman to go for his wages along that road, and that therefore the accident had happened during the course of employment. In view of this English act and the recent desire of our own government to do away with the doctrines of "fellow servant" and "assumed risk" as defences in actions for negligence, our State liability acts are also likely, before long, to be so amended as to make the employer virtually responsible in every accident to an employee. It seems to be a growing belief that each industry should bear the responsibility for its injuries, regardless of causes, rather than to cast the entire burden upon the injured man and his family. In view of this tendency, employers of labor might well consider introducing some definite system of compensation for injuries received during employment which will be recognized by all employees as equitable and just, and will follow the lines, perhaps, of the existing pension systems.

OUR NATIONAL EXTRAVAGANCE.

Mr. Bryan had no difficulty in making out a strong case against the Republicans when he spoke at Minneapolis on Monday about the extravagance of the present government. Had he wished, he might have fortified his statements by quotations from leading Republicans. There is Senator Hale, for instance, who early in April called attention to the increasing outlay in the face of falling revenues. An army bill appropriating $98,000,000 had just slipped through Congress, practically without debate. It was larger by $20,000,000 than that of the previous year, although no one could point to any emergency justifying the increase. There was not even the prospect of trouble in the Philippines. But, unlike any private business man, the government, instead of cutting expenditures to suit income, went ahead as if it were not facing a heavy deficit. The actual amount of this was $59,656,000 on June 30, as contrasted with a surplus of $72,000,000 in 1907 —hardly a satisfactory showing for a Presidential year. But it was Representative Tawney, chairman of the Committee on Appropriations, who made the strongest plea for a return to sanity and for curbing the mad craze to spend which has seemed to possess every succeeding Congress. It was in vain, however, that he appealed to his own party leaders; they turned a deaf ear to him. As a result, the appropriations amounted to more than a billion dollars, or double the appropriation for a single session of the Fifty-first Congress.

As Mr. Bryan points out, this enormous extravagance is primarily due to our imperialistic policy. Senator Hale bewailed the fact that his party, which disbanded the great volunteer armies so promptly in 1865, and let the fleet dwindle to reasonable proportions by 1870, is now devoting 70 per cent. of the national revenue to pensions and war purposes, past and present. Mr. Bryan explains that the army and navy now cost $120,000,000 a year more than in 1897—such is the legacy of our needless war with Spain. This enormous sum is, of course, raised by taxation from rich and poor alike. It makes life harder for every workingman, and adds directly to the cost of the food that goes into the now half-empty dinner-pail. It is the reverse of a square deal for the man who lives by his hands. Or for any one else; for it is a wasteful and unproductive expenditure for which, at the end of five or ten years, we have practically nothing to show.

So far as Mr. Bryan recites facts of this kind, he is not to be put down or answered. Even if the revenues were to equal the outlay, there would still be no excuse for such squandering of public moneys and for the abandonment of our former ideal of maintaining a small military establishment merely for police purposes. But Mr. Bryan is by no means convincing when he urges that the Democratic party is the only one to put a stop to this extravagance. In the last Congress the Democrats had no representatives who spoke out on this subject so earnestly as Messrs. Hale and Tawney. In the Denver platform the party abandons its opposition to a large navy and takes refuge in the platitude that it favors an "adequate" fleet, leaving the country quite in the dark whether the adequate size is to be determined by Rear-Admiral Evans, with his 48 battleships, or Hobson, with his 148, more or less. Nor in general have the Democratic leaders shown a disposition to devote themselves earnestly to a policy of economy.

That the Republican party is naturally more prone to be lavish than the Democratic, is undoubtedly true. We have repeatedly pointed out the close alliance between protection and prodigality. The raising of a great surplus by a high tariff is a temptation to embark on new schemes like irrigation, afforestation, the reclaiming of swamp lands, the widening of waterways, and a hundred other enterprises which, however important some of them may be, tend to jobbery and the consumption of huge sums. Naturally, there follows multiplication of offices, *ninety-nine thousand* new places under Roosevelt, as against ten thousand under Cleveland and McKinley—a fact which is not to be overlooked by those who would count up all the reasons for Mr. Roosevelt's popularity.

When the time comes for the Democracy under a consistent leader to throw all its influence on the side of frugality, the party will be able to make a powerful appeal. But to compel votes on this issue the Democrats must offer something more than Mr. Bryan's promise. The Democrats might well begin by a sharp attack upon our present Congressional committee system, which is now largely responsible for our recklessness. As long as this system exists unchanged, so long shall we have log-rolling and swapping of votes in the dark by both Democrats and Republicans, so long shall we be without a proper budget like that of Great Britain, which forecasts income pretty accurately and regulates expenditure accordingly.

JAPAN AND AUSTRALASIA.

As the Pacific fleet has ploughed its way along the Australian coast, popular enthusiasm there has steadily risen. Sydney was demonstrative in its welcome; Melbourne, the temporary capital of the Australian Commonwealth, is reported to be fast in the grip of that delirium which may be called consciousness of race-kinship or Anglo-Saxon fraternalism. The cause of such unwonted emotion under the Southern Cross is no secret. Bluff statesmen like Sir Joseph Ward, Premier of New Zealand, have declared in so many words that the British colonies in the Pacific look to us as their natural allies in the coming struggle against Japanese domination. Great Britain, white Australia feels, is too far away, farther away than ever since her policy of naval concentration in home waters has

reduced her strength in the Pacific. We, on the contrary, have the ships, have the men, and have the money, too—not to speak of the Panama Canal. So Australia takes our fleet to its heart.

How much of this anti-Japanese scare in Australasia is permanent and sincere, how much of it is the fine flower of the small politicians' efforts to raise a thrilling issue and provide a resonant battle-cry for the Australian voter, we do not know. Even if the ideal of an all-white Australia has permeated the entire population of the southern continent, there is still a long step between a people determined to keep Asiatics out of their country and a people working itself into a passion of alarm lest the Asiatics come and insist on being let in. Take the parallel instance of our own Pacific Coast, where persistent agitation has bred a certain amount of genuine anti-Japanese feeling. No one besides Hobson and his kind really believes in the possibility of an attack by Japan on our Pacific Coast, or on the Philippines, or even of any hostile move that may bring on war with this country. Yet the Hobsons thrive. It does not matter that Japan has repeatedly declared, by word and deed, her strong desire to remain at peace with everybody. Japanese statesmen, of course, are perjured villains, and Japanese concessions are only so many traps for the unwary Powers. It does not matter that only the other day Japan made open confession of her financial troubles by a radical cut in her military and naval budgets. Editors of yellow journals will tell you that the budget reduction is only a blind for Japan's putting another half-dozen Dreadnoughts on the stocks No, nothing that Japan can say, nothing that she can do, will convince the wild jingo that she is not determined to seize the mastery of the Pacific in a few years. And Australia apparently sees Japanese armies landing on the Queensland coast, even as Great Britain herself visualizes now and then a German expeditionary corps on the coast of Yorkshire.

And see, actually, what Australia must expect in the near future. Because Japan crossed one hundred miles of strait and occupied Korea, and moved down some five hundred miles and occupied Formosa, it follows inevitably that she must go south 2,500 miles and seize Australia. For does not the chain of islands curving down like a serpent from the Philippines through the Indian Ocean to Australia, point out to Japan her manifest destiny? Is not Australia but the last and largest morsel that Nippon reserves for her capacious maw? It does not matter that in Korea, practically just across the way, she is experiencing all the difficulties of subjugating a determined people, and that Formosa, five hundred miles away, is only half subdued after thirteen years of Japanese occupation. Why should not Japan go down and annex Australia? All she would have to do on the way would be to occupy the Philippine Islands after defeating the United States, take Borneo from Great Britain (her ally, let it be remembered), drive out the French from Indo-China, the Dutch from Sumatra and Java, and the Germans from New Guinea and their small archipelagoes. In other words, to get at Australia, Japan would only have to defeat the United States, Great Britain, France, Holland, and Germany; why shouldn't Australia be frightened? The Sheriff of Nottingham, in "Robin Hood," asserts that he is not afraid of Robin, "no, not even if there is one of him and six of us; I wouldn't be afraid if there were twice as many of us." The number of barriers interposed between Japan and Australia seems only to have intensified the latter's dread. If Austria and Italy, too, had colonies to defend in the Pacific, Australia would simply go mad with terror.

We have enumerated all the great Powers of Europe save one—Russia. That empire our anti-Japanese strategists have entirely overlooked in their disposition of the mastery of the Pacific. The momentous fact to be kept in mind is, however, that Japan has a frontier to defend in Korea and Manchuria, and Russian machinations to combat at Peking. If Japan should be plunged into war with the United States, or set off on the conquest of Australia, Russia can be counted on to seize the chance and try to regain the lost half of Saghalien, or Port Arthur, or her expensive Chinese Eastern railway, or her lost prestige in Asia. Even miracle-working Japan cannot keep her armies in Manchuria, and her fleet on the Sea of Japan, and have them over again to send to Australia and to the Pacific Coast and to the Philippines. While Russia remains one of the great Powers, neither Australasia nor our own Pacific coast should lose sleep over the peril from Japan.

THE CUBAN EVACUATION.

At a conference at Oyster Bay last week it was decided that the elections for a President of Cuba and a Congress shall be held November 14, and that the new President shall be inaugurated on January 28. Presumably, the provisional American government will then withdraw. The decision as given to the newspapers was accompanied by Gov. Magoon's familiar optimistic predictions that all will be well, that the elections will pass off peacefully, and that the Cubans will take "capable hold" of their reconstituted government. Official optimism is, of course to be expected. Not one of our colonizers or canal-diggers would admit that his work is marred by any flaws, or could be improved; and together they form a mutual admiration society of praiseworthy activity. President Roosevelt knows that no colonial administrator, not even Cromer, surpassed the record of Gen. Wood in Cuba or Taft in the Philippines; Gov. Magoon knows that no one living could have composed the revolutionary differences of 1906 as well as Mr. Taft; and Mr. Taft sends telegrams from Hot Springs to Gov. Magoon, congratulating him on his unparalleled success in bringing order out of chaos. The country believes firmly that our achievements in Cuba, the Philippines, and Panama are superhuman in worth and wisdom, and any one who insinuates that there may be another side to the record is obviously a bad American, ready to dishonor the flag in order to make political capital at the expense of the wisest and best of governments.

Well, there are many bad Americans in Cuba who do not get all their information from official sources or take it at the official valuation. They are by no means so happy and contented as Gov. Magoon, and they look to the future with unconcealed anxiety. Among them are men sincerely desirous of seeing Cuba independent and self-governing. They are convinced that the island is not ready to be turned over to the Cubans, if only because the Herculean task of rebuilding a wrecked government, of establishing the mass of new laws recently drawn by Col. E. H. Crowder and his assistants, and of ac-

customing Cubans to the spirit and letter of these statutes cannot be properly accomplished in two years, or even in five. These men are aware that the Palma republic collapsed not merely because of the weakness of its head, but because of the absence of these very laws, relating to elections, the judiciary, sanitation, the civil service, the military, the powers of the President and the various departments, the municipalities, commercial procedure, and still others. These Americans are bold enough to say openly in Havana that no government so ill-equipped as was Palma's could have succeeded even in American hands without perpetrating much injustice. They even go so far as to connect the coming evacuation of the island with the ending of Mr. Roosevelt's term, and to affirm that the setting-up of the new government, like the return of the battleship fleet, is hurried to form a part of the record of Mr. Roosevelt's achievements.

In their general position we believe that these Americans represent the views of nearly all the subordinate American officials under Gov. Magoon. Certainly, these officials are not ignorant of the growing feeling that the Magoon administration is tainted by too much personal as well as party politics. They object to the granting of a practical monopoly to the present street-car company in Havana, not so much because it is a monopoly as because its general manager, Mr. Steinhardt, is Gov. Magoon's closest adviser, a fact in itself bound to be misinterpreted, to be wrongfully regarded by the Cubans, used as they are to Spanish methods, as an evidence of corruption. The Cubans feel, too, that this was a matter which might properly be left to the new Cuban government. In their eyes the haste savors of carpet-bag rule.

Again, the revelations of corruption in the educational department have shocked the community. This bureau, like that of commerce and industry, has had less attention from Gov. Magoon than the others; yet it is of fundamental importance, and in it padded payrolls and other forms of graft have been discovered—under the American government. The chief of the department, one Escoto, ought never to have been reappointed to his place by Gov. Magoon. He was the man who stole and published the famous Dupuy de Lome letter, in which the Spanish Minister criticised McKinley; he was dismissed by President Palma from his present office; and he was reinstated, it is openly charged, through political influence. This is a poor example to set the Cubans; and no one can pretend that Lieut.-Col. Robert L. Bullard, now in charge of the department, can, for all his known ability, effect the necessary reforms between now and January 28. The department must be turned over to the Cubans in an unsatisfactory condition.

A most unfortunate impression has also been created in Cuba—for which Gov. Magoon is in no way responsible—by the inexplicable acquittal by a court-martial of the two American soldiers who killed their two Cuban boatmen. It was a peculiarly cold-blooded crime by deserters who were trying to escape from the island; the facts are undeniable, but the men got off scot free, and the entire respectable press of Cuba, as well as the sensational, is highly and properly incensed. This failure of justice is mistakenly connected with Gov. Magoon's abuse of the pardoning power. We have not the latest statistics, but up to May 1 Gov. Magoon had granted 833 pardons; the Havana press openly jokes about them, and it is scoffingly said by the Cubans that some politicians are making from $5 to some thousands per pardon. That this charge is wholly unfounded, we have no doubt; but the wholesale jail-delivery is bound to give rise to such talk. It is sincerely to be hoped that Gov. Magoon is correct in his belief that Cuba is now ripe for self-government. If, however, two or three years hence, the republic again falls, the responsibility should not wholly rest on the new Cuban President, any more than Palma should bear the whole blame for the collapse of 1906.

THE MOTOR-CAR PROBLEM.

Punch sums up in a recent issue the automobile problem in Great Britain by a cartoon representing John Bull holding up a motor-car driven by John Bull which has just run over John Bull. The picture illustrates clearly the difficulty of controlling the motors. If there is yearly an increasing number of American and French tourists who add to the dust and dangers of English highways, the bulk of the automobilists are, after all, Englishmen. Not all of them are wealthy, and comparatively few are criminally reckless. In addition, the motor has admittedly come to stay because of its marvellous convenience and because it is, when properly used, a genuine aid to good health. But how shall it be regulated? There has been an unprecedented outburst of wrath from the public this summer. The press, from the London *Times* down, has been fairly overwhelmed with complaints, and the subject was warmly discussed in Parliament before it adjourned. The testimony in general is that the enjoyment of English country life has been spoiled for all who do not take to motoring—that the pedestrian, the bicyclist, and the house-owner who dwells by the roadside are in a sorry plight. The question comes home to us in America also; and much that has been said in England bears on our own case.

Naturally, the wildest remedies have been suggested. There are men who think that every automobile should be so geared as to make it impossible to run more than twenty miles an hour. Others would compel the construction of motors that would not suck up the dust. The speed and the dust seem to be the chief causes of complaint. It is true that there were 932 motor accidents in England in 1907 resulting in 213 deaths, but these included the havoc of the London motor-'buses. There are at least 60,000 automobiles in England and 40,000 motor-cycles, and if each vehicle is credited with running only 100 miles a week, there is obviously not an alarming percentage of accidents in comparison to the traffic. It is annoyance rather than danger that provokes most of the protests. Frequently, however, as in the case of a man who writes to the *Times* that his country home is for sale because of the motor-traffic at his gates, there is genuine injury.

The suggestions for regulation are as indefinite as those which mark the debate in this country. Many persons think the horn the worst feature; others are certain that if it is forbidden the number of accidents will increase—a point of view that seems to us correct. Again, the speed limit has given rise to unending discussion. A majority of the motor drivers think that it should be abolished except for towns and villages. There is no reason for having the same rule apply to a little-used country road and Piccadilly. Lord Willoughby de Broke voiced the prevailing sentiment

in the debate in the House of Lords when he said that the government should relentlessly compel a speed of ten or twelve miles an hour in all inhabited places, and admitted the impossibility of checking fast driving in the country. Mr. Long, the author of the existing motor act, against whose wish the speed regulation was inserted, assured the House of Commons that every argument he had made against the regulation had been borne out by experience. It is, he says, no real protection to the public, and is vexatious to automobilists by imposing a restriction which is in many cases totally unnecessary. He asserts that it is the duty of the police to stop inconsiderate and reckless driving without regard to pace. The motor-owner who goes forty miles in some stretches of road may be the most careful in dangerous places. Mr. Long would have no speed-limit and would hold every one responsible for the damage he does.

On the other hand, the number of conservative and considerate drivers is admittedly growing. One of them, Max Pemberton, the author, sends to the London *Times* the following excellent code, the strict observance of which would end, here as well as in England, most of the evils complained of:

(1.) Submission to and a strict observance of a speed limit of twelve miles an hour in all villages and in such urban districts as seem fit and proper to the central authority.

(2.) A faithful observance of the following rules of safe driving:

(a) Never to take a sharp corner at more than a walking pace.

(b) Never to overtake another vehicle upon a corner.

(c) Never to drive the engine down hill.

(d) To slow down upon passing pedestrians and other traffic.

(e) To avoid the mania for taking doubtful openings in traffic, a habit very exasperating to the public and attended by much risk.

(f) Not to drive faster than twenty miles an hour at night under any circumstances, and to limit the speed to ten or fifteen miles an hour wherever other traffic or pedestrians are likely to be met.

(g) To slow the car down to ten miles an hour at all cross-roads where a clear view is not obtainable.

(h) To give cyclists plenty of room and avoid the inconsiderate and ungentlemanly practices by which they suffer so much inconvenience.

(3) The general habit of unselfishness, thus lessening the evils of the dust question and appeasing a large section of the public which would bear no hostility to the motor if it were not for the dust question.

(4.) The suppression of the open exhaust, dear to the heart of wild chauffeurs and of vain and foolish owners.

Unless there is a marked improvement in the manners and morals of the automobilists there are hard times in store for them. John Burns, as the Cabinet Minister concerned, has officially warned the fraternity that their fate is in their own hands, and that drastic results will ensue if they do not put their house—or their motor car—in order. Just what he will do he does not say. Perhaps he will take a leaf out of the new German automobile law, which makes the automobile owner personally accountable for the least misbehavior of his car. In this country the similar tendency to stringent law-making now noticeable has been proclaimed by the Automobile Club as a warning to all automobile drivers; and the club is in hearty accord with the movement to punish severely men like E. R. Thomas and the recently indicted J. H. Tyson of this city.

INNOCENTS FROM ABROAD.

When Prosper Mérimée was a young man he wrote a book about the Balkan countries, and with the money he received from his publisher made a journey through the Balkan peninsula to see how closely his descriptions tallied with the facts. We presume that, after all, Mérimée must have been pleased to see how near the truth he had come; for with books of travel as with trouble and love, the principle holds good that what we look for we find. This rule has often been illustrated by foreigners who write about America. Sometimes even they have succeeded in making us also see what they came to see among us and believed they had found. How many visiting Frenchmen or Germans, before they are within sight of Sandy Hook, have already sketched out the two leading chapters in their book—the one on the national thirst for wealth, and that other on the way in which American society is dominated by women? Both things may be true, but surely they do not represent a permanent condition, the account of which needs only to be stereotyped and repeated from decade to decade. Granted that we love wealth; do we love it as much as we did twenty or thirty years ago, or more or less? Granted that the average American slaves all day in order that his wife may spend money all day, are there signs of a drift towards a more evenly balanced altruism, or is the old tendency growing still stronger? Most of our visitors from abroad cannot answer because they come to us burdened with an old formula. If we could see ourselves as others see us, we should see ourselves as others saw us a hundred years ago.

In 1794, Talleyrand, for example, proscribed by the Convention in France as a royalist, came to America. An account of his two years' stay in this country is given in a recent number of the *Revue des Deux Mondes*. Now, Talleyrand was not the rapid-fire correspondent of our own days, whose fountain-pen has often done a country greater damage than the conqueror's rifle and cannon. But Talleyrand, too, falls into the double vice of writing according to formula, and writing according to—well, let us call it fancy. At once he laid emphasis on the traits, "that were to become with time the distinctive marks of the American character, the passion for freedom, and the passion for wealth"—so says our writer in the *Revue des Deux Mondes*. And he adds:

> One day in a small town in Maine, after having questioned his host, "a man of eminent respectability," about the quality and price of lands in the neighborhood, he [Talleyrand] mentioned Philadelphia. The American had never been there. "When you do go," said Talleyrand, "you will, of course, be delighted to see Gen. Washington?" "Oh, of course," replied the other, "but more than any one else, I should like to see Bingham, who, they say, is so rich." Washington the champion of freedom, Bingham, the man of money, in themselves they already incarnate America.

A striking bit of testimony across the ages, if only the tale, in one form and another, had not been printed so frequently. And the story not only sounds old, but, after all, it reveals no trait that is exclusively American. If you were to ask a French peasant, or a German woodsman, whom he would like to see in Paris or Berlin, he would very probably say M. Fallières or Emperor William and M. Rothschild or Herr Bleichroeder. If your European peasant should pass over the millionaire, it would be most likely because wealth and power are for him still concentrated in the person of the sovereign.

A French traveller whose book on America has just been brought out in Paris, complains of the wrong notion of France and Frenchmen prevalent in this country. He asserts that in one of our school geographies the inhabitants of France are summarily dismissed as "a frivolous people that drink

quantities of white wine." We venture, however, to doubt the authenticity of the citation. But even if we do misunderstand the French, does not our own critic remark in his opening pages that the favorite phrase on American lips is "Business *are* Business"? Let no nation cavil at the innocent errors of another. We are none of us in a position to throw stones.

But America has suffered much from the established formula. Books about us are often like magazine texts that are written to fit a collection of photographs; the word is slave to the preconceived image. Thus we suspect Talleyrand was a bit indulgent to his fancy when, in the feverish current of Philadelphia life (*on y sentait bouillonner la vie*), among whites and negroes, politicians and financiers, laborers and mariners from all lands, he discerned "the pale Quakeresses clad in robes of a uniform gray, whose beauty Chateaubriand was later to mention." Quakeresses—of course they must be pale, and Talleyrand saw them quite as he came prepared to see them. And once Talleyrand saw the pale Quaker women, Chateaubriand was bound to see them. Thus we see how easy it is to set going the thousand stories which relate how Americans eat their breakfasts and get shaved while going up in the elevator to their offices on the thirty-second floor, or how American children whose fathers have a hundred millions refuse to play with children whose papas have only five millions. Sometimes our traveller consciously lies; often he believes he is telling the truth because the material seems to suit his formula. One elderly German traveller made up his mind that, in spite of what most people said, life in this country did have an historical background. So he came to New York, and, of course, found Sleepy Hollow, and Washington's various headquarters, and a number of old colonial mansions, and was delighted. "Ah, but your country *has* got a historical *under*ground," he exclaimed in his enthusiasm. And that incident sums up the whole secret of much foreign comment on America.

A GERMAN EMANCIPATION.

There is no exaggeration in the recent dispatch from Berlin saying that Prussia has been giving much less attention to current stories about German and British naval schemes than to the new educational policy of the government. This policy, promulgated last month in a decree by the Minister of Education, drives itself home more forcibly than colonial programmes and indirect taxes for battleships can ever do. The ordinary Prussian voter has buxom daughters whose present living expenses and uncertain future give him cause for thought. He also has a few inherited, half-believed superstitions about woman's proper sphere. Therefore, when a government commonly regarded as reactionary announces that it will hereafter extend to women every opportunity for education and technical training which the privileged sex has long jealously enjoyed, the good man must pause to find his bearings. From the traditional German point of view, the departure is even more startling than the recent temperance movement in university and military circles; for only twenty-five years ago the status of German women was, in some respects, more nearly Turkish than Anglo-Saxon. The mere suggestion that the sexes should be equal, at least in educational opportunity, was food for comic journals and drink for imperial aphorists, with their *Kinder, Küche, Kirche.* Until recently, no political party save the Social-Democrats has dared to raise its voice against the primitive ideal of the *Hausfrau.* This liberal attitude of Bebel and his followers has been, in one respect, a hindrance to the cause of emancipation; the official ban upon Socialism has kept in disrepute everything which Socialism favored, thus strengthening upper-class loyalty to the tradition that "a woman who thinks is as disgusting as a man who paints." Hence it is that, even today, professors in universities to which women are admitted still hold—and occasionally exercise—the right of excluding them from lecture-rooms. So profound is the impression made upon the cultivated mind by the sight of a peasant woman hitched to a wagon beside an ox on Brandenburg highways!

The strength of prejudice is revealed, perhaps unwittingly, in the government's explanation of its course. The preamble to the decree states that the Minister of Education has been persuaded by the growing unpopularity of marriage among young men of the upper classes. This deplorable attitude deprives many girls of suitable consorts; hence the unhappy creatures must be given a fair chance to shift for themselves—an ungracious justification, to say the least. The plea of economic compulsion, although squaring with certain obvious facts, shows that officials are still unwilling to recognize the rights of women as simple human beings. To grant higher education to a girl because she cannot find a husband is an act of charity no less than that of giving tools and leather to an idle cobbler. Were the concession not infinitely better than the avowed motive, a stickler for principles might properly spurn it. But Prussian women are not going to leave the little loaves in the oven to burn, just because all the big ones are not yet baked. For the nonce, there will be no serious complaint against the proposed separation of the sexes in all grades below the university and the technical school; the temper of German parents and school children is still too generally irreconcilable with anything smacking of co-education. Nor will the exclusion of workingmen's daughters from universities be made an issue, so long as the brothers of these girls are not allowed to matriculate in those institutions. Swiftly as democratic ideals are spreading, the Prussian masses do not seem to be seriously threatening the exclusiveness of the academic world. In view of the terrible overcrowding of the teaching profession in Germany at present, practically minded women will not grieve deeply over their humbler sisters' inability to attain the Ph.D.

It is not unlikely that the first visible effects of the decree may vindicate the reactionaries. In many branches competition may be sharpened to razor edge; if the *Frankfurter Zeitung's* recent statement that 60 per cent. of college-bred technical men in Germany receive less than $500 a year, and that conditions are absolutely chaotic as a result of the ill-advised increase in the number of technical schools, be true, feminine invasion will certainly breed discontent. But eventually the inevitable economic adjustments must be made in Prussia as they have been in other countries where the opportunities for higher education are open to women. And in the long run an improvement in the intellectual condition of women cannot fail also to raise their social and political position.

A WORD FOR BOOKS ABOUT BOOKS.

One of our critics has just been eloquently lamenting that so many of the neatly bound products of the press are not really books, but are books about books; but even books about books strike us as coming a trifle nearer to the great realities than mere articles on books about books. In an imperfect world the articles have their humble place, and so have books that cannot be classed as creative literature, but that are at best substitutes for the schoolmaster. Many people, doubtless, spend their time on ephemeral essays, say, on Milton, when they might be better occupied with Milton himself; but it by no means follows that if they had not been reading the essay, they would have devoted that hour to "Paradise Lost." Indeed, the chances are that they would have lighted on something yet more trivial than the essay, to say nothing of the epic. Then, too, the essay may take them to Milton; and that journey will be worth while. It is good to go up into an exceeding high mountain and behold all the kingdoms of the world; but some climbers need to have a path blazed for them, and the man who does this pioneer work is entitled to our thanks. Ben Jonson, it was, who complained of the ingratitude of a certain lawyer to whom he had rendered a great service. "Why, I was the man that first made him relish Horace!" And to some bit of didactic discourse, spoken or written, to some obscure teacher or reviewer, or writer of a book about books hundreds of us owe our first relish of some notable author—perhaps the very author who opened the windows of our mind to the east.

The lists of "books that have helped me," published from time to time, are full of strange and interesting suggestions. It is not always—perhaps not usually—the immortal plays and poems that set the intellect in motion and kindle ambition. A few crude pictures of palm-trees and savages in a little school geography may stimulate curiosity in a hitherto sluggish brain and start a boy or girl in a never-ending voyage round the earth. It was Voltaire's "Life of Charles XII.," bought for a penny, that planted John Burns's feet on the road to the British Cabinet. Johnson's parallel between Dryden and Pope is a pompous and not too discriminating piece of criticism; but as printed in the old fifth reader it may have unlocked for many the door to what Ruskin calls the King's Treasuries. Then, too, our popular lectures on literature—given before women's clubs, university extension classes, Young Men's Christian Associations, and rural lyceums—are generally thin and feeble. Superior persons may find in them all the vices of books about books. But these fumbling lectures, with their slap-dash eulogy and misplaced censure, are not intended for superior persons. The arrow, awkwardly feathered and ill-aimed as it is, somehow flies to its mark. After each of these lectures the best books in the village library are more frequently drawn out and more eagerly studied. And the peripatetic lecturer, who has gone his way, sick with a sense of the futility of his efforts, may comfort himself with the reflection that his tiny spark of Promethean fire has, in spite of all discouragements, fallen upon tinder.

This, indeed, is the consolation of all teachers, and other inglorious guides to the realms of gold. They are generally underpaid and often unappreciated. They are prophets without honor in their own country. The Wall Street broker and the grocer set down the teacher and the literary hack as fourth-rate plodders, incapable of earning a decent living. It may be unfortunate that the men who facilitate the exchange of ideas receive less recompense than those who facilitate the exchange of commodities. Some callings, nevertheless, are in part their own reward; and there are human beings who would rather traffic in ideas at a profit of $1,500 a year than in cheese and bonds at a profit of $15,000. Then, too, it is written that man shall not live by cheese and bonds alone. The hand that carries the torch and passes it on may be weak and faltering, unworthy of the high office, but it is the hand of one who has chosen the better part, who has tried, however unsuccessfully, to quicken a love of good books, of art, of the humanities, of the things of the mind. He has devoted his life to the sustenance not of the body that perisheth but of the soul.

And each rising generation, be it remembered, must have its teachers and interpreters. They are the mediators between the past and the present. Just as children need instruction and guidance, so all of us, children of a larger growth, are in debt to the critics, whatever their rank or formal profession, who help us to understand, to enjoy, and to profit by the masterpieces of literature and the other arts. Most of us would be blind to the splendors of Homer, of Virgil, of Dante, and even of the noblest writers in our own tongue without some one to proffer us a word of advice and direction, a warning of the difficulties of the way, as also a hint of the delectable prospects. It is thus that the faithful teacher and the industrious author of books about books, the men who give us our first relish of Horace, are each in his degree servants of the ideal.

THE TEACHING OF LITERATURE IN COLLEGE.

I.

We are familiar with the charge that young people no longer read good books. The average young person to-day seems to have no habitual recourse to that selected and stored-up wisdom of the race, which until our day has been a chief means and effect of culture. Whether this loss be due to some widespread crowding out of the influence of books from the home, or to the unsettled mental background of a population recruiting from all races and traditions, in either case the educator has no more interesting problem, nor hardly a graver duty, than to open up for these young minds the experience of what is, or is to be, their race, and to lay upon them the spell of great books, in which that experience is stored. The importance of this problem is recognized in the amount of time given to the teaching of literature in schools and colleges. Yet it can hardly be questioned that in general, with all this teaching of literature, the knowledge of books is not taught. Can it be taught? ask the scientist and the historian.

We should not expect it to be taught in the schools; there the motley curriculum is too much a thing of expediency, and in English too much time must be lost in getting up the absurd entrance requirements, for the pupil to think of the mutilated and annotated classics in which he is "prepared," as much more than one of the barriers between himself and athletic eligibility. It is in the college that the educator at present finds room for the attempt to "teach literature," where the subject is fashionable, and the teacher readily finds students, has all the time he wants, and is free to devise any means whatsoever for turning the baseball captain into a reader of Thackeray. But the miracle rarely happens.

Yet it ought to happen—or, rather, why should it be a miracle at all? Literature presents to the boy the most directly human subject matter in the curriculum; he will find that work and play coincide as nearly as may be in this crude world, when he sits down to read Fielding, or Scott, or Dickens. So enticing, indeed, seem the hardest tasks that a literature course can prescribe, that our colleagues the scientist and the historian, mentioned before, remembering their own joyous first discovery of "Pendennis" or "Pickwick Papers," wondered how such a draught of nectar to the thirsty soul can be counted as a task at all. Yet the almost complete failure of the average teaching of literature should be warning enough that the problem is not simple. There are, indeed, the bright exceptions; who of us has not had some pupil who kindled at a chance word of his, and became a lover of books? Alas! who has not been startled by the random nature of his solitary successes?

II.

In his brilliant address last November to the Association of Colleges and Preparatory Schools of the Middle States and Maryland, President Wilson of Princeton University said of the teaching of literature in schools:

> You can teach English literature as a science, which it is not; or as art, which in your hands it cannot be; but whichever way you choose to attempt to teach it you will fail, if you regard it as a thing to be objectively imparted. You cannot pedagogically impart the song of a bird; you cannot pedagogically impart the appreciation of a landscape; you cannot pedagogically impart even the nice appreciation of idioms. The only way you will ever appreciate the idiom is by hearing it often; the idiom you hear most of you will most appreciate.

These words, spoken of school education, may well apply to college teaching, and they express and suggest both sides of the problem. They are a protest against useless methods of teaching literature to those who have not already the love for it; the dissecter and the scientist of literature leave the young heart untouched. But the speaker, like many of our educators, thinks of literature as an art—art in the sense in which it may be likened to a bird song or a landscape. Few teachers will disagree with his conclusion that such an art cannot be taught; there is very little in the human heart of boy or man to which such an art could permanently appeal. When we first read "Rob Roy" or "Ivanhoe," were we fascinated by its art at all (song of a bird!)? Or when we read "The Ancient Mariner" and "Kubla Khan," which attracted us more, the marvellous story or the marvellous song? Surely for the average boy or man, literature appeals through the experience it portrays, the companionship it offers—the crowded hour of glorious life, not the ministering artistry of music or picture. The interest is human, natural, and direct; we read "Pickwick Papers" because we like to meet Sam Weller and his father and the other amusing characters. If in time we find that the book becomes defective in art, by some definition or other, and that our pleasure in it therefore fails, we may be assured that intellectual formulas are paralyzing our natural enjoyment, not only of books, but of life itself.

In this enjoyment of life itself our students are not a whit beyond the youth of fifty years ago; it is their curiosity to get at life, to have experience, that perhaps is making them impatient of a medium so indirect as books. They read of their own choice stories, no matter how crude, that present life with the greatest zest and energy. The books that arouse their interest most readily in the college course are the works of men who have had something striking, and to them novel, to say about life—Wordsworth, Emerson, FitzGerald's Omar. Should not the first principle of teaching literature be to discover what prevents the life-loving youth from seeing the life stored up in those other books, as yet dead for him? Should not the seccond principle be to remove that obstacle? If there is a third principle, should it not be to see that the student reads as many books as possible? "The idiom you hear most of you will most appreciate."

If this statement of the general problem is just, a college course in literature should provide for two things—the actual contact of the student's mind with as many books as possible, and the filling in of any gaps in his sympathy with what he reads. Almost all the great books were intended for the average man; the author contemplated an immediate relation with his audience. There is room for the annotator or teacher only when time has made the subject remote and strange, or when the imagination, through some defect or decline, is unable to grasp the recorded experience. A book fails to interest young people because it is of another age, or because they are imaginatively immature. The business of the teacher, then, is to supply an historical or imaginative approach to the book; beyond that it should appeal for itself.

A glance at most college catalogues will show that far different theories of teaching literature are not uncommon. How many courses are offered on the development of this form, or the structure of that, or the romantic something else! Valuable as such studies may prove to the well-read scholar, they are useless to the unread. By their very nature they thrust a fatal screen of historical and critical apparatus between pupil and book; and the reading itself, what there is of it, tends to become a search for literary data to sustain the theory, rather than a vital experience. In such a course the more energetic the teacher, the less likely is he to make readers of his students; the pressure is too great upon him to systematize and clarify his formulas, and to make his doctrines logical—the scientific impulse of which President Wilson speaks. But as few great works of literature illustrate any one theory completely or exclusively, the students may come to patronize the masters, or at most to give them but partial approval, measuring them by classroom standards. Too often the critical apparatus has left no time for reading. In our modern education there is hardly a more shameful product than the faithful students who can tell you what is wrong with Scott and Dickens, and can even attempt one more definition of the short story, and who have yet to read "Kenilworth" and "Our Mutual Friend" and "Wandering Willie's Tale."

I wonder how much more can be said for those "general" historical courses, in which English literature from "Beowulf" to Alfred Austin is "surveyed." The text-book tells when the author lived and died, and the correct opinion to hold of his work; certain "illustrative readings" illustrate, presumably, the fact that he did live and die, and afford portable excuse for the correct opinion. The student's approach to the books is just near enough to get a few names and titles confused. Recently, the victim of such teaching told me that he had been particularly attracted to the novelist "Dickinson." Richardson and Dickens had so coalesced and coagulated in his memory that to divide his impression would be like rescuing the original drops of ink from an old blotter. I asked him which of "Dickinson's" novels he had read. He could not recollect, but he was sure the book had a green cover.

Perhaps it is something that he remembers how the volume looked. Too seldom now does the mere appearance of books find its way into a boy's life, to rouse his curiosity later as to its contents. Yet many readers first kindled to their life-long passion in the family library, at an age when to their physical and mental eye Dickens and Thackeray and Scott were simply so many volumes, bound, as the States on the map were tinted, each in his natural color. For me to this day, in my instinctive, unguarded moments, George Eliot is brown and gold, and Scott is a shinier brown and a brighter gold, and ever so much wider on the shelves; I like them best in that dress, which they wore when they won my heart. If our boys have missed this early external appeal of the volume, it is not too late

to try to surround them with books. Encourage them to buy as many as they can afford, and to keep them in sight; one enticing book habitually before the eye has much more likelihood of reaching the heart than a hundred volumes in the library stacks. And if ever it exists, the ideal classroom for teaching literature will be filled from floor to ceiling with great books and with portraits of their authors, so that book and writer, from hourly association, may be at least outwardly distinct in the boy's memory.

The cry is raised by many teachers that there is not time enough in the college course for reading. There certainly is not, if part of the student's time is consumed by the machinery of the course. But there is plenty of time if the student simply reads literature. The almost encyclopædic acquaintance with books shown by Tennyson and his companions at Cambridge, exceptional as it is, is quite possible for us. How well read a graduate would be who knew all of Shakespeare, the "Faerie Queene," "Paradise Lost," and the novels of Scott, Dickens, and Thackeray! The average college boy could cover this ground twice over in the time he now devotes to "literature," in class and out, from his fourteenth to his twenty-second year.

But how can you make the students read, objects many a teacher. A simple way is to assign reading, and then ask questions on it. To save time the questions and answers should be written, and the more frequent they are, the more regular will be the boy's contact with the books. If they are well chosen, three or four simple questions, calling for brief answers, will show whether the boy has read the novel or the play, and whether he has read thoughtfully. With a little prevision they can be used as a guide for the student in his reading. If you have been trying to explain Dickens's way of presenting character, and have illustrated from the chief figures in the story, ask questions that will involve similar principles in the minor persons; the answers will show whether the student read the book, and whether he read with your explanation in mind. What is more important, he will read for the next test with keener and more concentrated watch for the material for similar questions.

But even if the college course be planned so that the pupil's task will be to read great books constantly, the teacher's part, to connect the reading with the pupil's experience, is a large and difficult one. When we consider the wide knowledge he must have of boys and of books, we should not be surprised if the successful teacher is rare. He must recover for the student those past ideas from which the book grew, and to which it appealed; at the same time he will use his tact to keep in the foreground the book itself, rather than its history. When the boy reads Spenser, for example, he should be supplied in the classroom with those facts and ideas of chivalry and those concepts of Platonism which produced the "Faerie Queene," and on which the poet counted in his audience; if the teacher further explains in typical passages how those ideas and concepts are allegorized, the boy is then ready to find himself in the poem. In "Pendennis," for a nearer example, it needs no teacher to interest college boys in the first part of the story; there is no barrier between them and Pen or Foker or Capt. Costigan. In the latter half of the novel, however, their interest flags; the story seems to spread thin, flattening itself out in a society that college boys do not know. To perfect their connection with this part of the book it is necessary to show them, by reading and illustrating Pen's great speeches in chapter lxi., that the novelist is presenting what is perhaps the weightiest problem for young men of their age and breeding, the problem of compromise. To illustrate the speeches you have only to translate Pen's arguments into college experiences that you are certain your students know.

In addition, the teacher should not hesitate to put before the class the avenue, whatever it is, that led him in his youthful enthusiasm to any particular book. What attracted him may attract another. Unfortunately, the teachers usually reverse the method, and try to interest the boys first in the problems of research or criticism to which they themselves came after years of study—perhaps not well spent; they have wandered far from the simple love of books that makes the reader, and they will wander farther. It is a shame for them to take the boys in that direction. Have I set the standard too high when I say that the ideal teacher of literature is the mature scholar whose heart is young, whose love of books has been fostered by a love of life, whose enthusiasm in the classroom for his old favorites is unashamed? I must admit that there are very few examples of him.

III.

How does it fare with the teachers' own love of books? The fact seems to be that very few teachers of literature are habitual, enthusiastic readers of the books they blame their students for not reading. Their chosen companions are not Spenser, nor Shakespeare, nor Milton, nor Dickens, nor Thackeray. Of course, they know the books—like the old lady who had read the Bible—once. They know what the book is about. But through unfamiliarity they have forgotten the zest of the story, and by what device can they impart it? How often do you hear a teacher say comfortably, over his pipe or cigar, "Somehow Dickens doesn't take hold of me as he used to," in a tone that makes it look dark for Dickens; and then if your own delight in Mrs. Gamp or Mr. Pecksniff is undimmed, and you begin to defend your taste, you will find that the professor has not read Dickens recently. He will lecture to you about him, however, on the spot. The pity of it is that so often all that is needed to interest a boy in a book is a sincere way of intimate praise. In school during study hour Jim detects Bill with a non-academic volume under the desk, and starts inquiries, to which Bill responds from the nearest side of his mouth, "It's 'Tom Sawyer.' Gee, it's great!" And Jim is filled with the desire to read. Imagine the result if Jim's father had said at the dinner table, "James, I wish you to read 'Tom Sawyer'; every boy ought to read it. Some critics think Mark Twain our greatest novelist. The story is of the picaresque type," etc.

Finally, the teacher of literature should if possible be a writer. He needn't publish anything, but he should have the creative habit of mind, in no matter how humble a degree, the best self-protection against pedantry. The creative habit preserves the appreciation of literary expression for itself; what the poets might have said is less interesting to the creative mind than what they did say. May the number of writers who teach increase, as we realize the illumination, the fervor, the sanity of appreciation, that are fostered by habitual creative work. Even in Germany, where in our time the unimaginative mind has had its say of literature, the suggestion comes at last for poets to teach books. If such teaching seems a circumscribed task for a winged spirit, as it seemed to Lowell, at least it should not seem so to us who believe in the power of great ideals over a nation's destiny, and know how ignorant the newer generations are of books, wherein these great ideals are permanently stored.

The twofold reward of the poet-teacher's double calling is increased confidence and authority in his work. He pleads for his calling when he pleads for any book; to him the Muses are more than a name; he is their advocate to generous young hearts, open for a short time to noble persuasions, before they are calloused by the touch of the world. No wonder if he feels both the weight and the consecration of his office—to make of that short opportunity a tenfold talent; to plead for those voices of the race, of whose blood, however humbly, he is; to be the embodiment of that love which is the intercessor

Between the gods that live and mortal man.

To a few such teachers in this country how many of us owe how great a debt!

To remember them is to be grateful.

JOHN ERSKINE.

Amherst College.

NEWS FOR BIBLIOPHILES.

William Butler Yeats is one of the living poets whose first editions are sought by collectors as likely to grow in value. John Quinn of this city, friend and correspondent of Yeats, has undoubtedly the most extensive collection of his writings. He has many of Yeats's manuscripts and many books inscribed by the author. Mr. Quinn has assisted Mr. Yeats in securing American copyrights, and has himself printed privately several pamphlets and books which are actually first editions. The following is a list of these pieces:

Where There Is | Nothing | A Drama | In Five Acts | By | W. B. Yeats | John Lane | MCMII. Collation: Half-title, title, dedication, etc., pp. i.-viii.; text, pp. 1-99. Fifteen copies only were printed for copyright, in a gray paper cover, the first page from the types of the title-page. A second edition of thirty copies only was immediately struck from the same type on larger paper, but without publisher's name on the title, and with some errors in the text corrected; in pale green boards, with label. These two editions contain a dedication to Lady Gregory dated September 19, 1902, never reprinted. The book was not published by John Lane, but by the Macmillan Co., which brought it out, with other plays, the next year, as "The Hour-Glass and Other Plays." This volume has a new dedication to Lady Gregory, dated February, 1903.

The | Hour-Glass | A Morality | By | W. B. Yeats | London | Wm. Heinemann, 21 Bedford St., W. C. | 1903. Collation: Title, copyright, and text, pp. 1-14; blank, pp. 15-16. From the type of the *North American Review* for September, 1903, with special title as above, and altered page-numbers, without cover. Twelve copies only, of which six went for English copyright; of the remaining six, two sent by mail to England were lost, one was retained by the printer, and Mr. Yeats, Lady Gregory, and Mr. Quinn each own one.

The King's Threshold | A Play in Verse | By | W. B. Yeats | New York | Printed for Private Circulation | 1904. Collation: Half-title, title, prologue, etc., pp. i.-ix.; text, pp. 1-58. In gray boards. One hundred copies only, on old hand-made Italian paper.

The Golden Helmet | By | William Butler Yeats | Published | By | John | Quinn | New York, 1908. Collation: Limit notice, half-title, title, etc., pp. i.-viii.; text, pp. 9-33. Gray boards, with label; fifty copies.

The two little volumes "Representative Irish Tales," G. P. Putnam's Sons, 1891, have an introduction by Yeats which has never been reprinted, and these two volumes are necessary in a set of his first editions. The two volumes of "Poetical Works," published in New York by the Macmillan Co. in 1906-07, are also first editions. The text was newly revised; each volume contains a new introduction; Vol. I., three new poems; and Vol. II., one new poem. The works were not issued in this form in England. Laurence & Bullen, Yeats's English publishers, have nearly ready a new and uniform edition of his works in eight volumes, limited to a thousand sets. The last volume will contain a comprehensive bibliography.

The Jahrbuch der Bücherpreise, of which the first issue, that for 1906, was a volume of only 237 pages, has appeared for the year 1907 (Leipzig: Otto Harrassowitz) in a book of 414 pages, again with E. Beck as the author. It furnishes reports of the prices secured at the European book auctions, with the exception of the English. This new volume is particularly complete in reference to the literature of the sixteenth and the seventeenth centuries.

The Anderson Auction Co. of this city has received from Ireland a small but choice collection of books relating to Napoleon and the French Revolution, mostly in French, the library of Gen. Daniel O'Connell.

E. Dwight Church of Brooklyn, the owner of one of the most valuable collections of rare books in this country, died August 30, at Westfield, Conn., in his seventy-third year. He was a graduate of the College of the City of New York.

Correspondence.

THE PERIL TO FRENCH SCHOLARSHIP.

TO THE EDITOR OF THE NATION:

SIR: Prof. Irving Babbitt in a letter to the *Nation*, July 2 (as also in a recently issued volume of essays: "Literature and the American College"), has suggested that we adopt the idea at least of the French *agrégation*—a higher degree, that is, conferred, not for premature specialization, but for thorough and continued work in the subject which the candidate for the degree seeks to profess. This seems to me one of the very few really pointed contributions to the discussion of our American graduate schools and their shortcomings that your correspondents have for so long been occupied with. Professor Babbitt notes in passing that a certain amount of "research" work is now demanded by students coming up for the *agrégation*, adding that this is, however, preceded by a solid grounding (in the case of literary studies) in the humanities, as also by a grounding in that subject elected by the candidate for the degree.

It is so obvious that we Americans need in some manner to react against existing conditions of graduate-school study and against the fallacies upon which programmes of work are founded (fallacies of "original research," of "contributions to the sum of human knowledge" by fledgeling or lop-sided investigators), and that in reacting against German tendencies the earlier French tradition may best serve to guide us, that one sees with something like consternation France, too, facing a crisis in methods of university instruction. To *L'Opinion*, a new weekly review issued at Paris, M. François Albert, himself *agrégé des lettres*, has just contributed two trenchant papers on "La Sorbonne germanisée" (July 18, August 8). His criticism of modern tendencies in the instruction offered at the Sorbonne must apply, and that ever more and more intimately, to conditions of higher education everywhere in France. Like the *Nation's* correspondents, M. Albert sees in premature specialization (here it is in specialization that immediately follows the attainment of the *baccalauréat*) more of peril than of profit. The student is taken out of the *lycée*, he writes, only to be taught to despise general culture, the sentiment for art (wherever found or applied) and the old-fashioned humanities—the best, that is, in the national tradition. He is, in a week's time after matriculation, set to work on the archives or the Corpus Inscriptionum Romanarum:

He is a votary of epigraphy before he knows his Greek and Latin authors. Every day youthful palæographers are set to work learnedly deciphering manuscript texts that they must realize they cannot so much as translate.

Anything to escape "æstheticism"—which is, to-day, a far lower condition than the state of blind ignorance.

Writing of an American "Ph.D." now teaching modern literature, Dr. S. P. Sherman has told the *Nation*, May 28, that this product of our "scientific" methods lectures to his classes on Rousseau's influence upon John Dryden. M. Albert, as if to cap the story (which is only too painfully authentic) tells *L'Opinion* of an honor-student's declaration that by the French Constitution of '75 the Chamber of Deputies elects the French ministers. "In twenty years," asserts this critic of "La Sorbonne germanisée," "our professorships will resemble our ministerial offices"—each professor serenely ignorant and contemptuous of what is going on in the lecture-room next to his own, as of what may have happened in other periods of literature or history than that which he has chosen for his own. And what are we to think of an examination for a *licence* to teach "history" where it is made up of three written tests, as follows:

Latin translation—2 points.
Composition on *Géographie humaine*—2 points.
Exercises in cartography—1 point.

The *licentia docendi*, the degree that precedes by some years the *agrégation*, and that formerly assured that grounding in the humanities which Professor Babbitt has commented upon as the possession of French *agrégés*, used to be awarded only after the passing of a general examination, which was more than a mere pendant to the examination in the special subject elected—the subject to be professed by successful candidates for this degree. To the fact that neither hasty cramming nor laborious lopsidedness (I have used some such phrase before: I repeat it wittingly) sufficed to prepare one for these examinations was in some degree due the general equipment which made French scholarship always respectable, and, at its best, admirably magisterial and philosophic. This year has seen the institution of a series of special licenses whence all general tests—except the Latin translation (under certain reservations)—have disappeared. The French composition has been entirely abandoned. "The qualities of order, clearness, and ease in the exposition of a subject are no longer found useful to an historian," the *Journal des Débats* remarks, with a fair degree of irony. But the practical effects of "scientific" inroads upon French literary and critical methods were seen many years ago: it was in 1880 that M. Stapfer wrote of contemporary Molière criticism:

All æsthetic study of his comedies was long since abandoned, and this great man is to-day . . . the object of nothing better than an arid erudition and a materialistic curiosity.

If there are to-day some signs of a reaction against these procedures, much ground remains to be regained in criticism as in the methods of higher education.

Fortunately, the picture of conditions in

the Sorbonne is, in M. Albert's two articles, unmistakably overcolored. If matters are better than they appear to him, it is, however—and this the *Débats* remarks in the article cited, August 11—only because the French faculties "are living on their reserves. Some of the most rabid partisans of specialization are, themselves, men of a rare general culture, men who began their specialization after they had seen both sides of the humauistic training, the strong and the weak." But optimists, like the writer in the *Débats*, and our own philologists, do not seem to pose this question: What of the rising generation, and the generations to come? The generations of professors who have labored, as students, not to instruct themselves, but to "add to the store of human knowledge"?

Perhaps both French and American universities will soon be able to clear these problems up. We, who have as few traditions in higher education as in other matters, will blunder awhile, then see the light. But it must be regretted that France, that has its traditions, should, more alive to the sources of La Fontaine's fables than to their homely morals, drop the substance for the tricky reflection in the stream below.

THE DATE OF SHAKESPEARE'S "LEAR."

To the Editor of The Nation:

Sir: "The date of the composition of this play ["Lear"]," wrote Dr. Furnivall (the Variorum edition, p. 377), "can be ascertained with an unusual degree of accuracy." The Stationers' Registers, as he points out, fix the year 1606 as the latest date. The earliest possible date has been the cause of a good deal of difference of opinion. Malone thought long ago he had settled the question in favor of October, 1604, and with him agreed Mr. Fleay; Mr. Aldis Wright shifted it to the summer of 1606; then Dr. Furnivall and others decided in favor of 1603. In Act iii., Scene 4, are mentioned the names of various hobgoblins—Modo, Mahu, Flibbertigibbet— and these names are found in a tract published by Dr. Harsnet in 1603 (pp. 45-50). This argument assumes, of course, that these names of the goblins were in the first draft of the play, and also that Shakespeare could not have possibly found out about them before the publication of the tract. It is equally a matter of course, that no definite evidence whatever of either assumption has been or is likely to be forthcoming, and an historian like myself, approaching a literary problem, is at once struck with the futility of reaching any conclusion in the face of the danger that the few words on which we are relying may have been interpolated in 1603 or later into the printed version of a play written or acted any number of years previous that you will. Nevertheless, without some such assumptions, we should never date any doubtful plays at all. Let us confine ourselves to an examination of the evidence adduced from the tract, which Dr. Furnivall admits is really the only bit of proof "that is sure beyond a peradventure."

The history of this tract and of the story told in it seems to me suggestive. A Catholic priest named Weston asserted that he had performed certain miracles, casting out devils, and the like, and he used these "facts" to prove the superiority of Catholicism over Protestantism, and his own superiority over other priests. The "miracles" seem to have been performed in the years 1584-1586, while Harsnet's tract did not see the light till 1603. The real issue in 1603 was not so much the "miracles" as the right of Weston to the leadership of Catholics in England. In 1594-5 Weston became the leader of the Jesuit party in the "Wisbeach Stirs," a violent intestinal quarrel among the secular priests in England, and as a consequence all his previous history was well aired. Among other things, appeared the story of his miracle working, used by him and his friends to prove his great sanctity, and employed by his adversaries to cast slurs upon him. In 1598, at the time of the appeal to Rome by his opponents, the lives of all concerned were diligently raked for scandalous misdemeanors, and all their deeds told to Catholics from one end of England to the other as far as such news could be spread by the limited means of communication then possible. The miracle working formed the text of Weston's party. Then from 1600 to 1603 came the crisis. The party opposed to Weston secured the support of the English government, and began to publish tracts to discredit their enemies. Bancroft, then Bishop of London, determined to deal with Weston's performances himself, and in 1601 or 1602 set to work on the tract later published in 1603 (for state reasons) over the name of his chaplain, Dr. Harsnet. Helped by the appellant priests, Bancroft collected evidence of Weston's doings from priests and laymen who had witnessed or heard of them. His progress was noted from week to week by Father Rivers, the Jesuit, in his letters to his superior at Rome, so that it is pretty clear that the fact and its details were well enough known to the gossips of the metropolis.

Is it likely that the witnesses themselves had not told these stories before, and that the tale of Weston's miracles had not been rehearsed with all possible embellishments in many a tavern and ale house in London? And if not before 1600, most certainly before 1603? In fact, that was the very reason which decided Bancroft to write his tract: the currency which the story had attained. In truth, it is not at all unlikely that the story which Dr. Harsnet later published had acquired firmness and consistency by its oft-repetition, and had in the course of its growth picked up the names of certain well-known and "popular" fiends.

There seems, therefore, to be some reason to believe that Shakespeare could have heard the names of the fiends, Modo, Mahu, and their ilk, in the gossip of the inns on the South Bank. There is some reason to think, though of the slightest, that the poet may have known Bancroft, and there is somewhat more reason to think that his patron, Southampton, knew the bishop. The story may have come direct through them. That, however, is at best an unusually nebulous conjecture; and it seems to be far more probable that he should learn the names from intercourse than that he should cull them out of a long and tiresome tract by the chaplain of the Bishop of London. Others than he seem to have known about them: from the Variorum edition (p. 194, note) we find that Latimer used nearly identical names long before 1603; the spelling of the names in the various editions of "Lear" is not uniform, and some are very near the earlier spelling used by Latimer. Is there not quite as much reason to suppose that both the play and the tract used names in common usage as to assume that one drew upon the other? Mr. Staunton seems to suggest as much (Variorum, p. 198). It is also rather remarkable that Shakespeare might very well have heard the names in 1594-5, and that an unidentified play of "Lear" was published in that year. Might this be Shakespeare's first edition? We may as well assume they were present in 1594 as in 1603.

The rest of the evidence does not seem inconsistent with an earlier date for "Lear" than 1603. In truth, the word "British-man" for "Englishmau," on which Malone relied, cannot be earlier than March, 1603, when James ascended the throne, though how Malone can deduce that it *could* not have been used before the proclamation of the royal title in October, 1604, is difficult for an historian to grasp, who knows how little common usage waits or depends on proclamations. That, however, is only one word, and may have been changed when the play was printed in 1606 or 1607.

I am quite well aware that I have merely piled up more conjectures upon an issue which can hardly be demonstrated one way or the other. We cannot, of course, prove that Shakespeare did not learn the names of the fiends from Harsnet's tract; but when we are at best conjecturing that he learned of them from that source, an even better conjecture seems to be supplied by the history of the tract itself.

Roland G. Usher.

Washington University, St. Louis, August 25.

REFORM IN LEGAL LANGUAGE.

To the Editor of The Nation:

Sir: In view of the movement for reform in legal language recently inaugurated in France—a matter referred to some time since in your columns—and of the fact that such a reform has long been vainly demanded by popular opinion in this country, some explanation of the nature of the reform and of the indifference of lawyers to the subject may be of interest. The indifference of the legal profession is due to the fact that the proposal is impracticable, and that the popular demand is based on a misconception. The language of the law is a subject upon which popular opinion is both ignorant and prejudiced. The general drift of that opinion was well epitomized in an editorial of the *Nation* of April 22:

> More than the windy philosopher or the quack doctor the man of the law traditionally holds the world enmeshed in his network of obscurities, redundancies, and obsolescences. And the bulk of humble opinion throughout the world and throughout the ages has been that the lawyer has developed and clings to his dialect solely with a view to his own profit.

This indictment of the legal profession and its technical language, though severe doubtless fairly reflects the prevailing opinion. Yet nothing could be more erroneous than this opinion.

To one who is conversant with the needs

and the history of legal terminology, the theory that any one of its many technical words was coined or kept in use by lawyers either "solely" or partly for their own profit is unthinkable. Most of the technical terms of English law were coined several thousand years ago; they were the product of the surpassing legal genius of the Romans, and they have expressed and preserved for future generations that vast store of legal wisdom found in the Roman civil law.

A thousand years or more after they had become embedded in Roman law, they began to be imported into English law, to give expression to the dawning legal conceptions of a young nation. And for centuries those Roman words and the conceptions for which they stood were invaluable in providing appropriate laws, for the growing state. In the course of its development English law thus imported from Roman law upwards of seventeen hundred words, nearly, if not quite, all of which met a felt want and served a useful purpose. Possibly a few terms were unnecessarily borrowed through pedantry or an affectation of Latinity, but the number is insignificant. The indebtedness of English law to Roman law in this regard is immeasurable. The adoption of Roman legal terminology with its corresponding legal conceptions not only gave to English law a terminology ready made, as it were, but also, in spite of insular prejudice and jealousy of Roman institutions and influence, enabled England, while maintaining her own peculiar institutions, to keep abreast in legal development with the Continental countries which adopted the civil law outright.

Like every other department of knowledge, legal science must have technical terms, and their meaning must be determined with absolute exactness. These exact meanings have been obtained at great cost, either by judicial decisions or legislative enactments; and words once given a definite legal meaning are necessarily clung to in a way which popular opinion is wholly unable to comprehend. The extent to which words have thus been given a fixed meaning is strikingly exhibited in a book recently published, consisting of eight volumes and containing no less than 132,000 judicial definitions. The value of these definitions is shown by the fact that of the more than 700 words in the will of the late Russell Sage only 35 had not been thus defined.

The popular notion, therefore, that lawyers originate and perpetuate technical words for their own profit, is grotesque. No lawyer of intelligence would do it if he could. On the contrary, probably the most profitable thing that could happen to lawyers would be a legislative enactment abolishing all technical terms and undertaking to express all existing laws in popular language. The uncertainty which would result would be a most prolific source of litigation. The "common language," as you well say, is "constantly slurring the meaning of words into broad and vague connotations," and for this reason it cannot express specialized thought with perfect accuracy.

HERBERT L. BAKER.

Detroit, August 18.

NAVAL ESTABLISHMENTS ON SHORE.

TO THE EDITOR OF THE NATION:

SIR: I have read with interest the review of "The Art of Naval Warfare," by Admiral Sir Cyprian Bridge, in your issue of August 27. May I, as a layman, be permitted to express my dissent from the opinion involved in your reviewer's commendation of the author's dictum regarding naval establishments on shore?

No portion of the naval expenditure of a country should be scrutinized more closely or incurred with greater reluctance than that devoted to their creation and expansion. . . . The number of government establishments of the kind in question should be kept as small as possible.

Let me say at the outset that I am heartily in accord with the *Nation* in its abhorrence of the movement to launch this country upon a career of boundless naval aggrandizement. To some extent, however, I do disagree with you in this, that, while the world-wide evil of continually increasing armaments cannot be too strongly denounced, I am willing to admit that when it comes to any particular country, say one's own country, the question of naval armaments still remains one to which there are two sides. There is nothing wild in maintaining that the United States ought to occupy a commanding position on the sea, and that it should be in a position to meet whatever may chance to come along. Now, what the *Nation* has reiterated time and again (and who can deny the justice of its contention?) is that the very existence of a large navy would tend more than anything else to involve us in international affairs inviting a resort to arms. President Roosevelt and his followers contend that an ample array of battleships is what is needed if we desire to maintain peace. Is it not possible to meet the advocates of this policy half-way without surrendering our position?

There would appear to be one way, and that is to provide ourselves with the means of bringing into existence at short notice an up-to-date navy of sufficient dimensions to render us invincible; in other words, to devote our main energies to the establishment of engineering works, capable of turning out fighting ships at a rate that could not possibly be equalled by an enemy not endowed with our extraordinary resources in iron and coal, and above all, money. Would not this kind of preparedness, whose attainment need not be at all to the prejudice of our fighting qualities, uphold the dignity of our flag as effectually as an immense fleet, with many of its members antiquated or obsolete? However moderate the annual addition to our fleet, the work of construction could be so distributed as to keep a corps of engineers and a body of artisans constantly in practice in each establishment.

With such a system of naval establishments, located on land-locked harbors, what power would ever deem us so unprepared for a conflict that it would be rash enough to provoke one? Our flag will be secure without a great navy as long as the world knows what resources are at our command. It has been so hitherto. In the days when we had no large fleet our flag was respected as it is now. The nations recognize the man behind the steam hammer as well as the man behind the gun.

L. H.

New York, August 31.

Notes.

The *Atlantic Monthly* for September contains the lecture, "Edwin Lawrence Godkin," which James Ford Rhodes delivered at Harvard, April 13.

The authorized "Life of Grover Cleveland" is to be written by his friend John Finley, president of the College of the City of New York. Mr. Finley asks that persons having letters or other memorials of Mr. Cleveland will kindly lend them to him. All manuscripts will be promptly copied, and the originals returned to the owner. Communications should be addressed: President John Finley, College of the City of New York, St. Nicholas Terrace, New York City.

Thomas Y. Crowell & Co. promise for September "The Character of Jesus," by Dr. Charles E. Jefferson; "The Wider Life" and "Evening Thoughts," by Dr. J. R. Miller; "Old Man Coyote," an Indian fairy book by Clara K. Bayliss; "The Fire-Fly's Lovers," a Japanese fairy book by William E. Griffis; and "Stories of Persian Heroes," by E. M. W. Buxton.

Henry Frowde has become joint publisher for the Early English Text Society, whose next volume, due in September—Extra Series CII.—will be the "Promptorium Parvulorum," the first English-Latin Dictionary, about 1440, edited from the manuscript in the Chapter Library at Winchester, with introduction, notes, and glossaries, by A. L. Mayhew.

The "Handbook of Learned Societies and Institutions," of which the first volume, covering America, has been issued recently by the Carnegie Institution of Washington, was one of the first undertakings proposed to the trustees by its advisory committee on bibliography. The work was entrusted to the Librarian of Congress, and has been in charge of J. David Thompson of the library staff and Mrs. Lucy C. Daniels Thompson. The present volume, of nearly six hundred pages, gives data concerning some five hundred societies and institutions, the latter including chiefly universities and natural history museums, but neither art museums nor libraries, though the admission of such libraries and art galleries as publish real contributions to knowledge would have enhanced the value of the work. The further omission of medical and agricultural societies and institutions, and of civic leagues must also be regarded as a serious drawback. Within its field, however, the book cannot fail to be highly appreciated by librarians and scientific workers in general. The information offered is just what one wishes to know in regard to the history and organization of each institution—its address and the name of its secretary, with list of its publications, both regular and special. A work of this kind has long been a desideratum, being, to quote Mr. Thompson's address before the Conference of Librarians at St. Louis, "an indispensable preliminary to bibliographical work in any region of knowledge." It is therefore a cause for surprise to find from the preface to the volume that the publication of the remainder of the material, which is all collected and ready for the press, seems to be indefinitely postponed:

Pending decision as to further publication, the remaining material relating to so-

cieties and institutions in the Old World will, for the present, be kept on file for consultation at the Library of Congress.

It would seem that the authorities of the Institution might regard themselves as under peculiar obligations to complete without unnecessary delay this work which has been so widely announced. But bibliography and anything that savors of it has apparently fallen into bad repute with the Carnegie Institution. The dictum of its president, that bibliography is merely "the platitude of science," was evidently quite seriously made: witness the discontinuance, after the issue of one volume, of the much-heralded annual bibliography of "Writings on American History," and the threat that the "Index Medicus" also will be discontinued, unless the medical profession comes to the rescue with financial aid. The Carnegie Institution is not a money-making concern, dependent for success on the sale of its publications. It was founded in aid of science as such, and it was expected to prepare and publish particularly such works as could not expect success as commercial ventures. One would certainly suppose that its authorities, before taking up a certain work, should count the cost, and, having begun it, should carry it to completion.

"American Business Enterprise: A Study in Industrial Organization," by Douglas Knoop (Manchester University Press), is a report made by the holder of a Gartside scholarship, as the outcome of a nine months' tour in the United States in 1906-7. Part i., consisting of a single chapter, sketches the general aspects of business enterprise in this country. In social equality and in the constant opportunities for rising in the industrial scale, the writer finds two of the main causes for the success of our industrial life. When he touches on the financial organization of industry he occasionally makes a mistake. On p. 29 he concludes that "when watering of stocks occur [*sic*], it is a much greater evil" in Great Britain than on "the other side of the Atlantic." This conclusion is based on the idea that "often the only people to lose are the promoters and underwriters" in the United States, whereas in England, the loss falls on "the general public, who bought the ordinary shares at par." Here one fears the Greeks, even when bearing such complimentary gifts. The better part of the work is the second, where an analysis is made of the structure of manufacturing industry, and of the relations between manufacturers, middlemen, and retailers. The size of industrial units in various lines of production is investigated with intelligence. The process of integration by which the manufacturer undertakes the making of preliminary products required for his main output, is well explained, and its advantages and limitations put sharply. The most instructive matter is the detailed explanation of the practice of various typical industries in marketing their wares. The range of methods, many of them mixed, runs from entire dependence on brokers, commission houses, or jobbers, without any attempt to prescribe retail prices, to the entire elimination of jobbers and the dictation of retail prices, which the Standard Oil Company has accomplished.

Ginn & Co. have just issued a handsome quarto entitled "The World's Commercial Products: A Descriptive Account of the Economic Plants of the World and of Their Commercial Uses," by W. G. Freeman and S. E. Chandler. It is a readable, non-technical account of vegetable products designed for human use. It contains a wealth of illustration, partly in colors, but mainly taken from photographs which give a vivid presentation of the varied processes of tilling the soil in all countries of the globe, and with all sorts of implements from the most primitive to the most complex. The exposition verges at times on the popular, even the naïve, rather than the scientific. An important omission is a summary of the commercial values and exportable surplus of the agricultural staples of different lands. The sole exception to the above stricture must be made in the case of wheat. It seems rather surprising that the important cattle foods obtain such cursory notice. Hay, for example, seems to be entirely overlooked, and the word does not appear in the index. The book contains a series of world maps indicating the geographical sources of each important product. These maps, together with the illustrations, are perhaps as valuable as the letterpress itself.

"Colonel Saunderson, M. P.," by Reginald Lucas (E. P. Dutton & Co.), describes an able man who yet was of only secondary importance in English politics, and who will not interest a very large number of Americans. He was a type of the great Irish land-holders, and in Parliament as a member from Ulster played the part of a stout Unionist, opposing home rule with might and main. In character he embodied quite picturesquely incongruous qualities; he had the usual tastes of a country gentleman, was an athlete, almost an acrobat, a perfect horseman, a skilled billiard player, a zealous yachtsman, constructing as well as sailing his boats; in quieter lines he sketched well, was a remarkable cartoonist, and famed as a wit in the London clubs; with all this he was assiduous in Parliament, a well-informed and ready debater against Gladstone or whatever radical champion might present himself. To crown all, he was devotedly religious after the evangelical type, praying and exhorting among circles high and low. His career was parallel with those of men like John Bright, Disraeli, Gladstone, Randolph Churchill, Parnell, John Morley, and Joseph Chamberlain. Though he was not in the first rank, to read this book puts one in close contact with men of the first rank and with the momentous events in English history for the past forty years.

Maria A. Hoyer's "By the Roman Wall" (London: David Nutt) is a mild and amateurish little book, fitly sub-titled, "Notes on a Summer Holiday." Two ladies spend a week or two in following the line of Hadrian's Wall, looking up, with praiseworthy zeal, all the discoverable antiquities, and thrilling pleasantly over all the associations.

Charles M. Doughty's "Arabia Deserta," a narrative of adventurous explorations in Central Arabia, was first published by the Cambridge University Press nearly twenty years ago. A condensation by Edward Garnett, under the title "Wanderings in Arabia," is now issued in two volumes of some three hundred pages each (imported by Charles Scribner's Sons). Mr. Garnett says in his introduction:

While the learned world of European scientists devoted to the study of Arabia and its problems, geographical, geological, archæological, botanical, ethnological, and philological, has acknowledged its lasting debt to Mr. Doughty, both English literary men and the reading public at large have come into contact with the work scarcely at all.

This failure of the book to attract the general reader was due in part to the great length of the original edition and to the technical nature of much of the material. By excision of the passages of interest to the few Mr. Garnett hopes to show that this "may rank as a classic among the great travel books in our literature." These volumes are certainly of extraordinary interest. It must be said that the style presents some difficulties. The first fifty pages are hard reading; for the author is unduly fond of archæisms. But the reader, once he has fallen into the swing of the narrative, will find this a vivid and an absorbing picture of life among the wild Bedouins on the vast stretches of the Arabian deserts. With a few medicines, a few books, and a pistol in his bosom Doughty wandered from tribe to tribe and from oasis to oasis for more than two years. His hosts were fanatical Moslems, but he boldly avowed himself a Nasrâny, and though he had some narrow escapes from death, he seems to have charmed the most hostile by his frankness:

It had cost me little or naught to confess Konfuchu or Socrates to be apostles of Ullah; but I could not find it in my life to confess the barbaric prophet of Mecca and enter under the yoke, into their solemn fools' paradise.

The characters and customs of these dwellers in the booths of black-hair are presented with many intimate details. Most readers will be struck by the numerous descriptions which recall passages in the Old Testament and throw light on the manners and beliefs of the ancient Hebrews. We might quote at length, but we choose only a single short passage:

Sultry was our journey, and we alighted at half-afternoon, where we found shadows of some great rocks with tolh trees, and pasture for the camels. The men rested and drank coffee; the housewives also kindled fires and baked scanty cakes, under the ashes, of their last barley meal.

"The Meitheis," by T. C. Hodson, and "The Mikirs," by the late Edward Stack (the competent editor of both works is Sir Charles J. Lyall) are parts of a series of descriptive monographs on the more important tribes and castes of Assam, being published by the government of the province (London: David Nutt). The rare vestiges of prehistoric society are being rapidly swept away by advancing civilization—a railway now traverses the Mikir country—and accordingly the British officials are directed to collect information in regard to popular customs, religious beliefs, traditions, and government. Mr. Stack's work, interrupted by his premature death, is largely linguistic. He was enthusiastically aided by a bright young Mikir lad, a convert of the American Baptist Mission, who related many of the stories of which his people are very fond. Three of these tales are reproduced here, both in their original language and in an English translation. The best is a remarkably complete and interesting version of the widespread folk-tale of the Swan-

maidens. The Meitheis are described as a "singular oasis of comparative civilization and organized society, set in a congeries of barbarous peoples." Agriculture is the chief occupation of the people. Widows may remarry, but the education of women has not made much progress:

The failure is not improbably due to the rumor, started by malignity and disseminated by stupidity, that as soon as the girls had been satisfactorily taught to read, write, and speak English, they were to be shipped off to England, where there was said to be a scarcity of marriageable women.

In this volume, which contains very minute details in regard to laws, customs, and religion as well as a section on language and grammar, there are also some folk-tales. Among these is the popular story of the distressful loves of Khamba and Thoibi, which is illustrated by reproductions in color of five interesting paintings by a native artist. The other illustrations are from photographs and chromo-lithographs, based on photographs. Each volume has also an excellent map and an index.

Students of German literature will read with interest Richard Urban's "Die literarische Gegenwart: 20 Jahre deutschen Schrifttums, 1888-1908," just published (Leipzig: Xenienverlag), with a portrait of Gerhart Hauptmann and a brief introduction by the Berlin novelist, Max Kretzer. The book gives a clear and concise survey of the evolution of German polite literature during the last twenty years, and the author shows fine discrimination, sound judgment, and praiseworthy impartiality in the selection of his material—a rather difficult task in treating contemporary writers.

A series of *Dorfbilder* from Transylvania, by R. Ziegler, containing poetical descriptions of rural life in winter and summer, has been published under the title "Wenn die Ähren reifen." (Berlin: Karl Curtius).

As the twentieth volume of the Bibliothek deutscher Schriftsteller aus Böhmen, Josef Bayer publishes a series of instructive literary essays, "Studien und Charakteristiken: Dramaturgisches und Erinnerungen an Persönlichkeiten" (Prague: Calve). The volume, which contains fifty essays and covers a variety of subjects, is really the second edition of the author's "Literarisches Skizzenbuch," issued in 1905.

David Neumark has published (Berlin: G. Reimer) the first volume of what promises to be a comprehensive work, "Geschichte der jüdischen Philosophie des Mittelalters nach Problemen dargestellt." This volume is devoted exclusively to an introduction, and to a discussion of the principles of this philosophy, both as to matter and form. The author presents an abundance of new data on the philosophical contents of post-Biblical Jewish literature, as also new interpretations of generally known facts, especially on the relation of Jewish thought to Platonism and Aristotelianism.

Of the conservative Kommentar zum Neuen Testament, edited by Prof. Theodor Zahn of Erlangen, Volume XI. has just appeared (Leipzig: A. Deichert). It contains an excellent explanation of Philippians, by Prof. Paul Ewald of Erlangen. Further volumes are announced by Prof. E. Riggenbach of Basel, and Prof. R. Seeberg of Berlin.

In a volume entitled "Katholizismus und Protestantismus in Geschichte, Religion, Politik und Kultur" (Leipzig: Quelle & Meyer) Dr. Karl Sell, professor of ecclesiastical history in the University of Bonn, treats the comprehensive and somewhat complicated subject, not from an apologetical or polemical, but from a strictly historical point of view, and with the scientific and tolerant spirit which those who are familiar with his numerous works would naturally expect. He traces the development of Catholicism and Protestantism from their origin to the present day, shows their influence upon political institutions and intellectual culture, and adds some appropriate remarks on the antagonism of the Pope to Modernism as officially expressed in the recent "Encyclica Pascendi."

A province of scientific research, in which Professor Sell has made some valuable studies, namely, the psychology of religion, has been specially investigated by Dr. Theodor Kappstein of the University of Berlin in his "Psychologie der Frömmigkeit" (Leipzig: M. Heinsius Nachfolger). One of the first German books on this subject was Vorbrodt's "Psychologie des Glaubens" (1895), but it attracted very little attention. The author then established the *Zeitschrift für Religionspsychologie*, which, after a time, awakened considerable interest in the subject.

The sixth and last volume of the "Norsk Forfatterlexikon, 1814-1880" (Lexicon of Norwegian Authors), by J. B. Halvorsen, has just been completed by the issue of the sixty-sixth fascicle, pages 657 to 750 of the sixth volume. The work has been coming out for twenty-seven years, and the author himself, who regarded this as the main task of his life, did not live to see it completed. The last two volumes have been made ready for the press, partly on the basis of the papers left by Mr. Halvorsen, but largely on the ground of independent studies by Dr. Halvdan Koht, one of the editors of Ibsen's letters. We reviewed Halvorsen's work in 1886 (July 22, p. 82) soon after the completion of the first volume, but the importance of the work justifies our reverting to it. It is indispensable to any thorough study of Norwegian literature of the nineteenth century. The method of publication necessitated some unevenness in the treatment of the different articles. Björnstjerne Björnson (62 pages), for example, is carried only to March, 1884, whereas Ibsen (93 pages) is complete to November, 1889. Both biographical and bibliographical data are given very fully. That the officials of Norway have had a high opinion of the value of this undertaking is shown by the fact that the authors, first Mr. Halvorsen and afterwards Dr. Koht, have for many years had a grant from the national treasury in order to enable them to devote their time entirely to this work. The publication has been carried on by an association of Norwegian publishers, since the cost of such an enterprise would be beyoud the resources of an individual.

Of interest to phoneticians and dialect students is a booklet just published by Prof. Johan Storm of Christiania University, "Norsk Lydskrift" (Norwegian Sound Notation), giving also an outline of phonetics. The present booklet completes a treatise the beginnings of which were published in the defunct periodical *Norvegia*. Of special importance is the author's discussion of the production of vowel sounds. He takes issue with the opinion of Sweet and other English phoneticians as to the meaning of the terms "narrow" and "wide" in vowel formation.

At German universities this summer 3,594 foreigners matriculated, as compared with 3,861 last winter, and 3,766 last summer. For some time there has been a steady decrease. The foreigners now number only 7.5 per cent. of the entire attendance, as contrasted with 9.2 three semesters ago. According to studies the foreigners are divided as follows: Medicine, 944; philosophy, philology, and history, 826; mathematics and natural sciences, 630; law, 426; agriculture, 304. Of these students, Berlin has 869, Munich 566, Leipzig 504, Heidelberg 237, while Rostock has 19, Erlangen 32, and Münster only 10. Of the total number, 3,148 come from European countries, 252 from America, 179 from Asia—mostly Japanese—11 from Africa, and 4 from Australia.

The University of Heidelberg has a Journalistische Bibliothek, for which the funds were collected during the past twelvemonths. It is established by Prof. Ad. Koch, in commemoration of the completion of the first decade of his Journalistisches Seminar. The Verein Deutscher Zeitungsverleger has agreed to furnish the bulk of the material for research in the history, etc., of journalism.

Brussels has in late years become the headquarters of so many international societies, that an Office Central des Institutions Internationales has been opened, and a Bulletin is being published.

The Rev. Dr. Charles Taylor, who had been master of St. John's College, Cambridge, died at Nuremberg, August 12. He was born in 1840 and educated at Kings College School, London, and St. John's, Cambridge. His early work was in mathematics, and from 1862 to 1867 he was one of the editors of the *Messenger of Mathematics*, but he was more distinguished as a Hebrew scholar. Among his publications are "Geometrical Conics" (1863), "The Elementary Geometry of Conics" (1872), "The Dirge of Coheleth Discussed and Literally Interpreted" (1874), "Sayings of the Jewish Fathers" (1877), "An Introduction to the Ancient and Modern Geometry of Conics" (1881), "The Teaching of the Twelve Apostles" (1886), "An Essay on the Theology of Didache" (1889), "The Witness of Hermas to the Four Gospels" (1892), "The Oxyrhynchus Logia and the Apocryphal Gospels" (1899), "The Oxyrhynchus Sayings of Jesus" (1905), and "The Shepherd of Hermas in Early Church Classics" (1903-6). He edited a number of texts, and contributed to dictionaries of the Bible, the "Encyclopædia Britannica," the *Journal of Philology*, the *Journal of Theological Studies*, the *Jewish Quarterly Review*, and the *Alpine Journal*.

The Rev. Dr. John Robson, one of the founders of the Rajputana Mission and moderator of the Synod of the United Presbyterian Church of Scotland, 1899-1900, died last month at Lochranza, Arran. Among his publications are "Hinduism and Chris-

tianity," "The Bible: Its Revelation and Inspiration," "The Holy Spirit, the Paraclete," "Primer of Missions," and "Jeremiah the Prophet."

Dr. Rudolf Ehlers has died at Frankfort at the age of seventy-four. He was one of the editors of *Zeitschrift für praktische Theologie*. Among his publications are "Das alte Gesetz und die neue Zeit" (1877), "Bilder aus dem Leben des Apostels Paulus" (1886), "Aus festlichen Stunden: Von Advent bis Pfingsten" (1895), and "Das apostolische Glaubensbekenntnis" (1898).

Giuseppe Chiarini, who died early in August, in his seventy-eighth year, was one of the few Italians who have seriously concerned themselves with foreign literature. Goethe, Körner, Burns, Shelley, Byron, and Swinburne were among the authors he may fairly be said to have introduced to modern Italy. Heine enlisted his especial enthusiasm, and he was an assiduous translator of the poet of the "Lieder." Chiarini was the life-long friend of Carducci, and perhaps his best-known work is the defence of the metres of "Odi barbare." In "Lachrymæ," Chiarini essayed himself a poetry of proselike simplicity which made its stir, but has held few admirers. D'Annunzio's early work enlisted his enthusiasm, a mood soon exchanged for bitter condemnation of the later volumes. Like so many literary men in Italy, Chiarini was most of his life in the public service, holding an important position under the Ministry of Public Instruction. Not a great writer, he was a cultivated, persuasive, and useful critic.

Anton Giulio Barrili, the novelist, died at Genoa August 15, in his seventy-first year. As soldier, journalist, novelist, and professor, he represented perfectly the exuberant vitality of the young generation that made United Italy. He fought with Garibaldi in '59, '66, and '67 (Mentana), was editor of an influential Genoese paper, *Il Movimento*, in his twenty-second year. His novels are reckoned by the dozens, and most of them have gone through many editions. "L'Olmo e l'edera," "Come in sogno," and "La Notte del commendatore" may be named as among the more popular. He was thoroughly saturated with the sentimentalism of his generation, and none of his works seem likely to live. A most attractive figure as a man, he was beloved by his students and readers. A year ago last January the press and literary men of Italy joined in a remarkable testimonial to him. His too fluent novels often showed a whimsical and spontaneous humor, a quality very rare in modern Italian letters.

NOTES ON TEXT BOOKS.

"Lives of Great English Writers" (Houghton, Mifflin & Co.), by Walter S. Hinchman and Prof. Francis B. Gummere, is put forth with a hope of usefulness to the student and to the general reader. The book, which is well-indexed and provided with a select bibliography, consists of thirty-four biographical essays on representative writers from Chaucer to Browning. The various periods of literary history are connected by short links suggesting the character of the transitions. The preface anticipates criticism for sins of omission and inclusion; otherwise we should complain that the gulf between Chaucer and Raleigh is not so void as the absence of any representative makes it appear; that the minor poets of the seventeenth century are too numerous and too significant to neglect; and that of Richardson, Fielding, Smollett, and Sterne at least one should be included. At the same time, of those chosen we should hesitate to reject one. As for the treatment of the individual writers, the collaboration of Mr. Hinchman and Professor Gummere seems happy. There is no rhapsody, there are many facts, and the style is clear, competent, and animated. In so far as they have lived up to their intention to avoid "barren formulas and catch-words about æsthetic values" and "all literary criticism save that which serves to characterize the writers and give them their due places"—in so far they have sacrificed the general reader. But their intention frequently relaxes into vivacity and, occasionally, into unsoundness. For example, Professor Gummere says of Shakespeare: "He was neither a great moralist, nor, to use Matthew Arnold's phrase, 'a friend and aider to those who would live in the spirit' "—a bit of purely "personal" criticism against which many readers of Shakespeare would heartily and justifiably protest. Such lapses, however, are exceptional. In general, the criticism is sound, conservative, and illuminating, and the book should do good service. "Teachers' Outlines for Studies in English," by Gilbert Sykes Blakely (American Book Company), is a useful little manual adapted to a specific purpose and free from nonsense. It is based on the requirements for admission to college, and offers a simple and sensible method for elementary study of the novel, narrative poetry, lyric poetry, the drama, and the essay. Under each of these literary forms are outlines with questions and suggestions on a representative group of books from the required list. There is also an appendix containing specimen entrance examinations in English from various leading colleges.

"English Poems" by Edward Chauncey Baldwin and Harry G. Paul, assistant professors of English literature at the University of Illinois (American Book Co.), is an anthology of 333 pages extending from Chaucer to Tennyson with 65 additional pages of notes. The authors offer a timely apology for putting another collection of this sort before the public; but they believe that questions and information included in the notes will make the book useful to teachers and students. Some of their questions are easier to ask than to answer; but they will serve well enough to start the ball rolling, and will doubtless be welcomed by many teachers who cannot see what there is to ask about lyric poetry. Miss M. Bentinck Smith has edited for school use the much-edited "Prologue" and "Knight's Tale" of Chaucer (Cambridge University Press). The editorial work is full and competent, but naturally not very original. The introductory matter includes an outline of Chaucer's grammar and metre, and there are notes and a vocabulary. Browning's "Strafford," edited by Hereford B. George (Henry Frowde), is a satisfactory reading edition of the play, supplied with a brief introduction, a few notes, and a bad preface. Mr. George was evidently much at a loss for an excuse to publish when he hit upon the idea that the upper forms in the schools "should see for themselves that the greatest of English dramatists is not the only one." It is well, indeed, that pupils of the upper forms should know that Shakespeare is not the only English dramatist; but it is not well that they should think Browning the best or even the most available of the other dramatists; for any pupil with sufficient maturity and vigor of intellect not to think "Strafford" dull could safely be introduced to a dozen English writers far above mediocrity who are much better representatives of the dramatic tradition than Browning. The edition is attractive enough, however, to dispense with the preface.

"Argumentation and Debating," by Prof. William Trufant Foster of Bowdoin (Houghton, Mifflin Company), is one of the most satisfactory books in this field. A pupil of Prof. George P. Baker, the pioneer in reducing argumentation to a teachable art, Professor Foster shares with his former teacher a conviction of the vitality of the subject. His book is therefore not an academic formulation of principles; it is an inside view of the art presented by one conversant with all its difficulties and delights. While it insists rigorously upon method, order, and system, as the "backbone of argument," it avoids all pedantries of classification and terminology, and addresses itself strictly to practical ends. It shows, for example, precisely how to get to work at analyzing the proposition—one of the most difficult tasks for the beginner. A copious appendix gives specimens of analysis, briefs, material for briefing, a forensic, and a complete specimen debate, a model for instruction to judges and for the formation of a debating league, together with 275 debatable propositions. In conclusion we cannot help remarking that this is in the best sense of the word a very moral book: a course founded upon it would have none of the musical and knicknackical qualities of the "literary" curriculum, but would make certainly for the discipline of will and reason and the formation of character.

Chardenal's "French Course" (Allyn & Bacon) was for many years one of the most successful texthooks for the study of French. Of late it has been somewhat pushed aside by more "scientific" methods. It has now been revised and rewritten by a competent teacher, M. S. Brooks of the Brookline (Mass.) High School, and will probably renew its youth. The value of Chardenal's Course depends on its sometimes tedious, but nevertheless useful, drill by constant repetition. "Selected Poems by Victor Hugo," prepared by Prof. A. Schinz of Bryn Mawr, is one of the most satisfactory of the recent issues in Heath's Modern Language Series, and does not suffer, as some other advanced texts in the same series, from undue parsimoniousness of selection or of editing. These extracts are appropriate, well grouped, and accompanied by suitable comment, including introductory pages on Hugo's influence on French verse. The latest volumes in the Oxford Higher French Series (Henry Frowde) are marked by the same creditable standard of criticism and annotation as their predecessors. The gathering into one volume of Sainte-Beuve's essays on Cor-

neille, Racine, and Molière was a happy thought. The selections from Théophile Gautier's poetry, from Quinet, and particularly from the writings of Auguste Angellier, will appeal to a somewhat smaller set of initiated teachers and students. The choice of editors such as Prof. Émile Legouis and Charles Cestre of Lyons, of whom the latter got part of his training, by the way, in America, guarantees scholars at home both in French and in English.

Among new German text-books one may pick out Prof. O. Heller's edition of Baumbach's "Der Schwiegersohn" (Henry Holt & Co.), with its amusing sidelights on German educational manners and customs as well as bourgeois prejudices; and also Prof. L. A. Rhoades's "Selections from Schiller's Ballads and Lyrics" (American Book Co.). Both books are accompanied by exercises and elaborate vocabularies. In the case particularly of Schiller this concession, of late so prevalent among our publishers, to the physical inertia of American schoolboys and their aversion to the use of genuine dictionaries, is to be regretted.

An interesting event is the publication of a complete annotated edition of Terence (Henry Frowde). Heretofore no such edition has been issued in this country. In England many years ago Wagner attempted the task, but this work has long been out of date in both text and metre. In Germany, too, no editor has in recent times published notes to all the plays. Prof. S. G. Ashmore of Union College has therefore done a real service in preparing this complete edition, with an introduction of sixty-eight pages, the Suetonian life of Terence, 319 pages of notes, and a careful index. For the first time teacher and student have in a single volume a variety of material which is indispensable to a proper study of Terence. For example, the prologues throw a flood of light on the relations subsisting between Terence and his contemporaries, and on the human jealousy felt by his less successful rivals. They aid also to a right conception of Terence's consummate art. In these prologues Terence tells us himself that he had practised *contaminatio; i. e.,* that he had combined materials from two or more Greek plays. Yet modern scholarship has been unable to find the joints where the materials have been put together. Professor Ashmore's book is marked by sanity, by care, by fine literary instinct, for Professor Ashmore is master of an excellent English style, something all too rare in classical text-books. The introduction discusses clearly and well such topics as the history of Greek and Roman comedy, the plays of Terence, Terence's influence upon literature, and the production of plays. In no English book are these matters treated, on the whole, with greater fulness. If there be any serious defect it is that the introduction does not contain a detailed treatment of the language and style of Terence. This defect is offset, however, by the abundant references to such topics in the notes. A meritorious edition of Æneid I.-VI. has been prepared by Prof. H. R. Fairclough of Leland Stanford University and S. L. Brown, principal of the Wellesley High School (B. H. Sanborn & Co.). The introduction treats sympathetically Virgil's life, writings, and character. One rather questions the value of the list of the terms with definitions for figures of rhetoric and syntax. It seems better to omit most of such terms from elementary teaching; they often prove a bar to right thinking and true apprehension. The notes lay stress on the literary and artistic aspects of the Æneid. In a very attractive volume Henry Frowde has published a translation by W. H. Fyfe of Merton College of the minor works of Tacitus (the "Dialogus de Claris Oratoribus," the "Agricola," and the "Germania"). Mr. Fyfe's translation reads uncommonly well; it gives, save for a few details (wherein, perhaps, personal bias for certain interpretations affects the reviewer), a faithful reproduction of the original, if one allows that the peculiarly Tacitean style is incapable of exact reproduction in English. Prefixed to the translation is a brief introduction; there are also a few pages of notes. Mr. Fyfe accepts the "Dialogus" as by Tacitus; he gives no hint that its authorship has ever been called in question. Mr. Fyfe also indicates well the development of Tacitus's style, from the partial Ciceronianism of the "Dialogus" to the characteristic rhetoric of his later works. He holds that the "Agricola" is a defence of a party, of the "dreary provincials, whose careful ways and prudent middle course offended and rather disgusted the Roman aristocrats." Mr. Fyfe does not believe that Tacitus had personal knowledge of the German tribes:

> He writes always with an eye on Roman society. It is rather as if a modern English satirist should embody his criticism of London manners in a popular pamphlet on Boer society.

H. C. Pearson's "Latin Prose Composition" (American Book Company), based on Cæsar and Cicero, originally published in 1903 in a single volume, has been reissued in two volumes. It is thought that in its present form the work will better serve the needs of the schools, in which the work in Cæsar and that in Cicero come usually in different years. The books seem to be the result of an effort to gain the advantages claimed for a composition manual based on the text which the pupil is reading, while meeting the main criticism that works of that type render systematic development of syntactical knowledge and orderly grasp of vocabulary impossible. The student is warned to rely for the Latin words he needs on the text of Cæsar or Cicero, not on the English-Latin vocabulary (of fifteen pages) printed at the close of each book. But the inclusion of such a vocabulary seems an admission that the books will prove ineffective in an important part of the plan on which they are made.

The increasing attention paid to Greek archæology has led to closer study of Pausanias, the Greek traveller of the second century. Since 1896 at least two critical editions of the text have appeared in Germany, one equipped with a commentary. In England Frazer has produced a monumental work in six volumes, giving a translation of Pausanias's entire work and discussing many points in detail. Mr. Frazer has also published a useful book entitled "Pausanias and Other Sketches." In this country Pausanias has not been accessible for ordinary reading courses or ordinary students of Greek topography until Prof. Mitchell Carroll of the George Washington University brought out a book entitled "The Attica of Pausanias" (Ginn & Co.). The text of Book i., the most important of the ten books, covering Pausanias's account of Attica and of the neighboring districts of Eleusis and Megara, is printed entire. The introduction deals briefly but well with Pausanias's life and work, his style, and the question of his indebtedness to earlier authors. Professor Carroll holds that Pausanias is essentially trustworthy, that Pausanias saw with his own eyes most of the things of which he writes. There is an elaborate topical outline of the Attica, which will help the reader to "follow the somewhat tortuous course of the author." The notes are mostly archæological in character. The appendix deals with the manuscripts and with various works treating of Pausanias in general and of Attica in particular. There is also a select bibliography in connection with the twelve excursuses, which deal with such subjects as the Agora of Athens, the Enneacrounos and its neighborhood, the so-called Theseum, the Parthenon, and the old Athena temple, topics which the editor found it impossible to treat adequately in the notes. Professor Carroll presents the several problems concisely and states his own conclusions clearly. In most matters he agrees with Dörpfeld. Altogether the book should prove decidedly useful.

The growing list of collections of source material in English for the elementary study of mediæval history receives a worthy addition in Frederic A. Ogg's "Source Book of Mediæval History" (American Book Company). The selection, which covers the period from the invasions to the early Renaissance, has been made on the principles of subordinating purely documentary matter to narrative pieces, such as annals, chronicles, and biography; and of giving a few passages at length rather than many in fragmentary form. Valuable and distinctive features are the introductions to the various extracts and an unusually full provision of explanatory footnotes. The personal equation in compilations of this sort is so far entitled to respect that criticism of what has been included or omitted ought always to be restrained; but we cannot help wishing that the economic life and the culture of the Middle Ages had found fuller treatment in Mr. Ogg's book, and that the "foreshadowings of the Reformation" had not been confined to a single indication—the reply of Wyclif to the summons of Pope Urban VI.

We cannot but think that the multiplication of such books as the "Outline for Review: American History," by Charles B. Newton and Edwin B. Treat (American Book Company), must tend, in the long run, to the injury of historical instruction in the schools. While even the best teacher may profit by seeing how fellow-members of the craft do their work, a book of ready-made outlines like this is too often an irresistible temptation to the ignorant or indifferent teacher to neglect that which he ought eventually to do for himself. Moreover, such "aids," especially when, as in this case, the subject matter of the outline is quite devoid of distinction, go far to confirm in both teacher and pupil the pernicious impression that history has been learned when a classified collection of incidents, names, and dates has been mastered. A further serious objection to the present volume is the lite-

rary, or unliterary, form in which much of the outline material is couched. Titles, dates, phrases, and names are interspersed with half-formed or incomplete sentences in a way admirably fitted to demoralize the pupil's style and make trouble for the English department; for if this sort of thing is good enough for a book, why is it not good enough for a theme? On the whole, we think the volume might better have been dispensed with. Prof. A. B. Hart's "Manual of American History, Diplomacy, and Government" (Cambridge, Mass.: Harvard University) is a revision and expansion of material embodied in four earlier publications issued as "Outlines," "Suggestions for Students," "Revised Suggestions," and "Hand-Book," but with the historical portion brought down to 1898. The scheme includes both long and short courses in each of the three fields indicated in the title, with classified lists of readings under each topic, some hundreds of subjects for written reports, selected lists of authorities, both primary and secondary, and detailed directions for the use of books and libraries and the preparation of written work. As compared with its predecessors, the "Manual" gives increased prominence to economic, social, and diplomatic interests. Professor Hart has the faculty of showing the student how to work without at the same time doing the work for him; and the present volume, whether as an aid to teachers in the organization and conduct of systematic courses, or as a hand-book for students in connection with lectures, is easily without a rival for orderly arrangement, bibliographical completeness, and practical helpfulness. The only drawback is the absence of an index.

Robert H. Fuller's "Government by the People" (The Macmillan Co.) is a useful description, in systematic and rigidly condensed form, of the laws and customs regulating the American electoral system and party organization and work. The details of divergent practice are carefully summarized, with only so much reference to historical development as is necessary to explain current usage; while the New York system is set forth at length by way of concrete illustration. The account of the organization of the Republican and Democratic machinery in New York city is one of the best that we have seen, and ought to be read by every voter. The scheme of the work forbids much in the way of reflection or comment, but the author does not fail to point out the inseparable connection between politics and morals, and the responsibility of the citizen for party wrongdoing. The book should prove useful for reference, and for instuction in college courses in government. An appendix gives the party platform of 1904

Never before was rivalry in the production of textbooks of elementary mathematics so intense. The competition has already resulted in marked improvement in depth, clarity, and elegance of exposition, and in dignity of content. Not only have certain traditional themes of the elementary books been found too advanced for the beginner, but, on the other hand, the elements of many inspiring doctrines, as the theory of point-sets or that of the complex variable, hitherto reserved for graduate years, have been found available for sub-freshman instruction. Indeed the contrast between the very best of the recent books, such as Fine's "College Algebra," Halsted's "Rational Geometry," and W. B. Smith's "Introductory Modern Geometry," and the best of their predecessors of a generation ago, is comparable to that between the automobile and the ox-cart. The "High-School Algebra" (Boston: Allyn & Bacon), by Profs. H. E. Slaught and N. J. Lennes, is in two separately bound parts, elementary and advanced. The former is chiefly notable for its felicitous presentation of algebra, in accordance with the Newtonian conception, as an easy and natural generalization of arithmetic, formal argumentation being reserved for the advanced course. In this the march of formal thought, beginning with an exquisite treatment of the fundamental laws, is relieved by fresh examples and applications. While the authors have lucidly explained the incomplete traditional view of mathematical induction, they have not set it in modern light. We regret that this mode of argument, which no less an authority than Poincaré regards as mathematical reasoning *par excellence*, finds no place at all in the 438 pages of the "Elementary Algebra" (D. Appleton & Co.), by Profs. J. W. A. Young and L. L. Jackson. This book might besides have admitted the binomial theorem in place of a superabundance of exercises, summaries, reviews, and other excesses of pedagogical virtues. In many respects, as in the treatment of graphs, for example, the book is up to date; but the properties of zero are entitled to earlier recognition than that accorded on page 432. Harold Hilton's "Introduction to the Theory of Groups of Finite Order" (Henry Frowde) does not pretend to widen the borders of its great field, but it admirably opens it to those whose mathematical knowledge does not extend beyond elementary algebra and number theory, and it conducts them in various directions far beyond the gate. The method is mainly that of examples, the abstruser and longer demonstrations being for the most part omitted, though the recent theory of group-characteristics, due to the wondrously subtle genius of Frobenius, is accorded the recognition of a brief chapter. "A Study of Mathematical Education" (Henry Frowde), by Benebara Branford, is a work the reading of which is sure to delight those who find inspiration and a kind of light in the atmosphere of normal schools and teachers' colleges. For within its 392 compactly printed pages one finds no end of pedagogical methodology, educational psychology, historical citation beginning with Thales of Miletus (600 B. C.), tracing "the evolution of zero," the "evolution of geometric axioms," and many other evolutions, all woven together with rare skill, genuine platitude, unfailing patience, and infinite enthusiasm. The "Scrap-Book of Elementary Mathematics" (Chicago: Open Court Publishing Company), by Prof. W. F. White, though it is inferior in some respects to Schubert's "Mathematical Essays and Recreations," is yet a miscellany well worth having both on account of the mathematical curiosities it has brought together out of a space of more than two thousand years, and on account of its enlightened comment upon them. It deals indeed with more than D'Israeli's "six follies of science," not confining itself to follies or to impossibilities of the circle-squaring type, but including in its medley of seventy topics many other points of interest and even critical importance in modern mathematics, as, for example, linkages and straight-line motion, and the instruments allowed by Plato in simple constructions.

"General Physics," by Henry Crew of the Northwestern University (The Macmillan Co.), is well adapted for first-year college students. On the whole, it is rather more elementary than most of the recent books on this subject, and the science is presented more as a descriptive than a mathematical study. If the book errs, it is from too great a subordination of the latter branch of the science. Professor Crew does require problems and gives the equations necessary for their solution, but he rarely develops them. While mathematics is taught in college purely as a symbolic science, students in physics and the other mathematical sciences must acquire in the physics' class room familiarity with mathematical formulæ. It is difficult to see how this can be done unless the equations illustrating physical laws are systematically derived and conveniently emphasized in text-books on physics. On the other hand, the general treatment of the subject is original and carefully worked out. Recent and controverted points are wisely omitted in order that full justice may be done to the classical and historical development of the science. Interest also in the personal work of the great masters is aroused by well chosen references to their achievements. The book is unusually accurate and free from misprints. The style is simple and clear; different sizes of type make consultation easier. In "Electricity; What Is It?" (The Macmillan Co.) W. Denham Verschoyle attempts to explain popularly the nature of matter and electricity, and the evolution of organic and inorganic substance. He so mixes reliable experimental knowledge with abstruse hypotheses, which are, to say the least, still disputable, that the reader is left quite bewildered. It is to be expected that speculative generalizations will be made from the properties of the radio-active bodies and the theory of the electrified corpuscle, but there is no justification in throwing away all restraint and sobriety, as if the key to the universe had finally been put into our hands. Nature still has her mysteries, and the writer should not have forgotten Lord Kelvin's modest statement that he knew no more, at the end of his life, of the real nature of electricity, than when he began to study it.

CURRENT FICTION.

Halfway House: A Comedy of Degrees. By Maurice Hewlett. New York: Charles Scribner's Sons.

It is rather disconcerting at first sight to find Mr. Hewlett, with his romantic trunk-hose discarded, ambling through the artificial figures of genteel modern comedy in the white spats and waistcoat of George Meredith. Superficially the transformation seems radical. But, after all, was Mr. Hewlett's earlier mediævalism, so to call it, ever anything more than polite masquerade? To be sure, it looked big and blunt and burly; but the actors were at bottom our familiars and

no more elemental than the rest of us —only rather more cleverly made up and more than usually exhilarated by the robustiousness of their rôle and the brilliancy of the footlights and other theatrical accessories. Even the tragedy and the passions owed a good deal to stage illusion; while what was really genuine was exactly this same treachery of nerves and instinct which still marks the character of the heroine and her elderly husband in the "Halfway House," and which is as modern as it is anything else.

Nor is the gap between the sensational and the artificial so wide as it seems at first. Even Mr. Meredith was unable to keep the melodramatic wholly out of his comedy. And in much the same way, now that Mr. Hewlett has changed his vein, the centre of his new novel, despite gaiters and waistcoat, is claimed for romance and wonder by the picturesquely dishevelled figure of the gentleman-vagrant and social *révolté*, Senhouse, a kind of immature and attenuated Tolstoy—a younger brother, as it might be, with little taste for the asperities of Sinai and a decided preference for bedecking its austere declivities with transplanted wild flowers.

Unfortunately, however, it is impossible to rid one's self of a suspicion that this gentleman's unconventionality, too, is largely a matter of costume. Even his bare head and feet and his inveterate habit of trespassing on other people's property are not quite convincing. There is something strangely familiar in the tone of his philosophy and his talk of the natural life. He has been to college and read too much; and though he may have succeeded in divesting himself of a little superfluous clothing preparatory to entrance upon this tale, he has been less successful in putting away his dilettanteism. Thanks to this gentle apparition and his influence upon the susceptible heroine—herself a sufficiently puzzling combination of naïveté and shrewdness, the unhappy proprietor of a simple head and a troubled heart, with a perfect genius for impossible situations, who marries one man while committed with another, and contrives in some mysterious way to have her emotional reserves in favor of a third, to say nothing of numerous flirtations in the dubious background—the story gradually develops an air of coquettish and exasperating unreality. No doubt, there is comedy somewhere at the core of it, as Mr. Hewlett obligingly suggests —it is always infinitely amusing to the bystanders to find the *ingénue* less ingenuous than she is supposed to be by the susceptible old gentlemen whose heads she has momentarily turned. But it is, after all, the inadvertent comedy of circumstance and accident, as things fall out, ludicrous enough, but without any very intelligible motive.

Weeping Cross. By Henry L. Stuart. New York: Doubleday, Page & Co.

One is left wondering at the end of this "Unworldly Story" whether its aftermath of unpleasantness is due to the author's weakness or to his misdirected strength. In either case he has not given fair treatment to his—can we say his hero? Granted that the young Irishman, half cavalier, half Jesuit, and all violent weakling, is neither an admirable nor a lovable character, there is surely all the more crying need for broad sympathy in his portrayal. One cannot but feel that Mr. Stuart despises his puppet in his heart, and pulls the strings with a sneer. The unfortunate hybrid's alternating spasms of hysterical piety and equally hysterical passion are revealed with an undertone of mocking relish that repels the reader even more than the unnecessarily minute descriptions of physical torture that enliven the pages. Of the lofty quality of Agnes's love for so ignoble an object one is allowed hardly a conjecture until her really beautiful dying words proclaim her a sister of Solveig. Made earlier, this revelation might have redeemed Agnes in the reader's eyes, but as it stands, it comes after too much detail of moral squalor to seem other than an incongruity. In the description of wood and river the author is at his best; when the human element appears, "Weeping Cross," for a study of souls, wears somewhat too gross a vesture of flesh. With more restraint of manner and maturity of thought, Mr. Stuart's vivid fancy gives promise of work of real value.

The Power Supreme. By Francis C. Nicholas. Boston: R. E. Lee Co.

The author, professing to reproduce the story of a Spanish Indian guide, has constructed what he calls "a novel of Church and State in South America," an account of "the disorganized political and social conditions in Spanish America," existing shortly after our own Civil War, "conditions which, happily, are gradually improving under the guiding influence of the United States." His story is unusual and interesting. On its descriptive side it is a striking picture of a tropical region—forest, jungle, and stream, city and village, the Catholic college, and the great rubber industry that involves the subsistence and the fortunes of man, woman, and child, priest and people, Spaniard and Indian.

Besides this, there is in the autobiographic narrative of the half-breed Joaquin—mighty giant, trapper, rubber-hunter, warrior, scholar of St. Joseph's —an epitome of the story of savagery and civilization; a savagery intensified by Spanish ill-usage and ecclesiastical oppression; a civilization painfully evolved in long, unrecompensed suffering, and only hinted at in the concluding sentences. The Indian characteristic is never lost sight of in Joaquin's story; neither frailty nor merit is slighted. He never forgets to hate his Spanish father or the priests who trick him. He will plot, cheat, and kill, but he will not break faith with a benefactor. He is tender to children, but like all his neighbors, he beats "his woman" as naturally as he would correct a wayward dog. The author leaves him on the steep and painful path of redemption and draws the moral that for individual, state, or race, there is no security except under social conditions "founded on upright homes and honored maternity."

The way of the book lies along the path of wild adventure, cruelty, and wickedness; but as a sincere and serious record of a day and a race and an evil order of things, it has a painful interest and a grim value.

The Man Without a Head. By Tyler De Saix. New York: Moffat, Yard & Co.

It is a question whether the mere ingenuity of horror comes within the bounds of art; but whatever one's personal view, one cannot shirk the admission that such work has a reading public of its own, ready to encourage an increasing output. "The Man Without a Head" will doubtless find many admirers, as it is good of its class. The author has the gift, invaluable to the contriver of a detective story, of plausibly allowing the reader's suspicion of the truth to precede that of the detective; not with gross obviousness, but with sufficient skill to make the resulting conviction of one's own astuteness genuinely if briefly satisfactory. But the murderer's device for concealing his crime, while indubitably clever, would insure almost immediate detection of any unfortunately trustful homicide who sought to put it in practice. The story of it moves with interest, however, even under the ballast of aphorisms sprinkled upon the pages with pedagogic heaviness of hand.

The Old Allegiance. By Hubert Wales. New York: Mitchell Kennerley.

The author is to be congratulated on having made a story of adventure which, though dealing with such familiar topics as the Jacobite allegiance, the dynamiter, and the government spy, has yet contrived to get itself invested with a dewy freshness. To begin with, the action takes place on that happy hunting-ground of romance, an island. Then the actors are two nice Oxford boys, a thirty-year-old widow cast for a quite original rôle, and a pleasant company of Zanies and desperadoes. The plot embraces the old-fashioned in loyalty and the modern in ruse with a certain respectful audacity which gives the little fantasy a saucy charm. Its ingenuity is not to be denied. Witness the episode

BURLINGAME PUBLIC LIB.

of the man lashed to a box within which he hears the ticking of a dynamite fuse alarm, knowing it to be set to do its work at the end of ten minutes.

Catherine of Bragança, Infanta of Portugal and Queen-Consort of England. By Lillias Campbell Davidson. Pp. xviii. + 517. New York: E. P. Dutton & Co. $5 net.

There have been few queens in history more unhappy than Catherine of Bragança, the queen of Charles II. of England. Brought up in the seclusion of a convent, a spoiled child, wilful, tactless, and virtuous—she was the antithesis in almost every respect of her cavalier husband, and an object of ridicule at his gay and immoral court. It is but natural that her biographer should be so touched by her misfortunes as to make the story of her life a defence and apology. Miss Davidson has written a most elaborate biography, filled with much antiquarian research, but one feels that she is somewhat too much intent upon the glorification of a very ordinary character, finding for her beauty—of a kind—gentleness, and lovableness which escaped most of the unfeeling contemporaries who have left us descriptions of her. Were it not for the attempt to make romance out of the most prosaic character at the court of the Restoration, we should feel that the book is a solid piece of work. But along with the tone of over-wrought sentiment there are devices, such as invented conversations, imaginative descriptions of palaces and festivals, and a somewhat amateurish way of referring to certain secondary authorities that tend to lessen one's confidence in the author's judgment. This impression, however, grows less as one proceeds. Along with the wealth of antiquarian detail, there is a generous use of letters and contemporary documents. The book is better than it seems, and while it is doubtful if it will regain for Queen Catherine much popularity, it will certainly win for her some sympathy. If one were only so sure as the author is of the depth of affection the queen maintained for her wayward husband, one might stretch one's orthodoxy enough to read without a smile the closing words:

> Seas and shores part them; tides flow and winds sweep; but perhaps in the world unseen the desire and prayer of Catherine's life are granted, and she and the one man life held for her are face to face once more, with none between.

As it is, we regard this as merely indicating a lack of humor upon the part of Miss Davidson. Why should she want to secure an eternity of bliss for Catherine by an eternity of boredom for Charles? Somehow, in spite of our Puritan morals, we do not wish Charles quite such hard luck; and we confess to cherishing a secret preference for Nell Gwynn and her rollicking, generous ways over the shocked and virtuous queen. Catherine's failure to win her husband is her own condemnation, for no man was ever more susceptible to feminine charm than the gay, good-natured king. But then we perhaps should remember the difficulty of being a queen in competition.

For such as take an interest in royal romances, this life of Queen Catherine will be a welcome addition to the literature upon that subject. Outside its own field, it has little value to the student of history, for Catherine played no noteworthy rôle in European politics.

Essays, Political and Biographical. By Sir Spencer Walpole. New York: E. P. Dutton & Co. $3 net.

We have several times called attention to the unusual value of the writings of the late Sir Spencer Walpole, and we now heartily commend this posthumous volume. It contains ten papers, nearly all of which appeared originally as reviews of noteworthy books. Two deal with Halifax and Godolphin, and one with the late Lord Granville. There is a study of Crabbe the poet, whose fame, after various periods of occultation, seems at last to be fixed. Walpole makes the publication of the Croker Papers the text for an analysis of the public career of that shifty and truculent politician. Most entertaining is the story of Princess de Lieven, who exercised an astonishing fascination over British statesmen as dissimilar as Wellington and Grey, and captivated Continental celebrities as far apart as Metternich the lady-killer and Guizot the demure Puritan. Walpole's account of the Dining Societies of London—to wit, The Club, Grillion's, the Dilettanti Society, the Literary Society, and Nobody's—happily mingles chronicle and anecdote. Two important historical papers, "The History of the [British] Cabinet," and "The Causes of the American Civil War," display Walpole's firm grasp of historic evolution. For American readers the former is, naturally, the more valuable; nowhere else, so far as we are aware, can so clear and full a narrative of the development of the British Cabinet be found in so brief a space. The latter gives to Englishmen—who, as Walpole remarks, are deplorably ignorant of American history—a fair and comprehensive and remarkably lucid explanation of the origin of our irrepressible conflict. A tribute to Frank Buckland completes the list of essays.

Walpole's daughter, Mrs. Francis Holland, writes a pleasant but rather desultory chapter of reminiscences of her father: we search it in vain for the dates of his birth, death, and chief publications, but we find some bits of character-sketching which are evidently lifelike. We regret that the titles of the books which called forth Sir Spencer's reviews, and the names of the periodicals in which they first appeared (with dates) have not been given. The average reader may not immediately recall that Fitzmaurice is Granville's biographer, or that Jennings was Croker's editor, or that Torrens wrote the history of the Cabinet. But the essays themselves abound in interest. They are ripe, the fruit of a man versed in history and biography, who is also a frequenter of the highroad of literature, experienced in the affairs of government, and rich in half a century's intercourse with many of the leaders of his time and country. He has skill in getting at the mainspring of character, as when he shows how Granville failed through excessive complaisance in holding the dominant position for which his training and ability seemed to fit him; and he leaves the impression of reasonableness and an uncontroversial respect for truth.

The Imperial Gazetteer of India. The Indian Empire. Vol II. Historical. Vol. V.—XIV., Abazai-Kara. New edition, published under the authority of His Majesty's Secretary of State for India in Council. New York: Henry Frowde. $2 net each.

A careful examination of these latest volumes of the third edition of the Indian Gazetteer greatly strengthens the impression of the uniqueness and importance of the work, derived from the three volumes, entitled, respectively, "Descriptive," "Economic," and "Administrative," which were published last year (see the *Nation* August 8, 1907, p. 125). The "Historical" volume, which completes the introduction, is a mine of information, not only in regard to the history of the country from the earliest times to the resignation of Lord Curzon in 1905; but also in regard to the sources from which the facts are to be drawn. There are chapters on such important branches of historical investigation as epigraphy, numismatics, archæology, and architecture, as well as literature. These are contributed by different writers who have made a special study of the subject: that on Sanskrit literature, for example, is by the professor of Sanskrit at Oxford, Dr. A. A. Macdonell. From the chapter on epigraphy we learn that "only a small part of the mine of epigraphic information has been as yet explored," and that excavations will undoubtedly bring to light many an important record now hidden from sight.

The Gazetteer proper contains in a compact form innumerable facts and figures, based on the census of 1901, though many of the statistics are brought down as late as 1907. Since every important or specially interesting thing in regard to any place, however

small, is recorded, the volumes are replete with lively anecdotes of people and incidents. The writers are often district officers and officials of native states. Some idea of the extent of the work may be gained from the fact that the account of the Bombay Presidency and city fills 156 pages, including four excellent maps and seventeen tables of statistics. Among the many indications of progress contained in these volumes we will note only two: the recent increase in the number of schools for girls, and the fact that the native state Hyderabad has a telephone system owned by the government having connection with 154 offices and houses.

Of course, in a work of such magnitude absolute accuracy is impossible; but the only error of significance which we have observed is the different dates assigned to the reign of Asoka, 272-231 B. C. and 264-227 B. C.; the latter is probably the one best authenticated. A special map of the empire, beautifully executed, is prefixed to each volume. The work as a whole is a worthy monument to English rule in India, and it is doubtful whether any country has ever been described on such a scale in its every department, historical, physical, social, economic, religious, and literary.

Nach Amerika in einem Auswanderer-schiffe: Das innere Leben der Vereinigten Staaten. Von Mgr. Graf Vay von Vaya. New York: Imported by G. E. Stechert & Co.

The author, an Hungarian, a nobleman, and a Roman Catholic prelate, has given us one of the fairest and friendliest books on the American people that has been written in German. Count Vay de Vaya first visited the United States some ten years ago, in an emigrant ship, and early came into contact with the poorer classes. Indeed, his time in New York was divided among the rich and the poor, his mornings devoted to the East Side strugglers, his afternoons and evenings to the well-to-do. All his material, therefore, is that of the first-hand investigator. He relates his experiences among the emigrants on board ship; he adds his impressions of the slums of New York and the social whirl of Fifth Avenue. He has studied the problem of immigration, American youth and American schools, Chicago as the city of industry, the present state and prospects of American agriculture, the all-absorbing passion of Americans for work, and the power, as well as the powerlessness, of money here. He discusses American books and authors, American pictures and painters, and American religious organizations. A visit to President Roosevelt is reported in full. In fine, the book deals with the most salient features of American life as found in the North and in the States east of Chicago; and so far as it goes it is suggestive and entertaining. His style is clear and agreeable.

Count Vay de Vaya is hopeful for the immigrants' and the country's future on account of the readiness of the children of even the first generation here to become pronouncedly "Americanized." The public school he regards as the great agency for bringing the representatives of different races together on an equal footing and establishing the most enduring *ententes cordiales*; and, considering his Roman Catholic training, these views are of peculiar interest. In the public schools he also finds that the philosophy of work, hard work, is early instilled. Everybody works in America.

Finally, the author, who is Apostolic Protonotar, discusses the status of the Roman Catholic Church in America, and reaches the conclusion that it is the leading church, not merely in numbers, but also in its influence on public life, the extent and wealth of its edifices, and the relations of its dignitaries to prominent men outside of the church (the cardinal and other Catholics are often seen in company with the President). But even in discussing the contradictions of "the sects," and the relatively smaller fields of the Episcopalians and Presbyterians, the Hungarian nobleman preserves his amenity.

Individualism and After. By Benjamin Kidd. New York: Henry Frowde.

Mr. Kidd's latest public utterance (the Herbert Spencer Lecture, delivered at Oxford, May 29) will appear to most readers a belated expression of views that, in their main features, have often been ably expounded on both sides of the Atlantic. The central thesis of the lecture is that, in the thought and life of the Western world, an organic view of society has been rapidly displacing the individualism which was dominant until well after the middle of the nineteenth century. Accompanying this development there has been, as he shows, a rapid and continuous extension of the functions of government, and an abandonment of the doctrine of unqualified competition. Herbert Spencer is taken as the chief representative of individualism. His statement that the corporate life of the state "must be subservient to the lives of the parts, instead of the lives of the parts being subservient to the corporate life," epitomizes, we are told, the spirit and meaning of the doctrine.

Even while accepting Mr. Kidd's leading contentions, one feels the need of a more exact definition and a closer criticism of the terms and conceptions which he so freely uses. Especially does one miss any recognition of the permanent truth in individualism which no organic view of human life can render obsolete. For the consciousness of the individual is, in the last resort, the only centre of good and evil, the sole home of values. This truth can be maintained, while full justice is done to an organic theory of society. It is this fact which the French philosopher, Alfred Fouillée, has in mind when he speaks of society as "hyperorganic," in the sense that each member of the whole is itself an organism, whose welfare must be realized in and through the corporate life. The convenient figure of the organism, if uncritically accepted, may conceal as well as reveal the truth.

A corollary of a just theory of individualism is that any supposed efficiency or glory which Imperialism, for example, may win for the state, must always be appraised by its effects on the well-being of the many individuals comprising it. And the only sense in which we can say that the interests of the individual units must be subordinated to the corporate life of society, is that in social and political relations the interests of the few must be subordinated to the interests of the many. But such individualism does not mean a return to the atomistic view of society. The individual is, of course, through and through a social being, able to realize his richest life only in infinitely complex relations with his fellows.

The Law of the Federal and State Constitutions of the United States: With an Historical Study of Their Principles, a Chronological Table of English Social Legislation, and a Comparative Digest of the Constitutions of the Forty-six States. By Frederick Jesup Stimson. Boston: The Boston Book Co. $3.50 net.

This treatise consists of three distinct parts. The longest and most important is the third, a comparative digest of State Constitutions, annotated and compared with the Constitution of the United States (pp. 121-357). The scheme of classification is fivefold, covering individual rights, political provisions, legislation, the judicial system, and Constitutional amendments. The difficulty of constructing such a comparison of Constitutions is being greatly enhanced by the astounding length and minute details of some of the instruments recently adopted. Oklahoma's, for instance, runs to one hundred and seventy-five pages; and, as the author remarks pathetically, "without an index." This grouping of Constitutional law around common topics is not intended for the practitioner, but primarily for the student of politics. It is a comparative study never before worked out so completely. Our debt to the compiler is accordingly large.

The second part of the treatise (pp. 73-118) is little more than a chronological table of excerpts from Constitutional documents from Magna Charta down

through our own Federal Constitution, showing the basis of personal liberty. There follows a bare chronological table of English social legislation from the Conquest to the passage of the Hepburn Act—rather crudely done, as may be instanced by the entry under 1350. Herbert Spencer is quoted as authority for the abolition in this year of the privileges of the trade guilds. The author comments: "This statute, however, cannot be found in the Statutes at Large." Spencer is also cited as the authority for the statement that in 1348 the Court of Chancery became the Court of Equity. Coke we know, and Blackstone we know, but who in historical jurisprudence is Herbert Spencer?

The prefatory essay (pp.3-72), entitled "Origin and Growth of the American Constitutions," will chiefly challenge the attention of the reader broadly interested in political history. The treatment has its strong points and its defects. It is strong in perspective. The author realizes clearly the burning tract of present-day Constitutional strife in the mass of pending litigation involving the "obligation of contract" and "commerce among the States." He is keenly alive to the agencies at work to force Constitutional change—the impulse of class interest to escape from the leash of equality before the law, and the quickening tendency to sacrifice precedent for efficiency or "results" in administration. On the other hand, the very method of exposition by which the writer depicts Constitutional growth is bound to issue in a certain tenuous impression of unreality. His plan is to take a particular Constitutional principle, like the right to law (that is, the right of hearing and trial by due process of law), or the right of liberty, and then to trace the growth of this principle from start to finish. An alternative method of depicting simultaneously the people's Constitutional habit at different times is perhaps a more complicated task, logically viewed, but it carries a more intimate sense of reality than the plan adopted by Professor Stimson. A novelist who traced his heroine's several traits, each in isolation from the others, might afford us a conspectus of the virtues, but would never give us a flesh and blood creation. *Mutatis mutandis*. this method of describing Constitutional growth, gives the dialectic of categories rather than the historic sense of reality.

There are other occasional defects even in the seriatim analysis of the growth of particular Constitutional usages. To say that, apart from slavery in 1066 and villainage, which "disappeared, largely as a consequence of the rebellions of Jack Cade and Wat Tyler," "the right to liberty was general in England from the earliest times" gives a most misleading impression. The gradual emancipation of the serf, the century-long decadence of villainage, the persisting moral tyranny of the squirearchy and the legal tyranny of the craft guilds, are all momentous limitations of the right to liberty as defined by our author (p. 18) which quite negatives his generalization. Moreover, the chapter on "Government Organization" is not very discriminating in the matter of the separation of the powers of government. On page 52 we are told that "the judicial branch alone has no part in the other two," and on the very next page occurs the statement that "it is difficult to see why the alteration of the common law [by judicial decision] is not legislation"—a comment unquestionably sane, but destructive of the proposition about the complete separation of the judicial branch from executive or legislative functions. The general finding upon the essay must be that it exhibits the insight of the analytic juristic mind, but not the catholic comprehension of the social historian. Haste is unfortunately too often in evidence in the printed page—witness the footnote to p. 52, the use of public for republic on p. 60, and the curious use of the word "legislation" instead of "governmental powers" for the diagram showing the respective rights and disabilities of the Federal and the State governments.

An Apostle of the North. Memoirs of the Rt. Rev. William Carpenter Bompas. By H. A. Cody. New York: E. P. Dutton & Co. $2.50 net.

William Carpenter Bompas was in turn Bishop of Athabasca, Mackenzie River, and Selkirk, in the Yukon region, being in each case the first administrator of the diocese. He was a suffragan of the Archbishop of Rupertsland, who writes an introduction to the memoirs. The tone of the book cannot be called quite broad and tolerant. In the detailed account of the evangelization of the high North, there is no mention of work performed by other Protestant bodies; nor as regards the Roman Catholics, always so early and so effectively in the field when barbarism is to be redeemed, do we find in this book any cordial recognition of great service. As regards the missionary station Metlakahtla, on the Pacific Coast, it has been charged that the hierarchy of which Bishop Bompas was a member quite frustrated the good work of a worthy missionary by the imposition of an unessential and impracticable formalism—an unfortunate episode in the Christianization of the North to which this book only briefly refers without describing or defending.

But we hasten to drop the spirit of fault-finding. The critic who reads these memoirs finds himself disarmed in the presence of a character meek with the temper of the Master, heroically devoted, of courage which no hardships or misfortunes could break. Bompas was a well-born Londoner, son of an advocate of note, who had the distinction, grotesque in connection with this story, of being the original of the Sergeant Buzfuz of the "Pickwick Papers." The son was himself articled as a solicitor, studying law for five years, but becoming the subject of religious conviction, took orders, and in 1864, at thirty, resolved upon the life of a missionary. His name was said to be derived from an ancestor knighted at Crécy for valor. "C'est un bon pas," said an approving bystander. His descendant was to exhibit a higher chivalry than that of the battlefield. His life henceforth, until 1906, passed almost without break amid Arctic hardships; he was surrounded by the squalor of savages of a low type, in contact with the brutalities of remote trading and mining camps. He was a man of refined and scholarly tastes, as his verses show; he read the Scriptures in Greek, Hebrew, and Syriac. To him the Scripture was the source of all light and leading, and he pursued the letter of it into its most remote linguistic guise. Circumscribed as he was in his ideas, no salvation seemed possible to him except through profession of one special creed—no proper well-being for a soul except within the fold in which he himself was a shepherd. The narrowness made him the more intense, and he sacrificed himself utterly for what he felt to be duty. He grew to love the frigid and rock-bound wilderness and the scanty groups into which he gathered his dusky converts: what to the world seemed long and painful martyrdom became to him a career of joy. If he ever left his field to return to civilization, he went back again at the earliest opportunity with something like rapture. Here death found the old bishop in 1906. He sleeps in a graveyard in the remote Yukon country, after a life as consecrated and heroic, perhaps, as has anywhere been lived in our time, or indeed in any time.

Science.

Diseases of Occupation from the Legislative, Social, and Medical Points of View. By Thomas Oliver. New York: E. P. Dutton & Co. $3.00 net.

This book treats of the diseases incidental to a great variety of occupations in factories, workshops, mines, potteries, and other employments where many persons labor together. Less fully considered, but by no means neglected, are the occupations which may be called solitary in the sense that the individual takes the risk alone, or nearly so. There are general statements concerning diseases of domestic servants, but nothing is said of the dangers to which sewing-women are exposed when alone or in

small groups—the family sweatshop—or of the perils of the kitchen, which are by no means so slight as is commonly believed. Dr. Oliver has had much experience with many of these questions, both in his practice in Newcastle, England, and as a member of several committees to which the English government has referred various problems in industrial legislation for examination and report. He has also first-hand knowledge of the conditions prevailing in many industries of the Continent. Wherever he is not qualified to speak from personal experience, he has drawn from good sources, with as full a mention of the literature as the purpose of the book requires.

Any classification of occupations according to their dangers is necessarily difficult, and the reader must look in many different places for the particular effects of toxic substances or industrial conditions. A full index, however, which bears examination well, makes such comparison easy. In most cases the descriptions are rather brief, but here and there Dr. Oliver gives fuller details or adds an account of the history of an occupation and its dangers. Such, for example, is the story of the growth of match-making, with its incidental poisoning by phosphorus (pp. 35-53), as well as that of the curious anæmia of miners and others which long puzzled physicians, and finally found a simple explanation in the presence of a peculiar worm, ankylostoma. Interesting, too, is the description of the disturbances due to work in compressed air (caisson disease, "bends"), and also the extraordinarily varied rôle played by plumbism. The question of the immunity of coal miners to tuberculosis, recently discussed in the newspapers, is touched upon, and Dr. Oliver comes to the conclusion that the diminution of this particular death-rate should be ascribed to improved conditions in the mines rather than to any form of immunity peculiar to the occupation. The last chapter treats of rescue work in mines, particularly as illustrated in some recent disasters, a work whose good results would seem to be capable of much wider application. The book is modern enough to take in the motor car and the balloon, as well as the typewriter; nor are the Roentgen rays and their dangers, including sterility, neglected.

Even the casual reader will hardly fail to be impressed by the fact that, apart from accidents and a few specific organisms, much of the harm which comes to the industrial workman comes from dust or dampness. He will not read far without noting that man is so often the cheapest of all machines merely because the community rather than the employer pays for repairs or replacement. The Socialist will find many a good argument to support the thesis that the community has a great deal to gain by insistence upon inspection and sanitary regulation of employment, since it will decrease the public burden caused by ill health and consequent poverty, the cost of which is now hidden in the poor rates and other taxes.

In the "Cyclopedia of American Agriculture," edited by Prof. L. H. Bailey (The Macmillan Co.), Volume III., "Animals," has now appeared. In reviewing the earlier volumes (see the *Nation* of October 24, 1907, p. 380), we have already discussed the scope and general character of the work. Weather, soils, and plant life have been pretty thoroughly studied, but in the animal kingdom there is still much chaos and confusion. Little is certainly known about the laws of heredity, and most animal breeders pay slight attention to that little. We turn to the chapter on the principles of animal-breeding with some curiosity to see what F. B. Mumford will do with his embarrassing subject, and we find him slipping smoothly around and between Darwin, Lamarck, Weismann, Spencer, De Vries, Davenport, and Morgan, apparently unconscious of being between the firing lines. With malice toward none and with charity for all, he records conflicting theories and irreconciled facts, though gently setting aside, as of no practical importance, some of the pet superstitions of stock breeders, such as telegony, prenatal influences, and the determination of the sex. Mendel's law he does not even mention, but 500 pages further on C. B. Davenport compensates us by making the law a fundamental principle in the breeding of poultry. In the discussion of the stock-feeding and the diseases of the animals also many questions occur to which no satisfactory answers can now be given. But this Cyclopedia is as complete and authoritative as any work can be in the present state of science. The articles are signed and the present volume gives a list of 104 contributors and of 158 who have otherwise collaborated in the preparation. The casual reader who never intends to retire to a farm, will enjoy turning over the leaves because of the unexpected bits of curious information that he will strike. On the first page he will learn that only about one out of a thousand known living species of mammals and birds has been domesticated, and most of this domestication took place in primitive, if not prehistoric ages. The editor has made diligent effort to record every species of animal really domesticated for agricultural uses in North America (north of Mexico), and yet the book contains accounts of only twenty species of mammals, not more than a dozen birds, one of fish (carp), and two of insects (silk-worm and bees). The casual reader, with his usual habit of skipping the most important things, will also be interested in turtle farming, in raising sponges, in seal hunting, and in the fate of the seventy-five camels which disappeared in the Arizona desert.

The Third Supplement to the "Index Kewensis" (Henry Frowde), prepared by the curators of the Herbarium at Kew, under the supervision of the director of the Royal Garden there, brings the list of additions to phanerogamic botany down to the close of 1905. The labor involved in the collation of the names of new species of flowering plants, described throughout the world, is enormous. Every botanical publication must be searched for its contribution of new species, and, where possible, synonyms must be noted. The Second Supplement (issued in 1905) was published under the directorship of W. T. Thiselton-Dyer; the present director is D. Prain.

The late Dr. Charles Schäffer of Philadelphia was among the earliest botanists to explore the treasures of the Canadian Rockies. His widow has for some years continued his work; with camera and outfit for water-color painting on the spot, she has penetrated many of the almost inaccessible fastnesses of the Rockies, and by dint of an enthusiasm which no difficulties have lessened, has secured admirable photographs and paintings of the rarer species of flowering plants. Many of these exquisite illustrations are given in "Alpine Flora of the Canadian Rocky Mountains," by Stewardson Brown (G. P. Putnam's Sons). The volume constitutes one of the most useful Alpine guides we have seen. In the different regions of Switzerland, one finds local handbooks with fairly good representations of the most interesting species, but not one of these volumes possesses better illustrations for the use of the amateur botanist than this on our own Alps. Mr. Brown's descriptions appear to be clear and helpful, but it is to be regretted that he has made use of a provincial nomenclature, which is not in accord with the conclusions reached at the International Congress of Botanists. This guide is made handy in size by cutting down the margins, but by this process the artistic effect of Mrs. Schäffer's work has been considerably impaired.

The "Essentials of Dietetics in Health and Disease," by Amy E. Pope and Mary L. Carpenter (G. P. Putnam's Sons), a small volume of 250 pages, is intended for nurses and the household. Rather more than a third of the book is devoted to processes of cooking and recipes. Some of these are hardly explicit enough for the inexperienced, although many of them are likely to be useful. The rest of the book contains an account of foods, much of which is exceedingly good, despite a confusingly inconsistent use of calculations and chemical terms. The table of the approximate composition of common food materials (pp. 102-104) seems to contain serious errors and the calories given there do not agree with the results obtained by using the fuel values noted (p. 99) as the basis of comparison. The metric system is inadequately explained, and is applied in a very misleading manner, and the chemical part of the book leaves much to be desired.

"Nursing the Insane," by Dr. Clara Barrus of the New York State Hospital at Middletown (The Macmillan Co.), is based on talks to nurses which the author has given in the course of an extended asylum experience. The book contains much good advice, but the treatment of the general subjects which all kinds of nurses need to know is uneven and often incomplete. As the preface intimates, the author in her original talks had primarily the care of women in mind, a limitation which the extended work has not altogether overcome. The description of the various forms of in-

sanity has many admirable features, but on some points falls short of what a nurse should learn. The last chapter briefly notes the legal requirements to be fulfilled in the admission of insane patients to the hospitals of this State, and gives good advice concerning the removal of such persons from their homes. In general, it may be said that the book contains too little for a nurse obliged to work without constant direction, especially in private houses, and often almost too much for those that have such supervision.

Hermann Settegast, professor of agriculture in the University of Berlin, has died in his ninetieth year. Among his works are "Individualpotenz und Mentzel-Weckherlinsche Schule der Rassen- und Konstanzdoktrin," "Die Tierzucht," "Erlebtes und Erstrebtes," "Die deutsche Freimauerei," "Der Idealismus und die deutsche Landwirtschaft," "Die Viehzucht Frankreichs."

Drama and Music.

MUSIC HALLS AND THEATRES.

A great change has occurred in the relationship of the music halls to the theatres during the prolonged career of Antonio Pastor, the dean of the local variety stage, who died last week. The hall has become the rival of the theatre to a degree which would have seemed impossible half a century ago, when the former frankly appealed to the less intelligent part of the community. In those earlier days the chief attractions of the halls were clog-dancing, stump oratory — generally in black face—and the topical comic song; with intervals, perhaps, of ground and lofty tumbling. Most of these entertainments owed their main interest to the excuses which they supplied for the consumption of liquor and tobacco and indulgence in still coarser enjoyments. It is difficult to realize now that fame, of a sort, and solid wealth, were acquired on both sides of the Atlantic, by means of songs whose blatant vulgarity was only exceeded by their crass stupidity. Silly as are most of our contemporaneous popular ditties, they are not all completely void of point or melody. At all events, the "mammoth comiques" of the "Champagne Charlie" era would not have much chance of duplicating their fortunes to-day. Occasionally there would arise some vocal and instrumental comedian, of genuine ability, like Mackney, an agile eccentric like Stead, or a genius such as Robson, who could convert "Villikins and his Dinah" into a tragedy of pathos and passion, but such exceptions were rare and only served to emphasize the imbecility of the great body of music-hall entertainers.

It is not often that the contemporaneous music hall addresses itself successfully to the purely intellectual spectator, but beyond all question it exhibits a vast improvement in many respects over its predecessors, while, now and then, it offers achievements, in different directions, of positive artistic value. Of course, it is still, owing to the wholly commercial character of its managers, very often coarse, stupid, or grossly sensational—as in the matter of sensual dancing, for instance—but, nevertheless, it is making a certain amount of progress, and can no longer be numbered among the recreations at which it is discreditable to be caught. Without doubt, it constitutes an opposition to the regular theatre which is already formidable, and is likely to be more serious in the near future. Possibly the amount of capital invested in it may, before long, exceed that employed by the various syndicates in the exploitation of what they are pleased to call dramatic art.

But it must not be supposed that the music hall is making these inroads upon the constituency of the theatre simply by virtue of its own merits. The greater part of its growth and influence is due to the decadency of dramatic art and the grasping, short-sighted, and incompetent policy of the speculators who are slowly but surely reducing the regular stage to the music-hall level. It is not only that the music halls are growing better, but that the theatres are growing worse. Since the halls have gained the right of giving what is known as the "tabloid" drama, they have been competing with the theatres, and not altogether unsuccessfully, upon their own ground. As a matter of fact, some of the performers who have appeared of late years upon the variety stage must be rated among the most accomplished members of their profession, although, for one reason or another—often quite independent of their artistic capacity—it does not suit the associated managers to permit them to appear in the regular playhouses. Dramatic reputation, nowadays, does not depend so much upon histrionic ability as upon the machinations of the press agent. But genuine ability is recognized, nevertheless, in the music halls, and the fact that it can find a refuge there is a portent of which managers, were they wise, would take heed.

The important point is, that the man in the street who desires nothing better than to be amused, is practically certain of finding something good of its kind, and something pleasing to his own personal taste in the music hall, whereas he is as likely as not to find the theatre, except in special instances, utterly stale, flat, and unprofitable. It should be remembered that the music hall, in its dramatic enterprises, follows a certain principle of selection, only reproducing the dramatic morsel of which the popularity has been demonstrated by actual trial. The fact that it seldom tries an original experiment is at once its strength and its weakness. But it would scarcely be fair to assail it for its failure to undertake pioneer work, as it makes no pretence of being inspired by artistic ambition, or of being especially interested, except in a commercial way, in the progress of art of any kind. Actually it follows a policy identical with that of the theatrical managers, but more honest and respectable, because it is free from hypocrisy.

But our main contention is that the variety stage, a development of the old music hall, which has practically ceased to exist, has become, since the disappearance of the old stock companies, a most formidable rival of the regular theatre, not only commercially, but to an appreciable extent artistically. That the leading theatrical managers are fully aware of this change, is proved by the fact that some of them already have entered the variety business, with the apparent hope of dominating the variety as well as the regular dramatic stage and running one as supplementary to the other. It is long since they first began to adapt music-hall methods to dramatic purposes, and there is no reason for supposing that they discern much difference between the objects of the two institutions. If, in this respect, they were more enlightened, the prospect for the drama would be brighter, for they might perceive that, as a mere business venture, it would be a good thing to set apart a few houses, say, half a dozen in New York, for the entertainment of the real theatre-lovers, whom they now keep in a state of intellectual starvation, and to devote the rest openly to the least expensive and most frivolous shows. But there seems little likelihood of their abandoning their present system of catering to the mob. In the immediate future, while the music hall may be expected to assume a more and more prominent position, the theatrical outlook is not absolutely desperate. What the New Theatre may do toward the work of regeneration cannot be estimated now. We can only invoke for it wisdom and prosperity. But there is definite promise in the two or three stock companies formed or in process of formation; and the day, after all, may not be far distant when there will once again be a wide distinction as well as a difference between the music hall and the theatre.

Clyde Fitch has published (John Lane Co.) what is, presumably, a final edition of his "Beau Brummel," written many years ago for the use of the late Richard Mansfield, and played by that popular actor very successfully throughout his stellar career. For a juvenile work, it is a decidedly clever effort, clumsy and rickety as it is in construction and utterly unlifelike in many of its details. Of real literary quality it has very little, and of dramatic quality still less, except in the closing scene, which exhibits a certain sense of pathos and some power of imagination. But it

is, at least, an earnest, if not very felicitous attempt, to imitate the artificial comedy of three or four generations ago, and to illustrate the social manners and customs of England, in the days of the Prince Regent and the dandies. In its general conception, the scheme of the piece suggests the dawn of an ambitious purpose, which Mr. Fitch seems to have abandoned since he adopted the profession of dramatic tailoring, in which his adroitness as a cutter of theatrical suits has been much more conspicuous than his intellectual or moral sincerity. Although his mimicry of the formal phraseology of the older British comedy is imperfect—and sadly lacking in the wit and sharpness of human observation which atoned so amply for its elaboration—and although his character-drawing is exaggerated, often grossly inconsistent, and not infrequently wholly conventional, he nevertheless does convey a more or less distinct reflection of the times with which he is dealing, and encourages the hope of future serious and legitimate dramatic achievement which thus far has remained unfulfilled. The volume is printed as a memorial of Mr. Mansfield, who suggested the idea of the play, and who by his performance indisputably contributed greatly to its popularity. It is doubtful, indeed, whether it would ever have attracted much public attention if the central character had been entrusted to an actor of less influential personality.

A valuable contribution to the history of English literature and culture in the Elizabethan age, especially as reflected in dramatic productions and theatrical representions, is Dr. Levin Ludwig Schücking's "Shakespeare im literarischen Urteil seiner Zeit," just published (Heidelberg: Winter). The author is *privatdozent* in the University of Göttingen, and his work, based on thorough research, is written in a clear and attractive style. Particularly interesting is the chapter entitled "Shakespeare's Public," to which Hamlet's characterization of the players and spectators might well serve as a motto:

> O, it offends me to the soul to see a robustious periwig-pated fellow tear a passion to tatters, to very rags, to split the ears of the groundlings, who, for the most part, are capable of nothing but inexplicable dumb-shows and noise.

Emmanuel Arène, the French journalist and playwright, has died at the age of fifty-two. He was born in Ajaccio, and began his literary career as secretary to Edmond About. For many years he has been best known as the dramatic critic of *Figaro*. His plays are "L'Aversaire" (1905), in which he collaborated with Alfred Capus; "Paris—New York" (1907), with Francis de Croisset; and "Le Roi," with Robert de Flers and A. de Caillavet. M. Arène was also author of a book, "Le Dernier bandit."

"Musikalische Strafpredigten: Veröffentlichte Privatbriefe eines alten Groblans" is the characteristic title of a collection of critiques of modern music, which Max Steinitzer has just published in a second and much enlarged edition. Its two parts are entitled "Kleine Predigten an kleine Leute" and "Grosse Predigten an grosse Leute" (Munich: Verlag der Süddeutschen Monatshefte.

Hundreds of librettos in various languages were submitted to the Italian publisher who last year arranged an international competition for a prize of $5,000. The successful libretto, entitled, "La Festa del Grano" (The Corn Feast), by the Roman poet Salvatori, was offered to Mascagni, who declined it. It is now to be set to music by Giocondo Fino of Turin, who is a priest, as well as a composer. His oratorio, "Battista," has been produced in several Italian theatres as well as in South America. Hitherto Fino has not undertaken to compose an opera, because in all the librettos offered to him love had a prominent part. The "Festa del Grano" is not open to that objection.

The Berlin Royal Opera opened the season for 1908-9 on August 20, with Wagner's "Tristan und Isolde." Among the more important performances will be Mozart's "Figaro," with a cast including Destinn, Hempel, Berger, and Knüpfer; Puccini's "Manon," with Geraldine Farrar as Mimi; and "Aïda," "I Pagliacci," and "Marta," with Caruso. Three new operas are to be heard: Leo Blech's "Versiegelt," Laparra's "Habanera," and Goldmark's "The Winter's Tale." Among the revivals will be Gluck's "Iphigénie in Aulis" and "Mélme's "Joseph in Egypt," with recitatives by Zenger. Strong efforts are being made to provide Berlin with a new Royal Opera House. The site is already provided. The cost of building is estimated at 15,000,000 marks. It is hoped that the Prussian Parliament will grant 8,000,000 marks, and that the municipality of Berlin will provide the remainder.

Five years ago Carl H. Laeisz bequeathed $200,000 for a concert hall in Hamburg, and his widow added $50,000. The magnificent building, with seats for 1,900 persons, was opened a few weeks ago.

Art.

Heraldry as Art: An Account of its Development and Practice, chiefly in England. By G. W. Eve. Pp. x+308. New York: Charles Scribner's Sons. $5 net.

The utility of such a popular treatise as this must lie in its illustrations, unless indeed it is wrought into a rather dull book of reference, a mere glossary of technical terms. Such glossaries we have in the small single-volume works of Clark, Cussan, Planché, Worthy, Boutell, and others, and the valuable larger volume by the author last named, "Heraldry, Historical and Popular," of which the third edition was published in 1864; also in the two-volume "Treatise on Heraldry, British and Foreign," by John Woodward and George Burnett. Larger works, such as William Berry's "Encyclopædia Heraldica," and the recent folio of Arthur Charles Fox-Davies, "The Art of Heraldry: an Encyclopœdia of Armory" (1904), give us glossaries, together with much more material. But not one of them all compares with this new volume in display of so much of armorial achievement as can be shown in black and white.

The volume is printed entirely on coated paper, and contains at least sixty half-tone pictures, with 230 illustrations in line, from diagrams to elaborate reproductions of old prints. Naturally, those escutcheons are selected which are found sculptured or modelled in solid form, and the value of the book as a treatise is diminished by this avoidance of the true language of heraldic art, the *tinctures*—gules and azure, sable and or, ermine and vair. The hatchings and pointings which stand for these, by convention, are poor things when given in relief sculpture. And yet a seemly display is made in a number of cases, as by the bearings on the shield of the Black Prince in Canterbury Cathedral (Fig. 1) and by the diapered shield from Beverley Minster (Fig. 140). The enamelled escutcheons, too, can be photographed with some success, as in the shield of William de Valence (Fig. 174).

A more accurate title for the book would be "The Artistic Treatment of Blazonry," or "of Armorial Bearings." "Heraldry" is too general a term for the single subject of the marshalling of arms; and it is a poor and slight form of "art" that the herald knows. The use of a shield in a colored window, or carved upon a tomb, is indeed not forbidden to the decorative designer; and yet, the flat, ungraded patches of color, strong red, blue, black, white, and gold, afford but a poor set of units of which to make a design; and the smaller and the less showy your escutcheon, the better for your memorial window. The lead cisterns, steel lock-plates, and engraved blades of halberd and bill, all given in Mr. Eve's book, come nearer to an adequate system of ornamentation than any painted or inlaid color compositions. It is not until we reach embroidery, in the fifteenth century, that blazonry in full color becomes a really interesting and beautiful art.

Otto H. Bacher, the American artist and etcher, who knew Whistler in Venice, will publish this month, through the Century Company, a volume of recollections of those days, with reproductions of twenty-two Whistler etchings, three Whistler lithographs, and five Whistler letters, and a number of etchings and photographs by Mr. Bacher himself.

Two important Cretan discoveries, made by the Italian expedition, are reported by Luigi Pernier, in the *Marzocco*, Florence. The first is a terra-cotta disc more than six inches in diameter bearing on both sides a pictographic inscription. The small figures representing men, fishes, birds, trees, plants, and various utensils, are contained within incised spirals running from the rim to the centre. These figures are brought together into groups by scratched lines and are undoubtedly characters of a very ancient pictographic writing of which a few specimens of a simpler sort have been noted on gems found at Knossos. But on each side of this plaque, which was found at Phæstus, are no less than 120 signs. And

since we have not to do with letters but hieroglyphs, this indicates a document of considerable extent from which one may even hope to decipher the earliest Cretan inscriptions. The characters are not worked with a point, as has always been the case in previous scanty finds, but struck with punches which must have been beautifully and accurately cut. "A true example of typography," says Signor Pernier, "which goes back to 2,000 years before Christ." At Prinià the expedition discovered an archaic Greek temple containing many fragments of colored sculpture in soft limestone. The most important of these is a goddess half life size, seated with arms close to the body and hands resting on the knees. The heavy chiton is ornamented with rosettes and small figures of animals carved in low relief, representing embroidery. Under a sort of mitre the hair falls heavily and symmetrically upon the shoulders. Upon the sculptured base of this statue is carved the same divinity in the same costume, but standing with the arms pressed closely to the sides. At the right and left are three lions and three feeding stags in a highly developed naturalistic style. Signor Pernier surmises that in this sixth century fragment we may have a precious relic of the so-called Dædalan art of Crete, which the ancients believed to be the beginning of their sculpture.

An Italian expedition has been excavating on the site of the city of Adulis, near Zula, in Eretrea. The results are published by Dr. R. Paribeni, in the transactions of the Accademia dei Lincei. Extensive remains of a well-built town, antedating in part the Alexandrian era, were found. Temples, streets, and houses, with architectural decorations in marble, alabaster, and bronze, attest a considerable degree of culture. The later kings coined money, gold abundantly, using the Roman denominations, as they did the Roman weights.

The annual report of the Swiss National Museum at Zurich contains an account of the excavations which D. Viollier has directed at Augst, eight miles from Bâle. Not less than fifteen hundred tombs have been opened on a small plateau a few hundred yards above the ruins of the Roman Castrum, the Colonia Augusta Rauracorum which L. Munatius Plancus built, B. C. 27. They belong to the fifth century, when the Alemanni were well established on both banks of the Rhine. There was little stonework, but a few tombs were made of bricks taken from the Roman walls. Some skeletons held Roman coins in their hands, but in many cases no objects were discovered. There were a great many bead necklaces, including some very fine specimens, and many iron buckles, some ornamented with silver or bronze. Five extremely rare small Merovingian gold coins, coarse imitations of pieces issued hy the Emperor Justinian, were, because of their rarity, the most valuable objects.

Duncan MacKellar, a Scottish figure painter, whose series of scenes in the life ot Burns has attracted some attention, died at Lochgoilhead, August 13, in his sixtieth year.

Dr. Georg Schäfer, a writer on art, has died at Darmstadt in his eighty-sixth year. He discovered in 1863 the lost Passion pictures which Hans Holbein the elder painted for the Dominican Church at Frankfurt-a.-M.; and in 1873 he discovered the Einhard basilica in Odenwald. Among his writings are: "Histoire de Hohenzollern au moyen âge" (1859), "Denkmäler der Elfenbeinplastik des grossherzoglichen Museums zu Darmstadt" (1872), "Kunstdenkmäler im Grossherzogtum Hesse," "Die Kirche zu Offenbach" (1885), "Die Kirche zu Erbach" (1891), "Der Dom zu Fünfkirchen" (1891), "Kunsthistorisches Bildercalendar für das Grossherzogtum Hesse" (1896), and "Die Kirche zu Wimpfen" (1898).

Finance.

THE GUARANTEE OF BANK DEPOSITS.

The proposal to guarantee bank deposits, through the compulsory contribution by all banks to a common fund, is strongly urged by Mr. Bryan and opposed by Mr. Taft. This is a convenient and available campaign issue, first because it is apparently a measure of protection for the thrifty; second, because it is in line with the general movement for the regulation of capitalistic institutions. When the project is first stated to the average citizen, he is likely to adopt it unhesitatingly. It would certainly be to his advantage to be insured against loss through failure of his bank; and when he is informed, as he usually is, that such a guarantee would put an end to "bank runs," to hoarding of money, and to panics like that of last October, the argument is convincing.

As with other plausible theories, however, the plan of compulsory guarantee of deposits, when seriously considered, is found to have grave defects. The first and most familiar objection is that the conservatively managed institution will be compelled to contribute toward the guarantee of the bank which is incompetently or recklessly conducted. From this follows the inference that the incompetent or inexperienced manager, not to mention the banker who accepts risky loans and deals with doubtful undertakings, can appeal for the deposits of the public far more strongly with this guarantee than without it. The depositor who would not entrust his money to a bank with a shady reputation will now be assured that under any circumstances his deposits are safeguarded by the joint guarantee of the institutions that are strongest and soundest. If this argument impresses the depositor, as it is likely to do, the bank may follow it up by offering rates of interest which cannot be paid by rivals engaged in cautious and conservative banking. Every one knows how effective this expedient was in attracting deposits, during the few years prior to the panic, into certain banks and trust companies of New York city which were devoted to something else than legitimate banking; and how deposits thus obtained stimulated the unwholesome inflation and speculation in Wall Street.

When, furthermore, one is asked whether the prevention of panic "runs" might not be a sufficient advantage to offset these other objections, the fact comes to light that no plan of guarantee has ever contemplated a fund immediately available. If the fund is to be invested, the depositor in a broken bank must await its conversion into cash—which, at a time of numerous suspensions, would be at best a slow process; and under present conditions the assets of the failed institution will primarily be applied to the payment of depositors. All this means delay, and bank runs are started as much through the wish of depositors to get their money instantly as through a fear that they will not get it at all. Of this fact the runs on savings banks are the surest proof; their occurrence, in the face of the protection thrown by the law around depositors, hardly foreshadows the abolition of bank runs through assurances of ultimate reimbursement of depositors.

On these several points, Mr. Taft touched briefly in his statement of last week, declaring that "the fundamental objection to the proposed plan . . . is that it puts a premium on reckless banking and is an inducement to reckless banking," and that with such banks "relieved of the responsibility to and the fear of the depositors, the tendency would be to induce exploitation, manipulation, and the use of assets of banks in a speculative way." None of these points is fairly met by Mr. Bryan. His argument, in his Topeka speech, is that "a bank asks deposits on the theory that the depositor is sure of the return of his money, and the laws ought to make the facts conform to the theory." The inference is rather sweeping. Every loan of money—indeed, every investment of money—is solicited on precisely the same theory. The objection that obscure, inexperienced, or recklessly managed institutions would be enabled to outbid conservative banks in the competition for deposits, is described by Mr. Bryan as the argument "presented by the big banks which put their own selfish interests above the welfare of the depositors and the safety of the community." This is simply to misrepresent the idea. Reminded of the objection that the guarantee might easily stimulate increased activities by speculative bankers, Mr. Bryan replies that the guarantee "would, if it made any difference in this respect, bring into the banking business a better class of men and raise, if that is possible, the average of character." But this statement is sheer unsupported assertion, for he neglects to inform us how or why this useful result would be achieved.

Finally, Mr. Bryan fails, as do most of the advocates of the theory, to take

account of the fact that a guarantee of depositors is also in substance a guarantee of all bank loans. By far the greater part of the bank deposit fund of the United States is made up of credit granted by the institutions to borrowers, and placed on the books as a deposit when the credit has been granted. For the banks as a whole to insure depositors of this class from loss, under any and all circumstances, is equivalent to their guaranteeing to make up the shortage in the proceeds of the loan, if the bank is forced to liquidate. This, in our judgment, is a pretty extensive duty to impose on the banks against their will in any country, and particularly in our own.

BOOKS OF THE WEEK.

PUBLISHED THIS SUMMER

FITZ'S PRINCIPLES OF PHYSIOLOGY AND HYGIENE

By GEORGE W. FITZ, M.D., Assistant Professor of Physiology and Hygiene, Harvard University, and sometime teacher of Science in Cook County Normal School, Ill. xiii+357 pp. 12mo. $1.12.

A clear and simple treatment of physiology intended for a high-school course. It lays emphasis upon hygiene and sanitation, with special reference to the conditions of daily life. Experimental work is fully outlined in connection with each chapter, but the illustrated text is so arranged as to be independent of the experiments.

LOCY'S BIOLOGY AND ITS MAKERS

By WILLIAM A. LOCY, Professor in Northwestern University. xxvi+469 pp. 8vo. $2.75 *net.*

An untechnical account of the rise and progress of biology; written around the lives of the great leaders, with bibliography and index. The 123 illustrations include portraits, many of them rare, of nearly all the founders of biology.

CHARLES W. HARGITT, Professor in Syracuse University: "It more than meets my anticipations. I think it will fill a place not hitherto occupied in American books of its sort. The portraits are unusually good, and to have them brought together in a single volume will prove a welcome thing to those concerned. I shall certainly find use for the book in my course, and have also brought it to the attention of a number of biologists here."

REMSEN'S COLLEGE CHEMISTRY (*New Edition.*)

By IRA REMSEN, President of the Johns Hopkins University. (*American Science Series.*) xxiii+686 pp. 12mo. $2.25.

This standard text-book has been thoroly revised and entirely reset

C. F. CHANDLER, Professor in Columbia University: "I am very glad that Professor Remsen has found time to bring this admirable book down to date."

BAKER AND ABBOTT'S ENGLISH COMPOSITION

By FRANKLIN T. BAKER, Head of the English Department in the Teachers College, New York, and Herbert Vaughn Abbott, Associate Professor in Smith College. xi+211 pp. 12mo. 80 cents.

A manual for elementary work in composition, providing an abundance of helpful suggestions and of illustrative selections.

EDWIN M. HOPKINS, Professor in the University of Kansas: "I have just reviewed it with a class of teachers in the summer school here, and it meets with general approval as a text eminently well suited for the beginning of our high-school course."

HENRY HOLT AND COMPANY

NEW TEXTS

Elements of Plain and Spherical Trigonometry

By JAMES HOWARD GORE, Ph.D., Prof. of Mathematics, George Washington University.

Crown 8vo. With answers, Leather binding. With six-place tables. Pages 208. $1.20 *net.*

Crown 8vo. With answers, Cloth binding. Without tables. Pages 120. $1.00 *net..*

Crown 8vo. Cloth binding. Tables Separately. Pages 80. .60 *net.*

The Making of the English Constitution 449—1485

By ALBERT BEEBE WHITE, Prof. of History. Univ. of Minnesota. 8vo. *Probable price, net* $3.50.

The Constitutional History of England

A Course of Lectures delivered by F. W. Maitland, LL.D., Late Downing Professor of the Laws of England in the University of Cambridge. 8vo. $3.50 *net.*

A Manual of American Literature

Edited by THEODORE STANTON, M.A. (Cornell.) In collaboration with members of the Faculty of Cornell University. *Crown 8vo. Probable price,* $1.50 *net.*

The Trachiniae of Sophocles

With a commentary anridged from the larger edition of Sir Richard C. Jebb, by GILBERT A. DAVIES, M. A. *Crown 8vo.* $1.00 *net.*

The Theory of Light

A treatise on Physical Optics by RICHARD C. MAC LAURIN, M.A., LL.D. (In three parts, Part 1.) 8vo, $2.75 *net.*

Conditions of Life in the Sea

A short account of quantitative marine biological research by JAMES JOHNSTONE, Fisheries Laboratory, University of Liverpool. *Crown 8vo,* $3.00 *net.*

A History of Classical Scholarship

From the sixth century B. C. to the end of the Middle Ages, by JOHN EDWIN SANDYS, Litt.D. 3 volumes. Vol. I. *ready.* Vols. II. and III. *in preparation. Price per volume* $3.50 *net.*

The Seven Against Thebes of Aeschylus

With introduction, critical notes, commentary, translation by T. G. TUCKER, Litt.D. (Camb.), Prof. of Classical Philology, University of Melbourne. *Second edition,* 8vo. $3.50 *net.*

G.P.PUTNAM'S SONS NEW YORK and LONDON

THE FRENCH MEN OF LETTERS SERIES

Aiming to do for French literature what the English Men of Letters Series has done for English literature. Each volume contains a biographical and critical study of its subject, by a writer well fitted for the task; also a frontispiece portrait, a bibliography, and an adequate index.

12mo. Cloth, paper label, $1.50 net, per volume.

FRANÇOIS RABELAIS

By ARTHUR TILLEY, M.A.

Fellow and Lecturer of King's College, Cambridge.

"This is a stimulating little book. It is good to have all the documents of Rabelais's career assembled. Mr. Tilley is very interesting in his study of the master's literary sources. We value, too, his bibliographical pages. But chiefly we value his warm, human interpretation of Rabelais, his skill in communicating to the reader something of the gusto that lies in his theme."—*New York Tribune.*

"Mr. Tilley has written the best work which we have yet had on Rabelais."—*The Modern Language Review*, London.

MICHEL DE MONTAIGNE

By EDWARD DOWDEN, LL.D.

Professor of English Literature in the University of Dublin.

"This alluring volume is an admirable starting-point for a series that will certainly prove a boon to lovers of literature."—*Philadelphia Press.*

HONORÉ DE BALZAC

By the late FERDINAND BRUNETIERE

Member of the French Academy, and Editor of the "Revue des Deux Mondes."

"As brilliant a piece of literary criticism as has appeared in a score of years."—*New York Sun.*

In Preparation — GEORGE SAND

By Prof. W. P. Trent of Columbia University.

C. A. SAINTE-BEUVE

By Prof. George McLean Harper, of Princeton University.

For Your Reference Table

Chambers's Cyclopaedia of English Literature

NEW EDITION

A clear and comprehensive survey of English literature from its beginning to the twentieth century.

It contains an authentic biography of every American and English writer of note, an account of his work, many extracts, and 300 approved portraits and facsimiles. It is the cheapest authoritative reference work of similar scope now in print.

Three volumes. 2500 pages. Imperial octavo. Cloth, $12.00 per set.

Lippincott's New Gazetteer

EDITED BY ANGELO HEILPRIN AND LOUIS HEILPRIN.

A geographical dictionary of the world, giving an accurate picture of every corner of the globe in its minutest details as it exists in the twentieth century.

"A work of such thorough execution and admirable plan as to leave no room for adverse criticism."—*The Dial.*

Over 2,000 pages, quarto.

Sheep $10.00 net; Half Russia, $12.50 net; patent index, 50 cents extra.

J. B. LIPPINCOTT CO.
Publishers Philadelphia

New Text Books

English Poems

Edited by WALTER C. BRONSON

A selection of representative poems, annotated for college classes.

The Restoration and the 18th Century, 558 pp., 12mo, cloth, net $1.00

The Nineteenth Century, 635 pp., 12mo., cloth, net $1.00

Value and Distribution

By HERBERT J. DAVENPORT

A scientific treatment of an important economic subject. 600 pp., 8vo, cloth, net $3.50

Animal Micrology

By MICHAEL F. GUYER

A manual for college students. 250 pp., 8vo, cloth, net $1.75

First Year Mathematics for Secondary Schools

By GEORGE WILLIAM MYERS

A logical course in which the old-fashioned divisions of mathematics are disregarded. 198 pp., 12mo, cloth, net $1.00

Geometric Exercises for Algebraic Solution

By GEORGE WILLIAM MYERS

Intended to supplement second-year work and keep the pupil from forgetting his algebra. 90 pp., 12mo, cloth, net $.75

WRITE FOR INFORMATION.

DEPT. 21.

The University of Chicago Press

CHICAGO. NEW YORK.

William Lloyd Garrison, 1805-1879.

The Story of his Life, told by his Children

Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression; it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

HOUGHTON MIFFLIN COMPANY

BOSTON AND NEW YORK.

SECOND-HAND BOOKS

Please send us your address if you would like to receive really interesting Catalogues of Books in all departments of Literature.

The following Catalogues have recently been or will shortly be issued:

No. 35. Mathematical and Physical Books—Transactions, Journals and Scientific Periodicals, Books printed previously to 1800, Mathematical and Physical Pamphlets, &c. 2,825 items.

No. 36. English Literature, including many rare and unique books and MSS. 2,461 items.

No. 37. Theological Books. With special collections under Bible, Hebrew Hymnology, Sermons, Syriac Liturgies, Biographies. 2,762 items.

No. 40. New Books offered at greatly reduced prices (a Catalogue of great value for Prize Books, etc.) 100 pp.

No. 41. Books with Illustrations, classified under the following heads: Art, Architecture, Archæology, Classics, Literature (English and Foreign), Topography, &c. 1,200 items.

No. 42. Books in use at Schools and Colleges (a most useful reference Catalogue, as in the majority of instances we can supply a number of copies of each book at all times). 90 pp.

Catalogue of Natural Science Books in Preparation.

NEW BOOKS

Libraries, Schools, and Colleges supplied with New Books, both English and Foreign, on the most advantageous terms. We are in a position to guarantee that all orders shall be executed in an intelligent fashion and with the utmost promptitude.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 10, 1908

The Week.

Mr. Taft's change of mind in regard to his speaking trip is now attributed indirectly to the recent law forbidding railway passes. Mr. Taft, it appears, had expected to be waited upon by delegation after delegation, to each of which he was to pour out his soul. But the pilgrims have not arrived, because, it is alleged, they could not obtain free transportation, and did not care to expend from $2 to $20 each to see the candidate and hear an address. This explanation is unconvincing. The real reason is simply that the West wants to be assured that Mr. Taft is as radical as Roosevelt, and not a "reactionary." It still regards him as a poor substitute for the man it wanted, and is, therefore, eager to get a glimpse of the candidate himself. The change of plan must be regarded as wise, even if Mr. Taft is not so attractive a speaker as his rival. His winning personality and his hearty, straightforward manner will make friends wherever he goes, and the training in speaking briefly will be a benefit to him for the rest of his life. As he travels, too, he will get a clearer idea than a thousand delegations could give him of the temper of the people and of their desires in the way of political changes.

Gov. Hughes's speech at Youngstown on Saturday throws no more light on his opinions than was afforded by his speech on national issues at the New York Republican Club last winter. He is a party man, not so enthusiastic, perhaps, for some of the Republican doctrines as Mr. Taft, but none the less orthodox enough to please the most fastidious. The speech is an effective piece of campaign oratory. In his summary of Mr. Bryan's qualifications, or lack of qualifications, for the Presidency, Mr. Hughes was at his best. At the same time, one must not be too severe on Bryan because he has not administered the government of Cuba or the Philippines. While Mr. Bryan's lack of experience as an executive is, so far as it goes, a valid argument for preferring Mr. Taft, experience does not seem to us the final test. President Cleveland's record, like Mr. Hughes's, shows that, given character, fixed principles, and general ability, a man may speedily rise to high administrative duties. But Mr. Bryan, able though he be, has neither the fixed principles nor the stability to make up for his lack of experience in administration and to warrant the voters in entrusting him with the highest office in the land.

Honest political soothsayers can give but one forecast as a result of the Vermont election. It indicates clearly the choice of Mr. Taft, unless the State has lost its usefulness as a political weather-vane. True, some Democrats pretend to read the signs differently and to gather hope from a falling off of 6 per cent. in the Republican vote. But although the Republicans may be overconfident, the failure of the Independence League to secure more than a thousand adherents in Vermont will reassure the Democrats who feared that Hisgen would draw seriously from them. And the small vote for the Socialists indicates that the Green Mountain boys are still sticking to the political and economic faiths of their fathers.

It is probable that the President, as reported in the press dispatches, will ask Congress for another increase of the army. It will be shown conclusively that millions are being spent on coast defences in Hawaii and the Philippines, and that therefore we must provide the gunners. The undoubted hardships of the infantry in spending two out of every six years in the Philippines will also be dwelt upon. Indeed, the army, like the navy, has found Congress an easy master since the Spanish war, in striking contrast to its refusal to do much of anything for the soldiers from 1870 to 1898. They can hardly be blamed for making hay while the sun shines; but it is time for the public to put its foot down hard. With 70 per cent. of our national revenues going for army, navy, and pensions, with no foreign difficulty of any kind in sight, it is the hour to stop this folly. The price we have paid for our colonial investments is large enough now, without the squandering of further millions.

It was announced some time ago that the Navy Department was planning to build torpedo-boat destroyers with a speed of 29½ knots, although foreign nations are insisting on 33 and 35 knots. When the bids for these new destroyers were opened in the Navy Department last week it appeared that several of the most progressive of our ship-builders were of the opinion that the speed required was ridiculously low for this stage of naval development. The Fore River Shipbuilding Company, for instance, offered to construct 33-knot boats for $122,000 less apiece than the outside sum allotted by Congress, and several other concerns offered 30 and 31-knot destroyers for little more than the lowest bid for the 29½-knot vessels. Presumably, the Department will stick to its plans, content with the demonstration that we can build fast boats if we wish. In every branch of the navy we simply imitate the English. Three years ago the Admiralty announced that every battleship thereafter would have turbines—last week our Department reached the same conclusion. And the Admiralty is getting years ahead of us by conducting experiments with gasolene and suction-gas engines. The Navy Department simply will not interest itself in anything so new or so progressive.

One hundred and seventeen indictments—this is a brave showing for the Springfield, Illinois, grand jury which is investigating the lynching riots. If only the matter will not rest there, if, say, seventy-five of the rioters could finally be committed to jail for long terms, the city will have gone a long way towards redeeming itself. Thus far the grand jury confirms the assertion of the ministers that the basic trouble was not race prejudice, or even high moral indignation at a shocking crime, but just a thirst for drinking, robbing, and murdering by the lawless elements long unmolested by the authorities. If, as some of our Southern friends would have us believe, this was another uprising on behalf of Anglo-Saxon purity and superiority, it is obvious that these sacred sentiments took strong hold upon

a mob of loafers, thieves, and prostitutes—persons not always credited with lofty sentiments or a desire to uphold any standards, much less the racial. Had the crime been committed by a Jew or an Italian the same conflagration might have followed. But this fact, of course, detracts not one whit from the shame of Springfield. That so contemptible a police force could have existed anywhere is in itself humiliating. Of this body the grand jury says:

> We condemn in unmeasured terms the cowardly, contemptuous action of those members of the police force who, having taken the oath of office, failed to do their duty; men who were paid from money obtained from the pockets of the people of this city to protect life and property; men who were ordered by the heads of departments of the police to go out and disperse the mob, and who not only failed to use a club, handle a pistol, or raise a voice against the mob on the side of law and order, but some of whom are shown to have assisted by act and word in doing the work that has brought destruction to thousands of dollars of property and has brought shame to every law-abiding citizen of this city.

William F. Vilas's bequest to the University of Wisconsin is one of many replies to the complaint, frequently raised by the friends of State educational institutions, that a public school cannot look to philanthropists for favors. The swelling stream of benefactions during recent years has been washing away all distinctions between State and privately endowed colleges. Like the extension to State universities of the benefits of the Carnegie Foundation, Mr. Vilas's bequest shows that our great philanthropists are coming to recognize that their peculiar function may be to furnish money for purposes which to State legislators of narrower vision seem unnecessary or impracticable. Scholarships and fellowships, liberally endowed chairs, and special laboratories, which cannot be wrung from representatives who identify culture with agriculture, must often be created by private generosity.

Few people can realize to-day the excitement caused by the publication of the letter from the late Lord Sackville to the Irish-American in California who had asked his opinion of political conditions during the Presidential campaign of 1888. This rather ingenuous missive was instantly seized upon by the Republicans as a tremendous weapon. They paraded it as proof that the English government was trying to direct the affairs of this country, and therefore the only thing to do was to elect Mr. Harrison. Copies of Lord Sackville's letter were circulated by the thousand; it was printed day after day in leaded type in Republican newspapers, together with drawings of the British crown. It received all the honors that could be accorded to a dispatch announcing a great victory by land or sea, or the outcome of a great foreign war, or a great scientific discovery. But it was only a piece of small stupidity by a diplomat of the second rank. Of course, it completely discredited Lord Sackville and ended his diplomatic career. Such a blunder would discredit any ambassador to-day, but it could not create the same sensation. For one thing, the appeal to anti-British prejudice is far less popular; and we also have become rather more accustomed to dabbling in European affairs.

British enthusiasts are weaving dreams of empire out of British cotton. After six years of agitation, in which the government has taken active part, the British Cotton-Growing Association is already witnessing the partial success of the project for "Cotton within the Empire." At a recent conference in Manchester the representatives of the West Indies reported that their season's crop of Sea Island cotton is more than enough to supply the present wants of all Lancashire mills; British East Africa and British West Africa also testified to a rapidly increasing output. These are but beginnings. But so far as our own cotton industry is concerned, we may note that the finest grades of fibre, to which the British are now giving exclusive attention, are but a trifle in the total American output; indeed, some of them our thread and woollen mills have to import. But, even if British soil shall some day yield every fibre needed for British spindles, the rest of the world will probably call for all the bales we care to export, especially in view of the fact that our own mills are steadily increasing their consumption. In at least one respect this steady demand for cotton is unfortunate. Sharp foreign competition, by making cotton-growing less profitable, would hasten the diversification of Southern agriculture and occupations, with the result that economic and social life below Mason and Dixon's line would become more wholesome.

The plain people have a disconcerting habit of turning on their self-constituted defenders, and telling them gruffly to "stop that nonsense." In England Mr. Balfour and other Conservative orators have argued that the government's Licensing bill is a reprehensible attack on the right of the British workingman to the "'arf a pint" of ale that was guaranteed him by Magna Charta and the Great Remonstrance. But the president of the British Trade-Union Congress declares that "the great political and social question at present is the Licensing bill, which is wanted by the workingman," of whom nearly 1,800,000 are represented at the Congress. The intelligent British workman knows well what a detriment drink has been to his personal welfare, and even to his class interests. For the president of the Trade-Union Congress to declare that if the Upper House tampers with the bill, "the Lords would raise the question of their own existence," is considerably to strengthen the hands of the government.

The presence of the Turkish Consul-General at a Zionist mass meeting in this city may be indicative of the new fraternal feeling among the different races of Turkey that has come with the new régime, without meaning that the outlook for the success of the Zionist movement has changed for the better. As we have already pointed out, the Young Turks are primarily actuated by national Ottoman aims. The crisis, indeed, seems to have been precipitated by the imminent action of the Powers in Macedonia, which threatened the virtual extinction of Turkish authority in that region. As long as Abdul Hamid reigned, Turkey was being brought nearer to dismemberment. To avert such a catastrophe, to keep the Empire intact and make it modern, is the work to which the triumphant party has set itself. With such aims the erection of an independent Jewish state in Palestine is evidently incompatible. Even autonomy is something which a Turkish Parliament could hardly grant to a Jewish population in Palestine without conceding the same rights to the other nationalities in Europe and Asia. On the other hand, it may well be that un-

der a liberal régime Jewish immigration into Palestine may be facilitated; and at the same time, under an enlightened economic policy, the resources of the Holy Land may be so developed as to render it capable of supporting a much larger population.

The formal celebration last week of the opening to Medina of the Damascus-Mecca railway marks another important step in the modernization of Islam. In the spring of 1900 it was announced that the Sultan had determined to construct a railway from Damascus to Medina. Much of the route lay across deserts traversed only by caravans since the earliest times. Four years ago the railway had crept to Ma'an; two years ago it reached the Thabouk station; and a few weeks ago the rails were laid to Medina. From Medina to Mecca is only 280 miles, and notwithstanding the chronic financial troubles of the Sultan, the entire line from Beirut via Damascus and Medina to Mecca will probably be completed before long. The pilgrims can then make in a few days the long journey of 1,280 miles, that hitherto was the greatest achievement of a lifetime for devout followers of the Prophet. While this holy railway was planned chiefly as a convenience to pilgrims to the shrines of Medina and Mecca, it will also serve important military and commercial purposes. It will, in connection with the Anatolian and the partly completed Baghdad railway, help to bind closer together Turkey's Asiatic dominions, and help her to transform her present shadowy claims over practically all Arabia into a hard and fast reality. That fact will not be without significance to more than one European Power, and especially to England, seated at Aden, and thus commanding the Persian Gulf. It will now be more than ever necessary for her to remain on good terms with Turkey if she is to maintain her present position on the high road to India. To-day, however, it is chiefly the picturesqueness of the event that arrests attention and appeals to the imagination. The "ship of the desert" once more gives place to the locomotive; the caravan's slow progress toward the holiest of holies, to the swift trip of the railway train, with all that that implies in the changed attitude of the Eastern mind.

Careful study of the White Man's Burden proves that there are other ways of carrying a load besides shouldering it. Everything depends upon the character of the burden. If it is a Cuban gentleman with a Harvard degree, he may be inspired by the spectacle of our civilization. If it is a Porto Rican, he may be dragged up; if a Louisiana "nigger," kicked up; if a Philippine tribesman, shot up; and British dispatches from South Africa reaffirm that the proper and accepted methods of boosting Zulus to a higher plane is to flog their backs into ribbons. Squeamish people dislike some of these varieties of burden-bearing; a hypersensitive Miss Colenso has been pestering the Premier of Natal with complaints about the whipping administered, in some cases fatally, to thirty-one men, women, and children, by order of a local magistrate. Miss Colenso seems vexed because many of the victims had not been convicted of any offence, but were simply awaiting trial. This shows how completely women misunderstand these matters; the lash was applied, not in anger or for retribution, but only to teach the first lesson of imperialism, namely, Anglo-Saxon superiority. The *Times of Natal* silences the sentimentalists with the assurance that "many things are inseparable from a state of war or from the administration of martial law." Even unreasoning woman must see that this profound truth proves the advisability of maintaining martial law wherever contractors find it difficult to secure laborers.

The protest which the Swiss Democrats addressed to the Bundesrat because Count Zeppelin sailed with his airship across Switzerland without special permission, calls attention to the most important problem now before international tribunals. Time was when the oceans were partitioned among the nations, and wars were waged for their possession. Then the principle of the free oceans was finally adopted. In 1903 the French jurist Alexandre Mérignhac demanded in a paper submitted to the Peace Congress of Rouen that the atmosphere should "be as free as the ocean," and this principle was adopted by the Institut de Droit International at its Edinburgh meeting of 1904. Now that the problem of aerial navigation seems so near solution, many persons feel that the air cannot possibly be treated like the water. Absolute freedom of ballooning would expose the cities to greater danger than has ever confronted them; it would render espionage easy, as is shown by the excellent photographs taken in airships; it would facilitate smuggling and the escape of criminals. At the second Hague Conference several countries, among them Russia, Germany, and France, refused to renew the former agreement that no explosives must be thrown from balloons; but it was agreed that undefended cities, villages, and habitations must not be bombarded in any way. Thus the destructiveness of balloon explosives is limited to fortresses, warships, and armies. Alfred H. Fried deems it likely that the nations will grant freedom of ballooning over oceans, deserts, and unappropriated regions of the globe; but a general freedom, as in the case of the ocean, seems to him to be out of the question. But can it be prevented?

It is easy to believe that the pantomime of "Sardanapalus," prepared by the orders of Emperor William and acted last week at the Royal Opera House, was, as reported, a gorgeous spectacle. It may well have been, too, through the labors of Prof. Friedrich Delitzsch and other eminent Orientalists, an instructive reproduction of life in the ancient palace of Nineveh. But the piquancy of the scene lies as much in the observer as the observed. What were the emotions, one asks, of the Kaiser, to whom empire is the very breath of life, as he watched this pageant which has been for thousands of years the emblem of moralists for the vanity of empire? Modern archæology has destroyed the old legend of the effeminate Lord of Assyria as the Greek historians portrayed him, and as Byron represented him in his play. It is probable that he never set up the inscription:

> Sardanapalus,
> The King, and son of Anacyndaraxes,
> In one day built Anchialus and Tarsus.
> Eat, drink, and love; the rest's not worth
> a fillip,—

or composed for himself the famous epitaph: "Only that have I now which I took from eating and drinking and love; all the fulness of empire I have left behind." Yet these are the ideas that will always cling to the name of Sardanapalus, and these are the memories that must have awakened curious thoughts in the mind of the imperial observer.

JAPAN AND HER "NAVAL PROGRAMME."

The formal announcement made through the financial agents of Japan in this country, that the Japanese government has decided on a drastic cut in its military and naval outlay, need cause no surprise. As long ago as last December, it was given out at Tokio that there would be a reduction of 40,000,000 yen, or approximately $20,000,000, in the annual appropriations for these purposes. This was the result of popular demands and pressure by the financial experts of the national legislature, with whom Marquis Ito was believed to be in sympathy. It was significant, then, that this reduction was described as a "concession" by the army and navy authorities. But when the budget for the new fiscal year was framed, a few months later, it became evident that the concession was not large enough to square the Treasury accounts. The Financial Annual of Japan, in which the government made its report, admitted that "if the programme already made for the year 1909-10 and subsequent years is carried out, large deficits will be made," and announced that taxes on sugar, sake, and kerosene would be increased, and with them the price of tobacco under the government monopoly. The result of this declaration was a debate of great acrimony in the national legislature, followed by indignant protests from commercial bodies against the plan of adding to the already burdensome war taxes for the sake of "unproductive public expenditure." When this remonstrance was followed up by severe criticism from Japan's foreign creditors, the pressure became too strong to resist; and the Cabinet has voted to reduce expenditure during the next half-dozen years by 200,000,000 yen, or $100,000,000. Of this reduction, $75,000,000 is to fall upon army and navy.

What, it may be asked, are the conditions which make possible, through the stroke of a pen, a saving so enormous? Simply this—the Japanese government had yielded to the reckless competition among the militant powers to keep on adding men and ships at whatever rate the jingo faction demanded. Japan has been spending annually, on army and navy, $45,000,000 more than in the year preceding the Eastern War, and this in the face of an interest charge on its foreign debt fully $60,000,000 greater than ever before. To meet this expenditure the government has been exacting a heavy income tax, a land tax, an inheritance tax, a general excise, and a variety of stamp taxes, while the "extraordinary special taxes," which were imposed during the war, and which were admitted to be very burdensome, have been continued. So long as the purpose of this crushing taxation was to raise money for bringing home troops, restoring the navy to its previous efficiency, and reducing the public debt, the people bore the load uncomplainingly. But when they learned, at the very moment of financial reaction and depression, that the burden was to be continued and increased, with no assignable limit, through the adoption of extravagant plans of naval construction, patience ceased to be a virtue. The armament was to be brought to a state satisfactory to the apostles of extravagance within six years, but now the programme is "to prolong the present six-year scheme into twelve years," which is only a euphemistic way of saying that the annual appropriation will be cut in two.

The importance of the incident lies in the fact that the advocates of economy have won a substantial victory, and have won it from a determined military clique. This means much for the Japanese taxpayers, much for the foreign creditors of Japan, and much for the peace of the world. In the London market and in our own, Japanese bonds have advanced 3 per cent. over former prices. Part of this rise is owing to a promise of liberal redemptions of the outstanding debt—a prudent and necessary step in view of the fact that the grand total of national loan bonds outstanding has actually increased in each year since the Eastern War was ended. People who never accepted seriously the European theories of the war-time that Japan would collapse through inability to raise money for the contest, were rightly disquieted by a policy of heaping up the burden in a period of peace. It was high time that sensible statesmen should call a halt.

But the effort to economize is significant quite aside from the plight of Japan itself. Germany, whose annual naval expenditure had already increased 260 per cent. since 1893, is plunging into a scheme of new construction similar to Japan's; and a well-informed article from Berlin in the London *Bankers' Magazine* estimates that, for this and other purposes, no less than $100,000,000 of fresh revenue must be raised. This means new taxes and new borrowings, for the Imperial Treasury has already found itself unable, with the growing charge for armaments, to make both ends meet. The condition of our own Treasury is familiar. England, embarking on unknown seas in her Old Age Pension projects, is also under the same remorseless pressure from ambitious builders of warships. Japan is the first of the Powers to make public confession that the craze has gone too far. And unless experience is wholly misleading, the fiscal embarrassments which have forced the hand of that government will in due time affect others.

MOROCCO ONCE MORE.

Germany has explained that when she let loose her latest Moroccan thunderbolt, she was merely offering advice, but French journalists when discussing German policy with regard to Morocco will continue to use the favorite adjective, *brutal*. Perfidious Albion has been quite replaced by Germania the brutal which delights in disregarding the ways of civilized diplomacy, roars like a lion in pain when a word of mild protest would suffice, strikes when least expected (by preference after displaying high amity), and in general seems bent on a policy of bedevilment and exasperation. That is the French view after an experience extending now over more than three years. It is also a view in which the outsider will find a fair measure of reason. What word, for instance, can characterize Germany's sudden change of attitude between Sunday week, when at Strasburg the Kaiser made his plea for international good will, and the report a few days later that Germany had determined to shift for herself in Morocco? In commenting on the Kaiser's speech we said that in Morocco he had an opportunity to make trouble if he wished, but that he had held himself in check. That judgment must now be suspended, for German diplomacy has nearly brought Europe to the threshold of another Moroccan "crisis." If the storm be safely weathered, the result will be due, as in 1906, to French self-restraint more than to Germany's regard for the peace of the Continent.

French self-restraint and German

recklessness—we seem to be confusing traditional characteristics of race. But this is what Frenchmen of late have been proudly asserting: that, in the face of continuous provocation from across the Rhine, France has kept her temper and her dignity while maintaining, as best she could, her rights. Marcel Prévost writes to the *Figaro* from Germany—*Zeppelinland*, he calls it, because of the tremendous enthusiasm over the dirigible airship. Do you think, he asks, that this vast emotional upheaval is all due to the loss to science, to sorrow for the cruelly tried inventor? No. What Germany bewails is the destruction of a war-machine on which great hopes rested. He cites from a Berlin daily, let us hope a sensational one:

> The fear of what the Zeppelin can do has become a nightmare for the Parisians. They watch with anguish for the appearance of the balloon over their city, just as they watched in 1871 for the Uhlans.

That, insists M. Prévost, is the spirit of the Young Germans, and he adds:

> I much prefer the way in which, on the morrow after the loss of the Patrie, our army was put into possession of another balloon ready for service, without press-agent publicity, without bluster, without bluff.

Here, indeed, was the volatile Gaul giving the stolid Teuton a lesson in self-control.

And in this matter of Morocco, Germany has supplied the French with frequent opportunities for exercising self-restraint. France's claims to a special position in Morocco as the neighbor of the Sultan in Algeria are acknowledged in long-existing treaties. In the Anglo-French Agreement of April 8, 1904, Great Britain pledged herself not to interfere with French ambitions in Morocco. Then began on a large scale the so-called policy of "pacific penetration." There was to be no military conquest of Morocco, but French commercial agents were to establish themselves throughout the country, French physicians were to open hospitals for the natives, French officers were to take service in the Moroccan army. This happy prospect was completely shattered by the famous voyage of Emperor William to Morocco in the spring of 1905. At Tangier he declared that the independence and integrity of the Sultan's domains must be maintained, and—an acute crisis was at hand. Delcassé, who had been in absolute charge of French foreign affairs for six years, and had established closer relations than ever between France and Russia, sympathetic relations with Italy and Spain, and the now famous *entente* with England, was ready to go to war over Morocco. But France felt herself utterly unprepared (M. Rouvier was then Premier), and Delcassé fell. It is widely believed that to bring about his fall was the real object of Germany's incursion into Morocco.

Only after prolonged negotiations, in the course of which that "brutal" mailed fist seemed to threaten war more than once, it was agreed to leave the settlement of the difficulty to a conference of the Powers. At Algeciras, in the early months of 1906, France won what seemed at the time a signal victory over Germany. She rallied to her side nearly all the participating Powers, including the United States and even Germany's partner in the Triple Alliance, Italy. True, Europe there declared for the independence and integrity of the Moroccan empire, and the financial reorganization was to be carried on under an international agreement, but to France, with Spain, was entrusted the task of preserving order in Moroccan ports. Recognition of the Act of Algeciras was made incumbent upon the Sultan.

When the attack on the Europeans at Casablanca led to the dispatch of a French army and the outbreak of war with the tribesmen of that region, the French government asserted that an emergency had arisen from which it would attempt to derive no special benefit for itself. And on the whole France has been loyal to the pledge. When native fanaticism, exasperated at the pro-European attitude of the Sultan, Abd-el-Aziz, finally took form in the elevation of a rival in the person of his brother, Mulai Hafid, the French did just enough to show that their sympathies were with Abd-el-Aziz, and not enough to prevent his downfall. The success of Mulai Hafid was a disappointment to the French; but they argued that nothing had occurred to nullify the Act of Algeciras; if Mulai Hafid should subscribe to its terms, there was no obstacle to his recognition by the Powers. Germany's announcement of a decision to recognize Mulai Hafid without waiting for guarantees is, therefore, regarded as a blow at the European concert. That the Powers which formerly stood with France will now be with her would seem to be beyond doubt. But the general effect upon Franco-German relations cannot be foretold. Germany may now declare that she has simply announced her intention of recognizing the new Sultan, without proceeding to the formal act. But in France such conduct is taken as only one more illustration of that mixed policy of sudden attack and forbearance which the French call *brutal*.

THE HANKERING FOR PROTECTION

The Kentish hop-growers are having a hard year. A few months ago they were complaining so bitterly of the "dumping" of American hops on the English market that a select committee was appointed to report on the industry. Last week the cable dispatches from England announced the destruction of a large part of the crop by excessively wet weather and high wind. Human nature being what it is, we may expect that the hop-growers, smarting under heavy losses both from competition and from the "act of God," as the old phrase is, will at the next session of Parliament appeal still more loudly for protection. They will, however, find it difficult to meet the arguments of the report of the select committee, which has laid down pretty clearly some basic principles of trade. These principles it is worth while to examine a little in detail, especially in view of the fact that at the promised extra session for revision of our own tariff, a number of manufacturers will appear, whining over the present hard times and demanding that their sufferings be allayed by still higher rates.

But when the lessened profits of this period of depression are presented as a reason for raising the tariff, we can say to the petitioners what the select committee, presided over by Sir William Collins, has said to the English hop-growers: the supply has outrun the demand, and therefore prices have fallen. In the case of hops, the demand fell off because less beer was brewed, and because fewer hops were used for each barrel of it. This last change is due in small part to the employment of substitutes, but chiefly to the growing preference for a "lighter, brighter, and therefore less heavily hopped beer." The increase in supply is the result of improved methods of cultivation. The dumping of foreign hops merely caused

a temporary flurry, which cannot have a permanent effect, because in both Germany and the United States the production of hops is at the moment declining. In this country, moreover, in spite of a heavy duty of $12 a hundredweight, the price has fluctuated between £1 12s. 8d. a hundredweight and £5 16s. 8d. The lower figure, it will be noted, is below that of the import duty, and is thus proof that the duty will not avail to maintain a minimum price.

Furthermore, Mr. Taft has just been telling us that some of the schedules of the Dingley Act need "revising up." Greedy manufacturers are sure to take him at his word, and, like Oliver Twist, ask for more. But it is evident that their trouble is mainly due to a temporary excess of supply over demand. In most branches of production, especially in those which do not deal with the bare necessities of existence, the demand has slackened a great deal since last October. What is more, the tariff will not quicken this demand. In England a tariff would not check the use of substitutes for hops in the brewing of beer, or alter the taste for a lighter product. In the United States a tariff will not enrich the average consumer, who is going through a period of saving in order to make good his losses from the panic, from a diminution in the volume of trade, or from lack of steady employment. In this field the tariff, our boasted panacea, is wholly impotent.

We have said that in the main our industries are suffering from a malady which the tariff cannot cure. To this statement there may be a few exceptions —those industries in which we are attempting to produce under adverse conditions articles that may be more advantageously made elsewhere. We are not, it is true, putting a heavy tariff on bananas in order to protect the bananas grown under glass in a few of our Northern gardens; but we are doing some things that are almost as silly. And if any American manufacturer protests that he cannot compete with the foreigner, we may properly answer, as England in substance answered the farmers of Kent: Why should the whole community be taxed in order to keep up the artificial value of your commodity? A generation ago we were met by the protectionist argument that the tariff would foster "infant" industries and enable us to maintain that variety of occupation and diversification of society that promote civilization. If we would only keep up the tariff for a few years till the infants were fairly grown, we should, so ran the promise, be able to revert to the low tariff again. But that promise has conveniently been forgotten. The tariff has been raised higher and higher, because the appetite of the beneficiaries has grown by feeding; and a considerable number of manufacturers are already beginning to say that the Dingley rates do not really afford them protection. And this reliance upon the tariff is especially characteristic of the men of the second generation, who have inherited their business, who are perhaps interested more in automobiling and other sports than in the dull routine of the shop, and who look to a paternal government to make up their own deficiencies in intelligence and enterprise. They would revive trade, not by making wares that are good enough and cheap enough to command the market, but by excluding the foreign competitor. To meet the foreign competitor requires a large outlay of ingenuity and energy. To secure protection has been far simpler and easier—the mere drawing of a check of appropriate size for the Republican campaign fund. Hitherto the rule has been: Drop a contribution in the slot and get a tariff schedule—at the expense, of course, of the great body of consumers, who cannot afford to pay for political favors.

THE PRESS AS A BIG STICK.

The repeated rumors that Lord Northcliffe (Alfred Harmsworth), who already owns so many newspapers, has secured control of the London *Times* have started the English press to discussing the man and his career, as well as the opportunities which modern journalism offers to a person with plenty of money and no scruples. The possibilities in this field are, we venture to say, hardly yet understood even by the most enterprising of our yellow journalists; and we shall be greatly surprised if, within the next generation, the newspapers which are—to use Lord Salisbury's phrase—"written by office-boys for office-boys" do not increase vastly in number and circulation. With cheap paper, cheap press-work, cheap editors, and advertisers of cheap wares to help, the supply of cheap news and pictures for cheap readers may become almost unlimited. The demand, too, from persons who can do little more than read and write, seems illimitable. Moreover, these journals for the half-illiterate millions enjoy the great advantage that they can actually influence, directly and immediately, the opinions of their subscribers. The more respectable papers are taken by people who often have ideas of their own, and who, though they may in the long run be somewhat affected by the damnable iteration of their favorite journal, may disagree with it at least half the time. But the newsboys and the shop-girls who feed, for example, on the New York *Evening Journal* are so crassly ignorant that they often swallow all it says with eager credulity. Now, in a democracy, the man who can lay down the law for the masses is a force to be reckoned with.

France, for instance, has just been getting an interesting view of the inside workings of the Paris *Matin*, a paper which, by catering to that public which delights in crimes and scandals, has gained an immense circulation. The facts came out in the course of a suit for libel brought by Charles Humbert, a Senator, whom the *Matin* had accused of being an accomplice in the frauds of a company promoter. In the course of the trial it turned out that this very promoter, M. Rochette, had paid the *Matin* some 200,000 francs for forwarding his enterprises. Moreover, the *Matin* could accuse M. Humbert, a former protégé, of the blackest ingratitude, for it had obtained for him, from successive ministers, (1) his rehabilitation after being involved in a military scandal; (2) his appointment to a post in the War Office; (3) his decoration; (4) a well-paid sinecure; (5) a degree of influence which enabled him to obtain orders from the government for firms in which he had an interest. For the sake of advertisement, the *Matin* organized a marching competition in the army, and afterwards secured for a festivity the free use of the state Opera House. The proprietor, in common with the President of the Republic and the ambassadors of the great Powers, exercised the right of passing the octroi stations in Paris without submitting to an examination. In fine, the *Matin* was treated almost as if it were a branch of the administration.

Lord Northcliffe has exerted his

strength less insolently. He owns a score of papers, daily and weekly, and is able to extend his influence throughout the entire realm. Hitherto the charge urged against him most seriously is that he has commercialized the press in the most vulgar fashion. He has persistently and systematically exploited crime, has run as close to the limits of indecency as he has dared, and in general has conducted all his enterprises as if his power entailed no responsibilities and his only conceivable aim were to make money. But Harmsworth's rewards have not been wholly pecuniary. He received a title in 1905 from the Conservative government, as a fit recognition of the power which he has used so unscrupulously.

In our own country the nearest parallel is W. R. Hearst. He now runs newspapers in San Francisco, Los Angeles, Chicago, New York, and Boston, and he threatens to enter other cities. On the character of his dailies we need not dwell. Nothing more brazen has ever been printed. His appeal is to the lowest instincts of the worst elements. This country is so large, however, so decentralized, and its interests are so diversified that no one paper can have the vogue of a journal published in Paris or London. Mr. Hearst's plan of issuing in several different places is therefore the only way of bringing pressure to bear in every part of the United States. To maintain newspapers in, say, twenty cities would require large capital, but were a man rich and ambitious enough, the project is wholly feasible. Mr. Hearst, however, has evolved a plan which affords him many of the advantages of direct control of a chain of dailies, with none of the disadvantages. He has organized a "news service," to which, he asserts, he has secured several hundred subscribers. These papers get news of the Hearst kind, and with the news there goes inevitably the taint of the Hearst shop. He is in constant telegraphic communication with all these publications; he has engaged their editors in business relations with himself; and consequently his version of the story and his views are bound to receive more or less favorable consideration. At this moment the doings of his Independence League and the utterances of its candidates are being generously reported through the Hearst (and what we may call the semi-Hearst) papers; and if Hisgen and Graves show unexpected strength in the election, they will owe it in part to this cunning propaganda of the Hearst news service. The present indication is that the Independence vote will not materially affect the result; but circumstances might easily arise in which the man who could dictate the policy of fifty or a hundred newspapers could determine a national election and make his own stipulations as to persons and policies. This is indeed to wield the big stick.

CANONIZATION BY POETIC LICENSE.

A striking difference may be pointed out between the Roman Catholic Church and the average young person who writes verses for the magazines. The Church, before it admits a candidate to the high communion of the saints, imposes an elaborate series of tests extending sometimes over hundreds of years. The susceptible young rhymer, on the other hand, if he happen to be stirred by some one else's bit of verse to a warm flush of altruistic emotion, is quite likely to dash off a sonnet or a quatrain in which he calls the first poet a saint. Tender-hearted persons who do not themselves write have been known to reveal the same passion for beatifying and canonizing contemporaries who do. There must be many people to whom the author of "Leaves of Grass" is St. Whitman and the author of "Ethics of the Dust" St. Ruskin. In a strictly utilitarian age, we grant, the man who has loved the true, the beautiful, and his fellow-men as Ruskin did, deserves the halo far more than some desert ascetic who visited on his own tortured body his hatred for mankind. Robert Buchanan, in his "New Abelard," we believe, makes his hero build a church dedicated to Human Brotherhood, in which the stained-glass windows bear the effigies of St. Homer, St. Dante, and St. Shakespeare. But Buchanan's hero finds final peace, with death, at the foot of the Cross.

The principle would seem to be commendable enough: to discern holiness in every common thing, to scent divinity at a football game; and yet the thing may be overdone. In the hands of the minor poet, especially, the bestowal of honors that are not of this world, easily becomes an abuse; for minor poets, like minor artists and workmen in every line, love to bring a vast enginery to bear on a very small need, and they deal light-heartedly with names and epithets that Dante or Milton were discreet in using. Minor poets never hesitate to invoke "The Christ," or Mary, or the Godhead, to lend glow to a verse that has little color of its own. For that mannerism, Swinburne, we suppose, is as much responsible as any man. Once he showed the way, it was easy enough to raid Jehovah's heavenly armories for the poet's daily use, and among other things the martyr's crown and the saint's aureole have come into popular vogue. Take, for instance, what is far from being the worst example of its kind, Sarah N. Cleghorn's verses, entitled, "Saint R. L. S.," in the *Atlantic Monthly:*

Sultry and brazen was the August day
When Sister Stanislaus came down to see
The little boy with the tuberculous knee.

And as she thought to find him, so he lay:
Still staring, through the dizzy waves of heat,
At the tall tenement across the street.

But did he see that dreary picture? Nay,
In his mind's eye a sunlit harbor showed,
Where a tall pirate ship at anchor rode.

Yes, he was full ten thousand miles away.—
(The Sister, when she turned his pillow over,
Kissed "Treasure Island" on its well-worn cover.)

There is point, as well as fancy, in the lines. If to bring peace to a crippled child on a bed of pain, is not a good title to saintship, what is? We may admit that we do not know, and confess at the same time that St. Stevenson does not sound quite right.

The trouble is that the title has been conferred for an inadequate consideration. Not many "Treasure Islands" have been written; but, after all, sick children, and their elders for that matter, have found relief in books inferior to "Treasure Island." If it is the bringing of surcease from paint that constitutes Stevenson's title to a golden crown around the glassy sea, a dangerous precedent is established. If your sick lad was, in health, a district messenger boy, he would find deeper balm in a dime novel than in Stevenson; his sister from the factory will forget her sorrows over a copy of the latest best seller; and thus we are confronted with an entire new hierarchy—St. Tarkington, St. McCutcheon, St. Caine, St. Co-

relli. Of course, if you wish to be thorough, you can take them all in. You can go much further. From the point of view of the altruist you are entitled to speak of St. Watt, St. Stephenson, St. Morse, St. Curie, and St. Marconi. More old-fashioned people, however, will ask for the old-fashioned conditions of eligibility for beatification. They will not insist upon remoteness in time; St. Florence Nightingale or St. Josephine Shaw Lowell is fitting enough; but that forgetfulness of self and of the world which we have so long associated with the truly elect, there must be.

It is not the poets alone that are to blame. The fashion of dragging the name of the Founder of Christianity into the vulgar rhetoric of the day is growing. The cheap politician, the sensational pamphleteer, the agitator, and the crank—yes, there have not been wanting men from among the clergy—still take it upon themselves to announce what the Son of Man would do if he came to Chicago, or if he came to Washington. In consequence this man is sure that he would attack the Trusts, the other that he would vote for the Republican ticket, the third that he would march in the Haywood parade.

CONGRESS OF ORIENTALISTS.

COPENHAGEN, August 21.

A clever woman once defined a scientific association as a body of men formed for the purpose of securing an audience to listen to papers that nobody cares to hear. Certainly, at international gatherings of scholars, the reading of papers, however interesting, is a secondary feature in comparison with the stimulus and encouragement to be gained from meeting one's fellow-workers, from the informal exchange of views with them, and even from the small talk in which scholars off on a holiday feel privileged to indulge.

At the Congress of Orientalists, which closed with a banquet last evening, the representation from all countries, with the notable exception of France, was good. As usual, however, Germany predominated. The delegation from the United States was perhaps not so large as at some previous gatherings, though in every sense representative. An interesting feature at the opening session was the unanimity with which the representatives of various countries, in their response to the address of welcome from the president of the Congress—the distinguished Prof. Vilhelm Thomsen—bore witness to the services rendered by Danish scholarship to the cause of Oriental learning. The names of Westergaard, Larsen, Rask, Tychsen, and Carsten Niebuhr fell from many lips. Indeed, in Avestan scholarship, in the first steps of cuneiform research, and in opening up unknown portions of the East, Danish scholars were among the pioneers. It was eminently appropriate, therefore, to hold an international Congress of Orientalists in the capital of Denmark.

The Congress divided into eight sections: (1) General Linguistics, (2) Indo-Iranian, (3) China and Japan, (4) Semitic Languages (Hebrew, Aramaic, and Assyrian), with (5) a sub-section for Arabia and Islam, (6) Egypt and Africa, (7) Greece, (8) Ethnography and Folk-lore of the Orient. In all, over one hundred papers were read, the largest number in the Semitic section, with the Indo-Iranian a close second. Without disparagement to the other sections, it may fairly be said that the Indo-Iranian carried off the honors, both by virtue of the unusually high qualities of the communications presented, and more particularly through the account of the remarkable results attained by the recent German expedition to Chinese Turkestan. These results were set forth at one of the meetings of the combined sections by the leader in the latest campaign, Dr. A. von Le Coq. The excavations, conducted chiefly at a place called Turfan, have shed an unexpected light on religious and linguistic conditions in northern Turkestan between the second and ninth centuries of this era. Written documents, secured in large number, furnish texts in no less than ten different languages, and the strange conglomeration characteristic of the period and district is illustrated by the use of a variety of the Syriac alphabet for Persian and a form of Sanskrit characters for Ugurian. In an earlier campaign, portions of what may properly be called the Manichæan Bible were recovered, and additional texts from the last campaign show how intense the struggle was in northern Turkestan between Manichæism and orthodox Christianity. Perhaps the most important, as it is certainly the most astonishing, result of the recent expedition is the discovery of an entirely new Aryan tongue (provisionally called Tocharic, from the name of the place where the documents in question were found), which, curiously enough, shows closest affinity with the western groups of Aryan languages, and not with the eastern. New linguistic problems entirely undreamt of a few years ago have thus arisen, some of which were discussed at a special meeting of Iranists and Sanskritists. In consequence of this important material it is not unlikely that a recasting of certain linguistic views that were thought to rest on stable foundations will become necessary. The closing session of the combined sections was devoted to a consideration of some general projects, notable among which was a proposed Arabic dictionary on a large scale.

In the special sections most of the papers were highly technical, but there was a fair sprinkling of communications of more general interest. Such was a paper in the Indo-Iranian section, by Mrs. Rhys Davids, on the place of Buddhism in the history of philosophy. It was a plea for a more thorough inquiry into the evolution of the meaning attaching to terms in Indian literature as a means of determining their full philosophic content. It was shown, *e. g.*, that by a study of the terminology of causation, the successive stages in the intellectual evolution in Indian literature could be followed. Prof. Maurice Bloomfield of Johns Hopkins, in a paper on work in continuance of the "Vedic Concordance," pointed out how important it was to follow the evolution of the text of the Vedas, and frequently of the ideas conveyed through a study of parallel passages. At the conclusion of his remarks a somewhat unusual demonstration took place. Prof. Richard Pischel, one of the leaders in Sanskrit studies, emphasized the great importance of the "Vedic Concordance" prepared by Professor Bloomfield (as the result of fifteen years of incessant labor), and declared that in the course of an extensive use of it he had not detected a single error. The section proposed a resolution of tribute to Professor Bloomfield, which was coupled with a general acknowledgment of the value of the Harvard Oriental Series published by Prof. Charles R. Lanman. The resolution was laid before the general congress and unanimously adopted.

Perhaps the most notable paper in the Islamic section was by Ignàcz Goldziher of Budapest, on Neo-Platonic and Gnostic elements in the Hadith, *i. e.*, the literature embodying the traditions regarding Mohammed, his doings and sayings. As instances of Neo-Platonic influences attention was directed to the conception of an imminent "world-intellect" in some of the utterances in the Hadith ascribed to Mohammed. In order to make such views conform to orthodox teachings regarding creation, slight textual changes were introduced or artificial interpretations offered. Gnostic influences were to be seen in the doctrine of the preëxistence of Mohammed and in the theory of transmission of prophetic inspiration of all generations from Adam and Eve to the parents of Mohammed. The doctrine of the "identity" of all prophets also made its way into the Hadith. The nearest approach to a sensation was occasioned by a paper of Prof. Paul Haupt of the Johns Hopkins University, setting forth the thesis that Jesus was in all probability of Aryan, and not of Semitic, origin. It naturally provoked a spirited

discussion, which threatened at one time to become somewhat personal. Professor Haupt's thesis was based on the evidence of a strong effusion of Aryan settlements into Galilee in the seventh century B. C.

Of interest to students of Semitic is an important undertaking of which specimen pages were laid before the Congress—the new edition of the Samaritan Pentateuch, to be edited by Dr. A von Gall and published by Alfred Töpelmann, Giessen. Dr. Max von Oppenheim reported on his travels in northern Syria and on the excavations he conducted at Tell Halef in that region. Monuments and inscriptions in cuneiform, Syriac, Armenian, and Arabic were brought to light which prove that the district was one of considerable importance in antiquity, and became tributary to Assyria in the tenth century, B. C. A clay model of a sheep's liver dating from about 2,000 B. C., and now in the British Museum, formed the subject of the contribution of Prof. Morris Jastrow, jr., of the University of Pennsylvania. The model was used as an object-lesson by Babylonian priests in teaching divination to the young aspirants to the priesthood, and the inscriptions on the clay model were so arranged as to illustrate the meanings attached to phenomena in certain parts of the liver. Very suggestive was the paper of S. A. Cook of Cambridge, England, on the bearings of recent excavations in Palestine on the history of Israel. These discoveries, he maintained, bore out the thesis of the higher critics that the eighth to the sixth centuries, B. C., were the critical ones for the civic and religious history of the Hebrews.

A paper of uncommon interest was presented in the Greek section by Prof. Franz Cumont of Brussels, the distinguished authority on Mithraism. He discussed a Greek astrological text in which the constellations of the zodiac were associated with the various countries and districts of the ancient world as constituted in the days of Persian supremacy. The combination points to Babylonian influences. Valuable papers were also read before the special sections by Dr. I. Friedländer of the Jewish Theological Seminary of New York, and Prof. Friedrich Hirth of Columbia.

The next congress will be held in Athens in 1911; and it is likely that a special Indo-Iranian congress will be held in 1910 in India. The need of some common language of interchange at international gatherings of scholars was perhaps more seriously felt at this congress than ever before. The official language was French, but outside of official announcements, one heard chiefly German, and many even of those who had announced their communications in English made them in German. It now looks as though, eventually, German will become the common meeting-ground at assemblies of the learned.

M. J., JR.

Correspondence.

DR. JOHNSON'S SYMPATHY FOR ANIMALS.

TO THE EDITOR OF THE NATION:

SIR: Dr. Samuel Johnson had a great scorn of cant and affectation, but he had also one of the tenderest of human hearts when faced by real sorrow and suffering. There is a story illustrating this which has escaped the notice of all his biographers. It was contributed by a correspondent who signs only "W." to the *European Magazine* for September, 1818 (Vol. LXXIV., p. 231). It reads as follows:

The Doctor in his tour through North Wales (which he never published, but of which he wrote a mere itinerary, never designed for publication) passed two days at the seat of Colonel Myddleton of Gwynog. The first day was employed in a survey of the Colonel's domain, and in contemplating a plan for the building of a principal drawing room to be attached to the mansion, the architectural proportions and ornaments of which were devised by the Doctor.

The room was afterwards built by the Colonel in strict conformity to the plan; and, after the Doctor's decease, in memorial of the visit, a cenotaph was erected by this gentleman, on the spot where his learned guest had occupied at the instant at which he suggested this addition to the original building.* On the second day it happened, that the Colonel's gardener found a hare on the form, amidst some potatoe plants. He caught it and brought it to his master, while he was engaged with conversation with Johnson. An order was given to carry it to the cook. As soon as the Doctor heard the sentence of death pronounced he requested to have the animal placed in his arms, at the same time anxiously extending them to receive it. The creature was immediately transferred from the gardener's grasp to the Doctor's embrace.—"Poor puss, poor puss," exclaimed Johnson, with the accompanying action of compassionately stroking its long squatted ears:—"and so thou art doomed to the ignoble fate of pampering the appetite of thy fellow-animal, Man—'tis a hard fate, Colonel; I must intercede for puss between sentence and execution—she is no criminal, at least there is no evidence against her: if she be indicted for a trespass, I think the laws of hospitality will plead in her favour." While he uttered these words he gradually approached the window, which was half open; and as soon as he reached it, he restored the object of his compassion to her liberty, shouting after her that she might make the best of her way. "What have you done?" cried the Colonel, "why Doctor, you have robbed my table of a delicacy, and perhaps deprived us of a dinner."—"So much the better, sir," replied this champion of a condemned hare, "for if your table is to be supplied at the expense of the laws of hospitality, I envy not the appetite of him who eats at it. This, Sir, is not a hare *ferœ naturæ*, but one which had placed itself under your protection; and savage indeed must be that man who does not make his hearth an asylum for the confiding stranger."

This anecdote is at all events credible as an illustration of the genuine kindness of Johnson's disposition.

WILLIAM E. A. AXON.

Southport, Eng., August 18.

*Many years ago, when I was in the neighborhood of Gwaenynog, I saw the cenotaph referred to in the anecdote. The country people not being familiar with such monumental structures gave it the name of Bedd y ci—"The grave of the Dog"! Nearby is a cottage with an inscription over the door which local tradition attributes to Johnson. (See *Notes and Queries*, Fourth Series, XI., p. 437, 511.) The cenotaph was erected during Johnson's lifetime and was not much to his taste.

APPEAL FOR A LOST HITTITE SEAL.

TO THE EDITOR OF THE NATION:

SIR: I have received the following letter from Sir William Ramsay:

Berlin, August 14, 1908.

My dear Sterrett: That remarkable little seal, which you found at Tchaoush, and presented to Miss Catherine Lorillard Wolfe, is now one of the most important and much desired objects in the world of history. It is a thing of unique interest. Nothing like it has ever been found since. The thing ought to be published in the style in which J. Pierpont Morgan has published a little Assyrian bronze—in a beautiful little book containing photographs of his and of all the known similar bronzes—a copy of which he kindly sent me last month. Or, if the present owner, or owners, are not interested in publishing it—a somewhat expensive thing in that style—you or I, or some one else, should make it known in a magazine. The possession of a unique thing like that seal, which every museum in the world would covet, ought to be made known to the world.

Yours always truly,
WM. RAMSAY.

In explanation of this letter I may say that the stone referred to was given by me to Miss Catharine Lorillard Wolfe, deceased, along with other objects, as a mark of my appreciation of her munificence which made possible my last journey in Asia Minor, and my subsequent stay in Athens. The stone is a Hittite seal. Its shape is a cylindrical drum, something less than an inch in diameter, and perhaps something less than half an inch in height. It bears Hittite inscriptions on both sides, which are slightly convex. Under the skilled guidance of W. J. Stillman, I made a positive impression of one side in plaster of Paris, and sent it to M. Georges Perrot, who published it in his "History of Hittite Art." I did not make an impression of the second inscribed side, because the stone was soft, and, from my experience with the side which I did impress, I feared that the inscription would be damaged.

At that time I knew well that the stone was one of unique value, and that its proper place was in a great museum, and for that reason I hesitated long before sending it to Miss Wolfe. Finally, I did send it, along with other ill-favored, but valuable treasures. My remorse has been bitter, and long continued. The stone had nothing to recommend it to Miss Wolfe; it had no beauty of any kind; its very dirty leaden color added to its seeming insignificance, and I feared that its fate would be that which has actually befallen it, for apparently it is lost. Miss Wolfe is dead and her heirs may be pardoned for thinking lightly of an apparently valueless object. Some years ago, when the importance of the stone had become more and more manifest, I wished to get an impression or a drawing of the second side. I therefore wrote, either to Miss Wolfe or to her heirs, begging to know of the whereabouts of the stone. I received no reply to my letter.

Recently, at the International Congress of Historians in Berlin, I was asked in the name of the science of the past, to make another effort to find the now famous Hittite seal, and the letter of Sir William Ramsay may be regarded as an appeal of

the whole world of historians to the heirs of Miss Wolfe. I therefore beg for space in the *Nation* for these letters, in the hope that some of its readers may know the heirs of Miss Wolfe, and may call their attention to the fact that they own an object of unique world-importance; and one which students of pre-Hellenic civilization are eagerly desirous to study, and to see published. For surely if they are aware of the facts, and of the exceeding value of the ugly stone, they will make every effort to find it, and either to publish it, as Sir William Ramsay suggests, or to permit others to publish it. J. R. S. STERRETT.

Dresden, Germany, August 24.

MISS WORMELEY'S "THE OTHER SIDE OF WAR."

TO THE EDITOR OF THE NATION:

SIR: You print in your issue of August 13 (p. 139) an obituary notice of a remarkably intellectual and useful woman, Miss Wormeley, whose accurate and masterly translations, in her later years, of several of the French classics, you naturally note. But it seems odd that, while recalling her valuable volunteer service in the United States Sanitary Commission (of which I was the assistant secretary), during the civil war, and making mention of some of her literary output in connection therewith, you should—even with necessarily limited space—omit "The Other Side of War," published by her not long after the close of that "cruel war," as the freedmen christened it in their camp-fire song. "The Other Side of War" is a book which vividly sets forth the humane work of the Sanitary Commission on the Pamunkey and James Rivers, in connection with its hospital transport service. It was widely read when it appeared, and would be valuable to the historian, among *memoires pour servir*. A. J. BLOOR.

Stonington, Conn., August 30.

THE IMMUNITY OF POISON IVY.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of August 27 (p. 192) the question is asked whether poison ivy is attacked by insects or fungi. The plant is rather abundant here, and many of its leaves show perforations, probably the work of insects, and brown spots, probably due to fungi. ARTHUR SEARLE.

Sandwich, Mass., September 1.

Notes.

Scribners will soon have ready "Poem Outlines of Sidney Lanier," containing fragments and outlines left by Lanier which have never before been published. Other books to be issued this month by the same house are "A Theory of Mind," by J. L. March; and "The Hermit and the Wild Woman," by Edith Wharton.

Chatto & Windus are to publish the Latin text of "Epistolæ Obscurorum Virorum," with a translation by F. G. Stokes. This witty and important work of the Reformation has never before appeared in English.

We are bound to hear a good deal about Africa these coming two years, and note, as one sign of the flood, Robert H. Milligan's "Jungle Folk of Africa," published by the Fleming H. Revell Co.

Albert Matthews, Hotel Oxford, Boston, has in preparation a bibliography of New England magazines of the eighteenth century, and he has printed a "tentative list," based on the collections owned by the following libraries and societies: American Antiquarian Society, Boston Athenæum, Boston Public Library, Library of Congress, Essex Institute, Harvard College Library, Lenox (New York Public) Library, Massachusetts Historical Society, Massachusetts State Library, New England Historic Genealogical Society, New York Historical Society, Historical Society of Pennsylvania, Library Company of Philadelphia, State Historical Society of Wisconsin, Yale Unversity Library. In a brief note accompanying the list Mr. Matthews says:

Other libraries or societies, however, may have earlier or later numbers of a particular magazine than those indicated in the present list, or may have a magazine not listed here. Again, questions not easily answered are: Exactly what is a magazine? Wherein does a magazine differ from a newspaper? Is the proper criterion size or contents? The propriety of regarding all the publications in the present list as magazines will probably not be questioned except in four cases, namely: New Haven *Gazette* and the *Connecticut Magazine* (1786-1789); Worcester *Magazine* (1786-1788); *Courier de Boston* (1789); *New Star* (1797). I should much like to have the opinions of librarians and of bibliographers as to whether those publications ought to be rated as magazines or as newspapers.

Two more volumes of the Eversley Tennyson (The Macmillan Co.) contain the "Idylls of the King" (Vol. III.) and a group of miscellaneous poems (Vol. IV.). It was not to be expected that much new light could be thrown on the genesis of the "Idylls," but the editor, the present Lord Tennyson, gives a fragment of a prose epic on King Arthur written by his father as early as 1833, and the scenario for a play set down about the same time. More interesting than these workshop chips, which might well enough have been swept away, are some of the notes of the poet, such as that which explains "the Siege perilous" as standing for "the spiritual imagination," and that which shows how he regarded the end of "The Holy Grail" as "the summing up of all in the highest note by the highest of men." Nothing, perhaps, as one turns over the pages of the "Idylls" and shorter poems of these volumes, is so striking as the growth of a certain mystical sense. Tennyson was always a romantic, but one misses in his work that peculiar note of wonder which makes some of the lines of Keats and Wordsworth sound as if echoes from another world. His romantic power, when most felt, comes from something different from that, and is rather akin to the spiritual ecstasy or exolution of the saints. It was a faculty early developed, as may be seen from his lines to "The Mystic," written in boyhood and now printed in the notes to "The Ancient Sage":

Angels have talked with him, and showed him thrones:
Ye knew him not: he was not one of ye,
Ye scorned him with an undiscerning scorn;
Ye could not read the marvel in his eye,
That still serene abstraction; he hath felt
The vanities of after and before;
Albeit, his spirit and his secret heart
The stern experiences of converse lives,
The linkèd woes of many a fiery charge
Had purified, and chastened, and made free.
. . . . . .
He often lying broad awake, and yet
Remaining from the body, and apart
In intellect and power and will, hath heard
Time flowing in the middle of the night,
And all things creeping to a day of doom.

What one sees in the later poems is rather the larger assurance in expressing this mystical romanticism than any essential change in idea. It is this that strikes one in the present volumes in "The Holy Grail," "De Profundis," "The Ancient Sage," "Vastness," and "Merlin and the Gleam." To some of these poems the notes bring valuable illumination. Thus from the poet's own note we learn that "What the Ancient Sage says is not the philosophy of the Chinese philosopher Laot-ze, but it was written after reading his life and maxims." And in the case of "The Gleam" the editor, on his father's authority, gives a long explanation as allegorical of the poet's own life.

Putnams have brought out an attractive reprint of Poe's "Complete Poems," with the critical introduction of Prof. Charles F. Richardson and the illustrations of F. S. Coburn.

With impartial prodigality Henry Holt & Co. have turned out two anthologies of the same character and of almost the same appearance. One is "The Poetic Old-World," compiled by Lucy H. Humphrey and printed uniformly with E. V. Lucas's charming anthologies, "The Open Road" and "The Friendly Town." The poems are arranged systematically by places, and, where un-English writers are drawn upon (French, German, Greek, and Latin), a verse translation is added. The selections, on the whole, are good, most of them familiar enough, but none the worse for that. And the editor has been wise, we think, in looking for pieces that convey some sentiment, personal or historical, connected with a place, rather than for mere descriptions. Only, from the wealth of material about Paris, better things might be found than the fantasies of Mrs. Browning and Edward Dowden. In breadth of choice the other anthology, "Poems for Travellers," by Mary R. J. DuBois, is the superior, but its arrangement is not so good, and it is not so attractively printed. Either volume would be a pleasant companion to the old-fashioned traveller, if such there still be, who dutifully tries to evoke the proper poetic sentiment on the right spot, or to the fireside traveller who regards the world from his own "Friendly Town."

Of making many editions of Jane Austen there is no end. The market, however, should never be glutted; for these are books that everyone who pretends to literary taste should own. The latest set (ten volumes) is in the St. Martin's Illustrated Library of Standard Authors, issued in London by Chatto & Windus and in this country by Duffield & Co. The first two volumes, "Pride and Prejudice," just out, are very attractive. Reginald Brimley Johnson furnishes a general introduction, which is rather scrappy and perfunctory, but happily brief. Little is to be told about Miss Austen's life, and that little has been frequently printed. Mr. Johnson himself said it all once, some sixteen years ago, in his introduction to Dent's popular edition. But the essential thing, after all, is the novels themselves; and they are presented in ad-

mirable form, neat binding, a well-proportioned page, light and opaque paper, and large type. The feature of the edition is the illustrations in color, some twenty in all, by A. Wallis Mills. Really to illustrate Jane Austen is, of course, impossible, for no artist can do more than faintly suggest the charm of Elizabeth Bennet and the fatuity of Mr. Collins. The Austen enthusiast is likely, therefore, to regard any pictures as an impertinence. These, we are bound to say, are better than most. They happily reproduce the costumes and furniture of the period, and most of them cleverly portray character. Lydia Bennet must have resembled closely the imaginary likeness in the second volume; and Lady Catherine de Bourgh is eminently satisfactory. Mr. Darcy, on the other hand, is unconvincing. The end papers of both volumes show Mr. Bennet telling Mrs. Bennet and Elizabeth of his call on Mr. Bingley—a spirited and amusing picture.

The "Year Book of the Holland Society of New York" is now published for 1906, containing genealogical lists together with a record of the twenty-first annual dinner given at the Waldorf-Astoria, January 18, 1906.

To its excellent reference lists the Library of Congress has added the subjects "Corrupt Practices in Elections" and "Workingmen's Insurance." It also issues a second edition of the "List of Works relating to Government Regulation of Insurance."
